Abstract:

The subseries of books “Atlas of New Research Based on EconLit (2006–2013)” uses the information regarding more than one million of publications from 1991–2013, derived from EconLit electronic bibliography. EconLit is the American Economic Association's comprehensive resource to the world's economic literature. The eleventh volume of the subseries is devoted to JEL general category K “Law and Economics”, which at the end of 2013 included 25 micro categories and reflected 46 thousand publications. The reader can find in this volume a composition of interconnected tables that contain:

1. The collection of bibliometric indicators that characterize the changes in general category K in 2006–2013 from the point of view 20 macro, 127 meso and 822 micro categories.

2. Information of the 2,965 new subject links of 25 micro categories that belong to general category K within 2006–2013 and that are presented in 9,315 publications. The contributors discover bibliographic information and abstracts concerning the first works on the new intersections of the subject micro categories, as well as more than 13 thousand potential intersections at the end of 2013.

Appendices include summarizing data for all 25 micro categories, information about the publication containing many new subject links, Atlas Tables Guide, and example of dynamic frequency dictionary for the terms of general category K.

The publication is intended for economists, researchers, teachers, graduate students, undergraduates and university students specializing in economics.

The American Economic Association has given its kind permission to develop the presented set of derivative works based on EconLit and to publish our results in English and in Russian.

Атлас новых исследований на основе EconLit (2006–2013) [Электронный ресурс]: в 19 т. / Новосиб. гос. ун-т, ИЭОПП СО РАН. – Новосибирск: ИПЦ НГУ, 2016–. – (Серия: Инновационный библиометрический анализ в экономических исследованиях). - На англ. яз., с фрагментами на рус. яз. – Microsoft Windows XP/Vista/7/8; Adobe Reader 9.0 и выше. ISBN 978-5-4437-0536-1 (серия).

T.11: JEL-категория K / [под ред. М.В. Лычагина, Г.М. Мкртчяна, В.И. Сусллова, В.Н. Лисицы]. - Электрон. дан. (22,5 Мб). - 2018. - 1 электрон. опт. диск (CD-R).- ISBN 978-5-4437-0588-0.

Аннотация:

Подсерия книг “Атлас новых исследований на основе EconLit (2006–2013)” использует информацию о более чем одном миллионе публикаций за 1991–2013 гг., извлеченную из электронной библиографии EconLit. EconLit создана Американской экономической ассоциацией и охватывает мировую экономическую литературу. Одиннадцатый том подсерии посвящен JEL-макрокатегории K “Право и экономика”. В конце 2013 г. категория K включала в себя 25 микрокатегорий, которые нашли свое отражение в 46 тыс. публикациях. Читатель может найти в издании набор взаимосвязанных таблиц, содержащих:

1. Совокупность библиометрических показателей, которые характеризуют изменения предметной области K в 2006–2013 гг. в разрезе 20 макро-, 127 мезо- и 822 микрокатегории JEL.

2. Сведения о 2965 новых предметных связях 25 микрообластей макрокатегории K за 2006–2013 гг., представленных в 9315 публикациях, с раскрытием библиографических сведений и рефератов первых работ на новых пересечениях предметных микрокатегорий. На конец 2013 г. указано свыше 13 тыс. еще не использованных предметных пересечений.

Приложения содержат обобщающие данные по всем 25 микрообластям, сведения о работах со многими предметными связями, путеводитель по таблицам тома и пример динамического частотного словаря для терминов категории K.

Издание предназначено для экономистов, исследователей, преподавателей, аспирантов, магистрантов и студентов экономических специальностей вузов.

Американская экономическая ассоциация дала любезное разрешение осуществить совокупность производных работ на основе EconLit и опубликовать полученные результаты на английском и русском языках.

EDITORIAL PREFACE

The historical origins of text statistical analysis could be found in the ancient Indian treatise “Arthashastra” (III in. BC. E.). In the last three decades the world of science, including the economics have seen a significant increase in the interest for bibliometrics¹. It is possible to consider the series of digital books “Innovative Bibliometric Analysis in Economics” and its subseries as a response to this tendency.

This volume belongs to a subseries of 19 books under the title of “Atlas of new research based on EconLit. 2006–2013”. Each volume is devoted to one of the general categories of JEL subject classification. The subseries uses the information regarding more than one million of publications from 1991–2013, derived from EconLit electronic bibliography. EconLit is the American Economic Association's comprehensive resource to the world's economic literature. EconLit includes the most sought-after economics publications including peer-reviewed journal articles, working papers from leading universities, PhD dissertations, books, collective volume articles, conference proceedings, and book reviews — all expertly indexed, classified, and linkable to full-text library holdings (see www.aeaweb.org/econlit).

The eleventh volume of the subseries is devoted to JEL general category K “Law and Economics”, which at the end of 2013 included 25 micro categories and reflected 46 thousand publications. The reader can find in this volume a composition of interconnected tables that contain:

1. The collection of bibliometric indicators that characterize the changes in general category B in 2006–2013 the changes in general category K in 2006–2013 from the point of view 20 macro, 127 meso and 822 micro categories.

2. Information of the 2,965 new subject links of 25 micro categories that belong to general category K within 2006–2013 and that are presented in 9,315 publications. The contributors discover bibliographic information and abstracts concerning the first works on the new intersections of the subject micro categories, as well as more than 13 thousand potential intersections at the end of 2013.

Appendices include summarizing data for all 25 micro categories, information about the publication containing many new subject links, Atlas [Tables Guide](#), and [example of dynamic frequency dictionary](#) for the terms of category K.

Who can benefit from the proposed project?

1. Researchers will have an opportunity to assess the data from EconLit related to the areas of their research interest and to identify emerging areas of work as the intersection of their areas of study.

2. Ph.D and post doctorate students, their supervisors, members of the dissertations councils and expert's boards, industry practitioners etc. The new information provides a way to evaluate the extent

¹ See Application A1 in Lychagin, Mikhail V., Gagik M. Mkrtchyan, and Victor I. Suslov, eds. 2016. *Atlas of New Research based on EconLit (2006–2013): Vol. 1 JEL Category A (with fragments in Russian)*, Innovative Bibliometric Analysis in Economics series. Novosibirsk: Novosibirsk State University Press. URI: <http://www.nsu.ru/xmlui/handle/nsu/11392>.

of a problem by applying the perspective of “Global Maps of Economic Research”. We would like to highlight that the entry into EconLit provides an opportunity to be published not only in scientific journals but also in other types of publications such as books, articles in collections of papers etc.

3. The value for university and college education of these monographs and reference books is two-fold. First, as an opportunity to strengthen the research component for the course and graduation works. Second, quantitative evaluation of the existing links between subject areas, which will clarify the structure, and content of curriculum and academic programs.

Acknowledgements:

On behalf of the participants of this project, we are grateful to the American Economic Association team. The AEA constantly provided a great support to economic research and education around the world. Our very special thanks to Regina Montgomery, administrative director of the AEA for efficient resolution of organizational issues, and to Doug Quint, who were able to find ways to effectively support of our online version of EconLit.

Various aspects for bibliometric analysis have been discussed with colleagues from research organizations and higher educational institutions of Russia (Central Economic Mathematical Institute, State University – Higher School of Economics, Saint Petersburg State Polytechnic University, etc.) during scientific conferences, symposiums, individual interviews etc. We express our appreciation for the valuable advices, remarks and comments.

We appreciate the continued support of the two organizations, whose names are placed on the title page of each volume: Novosibirsk State University (NSU) and the Institute of Economics and Industrial Engineering of SB RAS (IEIE). We want to offer our gratitude to the NSU and IEIE academic libraries. Our thanks to Novosibirsk State University Press, which took over the responsibility of the project output to the completion.

Eugene V. Molodin, a member of the Union of Artists of Russia, did an original design for the front side of the discs with project volumes. The company “PIKTOGRAMMA-98” completed the process of recording information and printing creative labels.

This project would not be possible without the dedicated efforts and creative work of a large group of authors, which included students, undergraduates, graduate students, faculty and staff of NSU, IEIE SB RAS and some other organizations. To all of them, as well as our friendly members of the Editorial Board, we say, “Thank you!”

Mikhail V. Lychagin, Gagik M. Mkrtchayn,
Victor I. Suslov, and Valerii N. Lisitsa

ПРЕДИСЛОВИЕ РЕДАКТОРОВ

Истоки статистического анализа текста можно найти в древнеиндийском трактате “Артхашастра” (III в. до н. э.). В последние три десятилетия в мировой науке, в том числе и экономической, наблюдается резкий рост интереса к библиометрии². В ответ на эту тенденцию была задумана и стала публиковаться в электронной форме серия работ “Инновационный библиометрический анализ в экономических исследованиях”.

Предлагаемый том входит в подсерию из 19 книг в электронной форме под общим названием “Атлас новых исследований на основе EconLit. 2006–2013”. Каждый том посвящен одной из макрокатегорий предметной классификации JEL³. В подсерии использована информация о более чем одном миллионе публикаций за 1991–2013 гг., извлеченная из электронной библиографии EconLit. EconLit является электронной библиографией, которая создана Американской экономической ассоциацией, для характеристики мировой экономической литературы. EconLit включает наиболее известные научные экономические публикации: статьи из рецензируемых журналов, препринты ведущих университетов, диссертации на соискание ученой степени “доктор философии”, книги, сборники научных трудов, материалы конференций, рецензии на книги. Все источники индексируются и классифицируются экспертами и имеют ссылки на полные тексты соответствующих изданий (www.aeaweb.org/econlit).

Одиннадцатый том подсерии посвящен JEL-макрокатегории К “Право и экономика”. В конце 2013 г. категория К включала в себя 25 микрокатегорий, которые нашли свое отражение в 46 тыс. публикациях. Читатель может найти в данном издании набор взаимосвязанных таблиц, которые содержат:

1. Совокупность библиометрических показателей, которые характеризуют изменения предметной области К в 2006–2013 гг. в разрезе 20 макро-, 127 мезо- и 822 микрокатегорий JEL.

2. Сведения о 2965 новых предметных связях 25 микрообластей категории К за 2006—2013 гг., представленных в 9315 публикациях, с раскрытием библиографических сведений и рефератов первых работ на новых пересечениях предметных микрокатегорий. На конец 2013 г. указано свыше 13 тыс. еще не использованных предметных пересечений.

Приложения содержат обобщающие данные по всем 25 микрообластям, сведения о работах со многими предметными связями, путеводитель по таблицам тома и пример динамического частотного словаря для терминов категории К.

Кому может принести пользу предлагаемый проект?

1. Экономистам-исследователям, у которых появится возможность с учетом данных EconLit дать оценку сложившимся областям исследований и выявить зарождающиеся направления работ на пересечениях предметных областей.

² См. приложение А2 в Atlas of New Research Based on EconLit (2006–2013) [Electronic resource]: with 19 vol. / [Novosibirsk State University; Institute of Economics and Industrial Engineering of SB RAS]. – Novosibirsk: Novosibirsk State University Press, 2016. Vol. 1: JEL Category A / [Lychagin, Mikhail V., Gagik M. Mkrtchyan, and Victor I. Suslov, eds.] – Атлас новых исследований на основе EconLit (2006–2013) [Электронный ресурс]: в 19 т. / Новосибир. гос. ун-т, ИЭОПП СО РАН. – Новосибирск : Новосиб. гос. ун-т, 2016. Т.1: JEL категория А / [под ред. М.В. Лычагина, Г.М. Мкртчяна, В.И. Сулова]. Номер госрегистрации: 0321603130. URI: <http://www.nsu.ru/xmlui/handle/nsu/11392>.

³ Наименования микрокатегорий на русском языке приведены в приложении С.

2. Соискателям ученых степеней, их научным руководителям, членам диссертационным и экспертных советов. Новые данные позволят проводить оценку степени разработанности проблемы с позиции “глобальной карты экономических исследований”. Очевидно, чем быстрее и активнее отечественные научные работы будут переводиться на английский язык и включаться в признанные библиографии (EconLit и др.), электронные библиотеки, индексы цитирования и т.п., тем более четко можно будет видеть российские достижения и нерешенные вопросы. Подчеркнем, что вхождение в EconLit предоставляет возможность не ограничиваться публикациями в журналах, а знакомить мир с другими видами публикаций (книги, статьи в сборниках трудов и т.д.).

3. Для высшего профессионального образования ценность предлагаемых монографий-справочников двойка. Во-первых, как в предыдущем пункте, — это возможность усилить исследовательский компонент в курсовых и выпускных квалификационных работах. Во-вторых, количественная оценка сложившихся связей между предметными областями позволит уточнить структуру и наполнение учебных планов и программ.

Благодарности

От имени коллектива участников проекта выражаем признательность Американской экономической ассоциации, которая оказывает большое содействие развитию экономических исследований и образования во всем мире. Наша особая благодарность Регине Монтгомери, административному директору АЕА, за оперативное решение возникавших организационных вопросов, и Дугу Квинту, благодаря советам которого нам удавалось находить способы эффективного использования онлайн-варианта EconLit.

Отдельные стороны библиометрического анализа неоднократно обсуждались с коллегами из научно-исследовательских организаций и высших учебных заведений России (Центральный экономико-математический институт РАН, Государственный университет – Высшая школа экономики, Санкт-Петербургский политехнический университет Петра Великого и др.) в рамках научных конференций, симпозиумов, отдельных бесед. Выражаем им признательность за ценные советы и замечания.

Мы высоко ценим постоянную поддержку двух организаций, названия которых размещены на титульном листе каждого тома: Новосибирского государственного университета и Института экономики и организации промышленного производства СО РАН. Особо хотим поблагодарить научные библиотеки НГУ и ИЭОПП и редакционно-издательский отдел издательско-полиграфического центра НГУ, который взял на себя ответственность за вывод проекта на финишную прямую.

Компакт-диски с томами проекта радуют глаз благодаря Е. В. Молодину, члену Союза художников России, создавшему оригинальный дизайн лицевой стороны дисков, и сотрудникам ООО “ПИКТОГРАММА-98”, осуществившим процесс записи информации и оформления дисков.

Реализация данного проекта была бы невозможна без самоотверженной и творческой работы большого авторского коллектива, в который входили студенты, магистранты, аспиранты, преподаватели и сотрудники НГУ, ИЭОПП СО РАН и некоторых других организаций. Всем им, а также членам нашего дружного редакционного совета, мы говорим: “Большое спасибо!”.

М.В. Лычагин, Г.М. Мкртчян,
В.И. Суслов, В.Н. Лисица

Table K00.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	B50	Mercurio, Nicholas, and Steven G. Medema. 2006. <i>Economics and the Law: From Posner to Postmodernism and Beyond</i> , Second edition. Princeton and Oxford: Princeton University Press. Revised and expanded second edition provides a concise overview of the dominant schools of thought within law and economics. Discusses the jurisprudential niche of law and economics; Chicago law and economics; public choice theory; institutional law and economics; the new institutional economics; branching out--New Haven, modern civic republican, and Austrian approaches; and social norms, law, and economics.
2006	F33	World Bank. 2006. <i>The World Bank Legal Review: Law, Equity, and Development. Volume 2</i> , Washington, D.C.: World Bank. Nineteen papers, resulting from a World Bank conference held in November 2005, explore law-related issues of equity and development. Discusses the role of legal and judicial reform in the development process; the multiple edges of law--dealing with legal pluralism in development practice; promise or plunder--a past and future look at law and development; whether justice reform projects should take non-state justice systems seriously--perspectives from Latin America; poor justice or justice for the poor--a policy framework for reform of customary and informal justice systems in Africa; legal empowerment--impact and implications for the development community and the World Bank; transnational human rights and local activism--mapping the middle; crime, justice systems, and development assistance; youth, crime, and criminal justice in South Africa; politics, institutions, and society--seeking better results; the legal aspects of the World Bank's work on human rights--some preliminary thoughts; economics and the right to basic services; human rights and the World Bank--practice, politics, and law; a human rights-based approach to development--theoretical and operational issues for the World Bank; equity, development, and the World Bank--whether ethics can be put into practice; one species, one planet--environmental justice and sustainable development; owning culture--pursuing equity--from international law to enterprise development; the World Bank's policy on physical cultural resources; and the World Bank's new policy on indigenous peoples, 2005. Index.
2006	G30 G38	Siems, Mathias, and Priya Lele. 2006. <i>Shareholder Protection: A Leximetric Approach</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In this paper we build a new and meaningful shareholder protection index for five countries and code the development of the law for over three decades. At-tributing and comparing legal differences by numbers is contrary to the tradi-tional way of doing comparative law and the use of a quantitative methodology to account for variations across legal systems has been subjected to some searching criticisms. However, we believe that with a cautious approach, it has the potential to open new vistas of research in the area of comparative law and as such should not be shunned. This paper provides an illustration of the inter-esting possibilities that diligent quantification of legal rules ('leximetrics') provides for comparing variations across time series and across legal systems. For instance, our study finds, that in all of our panel countries shareholder protec-tion has been improving in the last three decades; that the protection of minority against majority shareholders is considerably stronger in 'blockholder countries' as compared to the non-blockholder countries and that convergence in share-holder protection is taking place since 1993 and is increasing since 2001. Fi-nally, our examination of the legal differences between the five countries does not confirm the distinction between common law and civil law countries.
2006	K20	Siems, Mathias M. 2006. <i>Legal origins: reconciling law and finance and comparative law</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In the last few years law and finance scholars have 'discovered' the usefulness of comparative law. Their studies look at the quantifiable effect that legal rules and their enforcement have on financial development in different countries. Moreover, they link their results with the long-standing distinction between Civil Law and Common Law countries. Whether this revival of 'legal families' is a useful way forward is, however, a matter of debate. The following article challenges these studies and looks for characteristic features which are more precise and meaningful than the use of legal families as such.
2006	K20 N45	Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers. This paper surveys China's legal system in the economic reform era. We analyze the role of law in the economy, assessing whether China's formal legal system contributed to those expectations of stable and predictable rights of property and contract that are prerequisites for growth. The paper begins by detailing legal developments. The relationship between legal and economic development was bidirectional - a coevolutionary process. We then examine three spheres of activity - property rights, agreements to trade, and corporate governance - asking whether law plays an important role, how that role has changed, and what the current problems are. Common themes arise. First, there have been profound changes, with law playing an increasingly important role. Second, formal legal institutions have not made a critical contribution to China's remarkable economic success. This latter conclusion leaves open the question of which mechanisms generated the necessary expectations of reasonable returns from decentralized economic activity. We briefly reflect on mechanisms other than law that might have produced such expectations, for example, the role of local Communist Party officials. However, lack of empirical information suggests this is a topic for future research.
2006	N20	Siems, Mathias, and Priya Lele. 2006. <i>Shareholder Protection: A Leximetric Approach</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In this paper we build a new and meaningful shareholder protection index for five countries and code the development of the law for over three decades. At-tributing and comparing legal differences by numbers is contrary to the tradi-tional way of doing comparative law and the use of a quantitative methodology to account for variations across legal systems has been subjected to some searching criticisms. However, we believe that with a cautious approach, it has the potential to open new vistas of research in the area of comparative law and as such should not be shunned. This paper provides an illustration of the inter-esting possibilities that diligent quantification of legal rules ('leximetrics') provides for comparing variations across time series and across legal systems. For instance, our study finds, that in all of our panel countries shareholder protec-tion has been improving in the last three decades; that the protection of minority against majority shareholders is considerably stronger in 'blockholder countries' as compared to the non-blockholder countries and that convergence in share-holder protection is taking place since 1993 and is increasing since 2001. Fi-nally, our examination of the legal differences between the five countries does not confirm the distinction between common law and civil law countries.

National Bureau of Economic Research, Inc, NBER Working Papers: 12795. Neither economics nor political science can explain the process of modern social development. The fact that developed societies always have developed economies and developed polities suggests that the connection between economics and politics must be a fundamental part of the

Year	DE	Title and Abstract
		development process. This paper develops an integrated theory of economics and politics. We show how, beginning 10,000 years ago, limited access social orders developed that were able to control violence, provide order, and allow greater production through specialization and exchange. Limited access orders provide order by using the political system to limit economic entry to create rents, and then using the rents to stabilize the political system and limit violence. We call this type of political economy arrangement a natural state. It appears to be the natural way that human societies are organized, even in most of the contemporary world. In contrast, a handful of developed societies have developed open access social orders. In these societies, open access and entry into economic and political organizations sustains economic and political competition. Social order is sustained by competition rather than rent-creation. The key to understanding modern social development is understanding the transition from limited to open access social orders, which only a handful of countries have managed since WWII.

"Revisiting Institutional Law and Economics--The Inadequacy of the Chicago School: The Case of Personal Bankruptcy Law." <i>Journal of Economic Issues</i>, 41(2): 557-65. For Chicago style law & economics, bankruptcy is a utility maximizing choice agents make. Preventing personal bankruptcy requires raising its price. We analyze the developments of personal bankruptcy law as a way of allocating risks within a society. As bankruptcy is in large part something that befalls individuals and households, an institutionalist law & economics, based on instrumental value principles (IVP), suggests that risks should be reduced and shared rather than be shifted from firms to individuals. In addition to evaluating a specific policy area, we, therefore, also suggest a specific way in which institutionalist law & economics and IVP may be developed.

2007	D30 D91 K12	Jolls, Christine. 2007. <i>Behavioral Law and Economics</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12879. Behavioral economics has been a growing force in many fields of applied economics, including public economics, labor economics, health economics, and law and economics. This paper describes and assesses the current state of behavioral law and economics. Law and economics had a critical (though underrecognized) early point of contact with behavioral economics through the foundational debate in both fields over the Coase theorem and the endowment effect. In law and economics today, both the endowment effect and other features of behavioral economics feature prominently and have been applied in many important legal domains. The paper concludes with reference to a new emphasis in behavioral law and economics on "debiasing through law" - using existing or proposed legal structures in an attempt to reduce people's departures from the traditional economic assumption of unbounded rationality.
2007	E20	Llussa, Fernanda, and Jose Tavares. 2007. <i>Economics and Terrorism: What We Know, What We Should Know and the Data We Need</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6509. In this paper we organize the literature on the economics of terrorism around seven different topics, offering a comprehensive view of the literature with a view to identifying questions that remain unanswered. The chosen topic areas are: The Measurement of Terrorist Activity, The Nature of Terrorists, The Utility Cost of Terrorism, The Impact of Terrorism on Aggregate Output, Terrorism and Specific Sectors of Activity, Terrorism and Economic Policy, and Counter-Terrorism. In a sense, we proceed from measurement issues to studies of the characteristics of terrorists and terrorist organizations, the consequences of terrorism on individual utility and, aggregate output and on specific sectors of activity, as well as the impact of terrorism on fiscal and monetary policies. We conclude with an examination of the economics literature on counter-terrorism measures. For each of the topics above, we present what the literature has achieved, the important questions that remain open and the type of data that would help researchers make progress. In our discussion, we identify the main papers in the literature and the issue(s) where each made a contribution, presenting a brief individual summary for these papers, organized along the topic areas.

National Bureau of Economic Research, Inc, NBER Working Papers: 12932. This paper analyzes the influence that juvenile offenders serving time in the same correctional facility have on each other's subsequent criminal behavior. The analysis is based on data on over 8,000 individuals serving time in 169 juvenile correctional facilities during a two-year period in Florida. These data provide a complete record of past crimes, facility assignments, and arrests and adjudications in the year following release for each individual. To control for the non-random assignment to facilities, we include facility and facility-by-prior offense fixed effects, thereby estimating peer effects using only within-facility variation over time. We find strong evidence of peer effects for burglary, petty larceny, felony and misdemeanor drug offenses, aggravated assault, and felony sex offenses; the influence of peers primarily affects individuals who already have some experience in a particular crime category. We also find evidence that peer effects are stronger in smaller facilities and that the predominant types of peer effects differ in residential versus non-residential facilities; effects in the latter are consistent with network formation among youth serving time close to home.

2007	M14	Licht, Amir N., Chanan Goldschmidt, and Shalom H. Schwartz. 2007. "Culture Rules: The Foundations of the Rule of Law and Other Norms of Governance." <i>Journal of Comparative Economics</i>, 35(4): 659-88. This study presents evidence about relations between national culture and social institutions. We operationalize culture with data on cultural dimensions for some 50 nations adopted from cross-cultural psychology and generate testable hypotheses about three basic social norms of governance: the rule of law, corruption, and democratic accountability. These norms correlate systematically and strongly with national scores on cultural dimensions and also differ across cultural regions of the world. Using a linguistic variable on pronoun drop as an instrument for cultural emphases on autonomy versus embeddedness points to a significant influence of culture on governance. Using cultural profiles of a previous generation as an instrument indicates relative stability of cultural orientations and of their correlates. The results suggest a framework for understanding the relations between fundamental institutions.

2007	N21 N23 O38	Moser, Petra. 2007. <i>Why Don't Inventors Patent?</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 13294. This paper argues that the ability to keep innovations secret may be a key determinant of patenting. To test this hypothesis, the paper examines a newly-collected data set of more than 7,000 American and British innovations at four world's fairs between 1851 and 1915. Exhibition data show that the industry where an innovation is made is the single most important determinant of patenting. Urbanization, high innovative quality, and low costs of patenting also encourage patenting, but these influences are small compared with industry effects. If the effectiveness of secrecy is an important factor in inventors' patenting decisions, scientific breakthroughs, which facilitate reverse-engineering, should increase inventors' propensity to patent. The discovery of the periodic table in 1869 offers an opportunity to test this idea. Exhibition data show that patenting rates for chemical innovations increased substantially after the introduction of the periodic table, both over time and relative to other industries.

With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(12): 253-99. The relationship between law and economics has been an area in which there has been increasing interests among lawyers, economists, and politicians in recent years. Despite this interest, the links between these two disciplines have not been fully approached by Colombian researchers in the subject of Human Rights, especially economic, social, and cultural ones. The purpose of this research is to fill a gap in this area by analyzing the influence that decisions of international organizations have had in the evolving way in which the Constitutional Court has approached to the adjudication of economic, social, and cultural rights.
2008	H56	De Goede, Marieke. 2008. "The Politics of Preemption and the War on Terror in Europe." <i>European Journal of International Relations</i> , 14(1): 161-85. In the midst of the war on terror and unilateral US security politics, many observers look to Europe for alternatives. It is argued that Europe is particularly opposed to preemptive security practice, and prefers instead to rely on the rule of law. This article examines the meaning of preemption in the war on terror, and analyses three aspects of European counter-terror policy. It becomes clear that, with respect to a number of policies that play a key role in preemptive security practice, including criminalizing terrorist support, data retention, and asset freezing, the European Union is world leader rather than reluctant follower. Instead of relying on images that position Europe as inherently critical of preemptive security, debate concerning the legitimacy and desirability of such practices must be actively fostered within European public space.
2008	N13	Bogart, Dan, and Gary Richardson. 2008. <i>Estate Acts, 1600 to 1830: A New Source for British History</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 14393. A new database demonstrates that between 1600 and 1830, Parliament passed thousands of acts restructuring rights to real and equitable estates. These estate acts enabled individuals and families to sell, mortgage, lease, exchange, and improve land previously bound by landholding and inheritance laws. This essay provides a factual foundation for research on this important topic: the law and economics of property rights during the period preceding the Industrial Revolution. Tables present time-series, cross-sectional, and panel data that should serve as a foundation for empirical analysis. Preliminary analysis indicates ways in which this new evidence may shape our understanding of British economic and social history.
2008	N93 O12 R12 R14	Bogart, Dan, and Gary Richardson. 2008. <i>Making Property Productive: Reorganizing Rights to Real and Equitable Estates in Britain, 1660 to 1830</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 14107. Between 1660 and 1830, Parliament passed thousands of acts restructuring rights to real and equitable estates. These estate acts enabled individuals and families to sell, mortgage, lease, exchange, and improve land previously bound by inheritance rules and other legal legacies. The loosening of these legal constraints facilitated the reallocation of land and resources towards higher-value uses. Data reveals correlations between estate acts, urbanization, and economic development during the decades surrounding the Industrial Revolution.
2008	O13 P28 Q01 Q56	Du, Huanzheng, Bin Li, Wenwei Hu, and Yoshiro Higano. 2008. "A Note on Establishing a National Law System to Build a Circular Society in China." <i>Studies in Regional Science</i> , 38(1): 247-55. The present stage of economic development in China is already subjected to restrictions from the environment and resources, and a circular society is recognized as a new sustainable development strategy. Studies on the successful experiences and lessons learned from foreign law systems relating to a circular society are accumulating. The standpoint of "four factors", namely law as a core factor, public as a basic factor, enterprise as the main body and technology as a decisive factor, for building a circular society, are discussed. Furthermore, concrete policy suggestions for establishing national laws to build a circular society are put forward based on the actual situation in China.

Cohen is Professor, and Wright is Assistant Professor, with the School of Law at George Mason University. Index.
2009	C23	Kniesner, Thomas J., W. Kip Viscusi, and James P. Ziliak. 2009. <i>Policy Relevant Heterogeneity in the Value of Statistical Life: New Evidence from Panel Data Quantile Regressions</i> . Center for Policy Research, Maxwell School, Syracuse University, Center for Policy Research Working Papers: 118. We examine differences in the value of statistical life (VSL) across potential wage levels in panel data using quantile regressions with intercept heterogeneity. Latent heterogeneity is econometrically important and affects the estimated VSL. Our findings indicate that a reasonable average cost per expected life saved cut-off for health and safety regulations is \$7 million to \$8 million per life saved, but the VSL varies considerably across the labor force. Our results reconcile the previous discrepancies between hedonic VSL estimates and the values implied by theories linked to the coefficient of relative risk aversion. Because the VSL varies elastically with income, regulatory agencies should regularly update the VSL used in benefit assessments, increasing the VSL proportionally with changes in income over time.
2009	D12 L15	Freedman, Seth M., Melissa Schettini Kearney, and Mara Lederman. 2009. <i>Product Recalls, Imperfect Information, and Spillover Effects: Lessons from the Consumer Response to the 2007 Toy Recalls</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15183. In 2007, the Consumer Product Safety Commission (CPSC) issued 276 recalls of toys and other children's products, a sizeable increase from previous years. The overwhelming majority of the 2007 toy recalls were due to high levels of lead content and almost all of these toys were manufactured in China. This period of recalls was characterized by substantial media attention to the issue of consumer product safety and eventually led to the passage of the Consumer Product Safety Improvement Act of 2008. This paper examines consumer demand for toys following this wave of dangerous toy recalls. The data reveal four key findings. First, the types of toys that were involved in recalls in 2007 experienced above average losses in Christmas season sales. Second, Christmas sales of infant/preschool toys produced by manufacturers who did not experience any recalls were about 25 percent lower in 2007 as compared to earlier years, suggesting industry-wide spillovers. Third, a

Year	DE	Title and Abstract
		manufacturer's recall of one type of toy did not lead to a disproportionate loss in sales of their other types of toys. And, finally, recalls of toys that are part of a brand had either positive or negative effects on the demand for other toys in the property, depending on the nature of the toys involved. Our examination of the stock market performance of toy firms over this period also reveals industry wide spillovers. The finding of sizable spillover effects of product recalls to non-recalled products and non-recalled manufacturers has important implications for regulation policy.
2009	D87	CV: Chorvat, Terrence, Kevin McCabe, and Vernon Smith. 2009. "Law and Neuroeconomics." In <i>Foundations of Law and Economics</i> , ed. Robert D. Cooter and Francesco Parisi, 210-47. 2009	D87	Morck, Randall. 2009. <i>Generalized Agency Problems</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15051. Agency problems in economics virtually always entail self-interested agency exhibiting "insufficient" loyalty to principal. Social psychology also has a literature, mainly derived from work by Stanley Milgram, on issues of agency, but this emphasizes excessive loyalty--people undergoing a so-called "agentic shift" and forsaking rationality for loyalty to a legitimate principal, as when "loyal" soldiers obey orders to commit atrocities. This literature posit that individuals experience a deep inner satisfaction from acts of loyalty--essentially a "utility of loyalty"--and that this both buttresses institutions organized as hierarchies and explains much human misery. Agency problems of excessive loyalty, as when boards kowtow to errant CEOs and controlling shareholders, may be as economically important in corporate finance as the more familiar problems of insufficient loyalty of corporate insiders to shareholders. Overt conflict between rival authorities is shown to reverse the "agentic shift"--justifying institutions that formalize argumentation such as the adversary system in Common Law courts; the Official Opposition in Westminster democracies; discussants and referees in academia; and independent directors, non-executive chairs, and proxy contests in corporate governance.
2009	E02 N16 N26 N46 O54	Alston, Lee J., and Andres A. Gallo. 2009. <i>Electoral Fraud, the Rise of Peron and Demise of Checks and Balances in Argentina</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15209. The future looked bright for Argentina in the early twentieth century. It had already achieved high levels of income per capita and was moving away from authoritarian government towards a more open democracy. Unfortunately, Argentina never finished the transition. The turning point occurred in the 1930s when to stay in power, the Conservatives in the Pampas resorted to electoral fraud, which neither the legislative, executive, or judicial branches checked. The decade of unchecked electoral fraud led to the support for Juan Peron and subsequently to political and economic instability.

2009	G13	Deffains, Bruno, and Marie Obidzinski. 2009. "Real Options Theory for Law Makers." <i>Recherches Economiques de Louvain/Louvain Economic Review</i> , 75(1): 93-117. The formulation of legal rules is a challenging issue for lawmakers. Trade-offs are inevitable between providing more guidance by specific rules and enlarging the scope by general rules. Using real options theory we show that the degree of precision should be considered as a degree of flexibility which increases the value of the text. Thus, we derive a normative principle for a draftsman to choose between rules versus standards and to decide when the law should be enacted. In highly innovating environments, delaying the enactment allows lawmakers to obtain more information. Therefore, the lower the degree of precision of the law, the shorter the delay.
2009	G28 P43	Visser, Hans. 2009. <i>Islamic Finance: Principles and Practice</i> , Cheltenham, U.K. and Northampton, Mass.: Elgar. Explores the products and practices of Islamic finance against the background of its ideology, including the tensions that may arise between the ideology and the practices. Discusses the sources of Islamic law; the Islamic economy; financial instruments; Islamic banks; special sectors; public finance and the monetary authorities; and Islamic finance--a tentative verdict.
2009	I18	Viscusi, W. Kip, and Joni Hersch. 2009. <i>Tobacco Regulation through Litigation: The Master Settlement Agreement</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15422. The 1998 Master Settlement Agreement resolved the unprecedented litigation in which the states sought to recoup the cigarette-related Medicaid costs. The litigation was settled through a combination of negotiated regulatory requirements and financial payments of about \$250 billion over 25 years. Settlement payments received by states are strongly related to smoking-related medical costs but are also related to political factors. The payments largely took the form of an excise tax equivalent, raising potential antitrust concerns. The regulatory restrictions imposed by the agreement also raised antitrust concerns. However, there has been no evident shift in industry concentration. The increase in advertising and marketing expenses has largely taken the form of price discounts. The settlement sidestepped the usual procedures pertaining to the imposition of taxes and the promulgation of new regulations.
2009	I18	Boylan, Richard T., and Naci H. Mocan. 2009. <i>Intended and Unintended Consequences of Prison Reform</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15535. Since the 1970s, U.S. federal courts have issued court orders condemning state prison crowding. However, the impact of these court orders on prison spending and prison conditions is

Year	DE	Title and Abstract
		theoretically ambiguous because it is unclear if these court orders are enforceable. We examine states' responses to court interventions and show that these interventions generate higher per inmate incarceration costs, lower inmate mortality rates, and a reduction in prisoners per capita. If states seek to minimize the cost of crime through deterrence, an increase in prison costs should lead states to shift resources from corrections to other means of deterring crime such as welfare and education spending. However, we find that court interventions, that are associated with higher corrections expenditures, lead to lower welfare expenditures. This suggests that the burden of increased correctional spending is borne by the poor. Furthermore, states do not increase welfare spending after their release from court order; making the reduction in welfare spending permanent. Thus, our results suggest that states do not respond to prison reform in the manner prescribed by the deterrence model. States' responses to prison reform are most consistent with the predictions in the empirical public finance literature that indicate stickiness in expenditure categories and that increases in spending in programs that affect the poor generate declines in expenditures in other program that are also targeted to the poor.
2009	K23	Harbich, Jurgen. 2009. "State Supervision of Local Government Authorities." <i>Uprava/Administration</i> , 7(4): 53-71. State supervision of local government authorities, a requirement of the rule of law, is discussed on the example of municipalities. State supervisory authorities are also required to advise and support local government authorities. Supervision at various state levels takes place as legal supervision, which supervises only legality in matters of original competence of the municipality, and as functional supervision which also supervises expediency in matters transferred by the state. The legality principle (intervention in all cases) is modified by the expediency principle (discretion). A number of remedies are available for implementing both legal and functional supervisory measures. Where municipalities consider that the supervisory measures, whether legal or functional, violate their rights of self government, they are entitled to have recourse to the courts.

Explores how policymakers, lawyers, and managers can improve governance by weighing the agency benefits of increased accountability against the distributional costs of favoring principal stakeholders over more general economic opportunities. Discusses natural experiments; statistical evidence; politics; law; and business.
2009	N11 N70 O32	Lampe, Ryan L., and Petra Moser. 2009. <i>Do Patent Pools Encourage Innovation? Evidence from the 19th-Century Sewing Machine Industry</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15061. Members of a patent pool agree to use a set of patents as if they were jointly owned by all members and license them as a package to other firms. Regulators favor pools as a means to encourage innovation: Pools are expected to reduce litigation risks for their members and lower license fees and transactions costs for other firms. This paper uses the example of the first patent pool in U.S. history, the Sewing Machine Combination (1856-1877) to perform the first empirical test of the effects of a patent pool on innovation. Contrary to theoretical predictions, the sewing machine pool appears to have discouraged patenting and innovation, in particular for the members of the pool. Data on stitches per minute, as an objectively quantifiable measure of innovation, confirm these findings. Innovation for both members and outside firms slowed as soon as the pool had been established and resumed only after it had dissolved.

2010	C93 J10	Flory, Jeffrey A., Andreas Leibbrandt, and John A. List. 2010. <i>Do Competitive Work Places Deter Female Workers? A Large-Scale Natural Field Experiment on Gender Differences in Job-Entry Decisions</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 16546. Recently an important line of research using laboratory experiments has provided a new potential reason for why we observe gender imbalances in labor markets: men are more competitively inclined than women. Whether, and to what extent, such preferences yield differences in naturally-occurring labor market outcomes remains an open issue. We address this question by exploring job-entry decisions in a natural field experiment where we randomized nearly 7,000 interested job-seekers into different compensation regimes. By varying the role that individual competition plays in setting the wage, we are able to explore whether competition, by itself, can cause differential job entry. The data highlight the power of the compensation regime in that women disproportionately shy away from competitive work settings. Yet, there are important factors that attenuate the gender differences, including whether the job is performed in teams, whether the job task is female-oriented, and the local labor market.
2010	G01	Posner, Richard A. 2010. "On the Receipt of the Ronald H. Coase Medal: Uncertainty, the Economic Crisis, and the Future of Law and Economics." <i>American Law and Economics Review</i> , 12(2): 265-79. This paper discusses problems in economic analysis of law arising from the increased specialization of academic practitioners of this subfield of economics, which takes as its subject a uniquely fluid, contestable, and inveterately normative subject--namely, the law. As a result of the limited acquaintance of most economic analysts of law with macroeconomic theory (owing to their specialization in relevant fields of microeconomics), they have (with important exceptions, however) had trouble contributing to the understanding of the recent financial crisis. The crisis underscores the importance, across a range of issues including financial and antitrust law, of the economics of uncertainty (in the Knight-Keynes sense) and organization economics.
2010	I11	Cook, Joseph P., Graeme Hunter, and John A. Vernon. 2010. <i>Generic Utilization Rates, Real Pharmaceutical Prices, and Research and Development Expenditures</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15723. Generic utilization rates have risen substantially since the enactment of The Drug Price Competition and Patent Term Restoration Act (Hatch-Waxman) in 1984. In the year Hatch-Waxman was enacted, generic utilization rates were 19 percent; in contrast, today, the generic utilization rate is approximately 70 percent. Striking a balance between access to existing medicines and access to yet-to-be-discovered (and developed) drugs, through research incentives, was the principal objective of this landmark legislation. However, given the current rate of generic utilization, it seems plausible, if not likely, that any balance achieved by the 1984 Act has since shifted away from research incentives and towards improved access, ceteris paribus. Among other factors, recent mandatory substitution laws in most states have driven up generic utilization rates. In the current paper, we employ semi-annual data from 1992 to 2008 to examine the link between generic utilization rates and real U.S. prescription drug prices. This link is important because previous research has identified a causal relationship between real drug prices in the U.S. and industry-level R&D investment intensity. We identify a statistically significant, positive relationship between generic utilization rates in the U.S. and real U.S. prescription drug prices. Specifically, we estimate an elasticity of real drug prices to generic utilization rates of -0.15. This finding, when coupled with previous empirical work on the determinants of pharmaceutical R&D intensity, suggests an elasticity of R&D to generic utilization rates of about 0.090. While the magnitude of this elasticity is modest, as theory would predict--the effect of greater generic erosion of brand sales at patent expiration is heavily discounted due to the long time horizon to generic erosion when an R&D project is in clinical development. However, because there has been a very substantial increase in generic utilization rates since 1984, the impact on R&D is nevertheless quite large. We explore this and other issues in the current paper.
2010	I11	Dave, Dhaval, and Henry Saffer. 2010. <i>The Impact of Direct-to-Consumer Advertising on Pharmaceutical Prices and Demand</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15969. Expenditures on prescription drugs are one of the fastest growing components of national health care spending, rising by almost three-fold between 1995 and 2007. Coinciding with this growth in prescription drug expenditures has been a rapid rise in direct-to-consumer advertising (DTCA), made feasible by the Food and Drug Administration's (FDA) clarification and relaxation of the rules governing broadcast advertising in 1997 and 1999. This study investigates the separate effects of broadcast and non-broadcast DTCA on price and demand, utilizing an extended time series of monthly records for all advertised and non-advertised drugs in four major therapeutic classes spanning 1994-2005, a period which enveloped the shifts in FDA guidelines and the large expansions in DTCA. Controlling for promotion aimed at physicians, results from fixed effects models suggest that broadcast DTCA positively impacts own-sales and price, with an estimated elasticity of 0.10 and 0.04 respectively. Relative to broadcast DTCA, non-broadcast DTCA has a smaller impact on sales (elasticity of 0.05) and price (elasticity of 0.02). Simulations suggest that the expansion in broadcast DTCA may be responsible for about 19 percent of the overall growth in prescription drug expenditures over the sample period, with over two-thirds of this impact being driven by an increase in demand as a result of the DTCA expansion and the remainder due to higher prices.
2010	J10	THE SAME AS C93 Flory, Jeffrey A., Andreas Leibbrandt, and John A. List. 2010. <i>Do Competitive Work Places Deter Female Workers? 2010	J43 L23 Q10 Q15 Q24	Alston, Lee J., and Bernardo Mueller. 2010. <i>Property Rights, Land Conflict and Tenancy in Brazil</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15771. Tenancy has been a means for labor to advance their socio-economic condition in agriculture yet in Brazil and Latin America, tenancy rates are low compared to the U.S. and the OECD countries. We test for the importance of insecure property rights in Brazil on the reluctance of landowners to rent because of a fear of expropriation arising from land reform. Since 1964, the Land Statute in Brazil has targeted rental lands for redistribution. The expropriation of farms, resulting from land conflicts, is currently at the heart of land reform policies in Brazil. Land conflicts are a means for landless peasants to bring attention to land reform agencies for the need for redistribution. Land conflicts may also signal to landowners that their land is at risk for expropriation. Utilizing data across all counties in Brazil, we found that land conflicts reduce the likelihood of tenancy. This result implies: a reduction in agricultural efficiency; a reduction in the well-being of potential tenants, now landless peasants; and an expansion of the agricultural frontier through deforestation. Because of endogeneity between land tenancy and land conflict we instrument land conflict with Catholic priests.

National Bureau of Economic Research, Inc, NBER Working Papers: 15697. During Britain's industrialization, Parliament operated a forum where rights to land and resources could be reorganized. This venue enabled landholders and communities to exploit economic opportunities that could not be accommodated by the inflexible rights regime inherited from the past. In this essay, historical evidence, archival data, and statistical analysis demonstrate that Parliament increased the number of acts reorganizing property rights in response to increases in the demand for such acts. Tests with placebo groups confirm the robustness of this result. This evidence indicates that Parliament responded elastically to changes in the public's demand for reorganizing property rights. Parliament's efforts to adapt property rights to modern economic conditions may have accelerated Britain's economic ascent
2010	O53 P36	Xu, Cheng-Gang. 2010. <i>The Institutional Foundations of China's Reforms and Development</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7654. China's economic reforms have resulted in spectacular growth and poverty reduction. However, China's institutions look ill-suited to achieve such a result, and they indeed suffer from serious shortcomings. To solve "China puzzle" this paper analyses China's institution--a regionally decentralized authoritarian system. The central government has control over personnel, whereas sub-national governments run the bulk of the economy; and they initiate, negotiate, implement, divert and resist reforms, policies, rules and laws. China's reform trajectories have been shaped by regional decentralization. Spectacular performance on the one hand and grave problems on the other hand are all determined by this governance structure.
2010	P24	Li, Weigang, Jixiang Chen, and Dongying Wu. 2010. "Legal Institution Building and Economic Development in China." <i>International Journal of Development Issues</i> , 9(1): 43-52. The purpose of this paper is to explore the role of legal institution building during the process of China's economic miracle of past three decades. To engage with the issue, the paper builds on historical research and comparable approaches which explore the interactions of legal institution building and economic reforms in China. Legal institution building is not only a passive factor that can make up market failures in developing countries. Studies on China case find that legal institution building in China has often been taken as a tool to realize the ruling party's political commitment of economic development.

Many organizations use procurement tenders to buy large amounts of goods and services. Especially in the public sector the use of these reverse auctions has grown rapidly over the past decades. For the (reverse) unit price auction experience as well as theory have shown that they can attract skewed/unbalanced bids, i.e. bids where the price structure is distorted to take advantage of estimation errors. This paper shows that by either allowing for some secrecy or post tender competition, incentives in unit price auction change in such a way that can make bid skewing disappear.
2011	D49 L44 L49 M00	Ghosal, Vivek. 2011. <i>The Law and Economics of Enhancing Cartel Enforcement: Using Information from Non-Cartel Investigations to Prosecute Cartels</i> . CESifo Group Munich, CESifo Working Paper Series: 3506. I present the following proposal: information revealed during non-cartel investigations by competition law enforcement authorities, such as evaluation of M&As or investigation of monopolization (dominance) conduct, should be directly used to investigate and prosecute cartels. Currently, in several jurisdictions, information acquired in, for example, a M&A investigation typically cannot be directly used for a cartel case due to the underlying statutes and the legal and administrative procedures that govern information use. Reviewing the management and corporate strategy literature, I note that M&As form a vital part of firms' core business strategy, with the longer-run strategic aspects being more important. These longer-run strategies could be jeopardized if the firms were engaging in collusion, as the likelihood of detection and prosecution would increase under the proposed rule change, which would punish bad (collusive) behavior. I argue that irrespective of exactly how many cartels are actually prosecuted via this channel, the proposal has the likelihood of creating a meaningful deterrence effect. I also discuss the potential downsides related to Type 1 errors and administrative costs. Overall, I argue that the proposed rule change could increase the efficiency and effectiveness of cartel enforcement, and open an additional front in the fight against hardcore cartels that operate within jurisdictions as well as internationally.
2011	D85	Mennella, Antonella. 2011. <i>Informal Social Networks, organised crime and local labour market</i> . Department of Economics - University Roma Tre, Departmental Working Papers of Economics - University 'Roma Tre': 126. This paper's purpose is to show a new informal social networks interpretation, according to which social networks change their nature if they are located in social contexts where organised crime is relevant. Here the perusal of a social network is just a necessary condition to enter the labour market rather than a deliberate choice. Moreover this labour market is the ground where favouritisms and social and electoral consensus policies take place

We document that trust in public institutions--and particularly trust in banks, business and government--has declined over recent years. U.S. time series evidence suggests that this partly reflects the procyclical nature of trust in institutions. Cross-country comparisons reveal a clear legacy of the Great Recession, and those countries

Year	DE	Title and Abstract
		whose unemployment grew the most suffered the biggest loss in confidence in institutions, particularly in trust in government and the financial sector. Finally, analysis of several repeated cross-sections of confidence within U.S. states yields similar qualitative patterns, but much smaller magnitudes in response to state-specific shocks.
2011	F20	Fiaschi, Davide, Elisa Giuliani, Chiara Macchi, Michelangelo Murano, and Oriana Perrone. 2011. <i>To abuse or not to abuse. This is the question. On whether Social Corporate Responsibility influences human rights abuses of large Multinational Corporations (1990-2006)</i>. Laboratory of Economics and Management (LEM), Sant'Anna School of Advanced Studies, Pisa, Italy, LEM Papers Series. We are currently observing an apparent paradox. On the one hand there is growing evidence about corporate misbehaviour and Multinational Corporations (MNCs)' violations of human rights. On the other, the largest MNCs are showing an unprecedented level of commitment to 'save the world' through their Corporate Social Responsibility (CSR) initiatives and investments. In this scenario, how much does CSR contribute to curb human rights abuses of the largest worldwide MNCs? This paper investigates this question using a novel dataset of 135 MNCs operating in several sectors over the period 1990-2006. We apply Probit estimations to our data and show that MNCs that have adopted CSR initiatives have higher probabilities of being involved in alleged human rights abuses, but such probability decreases over time, as they accumulate experience in CSR. This result is found for human rights abuses for which MNCs are directly held accountable, whereas our evidence suggests that CSR experience does not curb corporate complicity in abuses committed by third parties. The paper concludes by discussing the normative implications of this result and by suggesting directions for further research.

2011	G33	Mayer, Christopher J., Edward Morrison, Tomasz Piskorski, and Arpit Gupta. 2011. <i>Mortgage Modification and Strategic Behavior: Evidence from a Legal Settlement with Countrywide</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 17065. We investigate whether homeowners respond strategically to news of mortgage modification programs. We exploit plausibly exogenous variation in modification policy induced by U.S. state government lawsuits against Countrywide Financial Corporation, which agreed to offer modifications to seriously delinquent borrowers with subprime mortgages throughout the country. Using a difference-in-difference framework, we find that Countrywide's relative delinquency rate increased thirteen percent per month immediately after the program's announcement. The borrowers whose estimated default rates increased the most in response to the program were those who appear to have been the least likely to default otherwise, including those with substantial liquidity available through credit cards and relatively low combined loan-to-value ratios. These results suggest that strategic behavior should be an important consideration in designing mortgage modification programs.
2011	H26 J53	Andrews, Dan, Aida Caldera Sanchez, and Asa Johansson. 2011. <i>Towards a Better Understanding of the Informal Economy</i>. OECD Publishing, OECD Economics Department Working Papers: 873. It is important to understand the nature and drivers of informality, as its social and economic consequences are wide-ranging. This paper critically reviews the current state of cross-country research on informality and discusses how existing data sources can be more effectively employed and extended to shed light on the link between public policies and informality. A number of interesting findings emerge. The informal economy is multi-faceted and a wide range of definitions and measures are required to capture its diverse activities. However, most existing--and widely used--cross-country estimates of informality suffer from large measurement problems, which reduce the reliability of existing empirical evidence on the extent and drivers of informality. Accordingly, future research on informality should be closely linked to obtaining better data, particularly at the household and firm levels.
2011	H30 L70	Holland, Stephen P., Jonathan E. Hughes, Christopher R. Knittel, and Nathan C. Parker. 2011. <i>Some Inconvenient Truths About Climate Change Policy: The Distributional Impacts of Transportation Policies</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 17386. Instead of efficiently pricing greenhouse gases, policy makers have favored measures that implicitly or explicitly subsidize low carbon fuels. We simulate a transportation-sector cap & trade program (CAT) and three policies currently in use: ethanol subsidies, a renewable fuel standard (RFS), and a low carbon fuel standard (LCFS). Our simulations confirm that the alternatives to CAT are quite costly--2.5 to 4 times more expensive. We provide evidence that the persistence of these alternatives in spite of their higher costs lies in the political economy of carbon policy. The alternatives to CAT exhibit a feature that make them amenable to adoption--a right skewed distribution of gains and losses where many counties have small losses, but a smaller share of counties gain considerably--as much as \$6,800 per capita, per year. We correlate our estimates of gains from CAT and the RFS with Congressional voting on the Waxman-Markey cap & trade bill, H.R. 2454. Because Waxman-Markey (WM) would weaken the RFS, House members likely viewed the two policies as competitors. Conditional on a district's CAT gains, increases in a district's RFS gains are associated with decreases in the likelihood of voting for WM. Furthermore, we show that campaign contributions are correlated with a district's gains under each policy and that these contributions are correlated with a Member's vote on WM.
2011	I21	Fryer, Roland G., Jr. 2011. <i>Creating "No Excuses" (Traditional) Public Schools: Preliminary Evidence from an Experiment in Houston</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 17494. The racial achievement gap in education is an important social problem to which decades of research have yielded no scalable solutions. Recent evidence from "No Excuses" charter schools--which demonstrates that some combination of school inputs can educate the poorest minority children--offers a guiding light. In the 2010-2011 school year, we implemented five strategies gleaned from best practices in "No Excuses" charter schools--increased instructional time, a more rigorous approach to building human capital, more student-level

Year	DE	Title and Abstract
		differentiation, frequent use of data to inform instruction, and a culture of high expectations--in nine of the lowest performing middle and high schools in Houston, Texas. We show that the average impact of these changes on student achievement is 0.276 standard deviations in math and 0.059 standard deviations in reading, which is strikingly similar to reported impacts of attending the Harlem Children's Zone and Knowledge is Power Program schools--two strict "No Excuses" adherents. The paper concludes with a speculative discussion of the scalability of the experiment.
2011	J31	Berlinguer, Aldo. 2011. "Sulla vexata quaestio delle tariffe professionali forensi. (The Never Ending Story of Minimum Fee Schedules for Lawyers. With English summary.)." <i>Mercato Concorrenza Regole</i>, 13(1): 65-92. This article aims at summarizing the long debated issue of minimum fee schedules for lawyers. This controversial matter has been fiercely argued in recent years between those who believe that fixed prices pursue only the economic interest of lawyers and those who think that mandatory schedules may help assuring a minimum degree of quality. Fixed prices were a linchpin factor of the old regulatory framework of the legal profession enacted during the fascist regime. Since then, many political, economic and social changes have occurred in over 80 years of Italian history, including the strong liberalization brought about by European institutions namely in the area of competition law and the implementation of the single market. That is why minimum fee schedules have been repealed in 2006, although today a recent bill provides for their restoration. The proposal is however highly questionable given the large imperfections of the market of lawyers, the credence nature of legal services, the strong presence of mechanisms of adverse selection and moral hazard. It would thus be preferable to link legal fees to capacity, endeavour and the beneficial effects of lawyers' work on client expectations.
2011	J47 N25 Y20	Fan, Joseph, Randall Morck, and Bernard Yeung. 2011. <i>Capitalizing China</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17687. Despite a vast accumulation of private capital, China is not embracing capitalism. Deceptively familiar capitalist features disguise the profoundly unfamiliar foundations of "market socialism with Chinese characteristics." The Chinese Communist Party (CCP), by controlling the career advancement of all senior personnel in all regulatory agencies, all state-owned enterprises (SOEs), and virtually all major financial institutions state-owned enterprises (SOEs), and senior Party positions in all but the smallest non-SOE enterprises, retains sole possession of Lenin's Commanding Heights. This manuscript introduces the chapters comprising the NBER volume <i>Capitalizing China</i> (Fan and Morck, eds. 2012), which examine China's high savings rate, banking system, financial markets, financial regulations, corporate governance, and public finances; and consider policy alternatives the CCP might consider if its goal is China's elevation into the ranks of high income countries.

2011	N12 Q00	Moser, Petra, and Paul W. Rhode. 2011. <i>Did Plant Patents Create the American Rose?</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16983. The Plant Patent Act of 1930 was the first step towards creating property rights for biological innovation: it introduced patent rights for asexually-propagated plants. This paper uses data on plant patents and registrations of new varieties to examine whether the Act encouraged innovation. Nearly half of all plant patents between 1931 and 1970 were for roses. Large commercial nurseries, which began to build mass hybridization programs in the 1940s, accounted for most of these patents, suggesting that the new intellectual property rights may have helped to encourage the development of a commercial rose breeding industry. Data on registrations of newly-created roses, however, yield no evidence of an increase in innovation: less than 20 percent of new roses were patented, European breeders continued to create most new roses, and there was no increase in the number of new varieties per year after 1931.

2012	F00 F01	Shachmurove, Yochanan, and Alojzy Nowak. 2012. <i>Failing Institutions Are at the Core of the Euro Crisis</i> . Penn Institute for Economic Research, Department of Economics, University of Pennsylvania, PIER Working Paper Archive. The European Union was created to promote economic, cultural, and regional prosperity. However, the Global Financial Crisis demonstrates that its economic institutions are flawed. While each sovereign state in the Eurozone forfeits the control of its money supply, the lack of a common fiscal institution allows individual countries to pursue their own political and financial agendas. The on-going economic hardship emphasizes the critical role of economic and political institutions. This paper analyzes both beneficial and perverse incentives of joining the European Union, discusses the consequences of deficient economic institutions and provides potential solutions towards the alleviation of the crisis.

2012	H89 M59	Fremeth, Adam, Brian Kelleher Richter, and Brandon Schaufele. 2012. <i>Campaign Contributions over CEOs' Careers</i> . University of Ottawa, Department of Economics, Working Papers: 1203E. Individuals dominate money in politics, accounting for over 90% of campaign contributions, but studies of individuals' giving are scarce. We show that individuals increase their personal contributions dramatically when they assume leadership roles at organizations such as labor unions, non-profits, and firms. Using a newly constructed dataset that focuses on personal contributions, we exploit variation in the leadership status of all 2,198 individuals who were S&P 500 CEOs at any point between 1991 and 2008 to identify a \$4,000 jump in personal political giving when individuals become CEOs. Despite giving more money to more candidates, more political action committees (PACs), and more parties, active CEOs' partisan orientations remain largely unchanged. Falsification tests of an underlying identification assumption demonstrate that these patterns hold whether an individual is promoted to CEO internally or appointed externally. While some fraction of CEOs' contributions can be attributed to long-standing preferences, willingness, and ability to contribute, the striking change in behavior we identify cannot be explained by these factors alone.
2012	L94 Y80	Thomas, Anthony, and Raphael J. Heffron. 2012. <i>Third Party Nuclear Liability: The Case of a Supplier in the United Kingdom</i> . Faculty of Economics, University of Cambridge, Cambridge Working Papers in Economics. The law surrounding third party nuclear liability is important to all parties in the nuclear supply chain whether they are providing decommissioning services, project management expertise or a new reactor. This paper examines third party nuclear liability, and in particular, in relation to a Supplier in the nuclear energy sector in the United Kingdom (UK). The term "Supplier" is used in this paper and, depending on the context, is intended to cover all parties in the supply chain providing services, equipment or technology (e.g. the EPC contractor, the reactor vendor, the owner engineer, architect engineer, or the Parent Body Organisation responsible for decommissioning one the UK legacy nuclear installations). With a return to nuclear new build expected in the UK, the clarification of the position of a Supplier and their potential to be liable for nuclear damage is of vital importance for a functioning nuclear supply chain. The research explores the nuclear liability legislation in the UK and identifies the gaps and limitations in existence. The latter problems pose a risk for the Suppliers to operators in the nuclear energy industry, and consequently some approaches that can mitigate those risks are advanced and assessed. The nuclear liability regime in the UK is largely based on international conventions and hence, the risks posed to the Supplier in the UK also exist for Suppliers in other countries. There are resource shortages already in the nuclear energy industry, and currently the Supplier to the nuclear industry is over exposed. This situation needs to be resolved and a new legal definition of nuclear damage enacted. Further, the level of liability exposure for a UK Supplier involved in a nuclear project outside the UK needs to be reviewed as there remains too much ambiguity regarding liability in an international nuclear law context.
2012	M51	Oyer, Paul, and Scott Schaefer. 2012. <i>Firm/Employee Matching: An Industry Study of American Lawyers</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18620. We study the sources of match-specific value at large American law firms by analyzing how graduates of law schools group into law firms. We measure the degree to which lawyers from certain schools concentrate within firms and then analyze how this agglomeration can be explained by "natural advantage" factors (such as geographic proximity) and by productive spillovers across graduates of a given school. We show that large law firms tend to be concentrated with regard to the law schools they hire from and that individual offices within these firms are substantially more concentrated. The degree of concentration is highly variable, as there is substantial variation in firms' hiring strategies. There are two main drivers of variation in law school concentration within law offices. First, geography drives a large amount of concentration, as most firms hire largely from local schools. Second, we show that school-based networks (and possibly productive spillovers) are important because partners' law schools drive associates' law school composition even controlling for firm, school, and firm/school match characteristics and when we instrument for partners' law schools.

2012	N22	Lampe, Ryan L., and Petra Moser. 2012. <i>Do Patent Pools Encourage Innovation? Evidence from 20 U.S. Industries under the New Deal</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18316. Patent pools, which allow competing firms to combine their patents, have emerged as a prominent mechanism to resolve litigation when multiple firms own patents for the same technology. This paper takes advantage of a window of regulatory tolerance under the New Deal to investigate the effects of pools on innovation within 20 industries. Difference-in-differences regressions imply a 16 percent decline in patenting in response to the creation of a pool. This decline is driven by technology fields in which a pool combined patents for substitute technologies by competing firms, suggesting that unregulated pools may discourage innovation by weakening competition to improve substitutes.

What is the optimal system of intellectual property rights to encourage innovation? Empirical evidence from economic history can help to inform important policy questions that have been difficult to answer with modern

Year	DE	Title and Abstract
		data: 1) Does the existence of strong patent laws encourage innovation? And 2) May patent laws influence the direction--as opposed to the rate--of technical change? Economic history can also help to shed light on the effectiveness of policy tools that are intended to address problems with the current patent system: 3) How do patent pools, as a mechanism to mitigate litigation risks, influence the creation of new technologies? 4) Will compulsory licensing, as a mechanism to improve access to essential innovations in developing countries, discourage innovation in the developing countries? This essay summarizes results of existing research and highlights promising areas for future research.
2012	P25	Ha, Thai Thanh, and Le Thi Van Hanh. 2012. "Identifying the Public Administration Reform Performance through the Lens of Provincial Competitiveness Index and GDP per Capita in Vietnam." <i>Modern Economy</i> , 3(1): 11-15. This study was conducted to test the hypothesis of whether the public administration reform (PAR) and provincial competitiveness could be causally linked to the GDP welfare per capita in Vietnam. By adopting the factor analysis and then the natural logarithm linear regression, the author found out that there were causality linkages between those above mentioned parameters. Namely, legal institutions were the main huddles for GDP per head, while public administration reform services and public services delivery exert positive impacts on GDP per capita. The dynamism of provincial leadership was also positively influential to the GDP outcome for Vietnamese citizens. Conclusions and recommendations were drawn for Vietnamese policy makers to modernize the public administration reform process.

2013	C91	Benoit, Jean-Pierre, Roberto Gabiati, and Emeric Henry. 2013. <i>Rational parasites</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9351. Understanding the impact of legal protection on investment is of major importance. This paper provides a framework for addressing this issue, and shows that investment may actually be higher in the absence of legal protection. Focusing on the application to innovation, in an environment where an innovator (the host) repeatedly faces the same imitators (parasites), we show that investment can take place even without patent protection, as parasites limit their imitation to preserve the innovator's incentives to invest. We show further that an innovator might be more active without legal protection: it is forced to increase its investment to keep the parasites satisfied and, thus, cooperative. We provide experimental evidence consistent with the theoretical results: in the experiment, investment levels with and without legal protection are comparable, and sometimes greater without patents. Our framework is general enough to apply to other situations such as investment in developing countries, commons' management and long-distance trade.
2013	C91	Gerber, Anke, Andreas Nicklisch, and Stefan Voigt. 2013. <i>Strategic Choices for Redistribution and the Veil of Ignorance: Theory and Experimental Evidence</i> . CESifo Group Munich, CESifo Working Paper Series: 4423. We provide experimental evidence on the emergence of redistributive societies. Individuals first vote on redistribution by feet and then learn their productivity and invest. We vary the individuals' information about their productivities at the time when they choose a distribution rule and find that there is more redistribution behind a veil of ignorance than under full information. However, the scope of redistribution is less sensitive towards the degree of uncertainty than predicted. For all degrees of uncertainty, we find a coexistence of libertarianism and redistribution as well as incomplete sorting, so that heterogeneous redistribution communities turn out to be sustainable.
2013	E40 E42 M40	Peacock, Mark S. 2013. "Accounting for Money: The Legal Presuppositions of Money and Accounting in Ancient Greece." <i>Business History</i> , 55(1-2): 280-301. This paper aims to extend the purview of Business History to the ancient world by exploring the hypothesis that the development of money was stimulated by legal institutions which regulated payment of compensation for torts. The hypothesis was propounded by Philip Grierson who argued that the Germanic institution of wergeld established the earliest concept of value which underlies money's function as a unit of account. It considers Grierson's thesis in the context of archaic Greece. Although archaic Greek law developed differently from the Germanic wergeld, the legal-political sphere in Greece provides decisive impetus to the development of money and accounting. The article examines the role of commerce in archaic Greece and its relationship to monetisation.
2013	F14	Yang, Junsok. 2013. "The Effect of International Trade on Rule of Law." <i>Journal of East Asian Economic Integration</i> , 17(1): 27-53. In this paper, we look at the relationship between international trade and the rule of law, using the World Justice Project Rule of Law Index, which include index figures on human rights, limits on government powers, transparency and regulatory efficiency. Based on regression analyses using the rule of law index figures and international trade figures (merchandise trade, service trade, exports and imports as percentage of GDP,) international trade and basic human rights seem to have little relationship; but trade has a close positive relationship with strong order and security. Somewhat surprisingly, regulatory transparency and effective implementation seems to have little or no effect on international trade and vice versa. International trade shows a clear positive relationship with the country's criminal justice system, but the relationship with the civil justice system is not as clear as such. For regulatory implementation and civil justice, services trade positively affect these institutions, but these institutions in turn affect exports more strongly than services trade. Finally, the effect of trade on rule of law is stronger on a medium to long term (10-20 year) time horizon.
2013	F36	Antenbrink, Fabian. 2013. "Legal Developments." <i>Journal of Common Market Studies</i> , 51(0): 139-54.
2013	G10	Bernholz, Peter. 2013. "Ordnungspolitik heute. ("Ordnungstheorie" Today. With English summary.)." <i>ORDO: Jahrbuch für die Ordnung von Wirtschaft und Gesellschaft</i> , 64(0): 465-74. Many economists consider "Ordnungstheorie" to be a somewhat outmoded specific German approach in economics. In this paper it is shown that this is a totally misleading perspective, and that many innovative approaches in economics like Public Choice, Institutional Economics and Law and Economics are in fact belonging to the field of inquiry called "Ordnungstheorie" in German. Moreover, it is demonstrated that a number of damaging developments during the present crisis of financial markets and over indebtedness of states are caused by a neglect of corresponding analyses.

Year	DE	Title and Abstract
		in a typical dispute face incentives similar to those in the classic prisoner's dilemma game? In this paper, we explore whether the costs and benefits of legal representation are such that each party seeks legal representation in the hope of exploiting the other party, while knowing full well that failing to do so will open up the possibility of being exploited. The paper first shows how it is possible to test for the presence of such an incentive structure in a typical dispute resolution system. It then reports estimates of the incentives for the parties to obtain legal representation in wage disputes that were settled by final-offer arbitration in New Jersey. The paper also reports briefly on similar studies of data from discharge grievances, court-annexed disputes in Pittsburgh, and child custody disputes in California. In each case, the data provide evidence that the parties face strong individual incentives to obtain legal representation which makes the parties jointly worse off. Using our New Jersey data, we find that expert agents may well have played a productive role in moderating the biases of their clients, but only early on in the history of the system. Over time, the parties slowly evolved to a non-cooperative equilibrium where the use of lawyers becomes nearly universal, despite the fact that agreeing not to hire lawyers is cheaper and does not appear to alter arbitration outcomes.
2013	M40	THE SAME AS E40 Peacock, Mark S. 2013. "Accounting for Money: The Legal Presuppositions of Money and Accounting in Ancient Greece." <i>Business History</i> , 55(1-2): 280-301.
2013	R10	Coco, Antonella, and Pietro Fantozzi. 2013. "Crisi della legalità e pratiche neopatrimoniali. (Crisis of Legality and Neopatrimonial Practices. With English summary.)." <i>Sociologia del Lavoro</i> , 0(131): 37-56. This paper presents the results of a survey regarding social construction of legality and based on the representations of local elites (politicians, entrepreneurs, civil servants, managers of the public health sector) in Italian regions (Lombardia, Toscana, Lazio, Calabria, Sicilia). The analysis concerns neopatrimonial tendencies, explored through illegal practices entailing personal use of public and private administrations' resources by power positions' holders. The paper shows evidence of the comparison between the private and the public sector and it puts attention to the different categories of interviewees. All considered behaviours are oriented towards illegality, but in some cases they are expressed in terms of crimes and illicit conducts, in others they refers to cultures and practices of manipulation. This distinction permits to highlight similarities and differences among Italian regions. Furthermore the analysis takes into consideration individual and institutional strategies contrasting illegality and private use of public resources.

Table K10.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	D21 D86 J30 M50	Krakel, Matthias, and Dirk Sliwka. 2006. <i>Should You Allow Your Agent to Become Your Competitor?—On Non-Compete Agreements in Employment Contracts</i> . University of Bonn, Germany, Bonn Econ Discussion Papers. We discuss a principal-agent model in which the principal has the opportunity to include a non-compete agreement in the employment contract. We show that if the agent faces limited liability and there is an incentive problem the principal prefers not to impose such a clause if and only if the principal's profits from entering the market are sufficiently large relative to the agent's outside option. If the principal can impose a fine on the agent for leaving the firm, she will never prefer a non-compete agreement.
2006	E40	Grubb, Farley. 2006. "The US Constitution and Monetary Powers: An Analysis of the 1787 Constitutional Convention and the Constitutional Transformation of the US Monetary System." <i>Financial History Review</i> , 13(1): 43-71. The monetary powers embedded in the U.S. Constitution were revolutionary and led to a watershed transformation in the nation's monetary structure. They included determining what monies could be legal tender, who could emit fiat paper money, and who could incorporate banks. How the debate at the 1787 constitutional convention over these powers evolved and led the founding fathers to the specific powers adopted is presented and deconstructed. Why they took this path rather than replicate the successful colonial system and why they codified such powers into supreme law rather than leaving them to legislative debate and enactment are addressed.

2006	G34 G38	Mueller, Dennis C. 2006. "Corporate Governance and Economic Performance." <i>International Review of Applied Economics</i> , 20(5): 623-43. What is the best corporate governance system? Is the Germanic corporate governance system the best? The Japanese? The Anglo-Saxon? This article reviews some of the relevant literature for answering this question. Particular attention is devoted to corporate governance problems in developing countries. It emphasizes that the nature of problems that corporate governance systems must deal with can be expected to vary with the state of development of a country. Central to any discussion of corporate governance is the question of how well a particular set of institutions mitigates the various principal/agent problems that arise in a firm. The article thus reviews the basic principal/agent problem and discusses its relevance for countries in different stages of development. It examines the advantages and disadvantages of each type of corporate governance system in mitigating principal/agent problems, and reviews the relevant empirical evidence for assessing their performance.
2006	H74	CV: Gomez, Eduardo J. 2006. "The Historical Institutional Genesis of Fiscal Decentralization Management: Lessons from Brazil." Stanford, Calif.: Hoover Institution Press, Education Next Books. Nine papers examine the issues involved in school funding adequacy in light of recent court cases and explores the effect that judicial actions regarding school finance have had on student performance. Papers discuss Campaign for Fiscal Equity v. New York--the march of folly (Sol Stern); the legal backdrop to adequacy (Alfred A. Lindseth); high-poverty, high-performance schools, districts, and states (Herbert J. Walberg); high-spending, low-performing school districts (Williamson M. Evers and Paul Clopton); thorough and efficient private and public schools (Paul E. Peterson); whether anyone can say what's adequate if nobody knows how money is spent now (Marguerite Roza and Paul T. Hill); science violated--spending projections and the "costing out" of an adequate education (Eric A. Hanushek); adequacy beyond dollars--the productive use of school time (E. D. Hirsch Jr.); and funding for performance (Koret Task Force).

"Capitalizing on Segregation, Pretending Neutrality: College Admissions and the Texas Top 10% Law." <i>American Law and Economics Review</i>, 8(2): 312-46. In response to the judicial ban on the use of race-sensitive admissions, the seventy-fifth Texas legislature passed H.B. 588, which guarantees admission to any Texas public college or university for all seniors graduating in the top decile of their class. We show that high levels of residential and school segregation facilitate minority enrollment at selective public institutions under the uniform admission law because black and Hispanic students who rank at the top of their class disproportionately hail from minority-dominant schools. However, qualifying minority students' lower likelihood of college enrollment at the flagships reflects concentrated disadvantage rather than segregation per se.

The Constitutional law on gender parity in the labour market registered a smaller evolution in Italy than in Europe and in the rest of Western countries, so that the present Italian primary laws are somehow more backward than they used to be 60 years ago. The European Union, however, is pushing us in the right direction. Furthermore, the gap between the laws on gender parity and the real condition of men and women in the Italian labour market is large. If one observes the male-female effective differentials in access, treatment, wages, Italian women are penalized by cultural traditions and the home and children caretaking. Compared with the rest of Europe, the situation of Italian female relative to male workers is particularly discriminated in the career paths and in the horizontal and vertical segregation.

2006	P43	Ahmed, Habib. 2006. "Islamic Law, Adaptability and Financial Development." <i>Islamic Economic Studies</i>, 13(2): 79-101. A large literature contends that legal systems that adapt efficiently to meet the contracting needs of the economy foster financial sector development. The paper discusses the adaptability features of Islamic law related to commercial transactions (Islamic commercial law) in light of contemporary financial system. After discussing the nature and way the common and civil law traditions can evolve, the paper discusses the history and the adaptability features of Islamic law. Given the principle of permissibility, Islamic commercial law can evolve within the limits imposed by Shari'ah. Recent history of the growth of the Islamic financial sector based on new rulings of Shari'ah scholars is an indicator of the adaptability of Islamic law to changed situations. While Islamic law can evolve, other elements of the legal infrastructure like laws and statutes and dispute settlement institutions also need to be strengthened. The adaptability features of Islamic law along with the strengthening the legal infrastructure are vital components of the development of the Islamic financial sector.
2006	Q22	Blumm, Michael C., and James Brunberg. 2006. "Not Much Less Necessary . . . Than the Atmosphere They Breathed': Salmon, Indian Treaties, and the Supreme Court--A Centennial Remembrance of <i>United States v. Winans</i> and Its Enduring Significance." <i>Natural Resources Journal</i>, 46(2): 489-546. A century ago, the Supreme Court decided <i>United States v. Winans</i> , which upheld the Indian treaty right to cross private property to access traditional fishing grounds in the Columbia River. The <i>Winans</i> decision protected critically important cultural and economic practices from white encroachment. The landmark case came as a surprise in an era committed to Indian assimilation and allotment. This article examines the case, its context, its participants, and its contributions to Indian natural resources law. The dispute took place at Celilo Falls, the most important Indian fishing site in the Columbia Basin, although the government agents and attorneys viewed it as a test case emblematic of the clash of cultures taking place throughout the Northwest at the end of the nineteenth century. In fact, the article considers in some depth two predecessor cases involving the same tract of land at issue in <i>Winans</i> and suggests that the Indian agents who pursued the case did so because they saw treaty fishing as an economic lifeline for Indians who had failed at agrarianism on-reservation. The district court issued a confusing array of injunctions and opinions that ultimately culminated in dismissal of the case some eight years after it was filed. A direct appeal to the Supreme Court produced an opinion memorable almost as much for its poetic language as for its result. Justice Joseph McKenna, not otherwise known for his lyricism, wrote that fishing at Celilo Falls was "not much less necessary to the Indians than the atmosphere they breathed" and proceeded to rule that their treaty rights included the imposition of a "servitude, a right in land" over lands necessary to access their traditional fishing sites. In response to the lower court's conclusion that the treaty language recognizing a tribal "right of taking fish in common with settlers" meant only equality of treatment, McKenna averred that such a result was "certainly an impotent outcome to negotiations and a convention, which seemed to promise more and give the word of the Nation for more." The decision's lodestar status is not merely due to its language, however. It established the reserved rights doctrine, which holds that Indian treaties are "not a grant of rights to the Indians but a grant of rights from them--a reservation of rights not granted." Over the last century, the reserved rights doctrine has been immensely important in recognizing tribal proprietary rights to natural resources and in protecting tribal sovereignty. <i>Winans</i> also reaffirmed the rule that Indian treaties should be interpreted as the Indians, the weaker party, would have understood and rejected claims that state ownership of the riverbed foreclosed federally created treaty rights. Both of these principles endure. Finally, the case recognized treaty fishing rights as property rights that would run against not only the federal government but also burden the state and private parties, a precedent that some recent lower court decisions seem to have overlooked.

2007	C43	Squalli, Jay, Kenneth Wilson, and Sarah Hugo. 2007. "An Examination of European Growth Competitiveness." <i>Economic and Business Review</i>, 9(2): 127-46. This paper argues that the arbitrary selection of weights by the World Economic Forum, (WEF) used in the calculation of the Growth Competitiveness Index (GCI) could lead to a distorted vision of the relative competitiveness of European countries. Using the weights generated by Structural Equation Modelling (SEM), the gap in competitiveness between European Union members becomes more distinct, whilst for many of the acceding and candidate European countries the competitiveness rating is found to have been previously underestimated by the WEF. This paper demonstrates the superiority and robustness of SEM for calculating weights which lead to more reliable policy and business recommendations.
2007	C72	Bar-Gill, Oren, and Lucian A. Bebchuk. 2007. <i>Consent and Exchange</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13267. In some cases, the law permits a party that unilaterally provides a benefit to another party to recover the estimated value of this benefit. Despite calls for expanding the set of cases to which such a restitution rule applies, the law commonly applies a mutual consent rule under which a party providing another with a benefit cannot obtain any recovery without securing the advance consent of the beneficiary to the transaction. We provide an efficiency rationale for the undesirability of broad use of the restitution rule by identifying significant adverse ex ante effects of the rule that are avoided by the consent requirement. Even assuming that courts' errors in estimating buyer benefits would be unbiased, a restitution rule would strengthen sellers' hand by providing them with a put option that they may but do not have to use. As a result, the restitution rule would

Year	DE	Title and Abstract
		encourage inefficient market entry by low-quality sellers that would not contribute to any efficient transactions but would be able to extract payments from buyers seeking to avoid an exchange with them. Furthermore, the restitution rule would discourage efficient market entry by some or all potential buyers of a good or service. Beyond the restitution rule, we extend our analysis to show that similar adverse effects can also arise from other "pricing" rules that provide buyers or sellers with call or put options to force an exchange at a judicially-determined price.
2007	E26 N62	Welskopp, Thomas. 2007. "Bis an die Grenzen des Gesetzes: Die Reaktion der legalen Alkoholwirtschaft auf die National Prohibition in den USA, 1920 bis 1933. (Probing the Limits of the Law: The Adaptation of the Legal Alcohol Industries to the Conditions of National Prohibition in the United States, 1920 to 1933. With English summary)." <i>Zeitschrift für Unternehmensgeschichte</i> , 52(1): 1-32. The constitutional alcohol prohibition in the U.S., which came into effect in January 1920, and lasted to December 1933, effectively forced established brewers, distillers, and vintners out of their core businesses. Although their property was not "taken" in a legal sense, prohibition amounted to nothing else but a "cold expropriation" of its value. Under the conditions of National Prohibition an illegal underground economy of alcohol production and distribution mushroomed instead which by the end of the 1920s produced sales of around five billion dollars a year--approximately the same sum Americans would have spent on alcoholic beverages anyway if Prohibition had not come. The article examines how the legal branch of the businesses, the brewers, distillers and Californian grape farmers, dealt with this life-threatening situation and with the emergence of a tempting "wet" black market out of their reach if they did not choose to cross the line into illegality themselves. National Prohibition is treated as a measure of extreme state intervention, like other supply prohibitions or war economy regulations, to which the legal enterprises reacted in a flexible, fully opportunistic manner. The breweries, distilleries, and grape concentrate makers probed the limits of the law when they, after a short period of adaptation and reorientation, turned to the manufacture, transport, and sale of the half-finished ingredients of alcoholic beer, spirits, and wine. While they themselves never really left legal territory--since their products did not contain fermented alcohol--they nevertheless provided the illegal black economy with raw materials ready to be refined into the final product on a scale that enabled the criminal alcohol business to become the third highest ranked industry in the U.S. by the end of the 1920s.
2007	J08	Deakin, Simon, Priya Lele, and Mathias Siems. 2007. "The Evolution of Labour Law: Calibrating and Comparing Regulatory Regimes." <i>International Labour Review</i> , 146(3-4): 133-62. Using a newly-created data set which measures legal change over time, the authors present evidence on the evolution of labour law in Germany, France, India, the United Kingdom and the United States. Their analysis casts light on the claim that "legal origin" affects the content of labour law regimes. While some divergence between common law and civil law countries is found at the aggregate level, a more complex picture emerges from consideration of specific areas of labour law. The authors discuss the potential significance of this relatively new measurement-based approach to understanding the forces that shape the evolution of labour law.
2007	J08	Mundlak, Guy. 2007. "The Right to Work: Linking Human Rights and Employment Policy." <i>International Labour Review</i> , 146(3-4): 189-215. This article outlines various explanations for singling out the right to work from the roster of human rights, and emphasizes the dilemmas associated with regulating the labour market as a barrier to the development of the right. It compares two frameworks that address these concerns from the contrasted perspectives of human rights and employment policy--namely, the General Comment of the Committee on Economic, Social and Cultural Rights, and the European Employment Strategy. While these approaches are not natural allies, they can complement each other and construct an institutional system guided by the right to work as a superordinate norm.

2007	L11	Clarke, Donald C. 2007. "Legislating for a Market Economy in China." <i>China Quarterly</i> , 0(191): 567-85. Since the early 1990s, China has come a long way in legislating the foundational rules for its reformed economy. Virtually all of the important areas--contracts, business organizations, securities, bankruptcy and secured transactions, to name a few--are now covered by national legislation as well as lower-level regulations. Yet an important feature of a legal structure suited to a market economy is missing: the ability of the system to generate from below solutions to problems not adequately dealt with by existing legislation. The top-down model that has dominated Chinese law reform efforts to date can only do so much. What is needed now is a more welcoming attitude to market-generated solutions to the gaps and other problems that will invariably exist in legislation. The state's distrust of civil-society institutions and other bottom-up initiatives suggests, however, that this different approach will not come easily.
2007	L11	Zhang, Xianchu. 2007. "Commentary on 'Legislating for a Market Economy in China'." <i>China Quarterly</i> , 0(191): 586-89. Donald Clarke's article provides a pretty full and accurate review of legislative activities in the course of China's economic developments since 1992. His perceptive analysis not only reflects the important achievements of economic legislation and its undeniable contribution to market developments in China, but also critically conceptualizes the many-featured legislative practice within an established theoretic framework with an emphasis on institutional capacity building.

"Characteristics and Behavior of Newly Listed Firms: Evidence from the Asia-Pacific Region." <i>Journal of International Financial Markets, Institutions and Money</i> , 17(5): 420-36. We examine the size, profitability and delisting experience during 1980-1999 of new lists in the Pacific Basin countries. We also examine the impact of the legal environment on post-listing behavior. We find that new lists are more numerous in common law countries. They are smaller than seasoned firms, regardless of legal regime. New lists are more profitable in civil law countries, but this is due to the high profitability of Japanese new lists. Asian new lists have lower rates of delisting compared to U.S. firms. The delisting frequency of seasoned firms exceeds that of new lists for our sample countries.

2007	M42	Choi, Jong-Hag, and T. J. Wong. 2007. "Auditors' Governance Functions and Legal Environments: An International Investigation." <i>Contemporary Accounting Research/Recherche Comptable Contemporaine</i>, 24(1): 13-46. This paper uses firm-level data collected from 39 countries to study whether national legal environments increase or decrease auditors' governance functions in serving the bonding and signaling role. On the one hand, Big 5 auditors may play a stronger governance role in weaker legal environments because they are good substitutes for legal protection of outside investors and risky firms find Big 5 auditors more affordable because of lower litigation costs. On the other hand, a country's poor legal environment may significantly weaken the demand for and supply of quality audits, lessening their role as a bonding mechanism and a credible signaling mechanism. Our empirical results provide support for the former view that Big 5 auditors fulfill a stronger governance function in weaker legal environments.

2007	N73 N74	Funnell, Warwick. 2007. "The Reason Why: The English Constitution and the Latent Promise of Liberty in the History of Accounting." <i>Accounting, Business and Financial History</i>, 17(2): 265-83. In 1215 Magna Carta determined freedom from executive oppression, or liberty, as the essential principle of the English Constitution and parliament as the bulwark against executive attempts to diminish the liberty of individuals. This constitutional precedence of liberty was confirmed after the Revolution in 1688 by the constitutional settlement which strengthened the financial accountability of the executive to parliament. Regular accounting for military expenditures especially became a critical component of the new accountability measures. Despite the overwhelming significance of liberty for the English Constitution and the contributions of accounting to preserving liberty, public sector accounting continues to attract few accounting historians. As a consequence, the vast historical resources contained in British Parliamentary Papers and the records of parliamentary debates continue to go largely unnoticed by all but a few accounting historians.

2007	P23	Ma, Ngok. 2007. "State-Press Relationship in Post-1997 Hong Kong: Constant Negotiation amidst Self-Restraint." <i>China Quarterly</i>, 0(192): 949-70. Ten years after the handover, Hong Kong's media faced multiple pressures. There were few cases of outright prosecution of the media, but there were subtle political and economic pressures. Co-optation of media bosses, fear of losing advertising revenue and media takeovers by pro-Beijing figures brought some of the media into line. This brought editorial shift and self-censorship, as the media systematically shied away from stories that might antagonize Beijing, underplayed negative news for the government and gave the democrats less favourable coverage. Interviews with journalists showed little evidence of ostensible intervention from government officials or media bosses, but newsroom socialization and editorial gatekeeping are effective constraints. The constitutional guarantee of freedom of the press and the moral force of professional ethics lent the media the room to defend and negotiate their freedom, but the pervasive fear induced by the political environment invariably overpowered the resistance and constrained press freedom in Hong Kong.
2007	Q54	Williams, Damian. 2007. "Reconstructing Section 5: A Post-Katrina Proposal for Voting Rights Act Reform." <i>Yale Law Journal</i>, 116(5): 1116-58. Section 5 of the Voting Rights Act (VRA)—the preclearance provision that is the most potent weapon in the nation's civil rights arsenal—quietly suffered an unexpected defeat in the aftermath of Hurricane Katrina. The "static benchmarking test" used to administer section 5 failed to fulfill a core VRA mandate: the preservation of minority political power. This Note provides the first critical account of this failure and argues that it transcends the specifics of Katrina. The Note then proposes a narrowly tailored doctrinal "fix" to resurrect section 5s enforcement powers after a disaster.

A review of recent Canadian case law on the constitutionality of legal controls on begging reveals the importance of an unacknowledged view of space and behaviour that I call the traffic code. The paper endeavours to take this code seriously, unpacking its logic and scope. In particular, it explores its legal effects, noting that it deflects rights-based arguments on behalf of the public poor. Its emphasis upon space, use and behaviour appears to be not only illiberal, but curiously aliberal, operating without reference to rights. It is suggested, however, that it may in fact rely upon some deeply liberal notions of rights and space. This, perhaps, allows for a rights-based critique of the traffic code. This, and other possibilities for challenges to the traffic code, are explored in the conclusion.
2008		
2008	B13	Peart, Sandra J., and David M. Levy. 2008. "Discussion, Construction and Evolution: Mill, Buchanan and Hayek on the Constitutional Order." <i>Constitutional Political Economy</i> , 19(1): 3-18. The paper examines the views of Mill, Hayek, and Buchanan on the role of discussion in the constitutional order. For Mill and Buchanan, the constitutional order itself may be subject to discussion (and change). By contrast, Hayek made the case that the constitutional order is best left unarticulated, outside the realm of public debate and discussion. The question as Hayek posed it is whether there is a role for discussion in "choice of law" the way there is a role for discussion in the "choice of legislation." For Mill and Buchanan, the answer is yes; but for Hayek, the answer is no. Supposing, with Hayek, that law evolves as a recognized pattern, we inquire about whether the pattern is unique. If multiple sets of experiences or patterns co-exist in society, then any one pattern is an incomplete description of experience and the question arises of whether there is there now a role for the recognition and then discussion of other patterns or laws? We sketch out how a norm of generosity might eventually be brought into a constitutional order as justice, through a process of discussion. We suggest that Hayek's appeal to government to remedy institutional incompleteness or "degeneration" actually takes him quite close to Mill's position that discussion can serve to beneficently direct institutional change.
2008	D31	Bessaoud, Omar. 2008. "Les organisations rurales au Maghreb: Leur role dans le developpement: Un essai d'evaluation. (Rural Organizations in the Maghreb and Their Role in the Development: A Test of Appraisal. With English summary.)." <i>Economie Rurale</i> , 0(303-305): 8-21. Institutional reforms made contribution to build a legal framework for the liberty of association in countries of Maghreb. The development of a network of new organizations afforded by new policies of rural development, give to local actors the possibility to have a special and independent role at the local level. However, this process of development of agricultural and rural organizations is characterized by contradictions which demand for the future, i) a strong setting up of strategies and public policies, ii) reforms of modalities of wealth distribution, and iii) redistribution of powers. The new models of local and rural governance must contribute to an in-depth process of decentralization and also of local democracy principles.

Lessons from the History of Creditor Rights and Bond Markets in Brazil." <i>Journal of Economic History</i> , 68(1): 80-108. Does a legal tradition adopted in the distant past constrain a country's ability to provide the protection that investors need for financial markets to develop? I look at the relationship between legal origin and the development of bond markets and find too much variation over time in bond market size, creditor protections, and court enforcement of bond contracts to assume that the adoption of a legal system constrains future financial development. I examine the evolution of bond markets in Brazil, a French civil law country, and provide preliminary results of similar variation for a small cross-section of countries.
2008	G31 G32	Gugler, Klaus, Dennis C. Mueller, and B. Burcin Yurtoglu. 2008. "Insider Ownership, Ownership Concentration and Investment Performance: An International Comparison." <i>Journal of Corporate Finance</i> , 14(5): 688-705. This article makes two important contributions to the literature on the incentive effects of insider ownership. First, it presents a clean method for separating the positive wealth effect of insider ownership from the negative entrenchment effect, which can be applied to samples of companies from the US and any other country. Second, it measures the effects of insider ownership using a measure of firm performance, namely a marginal q, which ensures that the causal relationship estimated runs from ownership to performance. The article applies this method to a large sample of publicly listed firms from the Anglo-Saxon and Civil law traditions and confirms that managerial entrenchment has an unambiguous negative effect on firm performance as measured by both Tobin's (average) q and our marginal q, and that the wealth effect of insider ownership is unambiguously positive for both measures. We also test for the effects of ownership concentration for other categories of owners and find that while institutional ownership improves the performance in the USA, financial institutions have a negative impact in other Anglo-Saxon countries and in Europe.

National Bureau of Economic Research, Inc. NBER Working Papers: 13757. Adaptable property-rights institutions, we argue, foster economic development. The British example illustrates this point. Around 1700, Parliament established a forum where rights to land and resources could be reorganized. This venue enabled landholders and communities to take advantage of economic opportunities that could not be accommodated by the inflexible rights regime inherited from the past. In this essay, historical evidence, archival data, and statistical analysis demonstrate that Parliament increased the number of acts reorganizing property rights in response to increases in the public's demand for such acts. This evidence corroborates a cornerstone of our hypothesis.

2008	P45	Al-Amine, Muhammad Al-Bashir Muhammad. 2008. "Sukuk Market: Innovations and Challenges." <i>Islamic Economic Studies</i> , 15(2): 1-22. Sukuk products offer a vast scope of innovation and a large potential for the growth of Islamic finance. Various structures of sukuk based on ijarah, musharakah, mudarbah, and many hybrids such as sukuk based on the combination of ijarah with istisna' or the combination ijarah with istisna' and murabahah etc., has evolved. Structures with convertibility features and those allowing the possibility of substitution of the underlying assets have also come in the market. However, these innovations have generated various Shari'ah, legal and economic issues and controversies. This paper discusses some of these important issues and challenges. Specifically, it deals with the issues of capital guarantee, contractual structures, pricing, and asset substitution in case of ijarah sukuk, musharakah sukuk, and their various forms. It also covers the issues pertaining to rating of sukuk, harmonization of Shari'ah rules, and problems involved in defining the governing law for sukuk issuance.
2008	P45	Bader, Mohammed Khaled I., Shamsheer Mohamad, Mohamed Ariff, and Taufiq Hassan. 2008. "Cost, Revenue, and Profit Efficiency of Islamic versus Conventional Banks: International Evidence Using Data Envelopment Analysis." <i>Islamic Economic Studies</i> , 15(2): 23-75. This paper measures and compares the cost, revenue, and profit efficiency of 43 Islamic and 37 conventional banks over the period 1990-2005 in 21 countries using data envelopment analysis. It assesses the average and overtime efficiency of those banks based on their size, age, and region using static and dynamic panels. The findings suggest that there are no significant differences between the overall efficiency results of conventional versus Islamic banks. Overall, the results in this paper are favorable with the 'new' banking system.
2008	Q15	Ferrara, Giuseppe. 2008. "L'ordinamento dei Consorzi di bonifica nell'evoluzione della disciplina nazionale e regionale. (With English summary.)" <i>Economia e Diritto Agroalimentare</i> , 13(2): 63-85. Legislation in force in Italy attributes to Consortium of drainage many functions that relate to drainage activity, water, territory, and environmental conservation: all matters that fall under transversal, statal, and regional competence. Those authorities must be qualified as public economic authorities exploit of the region not as functional autonomies. Therefore it is lawful on constitutional point of view that state law (as regional law) provides for the take away from Consortium of the functions related to drainage activity; but just if this assignment to different authorities from Consortium of drainage are consistent with the Constitutional principle of appropriateness (article 118 Constitution). Article 27 of d.l. 248/07, in the light of new criterions that have to be approved by State/Region conference, seems to be consistent with the constitutional principle of article 118.

2009	C20	Dehon, Catherine, Marjorie Gassner, and Vincenzo Verardi. 2009. "Beware of 'Good' Outliers and Overoptimistic Conclusions." <i>Oxford Bulletin of Economics and Statistics</i> , 71(3): 437-52. The main goal of this paper is to warn practitioners of the danger of neglecting outliers in regression analysis, in particular, good leverage points (i.e. points lying close to the regression hyperplane but outlying in the x-dimension). While the types of outliers which do influence regression estimates (vertical outliers and bad leverage points) have been extensively investigated, good leverage points have been largely ignored, probably because they do not affect the estimated regression parameters. However, their effect on inference is far from negligible. We propose a step-by-step procedure to identify and treat all types of outliers. The paper of Persson and Tabellini [American Economic Review (2004) Vol. 94, pp. 25-46] linking the degree of proportionality of an electoral system to the size of government is discussed to illustrate how the choice of a measure and the existence of atypical observations may substantially influence results.

This article discusses the methodological foundations of Buchanan's constitutional political economy. We argue that Buchanan is a constitutional economist because he is an economist or a political economist. In other words, Buchanan is a constitutional economist--he insists on the necessity of focusing on constitutions and to analyze the "rules of the social game"--because he defines economics as a science of exchange. Buchanan's definition of

Year	DE	Title and Abstract
		economics is not only specific, it is also opposed to the definition of economics that other economists retain and, above all, opposed to the definition of economics that many public choice theorists use. The latter have, in effect, adopted the Robbins 1932 definition of economics as a science of choice that Buchanan criticizes and rejects. Buchanan's constitutional economics can be a branch of public choice only under certain conditions.

2009	E21 E23	Oh, Yonghyup. 2009. "International Capital Market Imperfections: Evidence from Geographical Features of International Consumption Risk Sharing." <i>Applied Economics</i> , 41(7-9): 1043-53. This article attempts to rationalize the validity of gravity variables to explain the degree of international consumption risk sharing. We find that for a panel of 54 countries during 1950-2000, variables such as distance, affluence, a common language and the type of legal system are relevant in explaining not only cross-country consumption and output correlations, but consumption risk sharing. Common law countries share consumption risks more than civil law countries. English speaking countries turn out to share consumption risks more than other language groups, and show significantly higher consumption risk sharing even within the group of common law countries.
2009	E23	Roe, Mark J., and Jordan I. Siegel. 2009. "Finance and Politics: A Review Essay Based on Kenneth Dam's Analysis of Legal Traditions in The Law-Growth Nexus." <i>Journal of Economic Literature</i> , 47(3): 781-800. Strong financial markets are widely thought to propel economic development, with many in finance seeing legal tradition as fundamental to protecting investors sufficiently for finance to flourish. Kenneth Dam finds that the legal tradition view inaccurately portrays how legal systems work, how laws developed historically, and how government power is allocated in the various legal traditions. Yet, after probing the legal origins' literature for inaccuracies, Dam does not deeply develop an alternative hypothesis to explain the world's differences in financial development. Nor does he challenge the origins core data, which could be origins' trump card. Hence, his analysis will not convince many economists, despite that his legal learning suggests conceptual and factual difficulties for the legal origins explanations. Yet, a dense political economy explanation is already out there and the origins-based data has unexplored weaknesses consistent with Dam's contentions. Knowing if the origins view is truly fundamental, flawed, or secondary is vital for financial development policy making because policymakers who believe it will pick policies that imitate what they think to be the core institutions of the preferred legal tradition. But if they have mistaken views, as Dam indicates they might, as to what the legal traditions' institutions really are and which types of laws are effective, or what is really most important to financial development, they will make policy mistakes--potentially serious ones.
2009	F31 G14	Cotei, Carmen, Joseph Farhat, and Benjamin A. Abugri. 2009. "Market Efficiency in Emerging Markets: Does the Legal System Matter?" <i>Global Journal of Finance and Economics</i> , 6(2): 145-60. This paper investigates the question of market efficiency in a sample of thirty-four emerging markets with different legal systems. We use both dollar and local currency returns to examine whether exchange rate effects can improve our understanding of the information flows in these capital markets. Using various tests, we find that market efficiency rate is higher for dollar denominated returns than for local currency returns. Contrary to our predictions, we find weak evidence that one country's legal system contributes to the level of market efficiency. At the minimum, we can state that for local currency returns, civil law countries seem to have markets that are more efficient compared to those in common law countries. Overall, the findings are consistent with the suggestion that exchange rate reforms as well as exchange rate fluctuations may introduce biases that can affect market efficiency.
2009	G35	Farinha, Jorge, and Oscar Lopez-de-Foronda. 2009. "The Relation between Dividends and Insider Ownership in Different Legal Systems: International Evidence." <i>European Journal of Finance</i> , 15(1-2): 169-89. This paper provides new international evidence on the relationship between dividend policy and insider ownership by analysing a sample of USA, UK and Irish firms characterized by an Anglo-Saxon tradition and a matching sample of other EU companies from Civil Law legal systems. We hypothesize that, due to the different characteristics of both the legal system and the nature of agency conflicts in firms from those countries, the relation between dividend policies and ownership by insiders will be considerably distinct between the two sets of companies. We find that while in firms with an Anglo-Saxon tradition the relation between dividends and insider ownership follows the pattern negative-positive-negative, in Civil Law countries the relation is positive-negative-positive. These results are consistent with our hypotheses and breed new insights into the role of the dividend policy as a disciplining mechanism in countries with different legal systems and distinct agency problems.

2009	H26	Usher, Dan. 2009. <i>Why the Legal System is Not Necessarily Less Efficient than the Income Tax In Redistributing Income.</i> Queen's University, Department of Economics, Working Papers: 1210. A common, though by no means universally-accepted doctrine among practitioners of law and economics is that redistribution is no business of the law. This efficiency-only doctrine is not that redistribution is unworthy as a social objective, but that any given benefit to the poor is attainable at a lower cost to the rich through taxation than through the choice of legal rules. The rationale for the efficiency-only doctrine is that redistributive law creates a double distortion: an initial distortion arising from redistribution per se, through taxation or through law, and an additional distortion all its own. The efficiency-only doctrine is sometimes valid, but is far narrower than its advocates would seem to suggest, and is inapplicable to most of what is commonly thought of as redistributive law. Redistribution is best supplied by a balance of law and taxation.

As health has not just been defined as a fundamental right in the 1991 National Constitution, if it is understood as it is, thanks to the jurisprudential interpretation made by the Constitutional Court in some of its statements, according to which the right to health is linked with the Right to Live and the Human Dignity. Since the implementation of the 100 Law in 1993, the violation of this right has been permanently seen, in the hands of the different agents

Year	DE	Title and Abstract
		who are part of the Health Social Security System, which has made all its clients defend their rights through the use of guardianship, generating a lot of bureaucratic delay in judicial offices. Additionally, some of the guardianships belong to the category of unjustified negotiations made by insurance services which are part of the portfolio offered in the Obligatory Health Plan and which are also part of the existing inequity in this system, caused by the non fulfillment of its universal coverage and its content differences between the benefits granted by the contributive and subsidized current plans. To end these problems in the SGSSS and to guarantee the right to health of all citizens, the Constitutional Court passed the C-463 and T-760 statements in 2008, which have turned into guidelines for the different agents who intervene in this system, determining how to conduct real actions. Finally, the interpretation made by the national government on these issues have caused a lot of doubts on the question if the defined objectives will be reached or this will become just another failure in an attempt to provide the right to health.

2009	J10	Stevenson, Betsey, and Justin Wolfers. 2009. <i>The Paradox of Declining Female Happiness</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 14969. By many objective measures the lives of women in the United States have improved over the past 35 years, yet we show that measures of subjective well-being indicate that women's happiness has declined both absolutely and relative to men. The paradox of women's declining relative well-being is found across various datasets, measures of subjective well-being, and is pervasive across demographic groups and industrialized countries. Relative declines in female happiness have eroded a gender gap in happiness in which women in the 1970s typically reported higher subjective well-being than did men. These declines have continued and a new gender gap is emerging--one with higher subjective well-being for men.

"The Codification of Personal Law and Secular Citizenship: Revisiting the History of Law Reform in Late Colonial India." <i>Indian Economic and Social History Review</i>, 46(1): 83-104. Recent debates about personal law and a uniform civil code in India have seen both Hindu and Muslim leaders insist on the 'religious' status of Muslim law vis-a-vis a more secular or 'civil' Hindu legal system. This article argues that such claims obscure very important similarities in the development and functioning of these legal systems. Tracing the origins of the current debate to late nineteenth and early twentieth-century debates about law reform, it argues that the systems of personal law in operation in India today are the outcome of late colonial attempts by Hindu and Muslim male reformers to alter their legal systems in ways that served their own interests. The ways in which they succeeded in securing these ends were very different; colonial constructions of Hindu and Muslim religious practices, and later partition, shaped the context within which male reformers sought to assert their claims, before the state and their own religious communities. Thus, far from marking an inherent difference between Hindu and Muslim law, claims about the 'civil' or 'religious' status of the legal systems serve in both cases to underpin particular forms of patriarchal authority and gender inequality.

The 2008 global financial meltdown was the symptom of an underlying crisis in law and institutions caused by the neoliberal utopia of Total Market--"scientific" depoliticization of the economy, full commodification of labour, land and money, and all-out competition, with even legal systems subject to "law shopping". Financial markets were so successfully deregulated, they were the first to collapse: taxpayers are now paying the bills. But the markets for natural and "human resources" are also at risk. In the spirit of the 1944 Declaration of Philadelphia, Supiot argues, the rule of law must be reinstated to end human subordination to economic efficiency.

2010	F59	CV: Dreher, Axel, Martin Gassebner, and Lars-H. R. Siemers. 2010. <i>Globalization, Economic Freedom and Human Rights</i> . CESifo Group Munich, CESifo Working Paper Series: 3228. Using the KOF Index of Globalization and two indices of economic freedom, we empirically analyze whether globalization and economic liberalization affect governments' respect for human rights using a panel of 106 countries over the 1981-2004 period. According to our results, physical integrity rights significantly and robustly increase with globalization and economic freedom, while empowerment rights are not robustly affected. Due to the lack of consensus about the appropriate level of empowerment rights as compared to the outright rejection of any violation of physical integrity rights, the global community is presumably less effective in promoting empowerment rights.

"Preserving a Racial Hierarchy: A Legal Analysis of the Disparate Racial Impact of Legacy Preferences in University Admissions." <i>Michigan Law Review</i> , 108(4): 577-601. Many public and private universities around the country employ legacy admissions preferences in order to give children of alumni special consideration in the admissions process. Such preferences disproportionately benefit white applicants at the cost of their non-white counterparts, because past generations of college students were less diverse than today's applicant pool. However, universities argue that their legacy preferences are justified because they assist in alumni fundraising efforts. This Note presents a statistical analysis to argue that legacy preferences are prohibited by the Civil Rights Act of 1964 because they have a discriminatory effect on minority college applicants and have not been shown to promote (and do not promote) any legitimate university purpose.

"Damned If You Do and Damned If You Don't: Title VII and Public Employee Promotion Disparate Treatment and Disparate Impact Litigation." <i>Public Administration Review</i> , 70(4): 582-90. What has been the impact of the U.S. Supreme Court's 2009 decision in <i>Ricci v. DeStefano</i> on the selection and promotion practices of public employers? Relying solely on circumstantial evidence, the Supreme Court held that the Civil Service Board of New Haven, Connecticut, had engaged in Title VII disparate treatment discrimination by refusing to certify the results of a promotion examination that led, in turn, to a disparate impact on African American firefighters. To limit the discretion of public employers to disregard such selection and promotion exam results, the <i>Ricci</i> majority held that a public employer must "have a strong basis in evidence to believe it will be subject to disparate-impact liability if it fails to take the race-conscious discriminatory action." This article argues that the decision effectively prohibits public employers from rejecting the results of selection and promotion instruments, even though there is evidence that screening instruments inequitably affect protected groups. It also forces public employers to become more careful in developing selection and promotion examinations or face the possibility of costly Title VII litigation.

(The Making of the Italian Constitution and Agricultural Policies of the Fifties and Sixties. With English summary.)" <i>QA: Rivista dell'Associazione Rossi-Doria</i> , 0(1): 37-64. The economic and social problems of the rural areas had considerable impact on the making of the 1948 Constitution and subsequent legislation. The paper reviews the important supporting role of the Economic Commission highlighting two outstanding features of the Republican Constitution: (i) the power of the law to ensure that private and public economic activities be consistent with the pursuit of social ends; and (ii) the explicit reference to size limits and other obligations for private landed property. Finally, it describes the scope and degree of success of the agricultural policies approved after the Constitution enactment.
2010	N91	Grubb, Farley. 2010. "Testing for the Economic Impact of the U.S. Constitution: Purchasing Power Parity across the Colonies versus across the States, 1748-1811." <i>Journal of Economic History</i> , 70(1): 118-45. The U.S. Constitution removed real and monetary trade barriers between the states. By contrast, these states when they were British colonies exercised considerable real and monetary sovereignty over their borders. Purchasing power parity is used to measure how much economic integration between the states was gained in the decades after the Constitution's adoption compared with what existed among the same locations during the late colonial period. Using this measure, the short-run effect of the Constitution on economic integration was minimal. This may have been because the Constitution did not eliminate all the institutional barriers to interstate trade before 1812.

2010	P24	Yueh, Linda. 2010. "Thirty Years of Legal and Economic Reform in China: Growth, Institutions, and Laws." <i>Journal of Chinese Economic and Business Studies</i> , 8(2): 117-32. China's impressive economic growth over three decades has seemingly occurred in the absence of a strong legal system. This paper views China's reform process over the past three decades as one that has entailed a gradual introduction of market forces into areas of the economy, which requires both dismantling the structure of the centrally planned economy and developing market-oriented institutions. This paper argues that China's transition is premised on a set of informal, and increasingly formal, institutions that provided incentives during the process of gradual liberalization. Therefore, institutional developments were not absent. The exploration of the interplay between growth and institutions leads to the conclusion that continued economic growth in China will depend on implementing legal reforms better suited to the nature of the decentralized economy, hastened by the introduction of international economic laws and rules with greater global integration.
2010	Q10	Adornato, Francesco. 2010. "Costituzione e agricoltura tra passato e presente. (Constitution and Agriculture between Past and Present. With English summary.)" <i>QA: Rivista dell'Associazione Rossi-Doria</i> , 0(2): 85-101. Constitution and agriculture now interrelate between two fundamental parameters: the multifunctional principle on the one hand, with the emphasis on the new relations between town and country, and, on the other hand, the multiplicity of sources, overturning the traditional legal reference hierarchy. The author concentrates on the latter aspect, noting the substantial changes in the system of jurisdictions in the field of agriculture, as came about with the radical modifications introduced with constitutional law n. 3/2001, providing for a multi-centre model with equal distribution of competences, within which agriculture comes under the sole jurisdiction of the regions. The range of competence has also seen a second broad change with the EU system, a 'plural' model with manifold contents and agents, superseding both the inveterate productivity rationale and the traditional category of entrepreneur. The new integrated area development processes are seen to call for a differentiated range of development models.
2010	Q23	MARCHAND, Sebastien. 2010. <i>Historical and Comparative Institutional Analysis: Evidences from Deforestation. CERDI Working Papers: 201016</i> . This paper investigates if past institutional, economic, political, social, and cultural features (i.e legal origins on law and regulations and colonial legacies) interact in shaping the current institutional performances on deforestation in 116 developed and developing countries. A two step approach is implemented. First, we investigate relations between colonial legacies-legal origins and current institutional performances. We find that common law countries and previous British colonies have better institutions than French civil law and other past colonized countries. Second, we provide two econometrics procedures to capture some institutional persistences on deforestation which allow to estimate current institutional effects on deforestation conditioned to historical variables. In a first time, we run our deforestation model on different samples (under historical variables) and in a second time, interactive variables are introduced. We find that (i) French civil law countries deforest less than common law ones; (ii) less corruption and more secured property rights decrease deforestation in common law countries; (iii) better rules of law reduce deforestation but this feature is more likely in previous British colonies or non colonized countries. Finally, this paper shows that current institutional performances are important factors in the process of deforestation and that these factors are conditioned to past influences.
2011		
2011	B24	Rotondi, Claudia. 2011. "Progettare l'Italia nuova: Antonio Pesenti e il Ministero per la Costituente. (Designing the New Italy: Antonio Pesenti and the Ministry for the Constituent Assembly. With English summary.)" <i>Il Pensiero Economico Italiano</i> , 19(1): 103-16. In 1946 Antonio Pesenti was asked to chair the Committee on Labour set up within the Ministry for Constituent Assembly. He also collaborated with the Economic Commission of the same Ministry. Through the proceedings and the archival sources we can rebuild Pesenti's position on Right to Employment, public finance, and the role of the state in the economy. Furthermore we can trace the echo that his arguments had in the debate linked to the processing of the Italian Constitution.
2011	C73	Deakin, Simon. 2011. "Legal Evolution: Integrating Economic and Systemic Approaches." <i>Review of Law and Economics</i> , 7(3): 659-83. This paper explores the scope for synthesis between economic and systemic approaches to the understanding of legal evolution. The evolutionary and epistemic branches of game theory predict that stable norms will emerge when agents share common beliefs concerning future states of the world. Systems theory sees the legal order as a social system which reproduces itself by recursive acts of legal communication, thereby giving rise to self-reference and operational closure. At the same time, the legal system is cognitively open, that is to say, indirectly influenced by other social systems in its environment. This gives rise to the possibility of coevolution of law and the economy. It will be argued that systems theory, by developing the idea of law as an adaptive system with cognitive properties, provides a missing link in the evolutionary theory of norms. Recent game theoretical models imply that common knowledge is not entirely endogenous to agents' interactions, but depends to a certain extent on emergent normative structures. These include the public representations of common knowledge which are provided by

Year	DE	Title and Abstract
		the legal system. The paper will explore the implications of this idea, argue for an integrated economic and systemic analysis of legal evolution, and consider some of the theoretical and methodological implications of such a step.
2011	F43	CV: Ujunwa, Augustine, and Otaru Pius Salami. 2011. "Legal-Based Financial Structure and Long-Run Growth: Evidence from Nigeria." <i>Journal of Applied Finance and Banking</i> , 1(2): 1-17. This paper examines specifically the impact of legal-based financial structure on long-run economic growth in Nigeria, using time serial data for a 17 year period: 1992-2008. Time series general method of movement (GMM) regression was used to estimate the necessary models. The growth rate of gross domestic product per capita was adopted as the dependent variable, while the independent variables were the country's legal codes. The study also controlled for government expenditure as a ratio of GDP and gross capital formation as ratio of GDP. The regression result shows that the components of legal-based financial structure are negative and non-significant in promoting economic growth in Nigeria. The paper recommends for the restructuring of the legal system in enforcing contracts.

2011	N93	CV: Pica, Federico. 2011. "Finanza pubblica e regime istituzionale: Dal Regno d'Italia alla Carta costituzionale della Repubblica. (Public Finance and Institutional System: From the Kingdom of Italy to the Constitution of the Republic. With English summary)." <i>Rivista Economica del Mezzogiorno</i> , 25(3): 625-34. In this paper, we argue that democracy is meant to be not the consensus on "government", or on public choices, but a broadly unanimous or very large majority sharing of a set of rules that, in the Italian case, are expressed in the Constitution of the Republic. Among other things, two implications derive from such an assumption: the real start in Italy does not lie in the formation of the Savoy Kingdom but in the approval of our Constitution; federalism has to be defined within constitutional rules, among which the art. 3 (de facto equality of all citizens) and the art. 53 (progressivity principle for tax system) are pre-eminent. These articles fix the distribution rules--the most important in our country. As regards the formation of the Kingdom and the origins of the Southern question, in the author's opinion the fiscal choices made in the first years after Country's unification are very important. These choices favour consumption taxes, chiefly levied through local authorities, which are burdened by a lot of improper costs. In this respect, the Ricardo's model is suggested: taxes decrease employment, increase gross wages, trigger a huge migration from Southern territories. All this has caused, from the start, an obstacle to the development of Southern economy that cannot be overcome.

2012	A33	CV: Eger, Thomas, and Hans-Bernd Schafer, eds. 2012. <i>Research Handbook on the Economics of European Union Law, Research Handbooks in Law and Economics</i> . Cheltenham, U.K. and Northampton, Mass.: Elgar. Sixteen papers present an economic analysis of the most important elements of EU law and the mechanisms of decisions within the European Union. Papers discuss a constitution like any other?--comparing the European constitution with nation state constitutions; the rules of decision making in EU institutions; EU decision making and the allocation of responsibility; whether member state liability for the infringement of European law can deter national legislators; subsidiarity for a changing union; mutual recognition--economic and regulatory logic in goods and services; the law and economics of the free movement of persons in the European Union; corporate governance in Europe--foundations, developments, and perspectives; private law--tort; private law--contract; the evolution of consumer

Year	DE	Title and Abstract
		protection in the European Union; an economic analysis of legal harmonization--the case of law enforcement within the European Union; private enforcement of antitrust law; Eastern enlargement of the European Union; the economics of multilingualism in the European Union; and law and economics of the Monetary Union. Eger is Professor of Law and Economics in the Faculty of Law at the University of Hamburg. Schafer is Affiliate Professor with Bucerius Law School and Professor Emeritus of Economics in the Institute for Law and Economics at the University of Hamburg. Index.

"Finding the "Democratic Advantage" in Sovereign Bond Ratings: The Importance of Strong Courts, Property Rights Protection, and the Rule of Law." <i>International Organization</i> , 66(3): 515-35. Much scholarship in the political economy literature has investigated the influence of the democratic advantage on sovereign bond ratings by credit rating agencies (CRAs). Missing from earlier work, however, is inquiry into the effects on bond ratings of factors that lower political risk, such as adherence to the rule of law, the presence of a strong and independent judicial system, and protection of property rights. Using panel data for up to thirty-six developing countries from 1996 to 2006, we find that rule of law, strong and independent courts, and protection of property rights have significant positive effects on bond ratings. Policymakers wanting to obtain higher bond ratings and increased revenue from bond sales would do well to heed the message contained in these findings.

2013		
2013	C01	Deakin, Simon. 2013. "The Legal Theory of Finance: Implications for Methodology and Empirical Research." <i>Journal of Comparative Economics</i> , 41(2): 338-42. This commentary on the LTF project highlights the importance of the idea that law 'constructs' finance and considers some of its methodological implications. The idea that law shapes finance implies that the legal system can be clearly differentiated in theoretical terms from the economy, and that the independent causal influence of the law on financial outcomes can be measured empirically. It will be argued that this can best be achieved by placing empirical research on law and finance in an evolutionary-theoretical perspective, which draws on related developments in game theory and systems theory, in the statistical study of law ('leximetrics'), and in time-series econometrics.

2013	C93	Acquisti, Alessandro, Leslie K. John, and George Loewenstein. 2013. "What Is Privacy Worth?" <i>Journal of Legal Studies</i> , 42(2): 249-74. Understanding the value that individuals assign to the protection of their personal data is of great importance for business, law, and public policy. We use a field experiment informed by behavioral economics and decision research to investigate individual privacy valuations and find evidence of endowment and order effects. Individuals assigned markedly different values to the privacy of their data depending on (1) whether they were asked to consider how much money they would accept to disclose otherwise private information or how much they would pay to protect otherwise public information and (2) the order in which they considered different offers for their data. The gap between such values is large compared with that observed in comparable studies of consumer goods. The results highlight the sensitivity of privacy valuations to contextual, nonnormative factors.
2013	D84	Engel, Christoph, and Michael Kurschilgen. 2013. "The Coevolution of Behavior and Normative Expectations: An Experiment." <i>American Law and Economics Review</i> , 15(2): 578-609. In this paper, we test the effect of normative expectations and legal framing on cooperation in an experimental public good game with and without sanctions. We show that cooperation increases substantially as normative expectations and behavioral patterns coevolve. In the absence of sanctions, legal framing does not have any additional beneficial effect in realigning individual action and social well-being. Yet, in the presence of sanctions, the legal frame is crucial for the effectiveness of sanctions. Law and sanctions seem to complement each other. Our results inform the legal debate on customary law.
2013	F18	Buchholz, Wolfgang, Alexander Haupt, and Wolfgang Peters. 2013. "International Environmental Agreements, Fiscal Federalism, and Constitutional Design." <i>Review of International Economics</i> , 21(4): 705-18. In this paper, we analyze how the prospect of international negotiations over trans-boundary pollution shapes intracountry transfer schemes when the governments of the countries' polluting regions are in charge of environmental policy and negotiations. Federal governments can implement compensation payments between domestic regions and matching grants prior to the international negotiations between the polluting regions. The subgame-perfect transfer schemes fail to fully internalize the environmental externality, leading to an inefficient international environmental agreement. As the international spillover increases, the intracountry compensation rates increase while the matching rates decline, distorting the incentives for the regional governments in opposing directions. We also show that decentralization of environmental decision making arises endogenously.

2013	K39	Kennedy, Randall. 2013. <i>For Discrimination: Race, Affirmative Action, and the Law</i> . New York: Random House, Pantheon Books. Explores the complexities surrounding the practice of affirmative action in the United States, including its legal history, arguments made by the left and right, the impacts of Supreme Court decisions on higher education, and the future of affirmative action. Discusses affirmative action in the history of American race relations; the affirmative action policy debate--the key arguments pro and con; the colorblind challenge to affirmative action; the Supreme Court and affirmative action--the case of higher education; and reflections on the future of the affirmative action controversy. Kennedy is Michael R. Klein Professor of Law at Harvard Law School. Index.
2013	L00	Ramseyer, J. Mark, and Eric Rasmusen. 2013. <i>Lowering the Bar to Raise the Bar: Licensing Difficulty and Attorney Quality in Japan</i> . Indiana University, Kelley School of Business, Department of Business Economics and Public Policy, Working Papers: 2013-12. Under certain circumstance, a relaxation in occupational licensing standards can increase the quality of those who enter the industry. The effect turns on the opportunity costs of preparing for the licensing examination: making the test easier can increase the quality of those passing if it lowers the opportunity costs enough to increase the number of those willing to go to the trouble of taking the test. We explore the theoretical circumstances under which this can occur and the actual effect of the relaxation of the difficulty of the bar exam in Japan from 1992 to 2011.
2013	M48	Sue, Shu-Hui, Chen-Lung Chin, and Ann Ling-Ching Chan. 2013. "Exploring the Causes of Accounting Restatements by Family Firms." <i>Journal of Business Finance and Accounting</i> , 40(9-10): 1068-94. Prior research shows that family firms have better earnings quality than non-family firms in common-law countries and highly developed markets. In contrast, we do not find a significant difference in the financial reporting quality between family and non-family firms in the context of a civil-law system and less developed market. We show that the financial reporting quality of family firms is conditioned on: (1) the divergence between the controlling shareholders' voting rights and their cash flow rights, and (2) the firm's reputation for integrity, while these two conditions do not explain the restatement likelihood for non-family firms. Moreover, when accounting irregularities are detected in the case of family firms, they are associated with more serious accounting restatements. Together, these results imply that the severity of the conflict between ultimate and minority shareholders, and a lack of integrity, explain the propensity for making financial restatements among family firms in a regime characterized as having weak investor protection and concentrated ownership structures.
2013	N22	Timberlake, Richard H. 2013. <i>Constitutional Money: A Review of the Supreme Court's Monetary Decisions</i> . Cambridge and New York: Cambridge University Press. Reviews ten U.S. Supreme Court cases and decisions that dealt with monetary laws and presents a summary history of monetary events and policies as they were affected by the Court's decisions. Discusses the current condition of monetary affairs in the United States; the emergence of money in civilized societies; the bimetallic monetary system and appearance of a national bank; <i>McCulloch v. Maryland</i> , 1819; Congress's power "to coin money and regulate the value thereof . . ."; <i>Craig v. Missouri</i> , 1830; <i>Briscoe v. Table K11.D List of New Links in 2006—2013

DE	D	DN13	Name of JEL Micro Category
A11	1	0.01	Role of Economics; Role of Economists
A14	4	0.03	Sociology of Economics
A33	2	0.02	Handbooks
B19	1	0.01	History of Economic Thought through 1925: Other
B53	1	0.01	Current Heterodox Approaches: Austrian
C26	1	0.01	Single Equation Models: Single Variables: Instrumental Variables (IV) Estimation
C36	1	0.01	Multiple or Simultaneous Equation Models: Instrumental Variables (IV) Estimation
C41	1	0.01	Duration Analysis; Optimal Timing Strategies
C51	1	0.01	Model Construction and Estimation
C63	1	0.01	Computational Techniques; Simulation Modeling
C81	2	0.02	Methodology for Collecting, Estimating, and Organizing Microeconomic Data; Data Access
C82	1	0.01	Methodology for Collecting, Estimating, and Organizing Macroeconomic Data; Data Access
C88	1	0.01	Data Collection and Data Estimation Methodology; Computer Programs: Other Computer Software
D01	1	0.01	Microeconomic Behavior: Underlying Principles
D02	27	0.21	Institutions: Design, Formation, and Operations
D03	2	0.02	Behavioral Microeconomics: Underlying Principles
D10	1	0.01	Household Behavior: General
D22	3	0.02	Firm Behavior: Empirical Analysis
D24	5	0.04	Production; Cost; Capital; Capital, Total Factor, and Multifactor Productivity; Capacity
D40	4	0.03	Market Structure and Pricing: General
D41	1	0.01	Market Structure and Pricing: Perfect Competition
D42	9	0.07	Market Structure and Pricing: Monopoly
D43	4	0.03	Market Structure and Pricing: Oligopoly and Other Forms of Market Imperfection
D73	5	0.04	Bureaucracy; Administrative Processes in Public Organizations; Corruption
D78	1	0.01	Positive Analysis of Policy Formulation and Implementation
D80	2	0.02	Information, Knowledge, and Uncertainty: General
D85	3	0.02	Network Formation and Analysis: Theory
E02	6	0.05	Institutions and the Macroeconomy
E13	1	0.01	General Aggregative Models: Neoclassical
E22	7	0.05	Capital; Investment; Capacity
E23	14	0.11	Macroeconomics: Production
E24	1	0.01	Employment; Unemployment; Wages; Intergenerational Income Distribution; Aggregate Human Capital
E26	1	0.01	Informal Economy; Underground Economy
E31	1	0.01	Price Level; Inflation; Deflation
E32	5	0.04	Business Fluctuations; Cycles
E42	5	0.04	Monetary Systems; Standards; Regimes; Government and the Monetary System; Payment Systems
E43	1	0.01	Interest Rates: Determination, Term Structure, and Effects
E44	4	0.03	Financial Markets and the Macroeconomy
E62	2	0.02	Fiscal Policy
F11	2	0.02	Neoclassical Models of Trade
F12	4	0.03	Models of Trade with Imperfect Competition and Scale Economies; Fragmentation
F15	16	0.12	Economic Integration
F16	1	0.01	Trade and Labor Market Interactions
F33	2	0.02	International Monetary Arrangements and Institutions
F34	1	0.01	International Lending and Debt Problems
F42	1	0.01	International Policy Coordination and Transmission
F43	1	0.01	Economic Growth of Open Economies
F50	1	0.01	International Relations, National Security, and International Political Economy: General
F52	1	0.01	National Security; Economic Nationalism
F53	34	0.26	International Agreements and Observance; International Organizations
F55	4	0.03	International Institutional Arrangements
G01	4	0.03	Financial Crises
G10	1	0.01	General Financial Markets: General (includes Measurement and Data)
G11	4	0.03	Portfolio Choice; Investment Decisions
G12	1	0.01	Asset Pricing; Trading Volume; Bond Interest Rates
G13	2	0.02	Contingent Pricing; Futures Pricing; option pricing
G14	1	0.01	Information and Market Efficiency; Event Studies; Insider Trading
G20	1	0.01	Financial Institutions and Services: General
G28	5	0.04	Financial Institutions and Services: Government Policy and Regulation

DE	D	DN13	Name of JEL Micro Category

Year	DE	Title and Abstract
2006		
2006	C41	Nanda, Anupam. 2006. <i>Property Condition Disclosure Law: Why Did States Mandate 'Seller Tell All'?</i>. University of Connecticut Department of Economics, Working papers: 2006-16. Thirty-six US states have already enacted some form of seller's property condition disclosure law. At a time when there is a movement in this direction nationally, this paper attempts to ascertain the factors that lead states to adopt disclosure law. Motivation for the study stems from the fact that not all states have yet adopted the law, and states that have enacted the law have done so in different years. The analytical structure employs hazard models, using a unique set of economic and institutional attributes for a panel of 50 US States spanning 21 years, from 1984 to 2004. The proportional hazard analysis of law adoption reveals that greater number of disciplinary actions tends to favor passage of the law. Greater broker supervision, implying generally higher awareness among real estate agents, seems to have a negative impact on the likelihood of a state adopting a property condition disclosure law.
2006	F15	Rossi, Francisco. 2006. "Free Trade Agreements and TRIPS-Plus Measures." <i>International Journal of Intellectual Property Management</i>, 1(1-2): 150-72. This paper examines the intellectual property clauses incorporated into recent bilateral and regional free trade agreements, particularly those signed by the USA with developing countries, and their implications for public health.

Year	DE	Title and Abstract
		The TRIPS-Plus provisions in these agreements are highlighted. These provisions are intended to put restrictions on the use of international non-proprietary names (INN), to extend patent duration beyond 20 years, to protect data of safety and efficacy with product exclusivity in the market, and finally to link patents to health registration. All these measures strengthen IP holders' rights, increasing the prices of new drugs and limiting room for public health authorities to provide necessary drugs to the population.

In <i>Street Smart: Competition, Entrepreneurship, and the Future of Roads</i> , ed. Gabriel Roth, 43-77. Foreword by Mary E. Peters. Independent Studies in Political Economy. Oakland, Calif.: Independent Institute; New Brunswick and London: Transaction.
2006	H56	CV: Granstrand, Ove. 2006. "Intellectual Property Rights for Governance in and of Innovation Systems." In <i>Intellectual Property Rights: Innovation, Governance and the Institutional Environment</i> , ed. Birgitte Andersen, 311-43. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	H87	Pugatch, Meir Perez, ed. 2006. <i>The Intellectual Property Debate: Perspectives from Law, Economics and Political Economy, New Horizons in Intellectual Property</i>. Cheltenham, U.K. and Northampton, Mass.: Elgar. Seventeen papers explore the current debates on intellectual property rights (IPRs). Papers discuss a critical analysis of the Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement; the TRIPS agreement--the damage to the World Trade Organization; whether stronger intellectual property rights can boost trade, foreign direct investment, and licensing in developing countries; the enforcement of intellectual property rights--an EU perspective of a global question; what an idea is worth; intellectual property policies and scale neutrality--strategic management implications for small- and medium-sized enterprises; encouraging cooperation among the academic, government, and private sectors in U.S. biomedical research and development; university technology transfer policy matters--whether it is time for a "Bayh-Dole Modernization Act"; pharmaceutical innovation and intellectual property rights--a global public good; the realities of TRIPS, patents, and access to medicines in developing countries; patenting genes; balancing intellectual property rights and competition law in a dynamic, knowledge-based European economy; technology, time, and market forces--the stakeholders in the Kazaa era; author's rights and internet regulation--the end of the public domain or constitutional reconceptualization; geographical indications and TRIPS; the treatment of geographical indications in recent regional and bilateral free trade agreements; and geographic indications, trade, and the functioning of markets.

Jaffe, Josh Lerner and Scott Stern, 1-26. Cambridge and London: MIT Press; Cambridge, Mass.: National Bureau of Economic Research.
2006	L26	CV: Andersen, Birgitte. 2006. "If 'Intellectual Property Rights' Is the Answer, What is the Question? Revisiting the Patent Controversies." In <i>Intellectual Property Rights: Innovation, Governance and the Institutional Environment</i> , ed. Birgitte Andersen, 109-47. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	L26	Bigus, Jochen. 2006. "Staging of Venture Financing, Investor Opportunism and Patent Law." <i>Journal of Business Finance and Accounting</i>, 33(7-8): 939-60. Stage financing provides a real option that is valuable when facing external uncertainty. However, it may also induce investor hold-up, if the property rights on an invention are not sufficiently protected. As a consequence, the entrepreneur may not work hard. Investor opportunism is less likely to occur, if investors' residual cash-flow-rights are contingent on verifiable 'milestones' in the previous stage. Equity-linked financing also provides high-powered incentives to the investor not to 'steal the idea' because his payoff becomes sensitive to the project value. The paper provides a new explanation for both types of contractual provisions.
2006	M16	CV: Mahjoub, Kamal Khalifa. 2006. "Intellectual Property Rights." In <i>Doing Business with Saudi Arabia</i> , ed. Anthony Shoult, 147-55. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	N21 N22 N50 Q27 Q32	Libecap, Gary D. 2006. <i>The Assignment of Property Rights on the Western Frontier: Lessons for Contemporary Environmental and Resource Policy</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12598. In addressing environmental and natural resource problems, there is a move away from primary reliance upon centralized regulation toward assignment of property rights to mitigate the losses of open-access. I examine the assignment of private property rights during the 19th and early 20th centuries to five natural resources, mineral land, timberland, grazing and farm land, and water on federal government lands in the Far West. The region was richly endowed with natural resources, but assigning property rights to them required adaptation from established, eastern practices as defined by the federal land laws. The property rights that emerged and their long-term welfare effects provide a laboratory for examining current questions of institutional design to address over-fishing, excessive air pollution, and other natural resource and environmental problems. A major lesson is that property rights allocations based on local conditions, prior use, and unconstrained by outside government mandates were most effective in addressing not only the

Year	DE	Title and Abstract
		immediate threat of open-access, but in providing a longer-term basis for production, investment, and trade. Another lesson is how hard it is to repair initial faulty property allocations. Accordingly, path dependencies in property rules are real, and they have dominated the economic history of resource use in the West.
2006	N23	CV: Thompson, F. M. L. 2006. "Cobden, Free Trade in Land, and the Road to the Abbey National." In <i>Rethinking Nineteenth-Century Liberalism: Richard Cobden Bicentenary Essays</i> , ed. Anthony Howe and Simon Morgan, 68-79. Modern Economic and Social History Series. Aldershot, U.K. and Burlington, Vt.: Ashgate.
2006	N30	Ellickson, Robert C. 2006. "Unpacking the Household: Informal Property Rights around the Hearth." <i>Yale Law Journal</i> , 116(2): 226-328. As Aristotle recognized in <i>The Politics</i> , the household is an indispensable building block of social, economic, and political life. A liberal society grants its citizens far wider berth to arrange their households than to choose their familial and marital relationships. Legal commentators, however, have devoted far more attention to the family and to marriage than to the household as such. To unpack the household, this Article applies transaction cost economics and sociological theory to interactions among household participants. It explores questions such as the structure of ownership of dwelling units, the scope of household production, and the governance of activities around the hearth. Drawing on a wide variety of historical and statistical sources, the Article contrasts conventional family-based households with arrangements in, among others, medieval English castles, Benedictine monasteries, and Israeli kibbutzim. A household is likely to involve several participants and as many as three distinct relationships--that among occupants, that among owners, and that between these two groups (the landlord-tenant relationship). Individuals, when structuring these home relationships, typically pursue a strategy of consorting with intimates. This facilitates informal coordination and greatly reduces the transaction costs of domestic interactions. Utopian critics, however, have sought to enlarge the scale of households, and some legal advocates have urged household members to write formal contracts and take disputes into court. These commentators fail to appreciate the great advantages, in the home setting, of informally associating with a few trustworthy intimates.

2006	O11	Pagano, Ugo. 2006. "Bens posicionais e desenvolvimento assimetrico. (Positional Goods and Asymmetric Development. With English summary.)" <i>Economica (Fluminense Federal University)</i> , 8(2): 293-322. Standard international trade and development theories have concentrated on private and public goods. Comparative advantage and spillover effects of knowledge imply that theories, which focus on these types of goods, can easily generate optimistic views of symmetric development. The situation changes when we introduce positional goods into the analysis. In this case, the specialization of the first world in reputational and intellectual goods, which are often protected by pan-positional global rights, can be a cause of an asymmetric development. This is associated with serious disadvantages for the countries producing standard commodities and implies de facto trade restrictions and "unequal exchanges" that favor the richest countries.

2007	D80 H10 H40	Shavell, Steven. 2007. <i>Eminent Domain Versus Government Purchase of Land Given Imperfect Information About Owners' Valuation</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 13564. Governments employ two basic policies for acquiring land: taking it through exercise of their power of eminent domain; and purchasing it. The social desirability of these two policies is compared in a model in which the government's information about landowners' valuations is imperfect. Under this assumption, the policy of purchase possesses the market test advantage that the government obtains land only if an owner's valuation is low enough that he is willing to sell it. However, the policy suffers from a drawback when the land that the government needs is owned by many parties. In that case, the government's acquisition will fail if any of the owners refuses to sell. Hence, the policy of eminent domain becomes appealing if the number of owners of the land is large. This conclusion holds regardless of whether the land that the government seeks is a parcel at a fixed location or instead may be located anywhere in a region.

Year	DE	Title and Abstract
2007	D85	CV: Guadamuz Gonzalez, Andres. 2007. "The Copyright Web: Networks, Law and the Internet." In <i>New Directions in Copyright Law. Volume 4</i> , ed. Fiona Macmillan, 144-67. New Directions in Copyright Law. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	E22	Andonova Zuleta, Veneta. 2007. "Two Paths to Prosperity When Property Rights Enforcement Is Weak." <i>Globalizacion, Competitividad y Gobernabilidad/Globalization, Competitiveness and Governability</i> , 1(1): 136-45. Governments are not always the most effective mechanism for guaranteeing private investment. In many countries governments are unable to enforce property rights, whatever the degree of protection promised by the law. In this context, I argue that there are at least two alternative private paths to prosperity. Firstly, businesses can adopt production technologies that are less sensitive to institutional voids. These are cheaper, mobile versions of existing technologies, so they can reduce exposure to the hold-up problem. Secondly, entrepreneurs can implement employee ownership, together with other motivational strategies, in order to preserve the ownership itself. Employees are thus encouraged to support the current allocation of property rights instead of challenging it.

2007	F16 F42 J60	Cameron, Stephen, Shubham Chaudhuri, and John McLaren. 2007. <i>Trade Shocks and Labor Adjustment: Theory.</i> National Bureau of Economic Research, Inc, NBER Working Papers: 13463. We construct a dynamic, stochastic rational expectations model of labor reallocation within a trade model that is designed so that its key parameters can be estimated for trade policy analysis. A key feature is the presence of time-varying idiosyncratic moving costs faced by workers. As a consequence of these shocks: (i) Gross flows exceed net flows (an important feature of empirical labor movements); (ii) the economy features gradual and anticipatory adjustment to aggregate shocks; (iii) wage differentials across locations or industries can persist in the steady state; and (iv) the normative implications of policy can be very different from a model without idiosyncratic shocks, even when the aggregate behaviour of both models is similar. It is shown that the equilibrium solves a particular planner's problem, thus facilitating analytical results, econometric estimation, and simulation of the model for policy analysis.

2007	H55	Szreter, Simon. 2007. "The Right of Registration: Development, Identity Registration, and Social Security--A Historical Perspective." <i>World Development</i> , 35(1): 67-86. Identity registration at birth is a UN proclaimed human right. However, it is not available in many of the world's poorer countries today. A national system of identity registration dates from 1538 in England and was used by individual citizens to verify their property and inheritance rights and by local communities to verify social security claims. This facilitated the effective functioning of a nationwide social security system and a mobile market in both labor and capital, contributing to Britain's pioneering process of economic development. Today identity and vital registration systems should also be a high priority for development policy as a democratic institution vital for turning the liberal rhetoric of rights into a reality of empowered individuals.
2007	H71	Miceli, Thomas J., Kathleen Segerson, and C. F. Sirmans. 2007. <i>Tax Motivated Takings.</i> University of Connecticut, Department of Economics, Working papers: 2007-43. Tax motivated takings are takings by a local government aimed purely at increasing its tax base. Such an action was justified by the Supreme Court's ruling in <i>Kelo v. New London</i> , which allowed the use of eminent domain for a private redevelopment project on the grounds that the project promised spillover public benefits in the form of jobs and taxes. This paper argues that tax motivated takings can lead to inefficient transfers of land for the simple reason that assessed values understate owners' true values. We therefore propose a reassessment scheme that greatly reduces the risk of this sort of inefficiency.

2007	J51	Ranis, Peter. 2007. "Eminent Domain: Unused Tool for American Labor?" <i>WorkingUSA</i> , 10(2): 193-208. The deindustrialization of America with the concomitant loss of decent paying jobs, the rise of unemployment, and the increasing poverty among the working class requires a novel response. The challenges of "free trade," globalization and international competition and technological change are all threatening the viability of the labor movement in the U.S. The use of eminent domain offers a meaningful tool that can be implemented to counter this trend. Eminent domain has been legally used and constitutionally sanctioned for community, infrastructure, and development purposes. The time is ripe for a broad-based coalition of legislatures, community interests, labor unions, and social movements to promote the use of eminent domain to expropriate with compensation enterprises in danger of being abandoned and moved offshore by their owners. Decisions by the owners of enterprises have repercussions and societal externalities that legitimize the rights to regulate them by way of eminent domain on behalf of the public interest. Workers in cooperatives in both the U.S. and throughout the world have shown that they can run factories and enterprises without owners and managers if given the necessary financial and legal wherewithal.

"Optimal Protection of Property Rights in a General Equilibrium Model of Growth." <i>Scandinavian Journal of Economics</i>, 109(1): 153-75. We incorporate weak property rights into an otherwise standard general equilibrium model of growth and second-best optimal policy. In this setup, the state plays two of its key roles: it protects property rights and provides public services. The government chooses policy (the income tax rate, as well as the allocation of collected tax revenues between law enforcement and public services) to maximize the growth rate of the economy. The focus of our analysis is on how weak property rights generate multiple decentralized competitive equilibria, the different properties of these equilibria, and the implications of second-best optimal policies.
2007	O41	Horii, Ryo, and Tatsuro Iwaisako. 2007. "Economic Growth with Imperfect Protection of Intellectual Property Rights." <i>Journal of Economics (Zeitschrift für Nationalökonomie)</i>, 90(1): 45-85. This paper examines the growth effects of intellectual property right (IPR) protection in a quality-ladder model of endogenous growth. Stronger IPR protection, which reduces the imitation probability, increases the reward for innovation. However, stronger protection also gradually reduces the number of competitive sectors, in which innovation is easier than in monopolistic sectors. With free entry to R&D, the number of researchers in each remaining competitive sector increases, but the concentration of R&D activity raises the possibility of unnecessary duplication of innovation, thereby hindering growth. Consequently, imperfect rather than perfect protection maximizes growth. Welfare and scale effects are also examined.

2007	R00	Guttinger, Philippe. 2007. "Approche du paysage en droit français. (The Concept of Landscape in French Law. With English summary)." <i>Cahiers d'Economie et Sociologie Rurales</i>, 0(84-85): 11-60. The study of the correlations between yesterday and today's juridical rules and types of landscape is still to be made. Nevertheless, the association "right and landscape" can provoke more theoretical thoughts to the jurists. The term "landscape" appeared in French law in 1906. More recently, the law of January 8th 1993, named "Landscapes Law", confirms the landscape as a value to be promoted to the biggest benefit of the individuals and the Society. However the jurists still agree to wonder how the Right takes possession of the landscape. First, two questions will be examined: the juridical definition of the landscape and its juridical qualification, that is to say the operation to enter a fact into the categories of Right and, consequently, to assure it a full reception in the legal system. However, the Napoleonic Civil Code specified the juridical categories of the property law used in French law and the category "common heritage" is hardly satisfactory. Then, the internal tensions present in the rules applicable to landscapes will be assessed: they can be explained by the burst of these rules and mostly by the multiplicity and the variety of the persons subject to feel concerned by the future of the

Year	DE	Title and Abstract
		very landscape. Private possession, public possession, and common possession are indeed likely to express themselves, and the promoters of a public policy centred on the protection or the management of the landscape have to keep this fact continually in mind. More precisely, we evaluate if French law considers the wish of common possession of the landscape, a tendency highlighted by the Council of Europe in its European Landscape Convention.
2007	R48	Blomley, Nicholas. 2007. "How to Turn a Beggar into a Bus Stop: Law, Traffic and the 'Function of the Place'." <i>Urban Studies</i>, 44(9): 1697-1712. A review of recent Canadian case law on the constitutionality of legal controls on begging reveals the importance of an unacknowledged view of space and behaviour that I call the traffic code. The paper endeavours to take this code seriously, unpacking its logic and scope. In particular, it explores its legal effects, noting that it deflects rights-based arguments on behalf of the public poor. Its emphasis upon space, use and behaviour appears to be not only illiberal, but curiously aliberal, operating without reference to rights. It is suggested, however, that it may in fact rely upon some deeply liberal notions of rights and space. This, perhaps, allows for a rights-based critique of the traffic code. This, and other possibilities for challenges to the traffic code, are explored in the conclusion.

2008	D02 J23	Nystrom, Kristina. 2008. "The Institutions of Economic Freedom and Entrepreneurship: Evidence from Panel Data." <i>Public Choice</i>, 136(3-4): 269-82. This paper provides new evidence on the determinants of entrepreneurship across countries. The paper investigates the relationship between the institutional setting, in terms of economic freedom, and entrepreneurship, measured by self-employment, in a panel data setting covering 23 OECD countries for the period 1972-2002. The measure of economic freedom includes five aspects: size of government, legal structure, and security of property rights, access to sound money, freedom to trade internationally, and the regulation of credit, labour, and business. The empirical findings show that a smaller government sector, better legal structure and security of property rights, as well as less regulation of credit, labour, and business tend to increase entrepreneurship.
2008	D02 N00 N13 N93 P48 R12	Bogart, Dan, and Gary Richardson. 2008. <i>Making Property Productive: Reorganizing Rights to Real and Equitable Estates in Britain, 1660 to 1830</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 14107. Between 1660 and 1830, Parliament passed thousands of acts restructuring rights to real and equitable estates. These estate acts enabled individuals and families to sell, mortgage, lease, exchange, and improve land previously bound by inheritance rules and other legal legacies. The loosening of these legal constraints facilitated the reallocation of land and resources towards higher-value uses. Data reveals correlations between estate acts, urbanization, and economic development during the decades surrounding the Industrial Revolution.

2008	E23	Villa, Stefania. 2008. "Do Incentives Matter for Growth in Italy?" <i>Review of Economic Conditions in Italy</i>, 0(1): 101-19. This paper analyzes the role of incentives in stimulating growth in a microfounded model with three sectors. Incentives take two forms: patents, which stimulate innovation, and incentives for enrolling in post-secondary education. Incentive activity and the decision to enroll in post-secondary education are considered as investment decisions. Incentives that either increase the benefits of these activities or reduce their costs affect private decision-making, stimulating investment and, consequently, economic growth. Empirical investigation of the model for Italy demonstrates that incentives may have real effects. A new database covering more than 400 patents filed by public research organizations shows that invention responds to changes in the intellectual property rights regime. And enrolment rates in post-secondary education have trended upward since the enactment of three policy measures designed to increase the return on an individual's investment in university training. The conclusion is that incentives do in fact matter for growth in Italy.

2008	L80	Mangani, Andrea. 2008. "La proprietà intellettuale nei servizi: Analisi economica. (With English summary)." <i>Economia dei Servizi</i>, 3(1): 37-54. The economic analysis of intellectual property rights (IPR) usually focuses on material goods. In addition, IPR laws were primarily developed in relation to industrial sectors. Today, the structural evolution of economies and technological progress impose to reconsider the role of the main forms of intellectual property, patents, trademarks and copyright, in services. Service companies rarely apply for patents, because official classifications do not include service classes. Besides, service firms have a particular perception of the innovation and imitation process. Many firms use copyrights to protect innovative services,

Year	DE	Title and Abstract
		but the copyright system is not evolved enough. Trademark applications are frequent, both for diffusing new knowledge and differentiating services on the market. Thus, service firms have to choose an appropriate combination of IPR. In this context, aggregate statistics provide a non-homogeneous picture about IPR in services. Empirical observations and theoretical considerations suggest to reflect on the general IPR system and the creation of formal tools explicitly devoted to services.
2008	M10	Ncube, Caroline B. 2008. "Protecting Business Methods in South Africa and Zimbabwe." <i>International Journal of Intellectual Property Management</i>, 2(1): 1-10. This paper outlines the trade secret and patent protection of business methods in South Africa and Zimbabwe. It begins with an introduction to business methods and proceeds to outline various possible methods of legal protection. It notes that the law in this respect is not yet well developed but there have been indications in case law that the courts are receptive to comprehensive protection of business methods.
2008	M14	Dal Zotto, Cinzia, and Hans van Kranenburg, eds. 2008. <i>Management and Innovation in the Media Industry</i>, Cheltenham, U.K. and Northampton, Mass.: Elgar. Thirteen papers examine how media companies are currently embracing innovation, the levels at which they are doing so, and how innovation can help media companies meet their future development needs. Papers discuss innovation and creativity in the media industry; understanding innovation in new and young media firms; applying intellectual property rights theory to the analysis of innovation competition in mass media content markets--a general framework and a theoretical application to media formats; toward a methodological foundation of media innovation research; promises and challenges of innovation surveys--the German record industry; transformations in the media industry--customization and branding as strategic choices for media firms; strategies to exploit the advantages of new targeting technologies--realizing the advertising revenue potential of media audiences; media organizational culture and innovative performance; innovation through external sourcing activities--an overview of major trends and patterns of the telecommunications service provider industry; diffusion of innovation in news organizations--action research of middle managers in Danish mass media; decision making by newspaper editors--understanding values and change; social piloting as testing methodology for media innovations; and managing innovation in audience measurement--the U.S. case studies of BookScan and the Local People Meter.

2008	N44	Gubby, Helen, Pieter Kleve, and Richard De Mulder. 2008. "Taking Patents Seriously." <i>International Journal of Intellectual Property Management</i>, 2(2): 153-63. Do patents make economic sense? This question is as relevant today as it was at the time of the Industrial Revolution. The questions that troubled the judges are surprisingly similar. There are two issues in particular: what is the legal status of intellectual creations and what are the economic effects of a patent system? In the 18th century, judges struggled to determine how a patent for inventions fitted within the traditional description of property. Today, judges have struggled in a similar way with the legal status of software and whether it can be protected by a patent or only by copyright.

2008	O40	Maskus, Keith E., ed. 2008. <i>Intellectual Property, Growth and Trade</i>, Frontiers of Economics and Globalization, vol. 2. Amsterdam and Boston: Elsevier; distributed by Turpin Distribution, Bedfordshire, U.K.. Fourteen papers present a set of analytical literature surveys regarding the linkages between intellectual property protection, international trade and investment, and economic growth. Papers discuss the law and economics of international intellectual property--a primer; patents and information diffusion; patents and the market for technology; networks, standards, and intellectual property rights; knowledge creation and diffusion of public science with intellectual property rights; intellectual property rights and competition policy; intellectual property rights, parallel imports, and strategic behavior; intellectual property rights and international innovation; intellectual property rights and international technology transfer via trade and foreign direct investment; the theory of international policy coordination in the protection of ideas; the theory of dispute resolution with application to intellectual property rights; patents and access to essential medicines; the scientific origins of the green and gene revolutions; and incorporating a globalized intellectual property rights regime into an economic development strategy.
2008	O40	Asoni, Andrea. 2008. "Protection of Property Rights and Growth as Political Equilibria." <i>Journal of Economic Surveys</i>, 22(5): 953-87. This paper presents a survey of the literature on property rights and economic growth. Different theoretical mechanisms that relate property rights to economic development are discussed. Lack of protection of property rights can result in slow economic growth through different channels: expropriation of private wealth, corruption of civil servants, excessive taxation and barriers to adoption of new technologies. The origins of property rights are also considered. Different theories are illustrated but more attention is paid to the 'social conflict view' and its success and limitations. The second part of the paper illustrates relevant empirical works on property rights and growth.
2008	P24	Xu, Jin. 2008. "Why China Needs the Market Now More Than Ever: Exclusive Interview with Tian Guoqiang, Director of Economics Institute, Shanghai U Finance and Economics." <i>China Economist</i>, 0(16): 5-11. After 30 years of reform, people have

Year	DE	Title and Abstract
		been calling for fundamental breakthroughs in the reform of property rights and the political system. But in an exclusive interview, Professor Tian Guoqiang tells us that the initial conditions for development in China and a natural propensity have determined that so-called fundamental solutions like property rights are until now still totally impractical. But Tian is optimistic. Once a student of Leonid Hurwicz, the great master of mechanism design theory, Tian believes that it is high time to define government and market boundaries to steer China's institutional reform in the direction of a "good market economy".

This paper seeks to answer the following two questions. What is the stand of Islamic Jurisprudence with regard to regulating Intellectual Property Rights and its protection? Has this matter ever been tackled by any of the earliest or recent Islamic Jurisprudents?

2009	B53	Jora, Octavian-Dragomir. 2009. "Austro-libertarianismul si teza ca jus naturalis e unicul cenzor rational al legii, nu "eficienta" (With English summary)." <i>Romanian Economic Journal</i>, 33(3): 161-94. The fallibility of the "efficiency" concept as developed by the neoclassical economists (in a non-personal and non-subjective perspective) laid the foundations for an allegedly objective and value-free--but, de facto, a meaningless, nonrealistic and arbitrary--perspective on law-as-a-social-wealth-maximizer-device. The acquis of the Austrian School in the field of Law & Economics is threefold: first it demonstrates that law has an a priori, rationalistic and natural way of being discovered (although in history the path of natural discovery was surpassed by the "positive" political design) and an unique embodiment--private property; secondly, the analysis of efficiency can by no means preclude the analysis of the proper arrangement of (property) rights, as, ultimately, efficiency can be asserted only by the acting people, regarding only their own acts and involving only their own property; thirdly, only as long as we agree that the ethics of property is the reasonable censor of law, can, therefore, law's influence on economy be formulated--with those laws granting invasion on property (aggression) being, by necessity, harmful for social efficiency and wealth, while those consistent with the property rights becoming the very premises of (ex-ante) Pareto efficient outcomes in society (though not an ex post guaranty, this as long as man is not an errorless being).
2009	C81	Organisation for Economic Co-operation and Development. 2009. <i>OECD Patent Statistics Manual</i>, Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Provides users and producers of patent statistics with basic guidelines for compiling and analyzing statistical data. Discusses patents as statistical indicators of science and technology; patent systems and procedures; basic criteria for compiling patent-based indicators; classifying patents by different criteria; the use and analysis of citations in patents; indicators of the internationalization of science and technology; and indicators of patent value. Also available in French under the title Manuel de l'OCDE sur les statistiques de brevets.

2009	D42	Sonn, Sang-Young, and Illtae Ahn. 2009. "Competition among Originals, Managed Originals and Illegal Copies and Social Welfare. (In Korean. With English summary)." <i>Journal of Economic Theory and Econometrics</i>, 20(1): 60-102. DRM (Digital Rights Management) refers to access control technologies for copyright holders to limit usage of digital contents or devices and to prevent the unauthorized use of them. We consider an information good market in which DRM-free originals (simply, "originals"), originals controlled by DRM (simply, "managed originals") and illegal copies are traded. We model a monopolistic copyright holder's behavior of setting the prices of an original and a managed original as well as of determining the protection level of DRM in this market, and identify and analyze the market equilibrium. We also study the welfare effect of the introduction of managed originals into the market. In the equilibrium, the copyright holder selects a protection level of DRM which equates the quality of a managed original and that of an illegal copy, and sets the price of a managed original to be equal to the unit copy cost. The introduction of managed originals into the market raises the price of an original. If the copy cost is "relatively" low, the introduction of managed originals enhances the social welfare. Otherwise, it reduces the social welfare.
2009	D42	Boldrin, Michele, and David K. Levine. 2009. "Does Intellectual Monopoly Help Innovation?" <i>Review of Law and Economics</i>, 5(3): In this paper, we begin our analysis of copyrights and patents by asking: why should creators have the right to control how purchasers make use of an idea or new good? This gives creators a monopoly over the idea. We refer to this right as "intellectual monopoly," to emphasize that it is this monopoly over all copies of an idea that is controversial, not the right to buy and sell copies. The government does not ordinarily enforce monopolies for producers of other goods. This is because it is widely recognized that monopoly creates many social costs. Intellectual monopoly is no different in this respect. The question we address is whether it also creates social benefits commensurate with these social costs.
2009	D42	Depoorter, Ben, Adam Holland, and Elizabeth Somerstein. 2009. "Copyright Abolition and Attribution." <i>Review of Law and Economics</i>, 5(3): An increasing number of scholarly voices challenge the balance between incentives and deadweight losses created by intellectual property rights. In their book <i>Against Intellectual Monopoly</i> (2008), Boldrin and Levine) move beyond

Year	DE	Title and Abstract
		pragmatic calls to fine-tune the scope of intellectual property rights to question the very premises of the quid pro quo underlying the intellectual property rights system. In this brief essay, we contemplate the effects of removing traditional copyright protection. We draw upon the available literature in economic theory and copyright scholarship to examine the likely incentive effects of copyright abolition on authors, while considering the available non-legal forms of remuneration for authors. Furthermore, we contemplate a version of copyright protection grounded and limited to a mandatory right of attribution.
2009	D42	McManis, Charles. 2009. "A Rhetorical Response to Boldrin and Levine: Against Intellectual (Property) Extremism." <i>Review of Law and Economics</i>, 5(3): . The two sides of the contemporary debate over intellectual property agree that the law needs to "strike a balance" between providing sufficient incentive for creation and the freedom to make use of existing ideas. Michele Boldrin and David Levine, on the other hand, boldly declare in their recent work "Against Intellectual Monopoly" that they have arrived at conclusions that "are at variance with both sides." In this commentary, I examine 1) their assertion that intellectual property should be viewed as an "intellectual monopoly"; 2) their claim to have mustered evidence and authorities showing that innovators and creators can be well protected in the absence of intellectual property law; and 3) their rhetorical practices throughout the book. I conclude that 1) their assertion that intellectual property constitutes an "intellectual monopoly" is itself a bad analogy and an example of the logical fallacy of hasty generalization; 2) the evidence and authorities they muster in support of their claim that innovators and creators can be well protected in the absence of intellectual property law are unpersuasive, as they actually tend to support the opposite conclusion; and 3) their book as a whole is an example of bad rhetorical argumentation.
2009	D42	Selgin, George, and John L. Turner. 2009. "Watt, Again? Boldrin and Levine Still Exaggerate the Adverse Effect of Patents on the Progress of Steam Power." <i>Review of Law and Economics</i>, 5(3): . In an earlier comment on Boldrin and Levine's 2003 lecture on patents and their effect on technology, we observed that their account of James Watt's influence on the progress of steam technology contained factual errors which tended to exaggerate the negative consequences of Watt's patent. We concluded that it was far from obvious that a corrected account would support Boldrin and Levine's bold conjectures. While Boldrin and Levine's 2008 "Against Intellectual Monopoly" begins with a new version of Watt's story that claims to take our earlier criticisms into account, here we assess that version and conclude that it shares many of the shortcomings of the original.
2009	D42	Vertinsky, Liza S. 2009. "Responding to the Challenges of "Against Intellectual Monopoly"." <i>Review of Law and Economics</i>, 5(3): . Most would agree that a sound patent system is one in which the social benefits of the system exceed the social costs. Many would also agree that the current patent system imposes significant social costs, and that the current proposed patent reform legislation is largely motivated by a desire to address those costs. In their book, <i>Against Intellectual Monopoly</i> (2008), Boldrin and Levine base their policy recommendation to abolish the patent system on the claim that the social costs of having any patent system, even an "improved" or "reformed" one, will inevitably exceed its benefits. I argue that while <i>Against Intellectual Monopoly</i> falls short of establishing a case for abolishing the patent system, it succeeds in making a case for rethinking the law and economics paradigm of patents that has formed the foundation for much of patent law scholarship and policy. The arguments that Boldrin and Levine offer provide compelling reasons for re-examining the core assumptions underlying the dominant models of how patents impact innovation, paying greater attention to institutional alternatives and to historical lessons about the strength of competitive markets and the costs and benefits of regulatory intervention that dampens competition. I suggest we can meet the challenges highlighted by Boldrin and Levine by providing a more central role for New Institutional Economics (NIE) in the study of patent law, refocusing our analysis on the structure of activities and transactions that drive alternative processes of innovation and the roles that institutions (including but not limited to patent, contract and competition laws, and the informal rules governing collaboration and research activities) and organizations (both public and private) play in determining transactional structures and innovation outcomes.
2009	D42	Liebowitz, Stan J., and Stephen E. Margolis. 2009. "Bundles of Joy: The Ubiquity and Efficiency of Bundles in New Technology Markets." <i>Journal of Competition Law and Economics</i>, 5(1): 1-47. This paper examines the economic logic underlying bundles and tie-in sales and uses the lessons learned from that examination to analyze seven specific instances of bundling that have been the subject of antitrust scrutiny or other policy initiatives. Of particular interest are products that are nonrivalrous in consumption, making all-you-can-eat pricing a viable candidate for efficiency. The main economic points are the following: A-la-carte pricing may populate economic models, but most products are bundles. They are bundles because bundles are generally more efficient. Tie-in sales are much less common and often not properly understood in textbook discussions. Market foreclosure, the principal efficiency concern with tying and bundling, is likely to be exceedingly rare. The seven instances of bundling (ties) examined in the paper are: cable television; patent pools; blanket licenses; iPods and iTunes; telephones; music albums and songs; operating systems and component programs.
2009	D42	Creane, Anthony. 2009. "Socially Excessive Dissemination of Patent Licences." <i>Canadian Journal of Economics</i>, 42(4): 1578-98. Compared with the social optimum, a monopolist usually sells too little. This result seemingly includes the case of a lab that licences its patented cost innovation: Katz and Shapiro (1986) find 'conditions under which [the lab] will issue fewer than the socially optimal number of licences.' However, I find instead that its incentives can be socially too high; the monopoly seller may sell too much. For example, it can be profit maximizing to sell several licences, while it is socially optimal that none is sold.
2009	D43	Lemley, Mark A. 2009. "A Cautious Defense of Intellectual Oligopoly with Fringe Competition." <i>Review of Law and Economics</i>, 5(3): . In a 2008 paper, Michele Boldrin and David Levine offer a strong attack on intellectual property. While Boldrin and Levine make a plausible case, it is an exaggeration to say as they do that patents and copyrights are intellectual monopolies and are not necessary to encourage invention or creation. More significant is their claim that competition, not monopoly, drives innovation. Boldrin and Levine overstate the case for competitive innovation and understate the case for innovation driven by either market power or the prospect of acquiring market power through patent innovation. They are correct that we will get some innovation in many industries, and even the same level of innovation in some industries, without IP protection. But for most types of invention and creation we just can't be confident that IP isn't driving at least some innovation. On balance, IP protection will give us more benefit in the industries in which it spurs competitive innovation and fringe competition than the harm it causes in raising prices and constraining downstream innovation. It is, as Mike Scherer puts it, "a system that, despite its manifest imperfections, has worked tolerably well." Nonetheless, Boldrin and Levine do point the way toward needed reforms of the IP system short of its abolition.
2009	D78	Alcantara, Christopher. 2009. "Old Wine in New Bottles? Instrumental Policy Learning and the Evolution of the Certainty Provision in Comprehensive Land Claims Agreements." <i>Canadian Public Policy</i>, 35(3): 325-41. Comprehensive land claims agreements are important tools for empowering Aboriginal peoples. A crucial part of these treaties is the certainty provision, which deals with the nature of Aboriginal rights and title once a treaty is signed. Up until 1986, the Crown insisted on one certainty formula for all treaties. After 1986, however, Aboriginal groups were able to negotiate alternatives to the original certainty provision. This paper seeks to explain why alternatives to the original certainty provision emerged after 1986. It suggests that

Year	DE	Title and Abstract
		government perceptions of policy failure, generated by Aboriginal opposition to the extinguishment clause, resulted in the Crown engaging in instrumental learning.
2009	E02 N16 N26	Alston, Lee J., and Andres A. Gallo. 2009. <i>Electoral Fraud, the Rise of Peron and Demise of Checks and Balances in Argentina</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15209. The future looked bright for Argentina in the early twentieth century. It had already achieved high levels of income per capita and was moving away from authoritarian government towards a more open democracy. Unfortunately, Argentina never finished the transition. The turning point occurred in the 1930s when to stay in power, the Conservatives in the Pampas resorted to electoral fraud, which neither the legislative, executive, or judicial branches checked. The decade of unchecked electoral fraud led to the support for Juan Peron and subsequently to political and economic instability.
2009	F11	Yuan, Michael Y. 2009. "Should Different Information Economies Have the Same Duration of Copyright?" <i>Review of Economic Research on Copyright Issues</i> , 6(1): 13-33. Copyright has been increasingly internationalized and, recently, more and more harmonized. However, there has been little theoretical study of international copyright. This paper develops and analyzes a non-cooperative two-country model of copyright, where two countries trade in information goods and each with an open and competitive information goods industry sets copyright policy to pursue self-national interest. The model suggests that an increase in demand for information goods in a country calls for longer copyright protection in this country and shorter protection in its trading partner; decreases in fixed or per-product creative costs in a country with lower such costs call for marginally shorter protection; and an improvement in the economies of creative scale in a country with better economies of creative scale calls for marginally longer protection. Understanding these rational responses of nations to changes in creative technologies and markets should be helpful for international copyright-policy making.
2009	F11	Anderson, James E. 2009. "Symposium on International Trade: Does Trade Foster Contract Enforcement?" <i>Economic Theory</i> , 41(1): 105-30. Contract enforcement is probabilistic, but the probability depends on rules and processes. A stimulus to trade may induce traders to alter rules or processes to improve enforcement. In the model of this paper, such a positive knock-on effect occurs when the elasticity of supply of traders is sufficiently high. Negative knock-on is possible when the elasticity is low. Enforcement strategies in competing markets are complements (substitutes) if the supply of traders is sufficiently elastic (inelastic). The model provides a useful structure of endogenous enforcement that gives promise of explaining patterns of institutional development.
2009	G20	Besley, Timothy J., and Maitreesh Ghatak. 2009. <i>The de Soto Effect</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7259. This paper explores the consequences of creating and improving property rights so that fixed assets can be used as collateral. This has become a cause celebre of Hernando de Soto whose views are influential in debates about policy reform concerning property rights. Hence, we refer to the economic impact of such reforms as the de Soto effect. We explore the logic of the argument for credit contracts, both in isolation, and in market equilibrium. We show that the impact will vary with the degree of market competition. Where competition is weak, it is possible that borrowers will be worse off when property rights improve. We discuss the implications for optimal policy and the political economy of policy reform.
2009	H26	CV: Kahan, Dan M. 2009. "The Logic of Reciprocity: Trust, Collective Action, and Law." In <i>Behavioral Law and Economics. Volume 2.</i> , ed. Jeffrey J. Rachlinski, 568-600. An Elgar Reference Collection. Economic Approaches to Law, vol. 23. Cheltenham, U.K. and Northampton, Mass.: Elgar.

2009	L32	Han, Chaohua, and Xiaoyan Zhou. 2009. "Key Sources of SOE Profitability and Their Implications for Social Welfare." <i>China Economist</i> , 0(23): 120-28. An analysis of the sources of profit growth for China's state-owned industry since 1999 indicates that the key source of profit growth is not the high productivity of state-owned enterprises (SOEs) but rather their monopoly position and pricing power in some basic industries. From an overall social perspective, such high profitability means an inefficient allocation of industrial resources and a potential loss of social welfare. Therefore, further expanding and deepening the reform of SOE property rights, encouraging the development of non-SOEs, and boosting the competitiveness of basic industries will significantly improve the resource allocation efficiency of the Chinese industry and enhance overall social welfare.
2009	L38 O20	Libecap, Gary D., and Dean Lueck. 2009. <i>The Demarcation of Land and the Role of Coordinating Institutions</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 14942. This paper examines the origins and economic effects of the two dominant land demarcation systems: metes and bounds (MB) and the rectangular system (RS). Under MB property is demarcated by its perimeter as indicated by natural features and human structures and linked to surveys within local political jurisdictions. Under RS land demarcation is governed by a common grid with uniform square shapes, sizes, alignment, and geographically-based addresses. In the U.S. MB largely is used in the original 13 states, Kentucky, and Tennessee. The RS is found elsewhere under the Land Ordinance of 1785 that divided federal lands into square-mile sections. We develop an economic framework for examining land demarcation systems and draw predictions. Our empirical analysis focuses on a 39-county area of Ohio where both MB and RS were used in adjacent areas as a result of exogenous historical factors. The results indicate that topography influences parcel shape and size under a MB system; that parcel shapes are aligned under the RS; and that the RS is associated with higher land values, more roads, more land transactions, and fewer legal disputes than MB, all else equal. The comparative limitations of MB appear to have had negative long-term effects on land values and economic activity in the sample area.
2009	L50	Kjolbye, Lars. 2009. "Article 82 EC as Remedy to Patent System Imperfections: Fighting Fire with Fire?" <i>World Competition: Law and Economics Review</i> , 32(2): 163-88. AB: It has been a well-established principle of EC competition law that there is no inherent conflict between competition laws and intellectual property laws. However, there are indications that this view is coming under pressure. The European Commission's pharmaceutical sector inquiry has identified a toolbox of practices engaged in by originator firms, which allegedly aims at hindering or delaying generic entry or competition from other originators. A number of these practices involve the strategic use of patents. As sector inquiries aim at giving effect to Articles 81 and 82 EC, the Commission's preliminary findings raise the question whether strategic patenting engaged in by dominant firms is caught by Article 82 EC and, if so, in what circumstances. This article discusses these questions in light of the existing case law on the application of Article 82 EC to refusals to license intellectual property rights, in particular the Microsoft case, which has extended this case law to patents. The article discusses in particular whether practices involving patent clustering, secondary patenting, and defensive patenting may be caught by Article 82 EC.
2009	L61	Ergas, Henry. 2009. "An Excess of Access: An Examination of Part IIIA of the Australian Trade Practices Act." <i>Agenda</i> , 16(4): 37-66. Part IIIA of the Australian Trade Practices Act defines circumstances in which a facility owner may be required to provide

Year	DE	Title and Abstract
		a third party with use of its facility. This paper examines what Part IIIA might be doing from an economic perspective and criticises 'monopoly leveraging' arguments for third-party access. It argues that the transactions costs of access are potentially significant, and can exceed any efficiency gains third-party access permits. These contentions are corroborated by reference to the long-running dispute between the Fortescue Metals Group and BHP Billiton Iron Ore over access to rail track in the Pilbara region of Western Australia.
2009	L67	Blakeney, Michael. 2009. "Protection of Traditional Knowledge by Geographical Indications." <i>International Journal of Intellectual Property Management</i> , 3(4): 357-74. This paper considers the extent to which geographical indications (GIs) regimes might provide for the protection of traditional knowledge (TK), through a consideration of the debate on TK within both the WTO and WIPO. The author relates the policy objectives, identified by WIPO as ideally underpinning the legislative protection of TK, to the policy objectives of GIs protection. The paper concludes with an examination of debate within the WTO, for the extension of the special protection offered to GIs for wines and spirits to handicrafts and other products and concludes with some case studies of handicrafts as examples of GIs.

2009	R23	Stern, Stephanie M. 2009. "Residential Protectionism and the Legal Mythology of Home." <i>Michigan Law Review</i> , 107(7): 1093-1144. The theory that one's home is a psychologically special form of property has become a cherished principle of property law, cited by legislators and touted extensively in the legal scholarship. Influential scholars, most notably Margaret Radin, have asserted that ongoing control over one's home is necessary for an individual's very personhood and ability to flourish in society. Other commentators have expounded a communitarian vision of the home as rooting individuals in communities of close-knit social ties. Remarkably, the legal academy has accepted the theoretical accounts of the home without demanding a shred of empirical evidence. The misplaced belief in the psychological primacy of the home has encouraged the overproduction of home-protective legislation and added a gloss of moral legitimacy to rent seeking. In light of the political groundswell to "save homes" and the social costs of residential protectionism, it is time for a critical reexamination of the psychological importance attributed to the home. Drawing on the research literature in psychology, sociology, and demography, this Article argues that there is scant evidence to support the theory that one's home is a special object that constitutes psychological personhood or enables a rich web of territorial relationships. The psychology research illustrates the primacy of social relations, not possessions, to self and flourishing. The sociological and demographic data indicate that closely-knit, low-turnover territorial neighborhoods are the exception, not the norm. In view of the high costs and limited psychological benefits of protectionism, I advance an evidence-based and minimal approach to residential protection.
2009	R23	Carpenter, Dick M., and John K. Ross. 2009. "Testing O'Connor and Thomas: Does the Use of Eminent Domain Target Poor and Minority Communities?" <i>Urban Studies</i> , 46(11): 2447-61. In dissenting from the US Supreme Court's 2005 Kelo decision upholding the use of eminent domain for private-to-private transfers of property, Justices O'Connor and Thomas asserted, based on the history of urban renewal, that eminent domain for private development would disproportionately hurt poor and minority communities. This study uses US census data and a sample of redevelopment project areas using or identified for the use of eminent domain to test the assertions of Justices O'Connor and Thomas. Results reveal that such project areas are, in fact, disproportionately populated by those who are poor, minority, and less educated.
2009	R23	Flemsaeter, Frode, and Gunhild Setten. 2009. "Holding Property in Trust: Kinship, Law, and Property Enactment on Norwegian Smallholdings." <i>Environment and Planning A</i> , 41(9): 2267-84. In this paper we discuss relations between kinship, law, and property enactment. A recent revision of The Norwegian Act Relating to Concession in the Acquisition of Real Property is designed to influence the relation between subjects (property owners) and objects (properties) through ceasing the obligation of residency and cultivation on certain properties, which in turn is intended to increase sales prices of the respective properties. Drawing upon empirical research conducted in four Norwegian local authority districts, we argue that responsibility for past, present, and future generations of family or kin is highly important in property enactment. Although relations between subjects and objects are powerful and inform policy actions, relations between social subjects might be just as influential and powerful. When enacting properties, people may live in more complicated worlds than is often assumed. We assert that further research in legal geography and the emerging field of 'geographies of relatedness' might profit from seeing kinship and property as coconstituted.

2010	A14	Ramello, Giovanni B. 2010. "Copyright and Endogenous Market Structure: A Glimpse from the Journal-Publishing Market." <i>Review of Economic Research on Copyright Issues</i> , 7(1): 7-29. This article explores the journal publishing industry in order to shed light on the overall economic consequences of copyright in markets. Since the rationale for copyright is among

Year	DE	Title and Abstract
		others to promise some market power to the holder of the successful copyrighted item, it also provides incentives to preserve and extend market power. A regular trait of copyright industries is high concentration and the creation of large catalogues of copyrights in the hands of incumbents. This outcome can be observed as the aggregation of rights and is one of the pivotal strategies for obtaining or extending market power, consistently with findings in other cases. Journal publishing is no different in this respect from other copyright industries, and in the last decade has experienced a similar trajectory, leading to a highly concentrated industry in which a handful of large firms increasingly control a substantial part of the market.
2010	A14	Nabilou, Hossein. 2010. "A Response to Prof. Shavell's "Should Copyright of Academic Works Be Abolished?"" <i>Review of Economic Research on Copyright Issues</i>, 7(1): 31-44. Undoubtedly, the idea of strong property rights is the underlying idea of economics and one of the main sources of economic incentive. In his paper, Prof. Shavell (see Shavell, 2009) seems to question and eventually impugn the idea of the economic efficiency of property rights in the market place of ideas in the academic world. In this regard, I will criticize his paper with the economic methods and will explain how Prof. Shavell's idea of the abolishing copyrights for the academic works might suffer from inconsistencies and also lacks the merits in generating a more economically efficient atmosphere for the academic works.
2010	A14	Muller-Langer, Frank, and Richard Watt. 2010. "Copyright and Open Access for Academic Works." <i>Review of Economic Research on Copyright Issues</i>, 7(1): 45-65. In a recent paper, Prof. Steven Shavell (see Shavell, 2009) has argued strongly in favor of eliminating copyright from academic works. Based upon solid economic arguments, Shavell analyses the pros and cons of removal of copyright and in its place to have a pure open access system, in which authors (or more likely their employers) would provide the funds that keep journals in business. In this paper we explore some of the arguments in Shavell's paper, above all the way in which the distribution of the sources of journal revenue would be altered, and the feasible effects upon the quality of journal content. We propose a slight modification to a pure open access system which may provide for the best of both the copyright and open access worlds.
2010	B19	Astier, Isabelle, and Annette Disselkamp. 2010. "Pauvrete et propriete privee dans l'encyclique Rerum Novarum. (Poverty and Private Property in the Encyclical Rerum Novarum. With English summary.)." <i>Cahiers d'Economie Politique</i>, 0(59): 205-24. The social encyclical Rerum Novarum closely links the question of poverty with that of property, and invokes Thomas Aquinas. But on closer examination, the reasoning developed in favour of property departs from the scholastic thinker, since it maintains more affinities with the liberal tradition represented by J. Locke. While Aquinas links property to the common good, for Locke property is based on the rights of the individual. A re-reading of the encyclical, in light of its sources, permits greater precision of the nature of this issue, while enriching the current debate about private property and social property.
2010	C82	Organisation for Economic Co-operation and Development. 2010. <i>Handbook on Deriving Capital Measures of Intellectual Property Products</i>, Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Provides guidelines for evaluating research and experimental development as intellectual property products and considers how to compare them across countries. Discusses measuring intellectual property assets; research and experimental development; mineral exploration and evaluation; software and databases; and entertainment, literary, and artistic originals. Annexes provide information on price and quality change; questions on the length of the service life of research and development; a consolidated set of questions for research and development performers; additional data requirements; pointers on data development for international transactions in research and development; Australian mineral exploration and evaluation surveys; lessons from business accounting; software-related classifications; and copyright.
2010	E32	Adair, A., J. Berry, M. Haran, M. G. Lloyd, and W. S. McGreal. 2010. "Impact of the Recession on the Property Market in Northern Ireland: Contractual Non-compliance." <i>Local Economy</i>, 25(2): 131-42.
2010	E62	Arrunada, Benito, and Amnon Lehavi. 2010. <i>Prime Property Institutions for a Subprime Era: Exploring Innovative Models of Residential Development and Finance</i>. Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. This paper breaks new ground toward contractual and institutional innovation in models of homeownership, equity building, and mortgage enforcement. Inspired by recent developments in the affordable housing sector and in other types of public financing schemes, this paper suggests extending institutional and financial strategies such as time and place-based division of property rights, conditional subsidies, and credit mediation to alleviate the systemic risks of mortgage foreclosure. Alongside a for-profit shared equity scheme that would be led by local governments, we also outline a private market shared equity model, one of bootstrapping home buying with purchase options.
2010	F12	Stefanadis, Christodoulos. 2010. "Appropriation, Property Rights Institutions, and International Trade." <i>American Economic Journal: Economic Policy</i>, 2(4): 148-72. In producer-friendly economies--economies that are ruled by productive agents and have strong property rights institutions--international trade causes an institutional improvement and an aggregate shift of talent towards production, and away from socially wasteful appropriation. However, in predator-friendly economies--economies that are ruled by rent seekers and have weak institutions--international trade leads to an institutional deterioration, and a more unfavorable talent allocation.
2010	F12	Okawa, Yoshifumi. 2010. "Innovation, Imitation, and Property Rights with International Capital Movement." <i>Review of International Economics</i>, 18(5): 835-48. This paper extends the established Helpman (1993) model by introducing international capital movement, and obtains new results concerning the welfare implications of tightening intellectual property rights (IPR) in the South. First, if separated capital markets in the North and the South are integrated, enforcement of IPR would have more desirable welfare effects in both regions. Second, when international capital movement is allowed, the North always gains from the tightening of IPR if the imitation rate is sufficiently high. This implies that the North's demand on the South to tighten IPR becomes stronger as the integration of international capital markets progresses.
2010	F52	Crenshaw, Martha, ed. 2010. <i>The Consequences of Counterterrorism</i>, New York: Russell Sage Foundation. Nine papers examine the political costs and challenges democratic governments face in confronting terrorists. Papers discuss counterterrorism regimes and the rule of law--the effect of emergency legislation on separation of powers, civil liberties, and other fundamental constitutional norms (John E. Finn); the uses and abuses of terrorist designation lists (Chantal de Jonge Oudraat and Jean-Luc Marret); immigration policy as counterterrorism--the effects of security on migration and border control in the European Union (Gallya Lahav); the social contract and the three types of terrorism--democratic society in the United Kingdom after 9/11 and 7/7 (Dirk Haubrich); confronting terrorism in Northern Ireland and the Basque Country--challenges for democracy and legitimacy (Rogelio Alonso); French responses to terrorism from the Algerian War to the present (Jeremy Shapiro); Germany's response to 9/11--the importance of checks and balances (Giovanni Capocchia); the consequences of counterterrorist polices in Israel (Ami Pedahzur and Arie Perliger); and terrorism as conventional security for democracies--America, Japan, and military action in the Asia-Pacific (David Leheny).

Tenancy has been a means for labor to advance their socio-economic condition in agriculture yet in Brazil and Latin America, tenancy rates are low compared to the U.S. and the OECD countries. We test for the importance of insecure property rights in Brazil on the reluctance of landowners to rent because of a fear of expropriation arising from land reform. Since 1964, the Land Statute in Brazil has targeted rental lands for redistribution. The expropriation of farms, resulting from land conflicts, is currently at the heart of land reform policies in Brazil. Land conflicts are a means for landless peasants to bring attention to land reform agencies for the need for redistribution. Land conflicts may also signal to landowners that their land is at risk for expropriation. Utilizing data across all counties in Brazil, we found that land conflicts reduce the likelihood of tenancy. This result implies: a reduction in agricultural efficiency; a reduction in the well-being of potential tenants, now landless peasants; and an expansion of the agricultural frontier through deforestation. Because of endogeneity between land tenancy and land conflict we instrument land conflict with Catholic priests.
2010	H21	BALESTRA, Carlotta, Thierry BRECHET, and Stephane LAMBRECHT. 2010. <i>Property rights with biological spillovers: when Hardin meets Meade</i>. Universite catholique de Louvain, Center for Operations Research and Econometrics (CORE), CORE Discussion Papers: 2010071. In an overlapping generations setup we address the issue of the optimal number of property rights to allocate over a natural resource when the goal is to maximize the stock of the natural resource at the steady state. We assume that the effect of the property rights regime on the evolution of the resource is twofold: through biological spillovers and through monitoring costs. Property rights are assigned to local communities, which can decide whether to cooperate or not. The outcome in the strategic setting is hence compared to the one in the cooperative setup. A fiscal policy able to decentralize the cooperative outcome is studied.
2010	H21	CEULEMANS, Cedric, Victor GINSBURGH, and Patrick LEGROS. 2010. <i>Rock and roll bands, (in)complete contracts and creativity</i>. Universite catholique de Louvain, Center for Operations Research and Econometrics (CORE), CORE Discussion Papers: 2010074. Members of a rock and roll band are endowed with different creativity. They match and eventually obtain credit for song writing as well as a share of the returns from sales. More creative members increase the probability of success but may also claim a larger share of the pie. In our theoretical model, the nature of matching (positive or negative assortative) as well as the covariation between the probability of having a "hit" and the dispersion of credits given to individual members are a function of the completeness of contracting. When members adopt a "gentleman's agreement" to share credits equally, the covariation between the probability of a hit and the dispersion of credits is negative, which is the consequence of positive assortative matching in creativity. The data show that the relation between dispersion and success is significantly negative, and that rock bands are thus likely to sign incomplete contracts.
2010	H42	Diop, Moussa, Steven P. Lanza, Thomas J. Miceli, and C. F. Sirmans. 2010. <i>Public Use or Abuse? The Use of Eminent Domain for Economic Development in the Era of Kelo</i>. University of Connecticut, Department of Economics, Working papers: 2010-28. The Supreme Court decision in <i>Kelo v. New London</i> (2005) authorized the use of eminent domain for economic redevelopment projects provided that there are sufficient spillover benefits to the public in the form of enhanced taxes and new jobs. This paper examines the economic basis for this decision, and tests the conclusions using cross-state data on economic development takings. It also examines the factors underlying the political actions by states to limit such takings following the <i>Kelo</i> decision. The results are consistent with the economic justification for eminent domain as a means of overcoming holdout problems associated with land assembly.

NBER Working Papers: 15697. During Britain's industrialization, Parliament operated a forum where rights to land and resources could be reorganized. This venue enabled landholders and communities to exploit economic opportunities that could not be accommodated by the inflexible rights regime inherited from the past. In this essay, historical evidence, archival data, and statistical analysis demonstrate that Parliament increased the number of acts reorganizing property rights in response to increases in the demand for such acts. Tests with placebo groups confirm the robustness of this result. This evidence indicates that Parliament responded elastically to changes in the public's demand for reorganizing property rights. Parliament's efforts to adapt property rights to modern economic conditions may have accelerated Britain's economic ascent.
2010	M15	Lallement, Remi. 2010. "Droits de propriete intellectuelle et positionnement concurrentiel des entreprises: Bilan des nouvelles pratiques et elements de comparaison franco-allemande. (Intellectual Property Rights and Competitive Positioning of Firms: New Practices and Elements for a French-German Comparison. With English summary.)." <i>Innovations</i>, 0(32): 11-34. The increasing importance of the knowledge-based economy implies a stronger link, for firms, between their competitive positioning and their use of intellectual property rights (IPR). A French-German comparison leads to two main results on this issue. At the macro- and mesoeconomic level, firstly, the propensity to use the different types of IPR in Germany and France is to a large extent related to structural factors: the institutional framework, the sectoral composition, firm size structure or the average propensity to innovate. The high French/German contrasts on this regard explain why French firms on average file half as much patents as their German counterparts but use as least as many, if not more, trademarks or copyrights. At the microeconomic level, secondly, the evidence shows on the contrary a global convergence between Germany and France with regard to the different uses of IPR by firms. In this respect, the key point is rather the growing diversity of the roles played by the IPR system and particularly by patents. In both countries, the traditional uses in terms of protection (anti-counterfeit protection, securing the freedom to operate) generally remain of utmost importance but have gradually lost in significance. Conversely, more recent types of practices expand faster, be it in a context of open innovation (coordination role within partnerships) or, more generally, for strategic purposes (blocking patents, deterrence aspects, etc.). Hence, the relative position of France regarding IPR use does not merely reflect passively the performance of French firms in terms of innovation or of exports. The capability to manage IPR is itself crucial for competitiveness and, more generally, for dynamic firms seeking for a better position towards competitors or partners.

2010	N15 N92	Grafton, R. Quentin, Clay Landry, Gary D. Libecap, Sam McGlennon, and Robert O'Brien. 2010. <i>An Integrated Assessment of Water Markets: Australia, Chile, China, South Africa and the USA</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16203. The paper provides an integrated framework to assess water markets in terms of their institutional underpinnings and the three 'pillars' of integrated water resource management: economic efficiency, equity and environmental sustainability. This framework can be used: (1) to benchmark different water markets; (2) to track performance over time; and (3) to identify ways in which water markets might be adjusted by informed policy makers to achieve desired goals. The framework is used to identify strengths and limitations of water markets in: (1) Australia's Murray-Darling Basin; (2) Chile (in particular the Limari Valley); (3) China (in particular, the North); (4) South Africa; and (5) the western United States. It identifies what water markets are currently able to contribute to integrated water resource management, what criteria underpin these markets, and which components of their performance may require further development.

Explores topics in intellectual property and innovation related to new frontier technologies. Discusses innovation before intellectual property in Japan's pre-Meiji Restoration period; basic research and patents; and multiple patents.
2010	N20	Yoo, Dongwoo, and Richard H. Steckel. 2010. <i>Property Rights and Financial Development: The Legacy of Japanese Colonial Institutions</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16551. Several studies link modern economic performance to institutions transplanted by European colonizers and here we extend this line of research to Asia. Japan imposed its system of well-defined property rights in land on some of its Asian colonies, including Korea, Taiwan and Palau. In 1939 Japan began to survey and register private land in its island colonies, an effort that was completed in Palau but interrupted elsewhere by World War II. Within Micronesia robust economic development followed only in Palau where individual property rights were well defined. Second, we show that well-defined property rights in Korea and Taiwan secured land taxation and enabled farmers to obtain bank loans for capital improvements, principally irrigation systems. Our analytical model predicts that high costs of creating an ownership updating system and a citizen identity system discourage a short-sighted government from implementing these crucial components, the absence of which gradually makes land registration obsolete. Third, considering all of Japan's colonies, we use the presence or absence of a land survey as an instrument to identify the causal impact of new institutions. Our estimates show that property-defining institutions were important for economic development, results that are confirmed when using a similar approach with British Colonies in Asia.
2010	N63	Giannetti, Renato. 2010. "Tutela dell'innovazione e specializzazione settoriale nell' "eta liberal" (1855-1878). (Patent Law and Regional Specialization in the Liberal Age [1855-1878]. With English summary.)" <i>Rivista di Storia Economica</i> , N.S., 26(2): 209-32. The essay takes into consideration the theme of a new system of patent protection, represented by the law of Piedmont of 1855, based upon the effects that it exercised on the innovative capacity of a country. Starting from the theoretical literature on the subject, firstly, the essay evaluates the effect of the new law, which was weaker than the preceding law in terms of protection of the holders of industrial monopolies, on the innovative industrial capacity of the Sardinian states both before and after the adoption of the law. The industrial products presented by the Kingdom of Sardinia at the International Expositions in Paris in 1855 and 1878 are used. The research also considers the activities of two other regional states before the unification: the Granduchy of Tuscany and the Kingdom of Lombardy-Venetia, based on their regional basis in 1855. The paper shows how free-trade type of legislation, in the international context of a free market, favours the specialisation of regional areas in goods for which they had a comparative advantage and a relative de-industrialisation.

In representative democracies, citizens delegate powers. Not surprisingly, citizens react angrily when the delegated powers are misused (i.e., used so as to decrease social welfare). Perhaps more puzzlingly, citizens sometimes repeatedly delegate the same power (e.g., surveillance of citizens, conscription), and then repeatedly react with anger to its misuse. To study this phenomenon, we model a stylized public that repeatedly adjusts the set of powers it delegates to politicians. The public obtains new information each period, forecasts rationally (but not perfectly) the benefits and costs of delegation, and infers the likelihood with which a court will correct politicians' misuses of delegated powers. We use the model to explore the history of eminent domain in the United States--a history characterized by periodic public backlash. The model and historical discussion illuminate the nature of public responses to judicial rulings--explaining why the public may react by adjusting the scope of delegated powers, even if a ruling merely upholds a well-established precedent.

2010	N92	Collins, William, and Katharine Shester. 2010. <i>The Economic Effects of Slum Clearance and Urban Renewal in the United States</i> . Department of Economics, Vanderbilt University, Working Papers: 1013. The Housing Act of 1949 established a federally subsidized program that helped cities clear areas of existing buildings for redevelopment, rehabilitate deteriorating structures, complete comprehensive city plans, and enforce building codes. The program ended in 1974, but not before financing over 2,100 urban renewal projects and generating great controversy. We use an instrumental variable strategy to estimate the program's effects on city-level outcomes. The estimates are generally positive and economically significant and are not driven by differential changes in cities' demographic composition. We caution that the results do not imply that the program was an equitable or optimal approach to dealing with central-city problems.

2010	O43	Nee, Victor, and Sonja Oppen. 2010. "Endogenous Institutional Change and Dynamic Capitalism." <i>Sociologia del Lavoro</i> , 0(118): 15-39. State-centered theory asserts that political institutions and credible commitment by political elite to formal rules securing property rights provides the necessary and sufficient conditions for economic growth to take place. In this approach, the evolution of institutions favorable to economic performance is a top-down process led by politicians who control the state. Hence, in less developed and poor countries, the counterfactual is that if formal institutions secure property rights and check predatory action by the political elite, then sustained economic growth would follow. The limitation of state-centered theory stems from the problem that behavioral prescriptions--formal rules and regulations--that reflect what politicians prefer can be ignored. In contrast, we lay out the bottom-up construction of economic institutions that gave rise to capitalist economic development in China. Entrepreneurship in the economically developed regions of the coastal provinces was not fueled by exogenous institutional changes. When the first entrepreneurs decided to decouple from the traditional socialist production system, the government had neither initiated financial reforms inviting a broader societal participation, nor had it provided property rights protection or transparent rules specifying company registration and liabilities. Instead, it was the development and use of innovative informal arrangements within close-knit groups of like-minded actors that provided the necessary funding and reliable business norms. This allowed the first wave of entrepreneurs to survive outside of the state-owned manufacturing system. This bottom-up process resembles earlier accounts of the rise of capitalism in the West.

2011	E13	Tchouto, Jules Eric. 2011. "Air Pollution, Allocation of Property Rights, Environmental Issues and Theoretical Overlapping Generations General Equilibrium Modelling." <i>South East European Journal of Economics and Business</i> , 6(1): 23-36. This paper presents how the environment--considered as a production factor--and other related assumptions can be introduced step by step in a theoretical overlapping generations general equilibrium model (OLG-GE). The first part shows the behaviors of agents with pollution in the absence of an environmental policy. The second part emphasizes a greenhouse gas abatement policy through the allocation of pollution permit ownership, which allows property rights on the environment; here we assume a three-factor model: capital-labor-environment. The last part of the paper highlights one theoretical property about the allocation of pollution permits within a OLG-GE steady state with the environment. To our knowledge, it is the first time that the aforementioned property has been characterized.
2011	E31	Alhadeff, Peter, and Caz McChrystal. 2011. "Inflation and US Music Mechanicals, 1976-2010." <i>Global Business and Economics Review</i> , 13(1): 1-12. Recorded music is a commodity bundled with a number of intellectual property rights. This paper illustrates the conflict over the value of one of the most important rights of music, the so-called mechanical rate that the record labels pay to songwriters and their publishers for the reproduction, in a recorded medium, of their work. There has been a serious devaluation of the US mechanical rate against inflation since the Copyright Act of 1976. As Congress and the CARP Tribunal are ultimately involved in setting terms, the implication is that songwriters and their publishers are losing power in the USA against the record labels. For a variety of reasons, the phenomenon seems to be particular to the USA. It has also gone unnoticed in the current music business literature. Scholars who succeed in clarifying musicians' legal rights should also consider basic economics as a useful analytical tool.

2011	E44	Andrianova, Svetlana, Panicos Demetriades, and Chenggang Xu. 2011. "Political Economy Origins of Financial Markets in Europe and Asia." <i>World Development</i>, 39(5): 686-99. We provide historical evidence from London, Amsterdam and Hong Kong which highlights the essential role played by governments in kick-starting financial development. In the cases of London and Amsterdam, the emergence of financial markets was a by-product of the rise of large trading monopolies. These monopolies, partly created to improve public finances, were responsible for major financial innovations and helped to strengthen investors' property rights. In Hong Kong, where the financial development model was bank-based, a large banking monopoly with close links to both the British and Chinese governments, set up to finance international trade, played a similar role.
2011	G11	Gerardi, Kristopher, Lauren Lambie-Hanson, and Paul S. Willen. 2011. <i>Do Borrower Rights Improve Borrower Outcomes? Evidence from the Foreclosure Process</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17666. We evaluate laws designed to protect borrowers from foreclosure. We find that these laws delay but do not prevent foreclosures. We first compare states that require lenders to seek judicial permission to foreclose with states that do not. Borrowers in judicial states are no more likely to cure and no more likely to renegotiate their loans, but the delays lead to a build-up in these states of persistently delinquent borrowers, the vast majority of whom eventually lose their homes. We next analyze a "right-to-cure" law instituted in Massachusetts on May 1, 2008. Using a difference-in-differences approach to evaluate the effect of the policy, we compare Massachusetts with neighboring states that did not adopt similar laws. We find that the right-to-cure law lengthens the foreclosure timeline but does not lead to better outcomes for borrowers.

Discusses the traditional conception of the rule of law; reasonableness standards and the rule of law; where natural law and utilitarianism converge; where natural law and utilitarianism diverge; property rights in the grand social scheme; the bundle of rights; eminent domain; liberty interests; positive-sum projects; redistribution last; the rule of law diminished; retroactivity; modern applications--financial reform and health care; and final reflections.
2011	I32	Ali, Daniel Ayalew, Stefan Dercon, and Madhur Gautam. 2011. "Property Rights in a Very Poor Country: Tenure Insecurity and Investment in Ethiopia." <i>Agricultural Economics</i>, 42(1): 75-86. This article provides evidence from one of the poorest countries in the world that the institutions of property rights matter for efficiency, investment, and growth. With all land state-owned, the threat of land redistribution never appears far off the agenda. Land rental and leasing have been made legal, but transfer rights remain restricted and the perception of continuing tenure insecurity remains quite strong. Using a unique panel data set, this study investigates whether transfer rights and implied tenure insecurity affect household investment decisions, focusing on trees and shrubs. The panel data estimates suggest that limited perceived transfer rights negatively affects the long-term investment in Ethiopian agriculture, contributing to the low returns from land and perpetuating low growth and poverty.
2011	K19	Marr, Emily. 2011. "The Citizenship Shibboleth: Is the American Dream Everyone Else's Nightmare?: Book Notice." <i>Michigan Law Review</i>, 109(6): 1163-73. The American Dream is a trope with global reach. Although the "city upon a hill" may have lost some of its luster in recent years, the idea that America is a country where citizens can rise above "the fortuitous circumstances of birth or position" largely continues to resonate. Professor Ayelet Shachar's provocative new book, however, suggests otherwise. In <i>The Birthright Lottery</i> , Shachar condemns birthright citizenship laws as a feudal anachronism analogous to an inherited-property regime. For her, birthright citizenship in a prosperous nation confers a morally arbitrary windfall that determines life opportunities. Shachar further argues that in a world of material inequalities, the winners of the "birthright lottery" live large at the losers' expense, often with deadly results. Shachar's arguments, if embraced, profoundly undermine both the feasibility and the desirability of the American Dream. If birthright citizenship is akin to entailed property, it is impossible to meaningfully exercise the agency embodied in the American Dream. And if birthright citizenship really is a zero-sum game, anybody living the American Dream is necessarily responsible for somebody else's nightmare.
2011	L70	Das, Amarendra. 2011. "Does Firm Ownership Differentiate the Social Compliance? An Enquiry into the Indian Mining Industry." <i>Indian Economic Journal</i>, 59(3): 56-70. Involuntary land acquisition for mining projects needs special attention for the geographical specificity nature of minerals. Both public and private sector firms acquire private land for mining projects. Do they acquire land and compensate tenants in similar ways? Or there are some differences? This paper answers these questions in the context of Indian mining industry. The paper defines social compliance as the compensation provided for involuntary land acquisitions and distinguishes it from corporate social responsibility. With the help of survey data, gathered from a sample of households that have surrendered their land to the mining firms in two mineral-rich districts of India, the study compares the social compliance of public and private mining firms. The study reveals that majority of the households, that have surrendered their land to public and private mining firms, are dissatisfied over the compensation they have received. Moreover, the study finds no significant difference between the social compliance of public and private mining firms in India.
2011	L73	Karvonen, Matti, and Tuomo Kassi. 2011. "Patent Analysis for Analysing Technological Convergence." <i>Foresight</i>, 13(5): 34-50. Fusion of new technologies and convergence has led to the emergence of new industries. This paper aims to present experiences of the concept of convergence from a patent citation analysis viewpoint. The main objective of the paper is to develop a tool for anticipating the emerging new industry segments. The patent analysis methods have been used to get an idea of the stage of new industry segment in the intersection of the paper and electronics industries. The authors distinguish self-citations from external citations, and further divide citations into two groups: within the industry and beyond the industry. Backward citations are used to evaluate the spill-overs between industries and forward citations are used to evaluate the significance of technology-based industry transformation. The recognized trends of the trajectory changes and growing overlaps of technological fields show indications for possible convergence between industries. Differentiating between external and self-citations within and beyond industry citations helps to provide more comprehensive prospects of a future technology competitive environment.
2011	L97	Trojanek, Maria. 2011. "Communes' Revenues from Leasing Rights to Use Municipal Properties." <i>Journal of International Studies</i>, 4(1): 81-88. Properties are one of the components of communal assets, and as such they play various roles in the local government's tasks. Property management types are therefore dependent on the classification of properties according to the

Year	DE	Title and Abstract
		functions they serve. The aim of the study is to present the reasons for choosing certain forms of municipal property management. Furthermore, the author seeks to describe communes' revenues from sublicensing the rights to properties to other entities.

2012		
2012	A33	Elhauge, Einer, ed. 2012. <i>Research Handbook on the Economics of Antitrust Law</i> , Research Handbooks in Law and Economics. Cheltenham, U.K. and Northampton, Mass.: Elgar. Thirteen papers explore aspects of antitrust economics that are currently in flux because of new developments in law or the economics literature. Papers discuss research topics in unilateral effects analysis; lightening up on market definition; mergers that eliminate potential competition; tying, bundling, and loyalty/requirement rebates; predatory pricing; assessing resale price maintenance after Leegin; the plausibility of Twombly--proving horizontal agreements after Twombly; monopsony, monopsony power, and antitrust policy; issues in antitrust enforcement; antitrust law in global markets; antitrust and regulation; the intersection of patent and antitrust law; and antitrust damages.
2012	A33	Jolly, Adam. 2012. <i>The Handbook of European Intellectual Property Management</i> , Third edition. London and Philadelphia: Kogan Page; distributed by Ingram Publisher Services, La Vergne, Tenn.. Fifty-four papers explore European intellectual property (IP) management. Papers discuss a more unitary European IP architecture; plans for a unitary patent in Europe; when a patent is right for you; applying for national and European patents; patent trends; IP and the "Innovation Union"; IP and open innovation; innovating out of recession; how to extract value; aligning the business plan with financing and protection of IP; high-level IP; information technology for IP; pioneering IP; software and computer-related inventions; IP and climate change; life sciences; medical devices; innovation in plants and seeds; adwords; the fashion industry; liability of hosting services; the tensions between patenting ideas and product commercialization; drafting choices for first-time patent applicants; the protection of trade secrets--a comparative overview; acquiring community brand rights; from the scientific to the legal; how to protect yourself online; what your U.S. competition does not want you to know about U.S. patent law; IP portfolio design; IP issues for creative start-ups and spin-outs; IP on a low budget; strategic variations; seamless cooperation between product development and protection; how to recover your position; IP valuation; dynamic portfolios; how to clear your path to market; exploring patent information; how to oppose a patent; how to design around a European patent; how to limit a patent; being clear about who owns the IP; potential for technology partnership and its implications for intellectual property rights; engaging with universities; guidelines for technology transfer; IP in collaboration; IP financing and trading; how to draft a license; royalty agreements; the valuation of patents; IP litigation and alternative dispute resolution; preliminary patent injunctions in Europe; the scope of claims; and specialized IP courts.
2012	C26 C36 C51	Belloni, A., D. Chen, V. Chernozhukov, and C. Hansen. 2012. "Sparse Models and Methods for Optimal Instruments with an Application to Eminent Domain." <i>Econometrica</i> , 80(6): 2369-2429. We develop results for the use of Lasso and post-Lasso methods to form first-stage predictions and estimate optimal instruments in linear instrumental variables (IV) models with many instruments, p . Our results apply even when p is much larger than the sample size, n . We show that the IV estimator based on using Lasso or post-Lasso in the first stage is root- n consistent and asymptotically normal when the first stage is approximately sparse, that is, when the conditional expectation of the endogenous variables given the instruments can be well-approximated by a relatively small set of variables whose identities may be unknown. We also show that the estimator is semiparametrically efficient when the structural error is homoscedastic. Notably, our results allow for imperfect model selection, and do not rely upon the unrealistic "beta-min" conditions that are widely used to establish validity of inference following model selection (see also Belloni, Chernozhukov, and Hansen (2011b)). In simulation experiments, the Lasso-based IV estimator with a data-driven penalty performs well compared to recently advocated many-instrument robust procedures. In an empirical example dealing with the effect of judicial eminent domain decisions on economic outcomes, the Lasso-based IV estimator outperforms an intuitive benchmark. Optimal instruments are conditional expectations. In developing the IV results, we establish a series of new results for Lasso and post-Lasso estimators of nonparametric conditional expectation functions which are of independent theoretical and practical interest. We construct a modification of Lasso designed to deal with non-Gaussian, heteroscedastic disturbances that uses a data-weighted l_1 -penalty function. By innovatively using moderate deviation theory for self-normalized sums, we provide convergence rates for the resulting Lasso and post-Lasso estimators that are as sharp as the corresponding rates in the homoscedastic Gaussian case under the condition that $\log p = o(n^{\superscript 1/3})$. We also provide a data-driven method for choosing the penalty level that must be specified in obtaining Lasso and post-Lasso estimates and establish its asymptotic validity under non-Gaussian, heteroscedastic disturbances.
2012	E26	Tajibaeva, Liaila S. 2012. "Property Rights, Renewable Resources and Economic Development." <i>Environmental and Resource Economics</i> , 51(1): 23-41. This paper analyzes the role of endogenous property rights in the development of an open resource-based economy. I incorporate renewable resources and endogenous decisions on property rights into a convex growth model with the formal and informal sectors. I find that along the transition path to steady state, property rights enforcement is not constant but improves with time as well as involves intermediate property rights specification (between open access and perfect property rights). International trade and labor market are driving these endogenous changes. Property rights improve with favorable terms of trade when the economy exports resource services and stronger property rights help maintain the resource stock by deterring illegal harvest. This pushes labor away from the informal harvest sector toward greater participation in the formal sector of the economy. In turn, more labor participation in the formal sector along with capital formation increase the country's output and consumption. Overall, with an open economy and well-functioning institutions, renewable resources have a positive impact on economic growth.
2012	G02	Samet, Kaies, and Frederic Teulon. 2012. "Creative Intelligence." <i>International Journal of Behavioural Accounting and Finance</i> , 3(3-4): 127-44. This paper examines the behavioural finance aspects of developed countries which invest significantly in R&D, while trying to benefit from this investment, within the framework of the so called 'creative intelligence.' At this level, creative intelligence lies in the framework of the 'intelligent' way which must be used to assure creativity and thus innovation. As its name suggests, creative intelligence excludes imitation. Therefore, firstly, it requires an important investment in R&D that manifests itself in the developed countries. The resulting technological change seems to be a necessary but insufficient condition to assure innovation. Indeed, two other factors are necessary for that: the patent, as a form of protection of intellectual property rights, and the human capital (and thus the education). The resulting innovation can be of two forms: either horizontal or vertical, though

Year	DE	Title and Abstract
		more interest should be given to vertical innovations since there is a priority in households for quality. The relationship between R&D and stock markets will allow better understanding of the relationship between R&D, innovation, and the benefits that result.
2012	G10	Diss. Basu, Ranajoy. 2012. <i>Institutions and Financial Markets</i> . PhD diss. Iowa State University. My thesis deals with Institutions and Financial markets. In chapter 2, of my thesis the role of government in achieving technological progress in an insecure property rights environment is discussed. In such a setting, it is shown that publicly-funded protection of private property rights may successfully support the adoption of frontier technologies as Nash equilibrium which is not possible otherwise. In chapter 3, I study an investment problem faced by a risk averse investor who has the option to invest in a risk free asset (such as a bank account) and a risky asset. The wealth can be transferred between the two assets and there are no transaction costs. The objective is to find an optimal quitting time from the stock market which maximizes the expected discounted utility from terminal wealth. I show the optimal stopping time is of threshold type. Finally in Chapter 4, I discuss numerical results in the context of chapter 3 and future research topics.
2012	G38	Weinstein, Olivier. 2012. "Firm, Property and Governance: From Berle and Means to the Agency Theory, and Beyond." <i>Accounting, Economics, and Law: A Convivium</i> , 2(2): 1-55. Over the last thirty years, the shareholder conception of corporate governance has established itself as the foundation of the power structure and management principles of the corporation. It is based on a specific theorization of the firm: agency theory. Our aim is to explain the full significance of this theorization, by considering the context in which it was developed and the project--of a fundamentally political nature--that it conveys. For that purpose, we return to the questions raised during the first half of the twentieth century, in the seminal book of Berle and Means and in subsequent works by Berle; questions of a much broader scope that the relationship between shareholders and managers. We will show that agency theory can be considered a response to the most important ideas advanced by Berle and Means, and then by Berle (and others), after the New Deal and the Second World War. Comparison of these two themes of reflection leads us to identify two theorizations, and two radically different conceptions of the firm and the corporation. To address these issues, we start by considering the questions raised in the early twentieth century about the nature of the corporation and the status of managers; and how, in response to these questions, Berle constructed a certain conceptualization of the corporation and of managerial capitalism; we shall then revisit the contract-based approach of Jensen and Meckling, to assess the theoretical and ideological content and show how it was actually strongly opposed to Berle's vision. Lastly, by way of conclusion, we shall endeavor to show how the opposition between these two theorizations should be seen, above all, as an opposition between two theories that are both "performative" rather than positive, and that the apparent success of agency theory and the dominance of shareholder primacy in corporate governance can only be understood in an institutional and political perspective.
2012	H32	Wilson, Blake S. 2012. "Retrospective Valuations of Intellectual Property." <i>Journal of Technology Transfer</i> , 37(1): 124-33. A relatively simple method for ongoing retrospective valuations of intellectual property (IP) for the purpose of setting royalty rates is described. The method uses measurable variables that indicate directly the value of an IP to a licensee over time. Protections are built into the method to preclude royalties that would be unfair to either the licensee or licensor. Unlike the cost- or income-based methods used in current practice, the described method does not require any assumptions about the future and is therefore immune to the uncertainties and possible inaccuracies that are inherent to prospective valuations. Although forecasting is needed for some purposes, such as for certain tax purposes or for the overall valuation of a company by stock analysts, the described retrospective valuations can be usefully applied for setting royalty rates that closely track and reflect changes in market conditions, patent protection, and product design.
2012	H61 H62	Wagner, Richard E. 2012. <i>Deficits, Debt, and Democracy: Wrestling with Tragedy on the Fiscal Commons</i> . Cheltenham, U.K. and Northampton, Mass.: Elgar. Explores budget deficits and rising debts in modern democracies as a consequence of the clash between the rationalities of private and common property in governance. Discusses budgeting--the elusive quest for fiscal responsibility; budgeting and political economy--a theoretical framework; budget deficits, Ricardian equivalence, and macro-micro supervenience; property rights, societal tectonics, and the fiscal commons; parliamentary assemblies as peculiar market bazaars; taxation, fiscal politics, and political pricing; regulation as alternative taxation; and public finance for a constitution of liberty.
2012	L29	Hall, Bronwyn H., Christian Helmers, Mark Rogers, and Vania Sena. 2012. <i>The Choice between Formal and Informal Intellectual Property: A Literature Review</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 17983. We survey the economic literature, both theoretical and empirical, on the choice of intellectual property protection by firms. Our focus is on the tradeoffs between using patents and disclosing versus the use of secrecy, although we also look briefly at the use of other means of formal intellectual property protection.
2012	L87	Barby, Eric. 2012. "The Internet of Things, Legal Aspects: What Will Change (Everything) . . ." <i>Communications and Strategies</i> , 0(87): 83-100. After the birth of the Internet, the rise of Web 2.0, here comes the Internet of Things. Internet has led us to adopt special law, digital economy law . . . Web 2.0 has urged us to rethink core legal concepts such as liability and ownership and introduce notions such as sharing and availability. The Internet of Things--which no one doubts will be the next technological revolution--will be a legal tsunami, the intensity and magnitude of which are unknown to date.
2012	N61	Higgins, David M. 2012. "'Forgotten Heroes and Forgotten Issues': Business and Trademark History during the Nineteenth Century." <i>Business History Review</i> , 86(2): 261-85. This reassessment of the importance of trademarks in business during the nineteenth and early twentieth centuries reveals that the focus by business historians on the beverage and processed-foodstuff industries has resulted in comparative neglect of the textile and metal-fabrication industries. The trademark histories of the latter two show that they followed their own paths, which resulted in their adopting three solutions to trademark issues that differed sharply from the approaches taken by the former two. The textile and metal fabrication sectors participated heavily in the evolution of an international regime to protect intellectual property; featured prominently in the development of patents in trademarks and trade names; and devised unique institutional solutions to the emerging problem of conflicting private marks in the Lancashire cotton-textile and Sheffield edge-tool industries. The history of these two industries indicates that trademark protection was not sufficient to ensure international competitiveness and long-run survival.
2012	N61 N62	Duguid, Paul. 2012. "A Case of Prejudice? The Uncertain Development of Collective and Certification Marks." <i>Business History Review</i> , 86(2): 311-33. The introduction of collective and certification marks to U.S. law in 1946 by the Lanham Act has generally been regarded as an innovative and forward-looking step. Yet these marks had been widely used by individual states since the previous century, and international conventions had long been pushing the federal government to enact measures to protect them. Indeed, it may be stranger that the U.S. trademark law of 1905 did not include protection for such marks than that, forty years later, the Lanham Act did. In exploring why the law of 1905 failed to respond to widespread innovation, and why the Lanham Act was celebrated for fulfilling such a long-overdue obligation, this article raises questions about conventionally linear accounts of the development of trademark law and practice.

Year	DE	Title and Abstract
2012	N64	Saiz, Patricio, and Paloma Fernandez Perez. 2012. "Catalonian Trademarks and the Development of Marketing Knowledge in Spain, 1850-1946." <i>Business History Review</i>, 86(2): 239-60. Trademarks have traditionally been viewed as assets that, although intangible, nevertheless contribute to the success of firms. This study, based on a compilation of national trademark data, corrects existing distortions of the historical role of brands and their--often unsuccessful--use as business tools by countries, sectors, or firms. Legislation on, and the profuse use of, trademarks in the Western world was pioneered by Spain, rather than by France, the United States, or the United Kingdom, and was initiated in unusual sectors, such as papermaking and textiles, rather than in the more usual ones of food and beverages. Analysis of the applicants of Catalan trademarks, across sectors, during almost a century, reveals that the legal possession of a brand cannot in itself guarantee a firm's success.
2012	N64	Dahlen, Marianne. 2012. "Copy or Copyright Fashion? Swedish Design Protection Law in Historical and Comparative Perspective." <i>Business History</i>, 54(1): 88-107. While fashion piracy has been practised on an industrial scale for at least a century, the levels of intellectual property protection for fashion design have been low in most nations. This article gives a summary of the context of the lack of design protection for the Swedish textile and fashion industries, broadly defined, in the twentieth century, with comparisons to contemporary debates on fashion and creativity and to the historical French and US context. France, the US and Sweden have followed different paths in their approaches to intellectual property protection for fashion design. A study of the Swedish legislative debates 1916-70 shows that the different legislative approaches are connected to the local contexts of production. It is proposed that one way of understanding the levels of protection for fashion design is in terms of the differences in logic between 'fashion' and 'clothing'.
2012	N64	Lopes, Teresa da Silva, and Mark Casson. 2012. "Brand Protection and the Globalization of British Business." <i>Business History Review</i>, 86(2): 287-310. In expanding on earlier analyses of the evolution of multinational business that have drawn from concepts of competition and innovation, this study examines the strategies used by British multinationals, between 1870 and 1929, to protect the global reputation of their brands, which were crucial to their survival and success. Even after the passage of new trademark legislation in 1876, enforcement of trademarks remained expensive, and often firms preferred to negotiate, rather than to prosecute violations. Many trademark imitators were based in the newly industrializing countries of the time--the United States, Germany, and Japan--and were part of the British export supply chains as licensees, franchisees, or wholesalers. British firms responded to infringements by lobbying governments, appointing local agents to provide intelligence, and collaborating with other firms.
2012	N80	Weinstein, Olivier. 2012. "Firm, Property and Governance: From Berle and Means to the Agency Theory, and Beyond." <i>Accounting, Economics, and Law: A Convivium</i>, 2(2): 1-55. Over the last thirty years, the shareholder conception of corporate governance has established itself as the foundation of the power structure and management principles of the corporation. It is based on a specific theorization of the firm: agency theory. Our aim is to explain the full significance of this theorization, by considering the context in which it was developed and the project--of a fundamentally political nature--that it conveys. For that purpose, we return to the questions raised during the first half of the twentieth century, in the seminal book of Berle and Means and in subsequent works by Berle; questions of a much broader scope that the relationship between shareholders and managers. We will show that agency theory can be considered a response to the most important ideas advanced by Berle and Means, and then by Berle (and others), after the New Deal and the Second World War. Comparison of these two themes of reflection leads us to identify two theorizations, and two radically different conceptions of the firm and the corporation. Lastly, by way of conclusion, we shall endeavor to show how the opposition between these two theorizations should be seen, above all, as an opposition between two theories that are both "performative" rather than positive, and that the apparent success of agency theory and the dominance of shareholder primacy in corporate governance can only be understood in an institutional and political perspective.
2012	O44	Tajibaeva, Liaila S. 2012. "Property Rights, Renewable Resources and Economic Development." <i>Environmental and Resource Economics</i>, 51(1): 23-41. This paper analyzes the role of endogenous property rights in the development of an open resource-based economy. I incorporate renewable resources and endogenous decisions on property rights into a convex growth model with the formal and informal sectors. I find that along the transition path to steady state, property rights enforcement is not constant but improves with time as well as involves intermediate property rights specification (between open access and perfect property rights). International trade and labor market are driving these endogenous changes. Property rights improve with favorable terms of trade when the economy exports resource services and stronger property rights help maintain the resource stock by deterring illegal harvest. This pushes labor away from the informal harvest sector toward greater participation in the formal sector of the economy. In turn, more labor participation in the formal sector along with capital formation increase the country's output and consumption. Overall, with an open economy and well-functioning institutions, renewable resources have a positive impact on economic growth.
2012	Q49	van der Ploeg, Frederick, and Dominic Rohner. 2012. "War and Natural Resource Exploitation." <i>European Economic Review</i>, 56(8): 1714-29. We build a theoretical framework that allows for endogenous conflict behaviour (i.e., fighting efforts) and for endogenous natural resource exploitation (i.e., speed, ownership, and investments). While depletion is spread in a balanced Hotelling fashion during peace, the presence of conflict creates incentives for rapacious extraction, as this lowers the stakes of future contest. This voracious extraction depresses total oil revenue, especially if world oil demand is relatively elastic and the government's weapon advantage is weak. Some of these political distortions can be overcome by bribing rebels or by government investment in weapons. The shadow of conflict can also make less efficient nationalized oil extraction more attractive than private extraction, as insecure property rights create a holdup problem for the private firm and lead to a lower license fee. Furthermore, the government fights less intensely than the rebels under private exploitation, which leads to more government turnover. Without credible commitment to future fighting efforts, private oil depletion is only lucrative if the government's non-oil office rents are large and weaponry powerful, which guarantees the government a stronger grip on the office and makes the holdup problem less severe.
2012	R42	Turnbull, Geoffrey K. 2012. "Delegating Eminent Domain Powers to Private Firms: Land Use and Efficiency Implications." <i>Journal of Real Estate Finance and Economics</i>, 45(2): 305-25. Many private common carriers or regulated utilities have eminent domain powers in the U.S. The rationale resembles that for local governments; lower cost of assembling land for long distance electric transmission, gas and oil products pipelines, etc. Recent court cases raise questions about whether eminent domain allows firms to use inefficiently long indirect land corridors, inefficiently wide corridors, or higher value land when lower value land is available as an alternative? Despite the incentive to over-use capital under rate-of-return regulation, it turns out that the firm adopts an excessive land corridor width only to the extent that corridor width is tied to capital usage. For route selection,

Year	DE	Title and Abstract
		rate-of-return regulated firms follow the same Pareto rule that would be followed by an efficiency-oriented government when designating which land to take for a transmission route by eminent domain.
2013		
2013	A11	Sidak, J. Gregory. 2013. "Court-Appointed Neutral Economic Experts." <i>Journal of Competition Law and Economics</i>, 9(2): 359-94. Complex civil litigation routinely includes expert economic testimony. However, it may be hard for a jury to determine at trial which expert economist is more credible, and it may be hard for the judge to determine at the Daubert hearing whether the methodology upon which a given expert economist relies is intellectually rigorous enough to produce results that constitute admissible testimony. One solution rarely employed is for the court to appoint its own neutral economic expert under Rule 706 of the Federal Rules of Evidence when a lawsuit contains a claim for damages that will require rigorous analysis of data. Based on my recent experience as Judge Richard Posner's court-appointed economic expert on damages in patent infringement litigation, I explain how the wider use of Rule 706 would assist the judge and jury and would facilitate the prompt settlement of intellectual property, antitrust, securities, contract, business tort, and other complex disputes. The benefits to courts and litigants would surely exceed the costs.
2013	D01	Posner, Richard A., and Francesco Parisi, eds. 2013. <i>The Coase Theorem. Volume 1. Origins, Restatements and Extensions. Volume 2. Criticisms and Applications</i>, Elgar Research Collection. <i>Economic Approaches to Law</i>, vol. 37. Cheltenham, U.K. and Northampton, Mass.: Elgar. Fifty-five previously published papers explore topics that have contributed to the theoretical development of the Coase theorem and examine its range of applications. Papers focus on the sources; the positive restatements; the normative corollaries; the Coase theorem and Coaseanism; the intellectual legacy; surveys and applications; Coasean bargaining in the shadow of the law; the Coase theorem and the Constitution; the Coase theorem and political markets; does liability matter?--the Coase theorem in the long run; other theoretical critiques; and experimental tests of the Coase theorem.
2013	D22	Gattai, Valeria, and Piergiovanna Natale. 2013. "What Makes a Joint Venture: Micro-evidence from Sino-Italian Contracts." <i>Review of Financial Economics</i>, 22(4): 194-205. This paper provides new contract-level evidence on control rights allocation in order to define what makes a joint venture. Property rights theory of the firm identifies circumstances under which joint control alleviates investment distortions due to contract incompleteness. We compare predictions of the theoretical literature with actual governance structures of Sino-Italian joint ventures, as reported in a questionnaire submitted to the entire population of Italian enterprises operating in China. With an exceptional response rate of 60%, our evidence confirms most of the theoretical predictions and helps select among competing approaches to model joint ventures.
2013	D22	Gongol, Tomas. 2013. "The Preliminary Ruling Decision in the Case of Google vs Louis Vuitton Concerning the Adword Service and Its Impact on the Community Law." <i>Amfiteatru Economic</i>, 15(33): 246-60. The internet user after entering the keywords obtains two kinds of search results--natural and sponsored ones. The following paper deals with the issue of using keywords which correspond to trademarks registered by a third party for advertising purposes through internet search portals such as Google, Yahoo, Bing, Seznam, Centrum, etc. (in principle web search portals). The objective of this article is to analyze decided cases dealing with the AdWords service issued by the Court of Justice of the European Union and compare them also with the attitude in similar disputes in the U.S. Within this knowledge it is necessary to determine the impact of these decisions on further national courts decisions of European Union member states. Moreover there is also legal impact on copyright law and responsibility of internet search engines deduced. The method of the analysis of courts decisions is used and the method of legal comparison is applied to different attitudes in similar cases. Where a third party uses a sign which is identical with the trademark in relation to goods or services identical with those for which the mark is registered, the trademark proprietor is allowed to prohibit such use if it is liable to affect one of the functions of the mark (particularly the function of indicating origin). Regarding to the liability of the Internet search engine itself, decisions of the courts in matters of Internet search engines in the European Union vary from state to state. Whereas the German courts tend to currently access the responsibility for the outcome of the search engines more freely, the French courts are often more stringent. Differently, we can say much more liberal, is the access of the U.S. courts to this issue. Preliminary ruling decision in case of Louis Vuitton Malletier SA vs. Google, Inc. and community practice in further cases follow similar (liberal) decisions of the courts of the U.S.
2013	D22	Marinescu, Cosmin. 2013. "Institutional Quality of the Business Environment: Some European Practices in a Comparative Analysis." <i>Amfiteatru Economic</i>, 15(33): 270-87. In contemporary economic literature, we can find plenty of theoretical and empirical approaches which seek to highlight the most appropriate factorial variables that are associated with the institutional quality of the business environment. This study presents, in a summarised version, the institutional logic of transaction costs that was substantiated within a scientific research project. In essence, the economic performances of the business environment are circumscribed by the institutions that facilitate or constrain the entrepreneurial initiatives and the economic activity in general. In terms of empirical analysis, the comparative approach of the EU business environments illustrates various examples of (good or bad) practices with respect to the institutional quality of the business environment. By selecting certain relevant institutional variables, the original character of this research resides in developing an indicator--The Institutional Quality of the Business Environment (hereafter IQBE) which offers a dynamic perspective upon the business environments that characterise both Romania and other EU countries.
2013	E24 J28	Phelps, Edmund, and Gylfi Zoega. 2013. "Corporatism and Job Satisfaction." <i>Journal of Comparative Economics</i>, 41(1): 35-47. We introduce reported job satisfaction as a measure of economic performance and find it positively correlated with GDP per capita and the labor force participation rate in a sample of OECD countries and negatively correlated with unemployment. Moreover, we find that many measures of corporatism, which we define in the wider sense as institutions that hamper the allocation of the factors of production and the distribution of income in a capitalist economy, are negatively correlated across countries with job satisfaction. Thus job satisfaction is positively correlated across countries with measures of the protection of property rights and negatively correlated with the volume of regulations of credit markets, labor markets and businesses, in addition to barriers to entrepreneurship, corruption, and lack of access to capital. In contrast, measures of capitalism, such as the number of listed companies and market capitalization, are positively correlated with job satisfaction.
2013	F43	Iwaisako, Tatsuro, and Koichi Futagami. 2013. "Patent Protection, Capital Accumulation, and Economic Growth." <i>Economic Theory</i>, 52(2): 631-68. In this paper, we investigate how strengthening patent protection affects economic growth in an endogenous growth model where both innovation and capital accumulation are the driving forces of economic growth. In this model, stronger patent protection raises the profit flow obtained by innovation but reduces the factor demand for capital. This process accelerates innovation but discourages capital accumulation, and because of the negative effect on economic growth through reducing capital accumulation, strengthening patent protection may then impede economic growth. This result contrasts with earlier studies where innovation is the sole driving force for economic growth. Moreover, in an open economy model where technologies are transferred and capital is imported from abroad, the strictest protection of patents enhances technology adoption

Year	DE	Title and Abstract
		from abroad but impedes capital accumulation, and thus, the relation derived between patent protection and output can be nonmonotone. In terms of implications, these findings may be able to partly explain the complex relation found by some empirical studies in this area.
2013	F50	CV: Steinberg, Richard H. 2013. "International Trade Law as a Mechanism for State Transformation." In <i>Back to Basics: State Power in a Contemporary World</i> , ed. Martha Finnemore and Judith Goldstein, 177-95. Oxford and New York: Oxford University Press.
2013	G12	Graff, Richard A. 2013. "A New Generation of Non-debt Fixed-Income Finance." <i>International Journal of Islamic and Middle Eastern Finance and Management</i> , 6(4): 267-77. Purpose--The development of standardized fixed-income securities and organized secondary markets in which to price and trade the securities is a widely recognized factor in the emergence of modern developed economies. However, the ongoing global financial crisis has exposed the existence of a fundamental and costly conflict between lender and borrower property rights when debt is securitized that has imperiled some fixed-income markets in their present form. This paper aims to suggest a new non-debt concept for fixed-income finance that avoids the conflict inherent in securitized debt. Design/methodology/approach--The paper considers how to build the foundation of non-debt fixed-income technology on property law instead of contract law. Findings--Fixed-income products based on the new technology expose investors to lower loss risk than investors incur with analogous debt-based products. Such products could lower the cost of fixed-income finance and contribute to the global restoration of fixed-income market liquidity.
2013	G13	Lazar, Fred, and Eliezer Z. Prisman. 2013. "Valuing Historical Land Claims and Its Loss of Use." <i>Journal of Real Estate Literature</i> , 21(2): 317-25. Historical land claims commonly arise in disputes between government and the former inhabitants of the land. These claims typically relate to a past damage caused either by inadequate compensation or by inappropriate taking of the land. There are opinions voiced in the literature that these claims should be valued differently by the prospective and retrospective approach, respectively. This paper shows the deficiencies and perverse motivation for claims including the optimal timing of the claim induced by the retrospective approach. A new way of valuing the damage that is in the spirit of the prospective approach rooted in modern financial theory and option pricing is suggested and justified. This approach alleviates some deficiencies and spares the need for a long sequence of historical asset prices that are not readily available. Hence, it makes settling such disputes easier and increases the likelihood of arbitration instead of costly court cases.
2013	G13	Liu, Linlin. 2013. "The Value of 'Weak' Patent." <i>International Journal of Intellectual Property Management</i> , 6(1-2): 15-35. This paper revisits the issue of valuing patent under litigation risk, which is called 'weak' patent. Drawing on real options theory, the valuing model of weak patent explicitly considers the patent owner holds long the commercialisation project and sells short an option to litigate. Considering the interaction between options, the least squares Monte Carlo approach is employed rather than pure Monte Carlo in the model. It is shown that the patent value is decreasing under litigation risk. Sensitivity analyses help to understand the determinants of weak patent value. Finally, the results yield new policy perspectives that may alleviate the harm raised by litigation risk.
2013	G14	Nagano, Mamoru. 2013. "Similarities and Differences among Cross-Border M&A and Greenfield FDI Determinants: Evidence from Asia and Oceania." <i>Emerging Markets Review</i> , 16(0): 100-118. Firms choose either cross-border M&A or greenfield foreign direct investment (FDI) when expanding their operations overseas. In this study, by focusing on Japanese firms pursuing FDI in emerging countries in Asia and Oceania, we provide empirical evidence of the similarities and differences in cross-border M&A and greenfield FDI determinants. We derive the following four main conclusions. First, an increase in host-country population size and decreases in per capita income and corporate tax rates generally attract both inward cross-border M&A and greenfield FDI to the host country. Second, however, a home-country firm tends to choose cross-border M&A rather than greenfield FDI when the host country sufficiently implements shareholder rights laws and the firm tends to choose greenfield FDI rather than cross-border M&A when the host country adequately enforces intellectual property rights laws. Third, a firm tends to choose greenfield FDI when the firm already has regional networks in the host country and choose cross-border M&A when the purpose of the firm's overseas operations is to establish sales distribution channels. Finally, a firm pursuing cross-border M&A experiences higher cumulative abnormal returns in its stock prices following the investment, while a firm pursuing greenfield FDI experiences increases in its stock prices immediately before the investment.
2013	H51	Sampat, Bhaven N., and Tahir Amin. 2013. "How Do Public Health Safeguards in Indian Patent Law Affect Pharmaceutical Patenting in Practice?" <i>Journal of Health Politics, Policy and Law</i> , 38(4): 735-55. The 1995 Trade Related Intellectual Property Rights (TRIPS) agreement required developing countries to grant product patents in pharmaceuticals. Developing countries have since explored various measures to ameliorate potential negative effects of the new laws on public health. A prominent example is India, whose post-TRIPS patent laws include a provision, section 3(d), that restricts patents on incremental pharmaceutical innovations. Its critics and supporters alike suggest that this provision makes Indian patent law very different from that in other jurisdictions. Yet there are concerns that given resource constraints facing the Indian patent office, this novel feature of Indian patent laws on the books may not have an effect on Indian patent prosecution in practice. We test this by examining the prosecution outcomes of 2,803 applications filed in both India and Europe, coded by whether they include claims that trigger 3(d) considerations. We find that having the 3(d) provision on the books does not translate into very different patent outcomes in practice in India, relative to Europe, a jurisdiction without this provision.
2013	H57	Agren, Robert, and Max Rolfstam. 2013. "A Conjecture on Institutional Rationalities and Property Rights in Public Procurement of Innovation." <i>Rivista di Politica Economica</i> , 102(4-6): 137-57. The increased interest in using public procurement as a policy tool for innovation has renewed a need for understanding the procurement process. A conjecture on institutional rationalities and property rights is offered to explain the hurdles present for conducting successful procurement projects. If an efficient negotiation solution is to be achieved, participants in procurement projects need to be aware of the other participants' institutional rationalities and actively consider these while concluding the terms of procurement projects. Consequently, future policy efforts towards increased innovation have to be targeting the process of public procurement of innovation, rather than focusing on regulatory issues.
2013	I15 I25	Almond, Douglas, Hongbin Li, and Shuang Zhang. 2013. <i>Land Reform and Sex Selection in China</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 19153. Following the death of Mao in 1976, abandonment of collective farming lifted millions from poverty and heralded sweeping pro-market policies. How did China's excess in male births respond to rural land reform? In newly-available data from over 1,000 counties, a second child following a daughter was 5.5 percent more likely to be a boy after land reform, doubling the prevailing rate of sex selection. Mothers with higher levels of education were substantially more likely to select sons than were less educated mothers. The One Child Policy was implemented over the same time period and is frequently blamed for increased sex ratios during the early 1980s. Our results point to China's watershed economic liberalization as a more likely culprit.

Year	DE	Title and Abstract
2013	J22	Aksan, Anna-Maria. 2013. "Appropriate Health R&D and Intellectual Property Rights Reform in Developing Countries." <i>Economica</i>, 80(319): 475-95. Welfare implications of imposing intellectual property rights (IPR) protection on health goods in developing countries are analysed using a North-South model. Consumption of health goods counteracts adverse effects of region-specific diseases on labour supply. Health needs differ between consumers in innovating and imitating countries, weakening the benefits of southern IPR enforcement for the North and strengthening the benefits for the South. Southern regions with unique health needs are more likely to benefit from IPR enforcement if healthcare infrastructure is adequate and the southern market is large enough to stimulate sufficient innovation. There is then also interregional income convergence.
2013	J28	THE SAME AS E24 Phelps, Edmund, and Gylfi Zoega. 2013. "Corporatism and Job Satisfaction." <i>Journal of Comparative Economics</i>, 41(1): 35-47.
2013	J83	Kroncke, Jedidiah J. 2013. "Property Rights, Labor Rights and Democratization: Lessons from China and Experimental Authoritarians." <i>New York University Journal of International Law and Politics</i>, 46(1): 115-205. This article argues that a fundamental paradox exists in efforts to promote democratization abroad that emphasize property rights to the exclusion of labor rights. Such a paradox emerges from the still-tenuous connection between property rights and foreign legal development alongside the renewed emphasis on independent unionization in democratization theory. The article explores the paradox in action through the willingness of modern authoritarian regimes to experiment with rule of law reforms, and creatively so in the realm of property rights, while being uniformly repressive of associative labor rights. In this vein, the article further details this paradox through the example of today's most successful experimental authoritarian, China's Chinese Communist Party. The CCP's approach to property rights reform is but one area where it has used formal legal regulation to improve its governance capacity and legitimacy. At the same time, the CCP has developed an expansive state-dominated corporatist labor regime while engaging in the unyielding repression of private labor organizing. The article then outlines the implications of this promotion paradox and the authoritarian experience for U.S. influence on labor rights abroad, emphasizing the troubling parallels between the emphasis on employment law and employer self-regulation favored in authoritarian regimes and current trends in U.S. labor law. Beyond questioning dominant assumptions about the role of law in democracy promotion abroad, these parallels provocatively provide a new vantage point from which to consider the classic tension between property rights and labor rights in U.S. labor law doctrine.
2013	M11	Markova, Maria. 2013. "Management of Company Innovations as Intellectual Property: According to the Bulgarian Legislation System." <i>Economic Alternatives</i>, 0(1): 5-19. The article focuses on product innovations in business and their essence as intellectual property (IP). It addresses the topic of the protection of the product innovations as IP in the Bulgarian legislation, making an overview of their strong sides, advantages, and alternatives. This piece of research presents the IP protection of product innovations as invention, utility model, industrial design, know-how, and/or object of copyright. The paper is structured in three parts as the introduction elaborates on innovation as an intellectual product. The second part details the various forms of the protection of the product innovations, while the final part is focused on variants of IP strategy in the field of product innovations: different strategic alternatives to obtain economic advantages of the company product innovations. Each intellectual result is presented as an intangible company asset with a specific economic potential and economic instrument for the market success: product identification and differentiation, image, and competitiveness.

2013	M48	Herrmann-Pillath, Carsten. 2013. "Performativity of Economic Systems: Approach and Implications for Taxonomy." <i>Journal of Economic Methodology</i>, 20(2): 139-63. The paper proposes to ground the taxonomy of economic systems on the identification of strongly performative institutions as distinctive features. I analyse performativity on the basis of the Aoki model of institutions, enriched by current approaches to performativity, which I combine with Searle's notion of a status function. Performativity is conceived as resulting from the conjunction of public representations (sign systems) and behavioural dispositions which channel strategic interactions among actors such that certain sets of institutions are reproduced recurrently. I apply this approach to the case of 'financial capitalism' and analyse three strongly performative institutions, the accounting standards (International Financial Reporting Standards), managerial incentive systems and intellectual property rights.

2013	Q40	Hoffmann, Sabine. 2013. "Property, Possession and Natural Resource Management: Towards a Conceptual Clarification." <i>Journal of Institutional Economics</i>, 9(1): 39-60. There are few concepts that are more central to natural resource management than those of property and property rights. Given their importance, it might be expected that there would be some consensus in the economic literature about what property and property rights are. However, no such consensus seems to exist. In fact, different authors use the same terms to denote quite disparate concepts and ideas, impeding rather than advancing progress in understanding natural resource management. As but one example, there is hardly a concept that has been as fundamentally misunderstood as that of the commons. That misunderstanding notwithstanding, there is another, less familiar, more common, and even more fundamental one: the persistent confusion of possession with property. This article argues that the distinction between possession and property is of particular importance for comprehending the meaning of institutional shifts from one resource management regime to another. It therefore reviews concepts central to natural resource management, by distinguishing between state, private, common property, and possession on the one hand and open access on the other.
2013	R20	Lopez Vicente, Fernando. 2013. <i>The effect of foreclosure regulation: Evidence for the US mortgage market at state level</i>. Banco de Espana. Banco de Espana Working Papers: 1306. Do laws to protect borrowers curb foreclosures? This question is addressed by analysing the impact of foreclosure laws on default rates at state level in the US mortgage market. Using panel data techniques, we find a statistically significant effect of regulation on the different stages of the foreclosure process. More precisely, we analyse the effect of regulation on 60-day delinquencies and foreclosure starts, with a focus on three protective elements commonly found in state foreclosure laws, namely requiring a judicial process, granting a redemption period and banning a deficiency judgment. We find that, whereas protective states exhibit, on average, lower 60-day delinquency rates, more protection does not ultimately bring about lower foreclosure rates. Lenders seem to ration credit to mitigate costly protective laws, thereby reducing delinquency rates; but this effect is overshadowed by a moral hazard problem since, once borrowers are delinquent, they have incentives to

Year	DE	Title and Abstract
		take advantage of the protection due to the lower costs of foreclosure. We also find that the recent housing market crisis has exacerbated that behaviour. Finally, we show that lengthening the foreclosure process is no cure for the foreclosure crisis.
2013	R22	Abdraimov, Bakhytzhana, Saule Suleimenova, and Sholpan Saimova. 2013. "Theoretical and Methodological Basis for the Economic Mechanism of Land Rent in Foreign Countries. (In Russian. With English summary.)." <i>Actual Problems of Economics</i> , 145(7): 217-25. The authors of the paper carry out the economic, historical political, sociological and legal analyses of the establishment and further development of rent and land rent in particular. Legislation is studied, and gaps and drawbacks in it are revealed, thus enabling the development of recommendations and proposals on further improvement of current land legislation in foreign countries.

Table K12.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	D13 N30	Ellickson, Robert C. 2006. "Unpacking the Household: Informal Property Rights around the Hearth." <i>Yale Law Journal</i> , 116(2): 226-328. As Aristotle recognized in <i>The Politics</i> , the household is an indispensable building block of social, economic, and political life. A liberal society grants its citizens far wider berth to arrange their households than to choose their familial and marital relationships. Legal commentators, however, have devoted far more attention to the family and to marriage than to the household as such. To unpack the household, this Article applies transaction cost economics and sociological theory to interactions among household participants. It explores questions such as the structure of ownership of dwelling units, the scope of household production, and the governance of activities around the hearth. Drawing on a wide variety of historical and statistical sources, the Article contrasts conventional family-based households with arrangements in, among others, medieval English castles, Benedictine monasteries, and Israeli kibbutzim. A household is likely to involve several participants and as many as three distinct relationships--that among occupants, that among owners, and that between these two groups (the landlord-tenant relationship).

Year	DE	Title and Abstract
		Individuals, when structuring these home relationships, typically pursue a strategy of consorting with intimates. This facilitates informal coordination and greatly reduces the transaction costs of domestic interactions. Utopian critics, however, have sought to enlarge the scale of households, and some legal advocates have urged household members to write formal contracts and take disputes into court. These commentators fail to appreciate the great advantages, in the home setting, of informally associating with a few trustworthy intimates.
2006	D83	Kim, Jeong-Yoo, and Kyoungwon Rhee. 2006. "Information Acquisition Activity and Damage Measures." <i>Journal of Institutional and Theoretical Economics</i> , 162(4): 543-56. We examine the effect of various damage measures on the buyer's information acquisition efforts when the buyer can learn a signal about the production cost after a contract. We find that contrary to standard results, liquidated damages induce neither efficient performance nor efficient reliance, if a buyer decides to learn the signal, and that they do not provide a buyer with the incentive to acquire information. Thus, if acquiring information is costly enough, liquidated damages yield the highest social welfare among various damage measures, but otherwise, no damages, providing the incentive to acquire information, may perform better.
2006	F13	Yenkong, Ngangjoh H. 2006. "World Trade Organization Dispute Settlement Retaliatory Regime at the Tenth Anniversary of the Organization: Reshaping the 'Last Resort' against Non-compliance." <i>Journal of World Trade</i> , 40(2): 365-84.
2006	H54	CV: Pietrzyk, Richard, and Kai F. Sturfels. 2006. "Private Public Partnerships." In <i>Key Aspects of German Business Law: A Practical Manual</i> , ed. Michael Wendler, Bernd Tremml and Bernard Buecker, 179-85. Third edition. Berlin and New York: Springer.
2006	I23 O38	Kirstein, Roland, and Birgit Will. 2006. "Efficient Compensation for Employees' Inventions." <i>European Journal of Law and Economics</i> , 21(2): 129-48. We analyze a legal reform concerning employees' inventions in Germany. Using a simple principal-agent model, we derive a unique efficient payment scheme: a bonus which is contingent on the project value. We demonstrate that the old German law creates inefficient incentives even if litigation cost is zero. However, the new law (concerning university employees) and the pending reform proposal (concerning other employees) also fail to implement first-best incentives. With suboptimal incentives to spend effort on inventions, the government's goal, an increase in the number of patents, is likely to be missed.
2006	N23 N24	Duque Santamaria, Laura Pilar. 2006. "Evolucion de la supervision de la documentacion contractual y tecnica de los productos de seguro en Espana. (Supervision of Contractual and Technical Documentation for Insurance Products in Spain. With English summary.)" <i>Informacion Comercial Espanola Revista de Economia</i> , 0(833): 139-51. The purpose of the present article is to provide an overview of the development of supervision in the area of contractual and technical documentation for insurance products in Spain, and to reflect on the prospects for financial education opening up to the insurance world in a context of new international trends in supervision. To this end, it contains a discussion of the supervisory standards for insurance that have regulated this industry in Spain since 1908, highlighting the steady liberalization involved in the change from a system of ex-ante control to one of systematic revision and finally to the liberalized system of ex-post supervision presently in place.
2006	N30	THE SAME AS D13 Ellickson, Robert C. 2006. "Unpacking the Household: Informal Property Rights around the Hearth." <i>Yale Law Journal</i> , 116(2): 226-328.
2006	O38	THE SAME AS I23 Kirstein, Roland, and Birgit Will. 2006. "Efficient Compensation for Employees' Inventions." <i>European Journal of Law and Economics</i> , 21(2): 129-48.
2006	P23	Vinogradova, Elena. 2006. "Working around the State: Contract Enforcement in the Russian Context." <i>Socio-Economic Review</i> , 4(3): 447-82. While problems with contract enforcement can occur in any economy, in the transitional Russian economy they have reached epidemic proportions. When state institutions are perceived as failing to guarantee enforcement of contracts and property rights, small firms increasingly rely on alternative (non-state) ways of enforcing their business agreements. The paper presents the results of a series of in-depth interviews conducted in 2001-02 with owners and managers of 45 small private firms in St Petersburg, Russia, regarding the kind of problems with contract enforcement that they experience. It then discusses the historical and institutional roots of the incapacity of state institutions to provide reliable contract enforcement, and proposes a typology and analysis of available contract enforcement strategies. These findings are important for understanding the current business environment in Russia as the context in which new market institutions are formed, and the way Russian capitalism functions

2007	B00 D61 J70 K00	Jolls, Christine. 2007. <i>Behavioral Law and Economics</i> . National Bureau of Economic Research, Inc, NBER Working Papers, 12879. Behavioral economics has been a growing force in many fields of applied economics, including public economics, labor economics, health economics, and law and economics. This paper describes and assesses the current state of behavioral law and economics. Law and economics had a critical (though underrecognized) early point of contact with behavioral economics through the foundational debate in both fields over the Coase theorem and the endowment effect. In law and economics today, both the endowment effect and other features of behavioral economics feature prominently and have been applied in many important legal domains. The paper concludes with reference to a new emphasis in behavioral law and economics on "debiasing through law" - using existing or proposed legal structures in an attempt to reduce people's departures from the traditional economic assumption of unbounded rationality.
2007	C43	Squalli, Jay, Kenneth Wilson, and Sarah Hugo. 2007. "An Examination of European Growth Competitiveness." <i>Economic and Business Review</i> , 9(2): 127-46. This paper argues that the arbitrary selection of weights by the World Economic Forum, (WEF) used in the calculation of the Growth Competitiveness Index (GCI) could lead to a distorted vision of the relative competitiveness of European countries. Using the weights generated by Structural Equation Modelling (SEM), the gap in competitiveness between European Union members becomes more distinct, whilst for many of the acceding and candidate European countries the

Year	DE	Title and Abstract
		competitiveness rating is found to have been previously underestimated by the WEF. This paper demonstrates the superiority and robustness of SEM for calculating weights which lead to more reliable policy and business recommendations.

2007	E32 E44	Kharroubi, Enisse. 2007. "Crises, Volatility, and Growth." <i>World Bank Economic Review</i>, 21(3): 439-60. How do volatility and liquidity crises affect growth? When credit is constrained, a bias toward short-term debt can arise in financing long-term investments, generating maturity mismatches and leading potentially to liquidity crises. The frequency of liquidity crises ("abnormal" volatility) and the volatility of growth ("normal" volatility) are found to have independent negative effects on growth. Financial development however dampens the growth cost of volatility, but only in the case of normal volatility. The growth cost of volatility therefore depends critically on the composition of normal and abnormal volatility, the latter being more costly for growth.
2007	E44	Galindo, Arturo Jose, and Alejandro Micco. 2007. "Creditor Protection and Credit Response to Shocks." <i>World Bank Economic Review</i>, 21(3): 413-38. This article studies the relationship between creditor protection and credit responses to macroeconomic shocks. Using a data set on legal determinants of finance in a panel of data on aggregate credit growth for 79 countries during 1990-2004, it is shown that credit is more responsive to external shocks in countries with weak legal creditor protection and weak enforcement. The results are statistically and economically significant and robust to alternative measures of creditor protection, to the inclusion of variables that reflect different stages of economic development, to the restriction of the sample to only developing economies, to the controls for systemic crises, to alternative shock measures, and to vector autoregressive specifications.

2007	F14	Nunn, Nathan. 2007. "Relationship-Specificity, Incomplete Contracts, and the Pattern of Trade." <i>Quarterly Journal of Economics</i>, 122(2): 569-600. Is a country's ability to enforce contracts an important determinant of comparative advantage? To answer this question, I construct a variable that measures, for each good, the proportion of its intermediate inputs that require relationship-specific investments. Combining this measure with data on trade flows and judicial quality, I find that countries with good contract enforcement specialize in the production of goods for which relationship-specific investments are most important. According to my estimates contract enforcement explains more of the pattern of trade than physical capital and skilled labor combined.

We analyze venture capital (VC) investments in twenty-three non-US countries and compare them to US VC investments. We describe how the contracts allocate cash flow, board, liquidation, and other control rights. In univariate analyses, contracts differ across legal regimes. However, more experienced VCs implement US style contracts regardless of legal regime. In most specifications, legal regime becomes insignificant controlling for VC experience. VC firms that do not use US style contracts fail significantly more often, even controlling for VC experience. The results are consistent with US style contracts being efficient across a wide range of legal regimes.

2007	J21 J88	Autor, David H., William R. Kerr, and Adriana D. Kugler. 2007. Do Employment Protections Reduce Productivity? Evidence from U.S. States. National Bureau of Economic Research, Inc. NBER Working Papers: 12860. Theory predicts that mandated employment protections may reduce productivity by distorting production choices. Firms facing (non-Coasean) worker dismissal

Year	DE	Title and Abstract
		costs will curtail hiring below efficient levels and retain unproductive workers, both of which should affect productivity. These theoretical predictions have rarely been tested. We use the adoption of wrongful-discharge protections by U.S. state courts over the last three decades to evaluate the link between dismissal costs and productivity. Drawing on establishment-level data from the Annual Survey of Manufacturers and the Longitudinal Business Database, our estimates suggest that wrongful-discharge protections reduce employment flows and firm entry rates. Moreover, analysis of plant-level data provides evidence of capital deepening and a decline in total factor productivity following the introduction of wrongful-discharge protections. This last result is potentially quite important, suggesting that mandated employment protections reduce productive efficiency as theory would suggest. However, our analysis also presents some puzzles including, most significantly, evidence of strong employment growth following adoption of dismissal protections. In light of these puzzles, we read our findings as suggestive but tentative.

2007	O10	Macchiavello, Rocco. 2007. Financial Constraints and the Costs and Benefits of Vertical Integration. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6104. Does vertical integration reduce or increase transaction costs with external investors? This paper analyzes an incomplete contracts model of vertical integration in which a seller and a buyer with no cash need to finance investments for production. The firm is modeled as a "nexus of contracts" across the intermediate input supply and the financing transaction. The costs and benefits of vertical integration depend on the relative importance of a positive "contractual centralization" effect against a negative "de-monitoring" effect: the firm centrally organizes the nexus of contracts reducing the extent of contractual externalities while the market disciplines decisions driven by private benefits. Larger projects, more specific assets, and low investors protection are determinants of vertical integration.
2007	O12 O13 O18 Q16	Bandiera, Oriana. 2007. "Land Tenure, Investment Incentives, and the Choice of Techniques: Evidence from Nicaragua." World Bank Economic Review, 21(3): 487-508. The choice of cultivation techniques is a key determinant of agricultural productivity and has important consequences for income growth and poverty reduction in developing countries. Household data from Nicaragua are used to show that the choice of cultivation technique depends on farmers' tenure status even when techniques are observable and contractible. In particular, tree crops are less likely to be grown on rented than on owner-cultivated plots. Further evidence

Year	DE	Title and Abstract
		indicates that the result follows from landlords' inability or unwillingness to commit to long-term tenancy contracts rather than from agency costs due to risk aversion or limited liability.

2007	P34	Safavian, Mehnaz, and Siddharth Sharma. 2007. "When Do Creditor Rights Work?" <i>Journal of Comparative Economics</i> , 35(3): 484-508. Creditor-friendly laws are generally associated with more credit to the private sector and deeper financial markets. But laws mean little if not upheld in the courts. We hypothesize that the effectiveness of creditor rights is strongly linked to the efficiency of contract enforcement. This hypothesis is tested using firm level data on 27 European countries in 2002 and 2005. We find that firms have more access to bank credit in countries with better creditor rights, but the association between creditor rights and bank credit is much weaker in countries with inefficient courts. Exploiting the panel dimension of our data and the fact that creditor rights change over time, we show that the effect of a change in creditor rights on change in bank credit increases with court enforcement. In particular, we show that a unit increase in the creditor rights index will increase the share of bank loans in firm investment by 27 percent in a country at the 10th percentile of the enforcement time distribution (Lithuania). However, the increase will be only 7 percent in a country at the 80th percentile of this distribution (Kyrgyzstan). Legal protections of creditors and efficient courts are strong complements.

2008	C73 D44	Cesi, Bernardino, and Gian Luigi Albano. 2008. <i>Past Performance Evaluation in Repeated Procurement: A Simple Model of Handicapping</i> . Fondazione Eni Enrico Mattei. Working Papers: 2008.19. When procurement contracts are awarded through competitive tendering participating firms commit ex ante to fulfil a set of contractual duties. However, selected contractors may find profitable to renege ex post on their promises by opportunistically delivering lower quality standards. In order to deter ex post moral hazard, buyers may use different strategies depending on the extent to which quality dimensions are contractible, that is, verifiable by contracting parties and by courts. We consider a stylized repeated procurement framework in which a buyer awards a contract over time to two firms with different efficiency levels. If the contractor does not deliver the agreed level of performance the buyer may handicap the same firm in future competitive tendering. We prove that under complete information extremely severe handicapping is never a credible strategy for the buyer, rather the latter finds it optimal to punish the opportunistic firm so as to make the pool of competitors more alike. In other words, when opportunistic behaviour arises, the buyer should use handicapping to "level the playing field".
2008	D02	Chakravarty, Surajeet, and W. Bentley MacLeod. 2008. <i>Contracting in the Shadow of the Law</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 13960. Economic models of contract typically assume that courts enforce obligations on the basis of verifiable events. As a matter of law, this is not the case. This leaves open the question of optimal contract design given the available remedies that are enforced by a court of law. This paper shows that standard form construction contracts can be viewed as an optimal solution to this problem. It is shown that a central feature of construction contracts is the inclusion of governance covenants that shape the scope of authority, and regulate the ex post bargaining power of parties. Our model also provides a unified framework for the study of the legal remedies of mistake, impossibility and the doctrine limiting damages for unforeseen events developed in the case of Hadley vs. Baxendale.

2008	D02	Maggi, Giovanni, and Robert W. Staiger. 2008. <i>On the Role and Design of Dispute Settlement Procedures in International Trade Agreements</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 14067. Formal economic analysis of trade agreements typically treats disputes as synonymous with concerns about enforcement. But in reality, most WTO disputes involve disagreements of interpretation concerning the agreement, or instances where the agreement is simply silent. And some have suggested that the WTO's Dispute Settlement Body (DSB) might serve a useful purpose by granting "exceptions" to rigid contractual obligations in some circumstances. In each of these three cases, the role played by the DSB amounts to "completing"

Year	DE	Title and Abstract
		various dimensions of an incomplete contract. Moreover, there is a debate among legal scholars on whether or not precedent-setting in DSB rulings may enhance the performance of the institution. All of this points to the importance of understanding the implications of the different possible degrees of activism in the role played by the DSB. In this paper we bring formal analysis to bear on this broad question. We characterize the choice of contractual form and DSB role that is optimal for governments under various contracting conditions. A novel feature of our approach is that it highlights the interaction between the design of the contract and the design of the dispute settlement procedure, and it views these as two components of a single over-arching institutional design problem.

2008	D44	Blume, Andreas, and Paul Heidhues. 2008. "Modeling Tacit Collusion in Auctions." <i>Journal of Institutional and Theoretical Economics</i> , 164(1): 163-84. Many economic writers on contract theory have assumed that legal institutions are simply unable to do the job of enforcement, and have thus attempted to devise arrangements that motivate the parties to keep their commitments even though a government tribunal would be unable to tell whether they had performed. But non-legal enforcement mechanisms operate both as substitutes and complements for legal mechanisms (and as substitutes and complements for each other). This essay sketches how parties should choose among available enforcement mechanisms, based on the costs of information and other transaction costs.

"Sovereignty, Credible Commitments, and Economic Prosperity on American Indian Reservations." <i>Journal of Law and Economics</i> , 51(4): 641-66. American Indian reservations are islands of poverty in a sea of wealth. Because this poverty cannot be explained solely by natural resource, physical, and human capital constraints, institutions are likely to be part of the explanation. One of the institutional variables is the sovereign power of tribes, which allows tribal governments to act opportunistically. The potential for such opportunistic behavior can thwart economic development if tribes are unable to make credible commitments to stable contract enforcement. One avenue for credible commitments is Public Law 280, which required some tribes to turn judicial jurisdiction over civil disputes to the states in which they reside. Using data for 1969-99, we find that per capita income for American Indians on reservations subject to state jurisdiction grew significantly more than it did for Indians who were not.

"Legal Enforcement, Short Maturity Debt, and the Incentive to Manage Earnings." <i>Journal of Law and Economics</i> , 51(4): 619-39. Prior research contends that weak legal regimes discourage lender enforcement of contracts by making it either costly or ineffective. However, Diamond observes that this lender passivity can be overcome by structuring debt as a short-term loan. His argument is that an arrival of bad news in the presence of short-term debt can result in externalities that will trigger a run on the firm and that this in turn creates ex ante incentives for lenders to enforce their contracts. We examine whether short-term debt creates an incentive for borrowers to delay the recognition of bad news through earnings management. Using a sample of firm-level data from 33 countries over a 10-year period, we find that short-term debt induces greater earnings management. This impact of short-term debt is especially greater in countries with weak legal regimes. This evidence is consistent with the hypothesis that borrowers will manage earnings to circumvent lender enforcement.

Discussion Papers, CEPR Discussion Papers: 6927. We develop a theory of control rights in the context of licensing interim innovative knowledge for further development, which is consistent with the inalienability of initial innovator's intellectual property rights. Control rights of a downstream development unit, a buyer of the interim innovation, arise from its ability to prevent the upstream research unit from forming financial coalitions at the ex interim stage of bargaining, over the amount and structure of licensing fees as well as the mode of licensing, based either on trade secrets or on patents. We model explicitly the equilibrium choice of the temporal structure of licensing fees, and show that the innovator's ex interim financial constraint is more likely to bind when the value of her innovation is low. By constraining the financial flexibility of the upstream unit vis-a-vis her choice over the mode of licensing of her interim knowledge, the controlling development unit is able to reduce the research unit's payoff selectively in such contingencies. This serves to incentivise the research unit to expend more effort ex ante, to generate more promising interim innovations. We further show that such interim-inefficient control rights can nevertheless be renegotiation-proof.

2009		
2009	B11	Sihag, Balbir S. 2009. "Kautilya on Law, Economics and Ethics." <i>Humanomics</i> , 25(1): 75-94. The purpose of this paper is to explore the status of economic analysis of laws relating to property and contracts during ancient times in India. Modern research tools are used to present Kautilya's ideas on contracts and property. Kautilya implicitly proposes a labor theory of property. He devised economic laws related to contracts, property, and tort, which promoted economic efficiency and encouraged ethical behavior. Current approaches ignore the role of ethics in designing legal rules for promoting economic efficiency. Unless laws are designed to encourage and promote ethical conduct optimum economic efficiency is unlikely to be achieved. Kautilya advocated a contract theory (between the ruler and the ruled), which was utilitarian in nature, however, unlike Bentham, he still appealed to the moral motivation.
2009	D64 J16	McLachlan, Hugh V., and J. Kim Swales. 2009. "Commercial Surrogate Motherhood and the Alleged Commodification of Children: A Defense of Legally Enforceable Contracts." <i>Law and Contemporary Problems</i> , 72(3): 91-107. In this article, the authors defend the legal enforceability of surrogacy contracts, as well as their prior work on commercial surrogacy, against criticisms by others, including Elizabeth S. Anderson, Eric Blyth, and Claire Potter. The authors tackle conventional objections to commercial surrogacy, including arguments based on the best interests of the child and improper commodification, concluding that these objections to commercial surrogate motherhood are "based on an irrational prejudice against monetary transactions and a groundless general preference for services that are offered without a financial fee." Instead, The authors contend, rational prospective parents may consider that there are advantages and disadvantages to both altruistic and commercial surrogacy, and intended parents should be allowed to freely choose which system best suits their preferences.
2009	G01	Tuleasca, Luminita. 2009. "Insolvency in the Context of the Present Financial Crises--A Comparative Analysis." <i>Romanian Economic and Business Review</i> , 4(2): 33-44. This paper presents the current trends in the view of various national states and their impact on the application of collective insolvency proceedings, also called bankruptcy procedure in common language, by analysing their main pieces of legal regulation, extremely useful both for specialists as well as for creditors and debtors. The fact is that thanks to this procedure, businesses which are in a state of financial crisis, either actual or upcoming can be placed under court protection from creditors which results in blocking enforcement and increasing interest and penalties, allowing them a new start through a reorganization of their activities. Reorganizing the activities of insolvent debtors activity may also be in the interest of creditors, if they cannot obtain sufficient repayment through the debtor's bankruptcy. Thus, requests to open insolvency proceedings by them will appear as a means to preserve their rights and to avoid irreversible deterioration of the situation of the debtor. On the other hand, an aggressive insolvency procedure may be used by creditors as a means of pressure in order to obtain a quick settlement of their receivables from solvent borrowers acting in a state of panic created by the existence of an application to open a bankruptcy procedure. And not least, the paper presents how the situation has seriously deteriorated regarding the criteria allowing businesses to apply for an insolvency procedure and the proper use of the benefits of this procedure.

2009	J16	THE SAME AS D64 McLachlan, Hugh V., and J. Kim Swales. 2009. "Commercial Surrogate Motherhood and the Alleged Commodification of Children: A Defense of Legally Enforceable Contracts." <i>Law and Contemporary Problems</i> , 72(3): 91-107.
2009	J16	Scott, Elizabeth S. 2009. "Surrogacy and the Politics of Commodification." <i>Law and Contemporary Problems</i> , 72(3): 109-46. In this article, the author examines the history of commercial surrogacy, from the moral panic seeking to stamp out commercial surrogacy that ensued after the Baby M decision, to the more sanguine view evidenced today by many courts and legislatures, which seek primarily to ensure certainty of parentage and to address other policy concerns arising from commercial surrogacy. The author attributes the changed legal environment to the changed social environment, which eventually repackaged commercial surrogacy from a harmful, destabilizing force that coerced women and commodified children, into an altruistic gift freely offered to sympathetic, deserving, infertile couples unable to reproduce without the surrogate's help. Although the author traces this change in social norms to a variety of factors, including the advent of gestational surrogacy and the failure of the predicted harms attributed to commercial surrogacy markets to materialize, of particular interest is her analysis of the evolving views of feminists and liberals to the commercial surrogacy question and the resulting demise of the unstable coalition formed among feminists, liberals, and social conservatives in the wake of Baby M. The author's analysis is particularly salient today: will the more pragmatic contemporary approach to commercial surrogacy continue, or are we potentially poised for a second wave of moral panic? As she notes, the recent growth in the "outsourcing" of surrogacy to developing nations, particularly India, seems to have struck a nerve with an American public largely content to support or ignore commercial surrogacy arrangements within the United States.
2009	L43	Arrunada, Benito. 2009. <i>Electronic Titling: Potential and Risks</i> . Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. Initiatives in electronic conveyancing and registration show the potential of new technologies to transform such systems, reducing costs and enhancing legal security. However, they also incur substantial risks of transferring costs and risks among registries, conveyancers and rightholders, instead of reducing them; entrenching the private interests of conveyancers, instead of increasing competition and disintermediating them; modifying the allocation of tasks in a way that leads in the long term to the debasement of registries of rights with indefeasible title into mere recordings of deeds; and empowering conveyancers instead of transactors and rightholders, which increases costs and reduces security. Fulfilling the promise of new technologies in both costs and security requires strengthening registries' incentives and empowering rightholders in their interaction with registries.
2009	L61	Ergas, Henry. 2009. "An Excess of Access: An Examination of Part IIIA of the Australian Trade Practices Act." <i>Agenda</i> , 16(4): 37-66. Part IIIA of the Australian Trade Practices Act defines circumstances in which a facility owner may be required to provide a third party with use of its facility. This paper examines what Part IIIA might be doing from an economic perspective and criticises 'monopoly leveraging' arguments for third-party access. It argues that the transactions costs of access are potentially significant,

Year	DE	Title and Abstract
		and can exceed any efficiency gains third-party access permits. These contentions are corroborated by reference to the long-running dispute between the Fortescue Metals Group and BHP Billiton Iron Ore over access to rail track in the Pilbara region of Western Australia.
2009	L94 L98	Bellantuono, Giuseppe. 2009. "Contract Law, Regulation and Competition in Energy Markets." <i>Competition and Regulation in Network Industries</i> , 10(2): 159-88. Energy markets in the United States and the European Union are in the midst of a transition from a monopolistic structure to a competitive one. This paper argues that the outcomes of the reform process should be understood in the context of existing regulatory institutions. Successes and failures are as much the result of the economic and technological characteristics of energy markets as of the main components of the surrounding legal landscape. To document this claim, regulation of long-term energy contracts in the US and the EU is employed as a case study. Two divergent approaches can be detected: whereas European regulation focuses on the anti-competitive side, American regulation emphasizes the pro-competitive side of long-term contracts. Drawing on economic theories of contract, the paper points out that both systems must address the trade-off between reducing the costs of contractual rivalry and reducing the costs of competition. To strike a balance between these two aspects, American and European institutions rely on regulatory tools deeply entrenched in their respective legal cultures.
2009	O14	CV: Fafchamps, Marcel. 2009. "The Enforcement of Commercial Contracts in Ghana." In <i>Economics of Commercial Arbitration and Dispute Resolution</i> , ed. Orley C. Ashenfelter and Radha K. Iyengar, 369-90. An Elgar Reference Collection. Economic Approaches to Law, vol. 21. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2009	R11	Miceli, Thomas J., C. F. Sirmans, and Geoffrey K. Turnbull. 2009. <i>Lease Defaults and the Efficient Mitigation of Damages</i> . University of Connecticut, Department of Economics, Working papers: 2009-07. The traditional law of leases imposed no duty on landlords to mitigate damages in the event of tenant breach, whereas the modern law of leases does. An economic model of leases, in which absentee tenants may or may not intend to breach, shows that the traditional rule promotes tenant investment in the property by discouraging landlord entry. In contrast, the modern rule prevents the property from being left idle by encouraging landlords to enter and re-let abandoned property. The model reflects the historic use of the traditional rule for agricultural leases, where absentee use was valuable, and the emergence of the modern rule for residential leases, where the primary use entails continuous occupation.
2009	R21 R31	Seiler, Michael J., Vicky L. Seiler, David M. Harrison, and Kimberly F. Luchtenberg. 2009. "The Role of Profit, Law, and Ethics in Residential Real Estate Investments." <i>Journal of Real Estate Practice and Education</i> , 12(2): 157-71. This case study provides students with an opportunity to evaluate the series of cash flows associated with a residential real estate investment, while simultaneously probing unique aspects of legal and ethical issues confronting the investors. The case also introduces students to some key differences between buying real estate as an investment versus buying real estate as a primary residence. Specifically, buyers of a home are afforded the opportunity to opt out before closing in the event (1) there has been a "major change in the project" (HRS Section 514B-87) or (2) they no longer "qualify" for the purchase of the home. In this sense, the prospective purchasers effectively hold a call option on the property. One interesting departure from traditional financial option theory is that the buyers have a way--albeit both potentially unethical and fraudulent--to get their premium back if they decide not to invest. This potential benefit results from (1) a loose contract provision that may be upheld by common law on a case-by-case basis, or (2) through the willingness of the buyer and a lender to commit what the courts might interpret as fraud. All information employed in this case is based on an actual land purchase decision, though some specifics have been altered slightly for both illustrative purposes and to retain the anonymity of the various parties.

Boardman, eds. 2010. <i>International Handbook on Public-Private Partnerships</i> , Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty-six papers explore the challenges presented by infrastructure public-private partnerships (PPPs), and consider what lies ahead as governments balance the need to provide innovative new infrastructure against the requirement for good public governance. Papers discuss the PPP phenomenon and its evaluation; mixes and partnerships through time; an intellectual history of the PPP movement; PPPs--deciphering meaning, message, and phenomenon; reviewing PPPs--some thoughts on evaluation; splintered logic and political debate; the economics of PPPs--some theoretical contributions; assessing the economic worth of PPPs; different delivery models; law and regulatory aspects of PPPs--contract law and public procurement law; accounting for PPPs in a converging world; risk management; governing partnerships; the United Kingdom's Private Finance Initiative--history, evaluation, and prospects; empirical PPP experiences in Europe--national variations of a global concept; PPPs in North America--renting the money (in Canada), selling the roads (in the U.S.); the Australian PPP experience--observations and reflections; PPPs--the Scandinavian experience; empirical evidence of infrastructure PPPs--lessons from the World Bank experience; PPPs--the UN experience; the global PPP industry; toward a process perspective on PPPs; PPPs in developed and developing economies--what lessons can be learned; a review of transport PPPs in the United Kingdom; reviewing PPP performance in developing economies; and PPPs--international experiences and future challenges.
2010	C71	Aperjis, Christina, Yali Miao, and Richard J. Zeckhauser. 2010. <i>Variable Temptations and Black Mark Reputations</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16423. In a world of imperfect information, reputations often guide the sequential decisions to trust and to reward trust. We consider two-player situations, where the trusted player, called the tempte, has a temptation to betray. The strength of the temptation to betray varies from encounter to encounter. We set aside any information about types and examine how reputations work when the temptees are the same in terms of morals and self control. We refer to a recorded betrayal as a black mark and focus on mechanisms that only reveal the number of black marks of a tempte. We show that the greater the number of black marks, the less likely the tempte is to betray. We then study the different equilibria that emerge, depending on which side of the market has the ability to specify the equilibrium. In closing, we generalize to cases where the number of encounters is also recorded.
2010	D20	Kornhauser, Lewis A., and W. Bentley MacLeod. 2010. <i>Contracts between Legal Persons</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16049. Contract law and the economics of contract have, for the most part, developed independently of each other. In this essay, we briefly review the notion of a contract from the perspective of lawyer, and then use this framework to organize the economics literature on contract. The review thus provides an overview of the literature for economists who are interested in exploring the economic implications of contract law. The title, Contracts between Legal Persons, limits the review to that part of contract law that is generic to any legal person. A legal person is any individual, firm or government agency with the right to enter into binding agreements. Our goal is to discuss the role of the law in enforcing these agreements under the hypothesis that the legal persons have well defined goals and objectives.

2010	J71	Brozova, Dagmar. 2010. "Antidiskriminacni zakon a jeho economicke a pravni souvislosti z pohledu liberalni ekonomie. (Antidiscrimination Act and Its Economic and Legal Connections from the Liberal Economic View. With English summary.)." <i>Politicka Ekonomie</i> , 58(3): 357-73. The article deals with sex discrimination prohibition in the European community law as well as in the Czech law and it describes antidiscrimination juridical practise in the Czech Republic. It judges selected institutes of the antidiscrimination act from the point of view of their economic consequences. It shows to which behaviour the economic subjects are forced and analyses whether this behaviour is in accordance with economic rules of market economy, with principle of private property and free choices. It pays attention to equal opportunities and affirmative action as measures to ensure them, and the institute of burden of proof transfer to the accused. It concludes that the antidiscrimination act does not respect the natural rules of people's behaviour in real economic relations and it seems to be an artificial authority construct, which serves special purposes.
2010	L32	CV: Tvarno, Christina D. 2010. "Law and Regulatory Aspects of Public-Private Partnerships: Contract Law and Public Procurement Law." 2010	L32	Long, Cheryl Xiaoning. 2010. "Does the Rights Hypothesis Apply to China?" <i>Journal of Law and Economics</i> , 53(4): 629-50. Using firm-level data from a World Bank survey, this paper examines how legal development in China relates to various firm decisions. I find that a more active court system is associated with more investment, more adoption of technology, more innovation, and more complex transactions. Specifically, when a higher percentage of business disputes are resolved through the court system, firms tend to have higher investment rates, higher propensities to adopt new automated technology, and higher probabilities of developing new products. In addition, they tend to have more nonlocal sales. These findings are consistent with a sophisticated version of the rights hypothesis, in which the rule of law eventually replaces relation-based governance as a superior governance mechanism. I find two limitations of China's legal system. The court system does a better job facilitating the growth of state-owned enterprises than of private firms, and it protects local firms better than nonlocal firms.
2010	L84	CV: McLaughlin, Robert M. 2010. "Risk Management and Fiduciary Duties." In <i>Risk Management: Foundations for a Changing Financial World</i> , ed. Walter V. Haslett Jr., 511-27. CFA Institute Investment Perspectives Series. Hoboken, N.J.: Wiley.
2010	N33 N35	Diss.: Yuchtman, Noam Meir. 2010. Essays on Historical Labor Market Institutions. PhD diss. Harvard University. This dissertation examines the emergence of "modern" labor market institutions during three historical economic transformations. Industrialization in 19th century Britain was associated with "free" labor and saw the decriminalization of contract breach; medieval Europe's "Commercial Revolution" occurred just as the continent's first universities were established; China's economy slowly modernized in the 19th and early 20th centuries alongside the replacement of traditional educational institutions by modern ones. The dissertation is aimed at understanding the functions and economic consequences of these changing labor market institutions. Following an introductory chapter, Chapter 2 examines Master and Servant law in 19th century Britain, which made employee breach of contract a crime. We show that prosecutions under the law increased when labor markets were tight: employers prevented employees from pursuing high wages elsewhere. Because employers could retain employees using prosecutions, they were willing to offer long-term, partial-insurance contracts. Consistent with this, following the repeal of Master and Servant (1875), we find that wages rose and wages responded more to labor market shocks. Chapter 3 examines the establishment of the first universities, alongside dramatic commercialization in medieval Europe. We present newly-collected data documenting increased market establishment in "Germany" during the Middle Ages. Next, we exploit the arguably exogenous establishment of Germany's first universities--due to the Papal Schism--to establish a causal link between universities and increased economic activity. We find a significant increase in the rate of market establishment in Germany just after university establishment, and argue that this effect is a result of the legal training universities provided. Chapter 4 considers the transformation of China's educational institutions in the late 19th and early 20th centuries. Evidence is presented from Who's Who compilations and the Tianjin-Pukou Railroad's employee records (1929) indicating that modern education was especially valued by industry in early 20th century China. Traditionally-educated Railroad employees earned skill premiums, but were concentrated in clerical positions; the Railroad paid huge premiums to individuals trained at university and in engineering, reserving high-level positions for them. These results indicate the importance of modern educational institutions to China's adoption of modern technologies in the early 20th century.
2010	Q41	Izadifard, Aliakbar, and Hossein Kaviar. 2010. "A Jurisprudential-Legal Deliberation on the Buy Back Contract. (In Farsi. With English summary.)." <i>Iranian Journal of Trade Studies</i> , 14(54): 111-43. Development of petroleum industry of Iran needs finance. Although by existence of high prices of petroleum in recent circumstances, part of these financial sources is securable from sale of petroleum; however use of foreign finance for absorption of technology and acceleration of finance programs is necessary. In recent decade, Iran has endeavored to attract part of necessary capital and adequate technology in petroleum industry by introduction of buy back contract. The object of buy back contract is equipment, technical science, and provide convenience for production in the importer country. Parties of buy back agree that seller subsequently purchase the productions that have been output through this convenience and amortize own expenses. Specifications of buy back are: being contract, being irrevocable, being unconditional, being consideration, being coherency, and being long term. The main issue in buy back transactions is its description of a contractual nature. Buy back has similarities to legal institutions like contract of sale, contract of exchange, contract of partnership, contract of reward, contract of capital investment by sleeping partner, hire-purchase contract, and contract of settlement. Buy back indeed is none of these institutions. This research surveys the nature of buy back contract in jurisprudential and legal viewpoint and assay to prove the legitimacy of this international contract in sight of Islamic dynamic jurisprudence and Iran law.
2010	Q42 R52	Caffrey, Kristina. 2010. "The House of the Rising Sun: Homeowners' Associations, Restrictive Covenants, Solar Panels, and the Contract Clause." <i>Natural Resources Journal</i> , 50(3): 721-59. Private land-use controls in the form of restrictive covenants promulgated by homeowners' associations prevent the effective use and expansion of alternative energy by prohibiting or restricting the use of solar energy devices based on concerns of uniformity and aesthetics. The problem of homeowners' associations discriminating against solar energy has received less attention than the problem actually merits. The best possibility for invalidating these covenants and moving renewable energy forward is legislative action. Although some states have taken action on this issue, state statutes have significant and serious deficiencies. Effective state statutes require both more breadth and more specificity. State statutes that invalidate restrictive covenants discriminating against solar energy implicate, but do not violate, the U.S. Constitution's Contract Clause. These statutes remain within the legitimate exercise of state police power.
2010	R10	Rauch, James E., and Joel Watson. 2010. <i>Client-Based Entrepreneurship</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15933. Client relationships create value, which employees may try to wrest from their employers by setting up their own firms. If when an employer and worker establish a relationship they cannot contract on the output and profits of the

Year	DE	Title and Abstract
		worker's prospective new firm, the employer counters by inducing the worker to sign a contract that prohibits him from competing or soliciting the current client in the event of termination of employment. The socially optimal level of entrepreneurship will nevertheless be achieved if clients, employers, and workers can renegotiate these restrictive employment contracts and make compensating transfers. If workers cannot finance transfers to employers, however, employers and workers will sign contracts that are too restrictive and produce too little entrepreneurship, and governments can increase welfare by limiting enforcement of these contracts. With or without liquidity constraints, locations where non-compete contracts are less enforced will attract more clients and have higher employment and output.

2011	E24	Marinescu, Ioana. 2011. "Are Judges Sensitive to Economic Conditions? Evidence from UK Employment Tribunals." <i>Industrial and Labor Relations Review</i> , 64(4): 673-98. The author investigates whether judges deciding on unfair dismissal cases are sensitive to economic conditions faced by workers and firms. Using the 1992 survey of Employment Tribunal Applications in Great Britain and controlling for case selection, she finds that both the unemployment and the bankruptcy rates significantly decrease the probability of judges deciding in favor of dismissed employees. A one-point increase in the unemployment rate leads to a seven-point decrease in this probability; this effect, however, is not significant for unemployed workers. These findings are consistent with the idea that judges, while tailoring firing costs to economic circumstances, are somewhat more sensitive to firms' interests.
2011	F11	Diss. : Olsen, Morten. 2011. Incomplete Contract Enforcement in International Trade. PhD diss. Harvard University. This dissertation consists of three chapters on incomplete contract enforcement and international trade. The first chapter analyzes the role of banks in overcoming incomplete international contract enforcement. It argues that banks function as mechanisms for building reputation when firms themselves are incapable of doing so and that other large entities can serve a similar purpose. The second chapter explores the role of repeated interaction in overcoming contract enforcement domestically and argues that although repeated interaction can overcome the short run incentive for dishonest behavior when contract enforcement is poor, it comes at the cost of creating rigid relationships which can stifle innovation and lead to dynamic costs. The third chapter explores the role of accumulated sector-specific human capital in accounting for the observed sluggish adjustment to trade liberalization, but show that the existence of sector-specific human capital might be of a benefit to low-skilled workers, even--as we suggest is the case--the existence of sector-specific human capital is predominantly a feature of less educated workers.
2011	F30 G00	Antras, Pol, and C. Fritz Foley. 2011. <i>Poultry in Motion: A Study of International Trade Finance Practices</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 8422. This paper analyzes the financing terms that support international trade and sheds light on how and why these arrangements affect trade. Using detailed transaction level data from a U.S. based exporter of frozen and refrigerated food products, primarily poultry, it begins by describing broad patterns about the use of alternative financing terms. These patterns help discipline a model in which the trade finance mode is shaped by the risk that an importer defaults on an exporter and by the possibility that an exporter does not deliver goods as specified in the contract. The empirical results indicate that transactions are more likely to occur on cash in advance or letter of credit terms when the importer is located in a country with weak contractual enforcement and in a country that is further from the exporter. Letters of credit, however, are rarely used by the exporter. As an importer develops a relationship with the exporter, transactions are less likely to occur on terms that require prepayment. During the recent crisis, the exporter was more likely to demand cash in advance terms when transacting with new customers, and customers that traded on cash in advance terms prior to the crisis disproportionately reduced their purchases. These results can be rationalized by the model whenever (i) misbehavior on the part of the exporter is of little concern to importers, and (ii) local banks in importing countries are typically more effective than the exporter in pursuing financial claims against importers.

2011	M52	Garmaise, Mark J. 2011. "Ties That Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment." <i>Journal of Law, Economics, and Organization</i> , 27(2): 376-425. We study the effects of noncompetition agreements by analyzing time-series and cross-sectional variation in the enforceability of these contracts across US states. We find that tougher noncompetition enforcement promotes executive stability. Increased enforceability also results in reduced executive compensation and shifts its form toward greater use of salary. We further show that stricter enforcement reduces capital expenditures per employee. These results are consistent with a model in which enforceable noncompetition contracts encourage firms to invest in their managers' human capital. On the other hand, our findings suggest that these contracts also discourage managers from investing in their own human capital and that this second effect is empirically dominant.
2011	N53	Henriksen, Ingrid, Morten Hviid, and Paul Sharp. 2011. <i>Law and Peace: Contracts and the Success of the Danish Dairy Cooperatives</i> . University of Copenhagen. Department of Economics. Discussion Papers: 11-11. We consider the successful early emergence of cooperative creameries in Denmark in the late nineteenth century within the framework of the 'new institutional

Year	DE	Title and Abstract
		economics' presented by Williamson (2000). Previous work has focused on the social cohesion of the Danes, but we demonstrate that this was not sufficient for the success. The Danish legal system, which we compare to that of other countries, was also of crucial importance, along with the way in which rules were monitored and enforced. Of particular importance was the Danish cooperatives' use of contracts, which we explore with evidence from a variety of primary and secondary sources.
2011	O23	Fares, M'hand. 2011. "Un contrat a obligation d'execution peut-il resoudre le probleme du hold-up? (Can a Specific Performance Contract Solve the Hold-Up Problem? With English summary.)." <i>Revue Economique</i> , 62(3): 545-55. This paper aims to define the conditions under which a specific performance contract can solve the hold-up problem. We mainly show two results. First, in a very general environment the efficient solution is achieved only with renegotiation design. Second, in a specific environment where the valuation functions satisfy a separability condition, the efficient solution is implemented only because there is an equivalence result between this condition and a state independence assumption. This implies that a specific performance contract is unnecessary since a voluntary contract is also able to achieve efficiency.

2011	R32	Mengova, Evelina. 2011. "Imperfect Contract Enforcement and the (In)efficiency of International Firm Location." <i>Journal of Institutional and Theoretical Economics</i> , 167(3): 465-88. This paper explores the location decisions of final-good producers under imperfect contract enforcement. The legal systems' quality is measured by the contracting environment in each country. The final producers' location decisions create different outcomes in terms of efficiency. We find one inefficient outcome, where final producers locate in the country with the weaker enforcement in pursuit of higher profits, which leads to losses in production and trade. But opening up for international trade and contracting acts as a substitute for a poor legal system, by making final producers prefer the country with the stricter enforcement, leading to an efficient equilibrium.
2011	R41	Fischman, Marianne, and Emeric Lendjel. 2011. "Efficience du marche et "contrats types": Une analyse transactionnelle du contrat d'affretement au voyage dans le transport fluvial de fret. (Market Efficiency and French "Contrats Types": A Transaction Cost Analysis of the Voyage Charter for Freight Inland Waterway Transport. With English summary.)." <i>Cahiers Scientifiques du Transport</i> , 0(60): 7-38. Based on insights from transaction cost economics, this paper analyses the French "contrat type" for a voyage charter in freight river navigation. The "contrat type" is unique to France and it is envied abroad. But, economists have barely studied it. The paper explains how this contract is used to economize transaction costs in this sector and preserves the advantages of the market governance structure. The paper emphasizes how this legal institutional tool influences the economic effectiveness by highlighting its own characteristics. Finally, the paper identifies the necessary requirements that lack today to use this contract in court

2012	C61	Dosi, Cesare, and Michele Moretto. 2012. <i>Procurement with Unenforceable Contract Time and the Law of Liquidated Damages. Fondazione Eni Enrico Mattei, Working Papers: 2012.45</i> . Time overruns are common in public works and are not confined to inherently complex tasks. One explanation advanced in this paper is that bidders can undergo unpredictable changes in production costs which generate an option value of waiting. By exploiting the real-option approach, we examine how the inability to force sellers to meet the contract time influences their bidding behaviour, and how this can ultimately affect the parties' expected payoffs. Further, we examine the outcome of the bidding process when legal rules prevent the promisee from contracting for damage measures which would grant more than her lost expectation. We show that when the pre-agreed compensatory payments prove insufficient to discourage delayed orders, setting a liquidated damages clause would not lead to a Pareto superior outcome with respect to the no-damage-for delay condition. While such a clause would increase the seller's expected payoff, the buyer's expected payoff is lower than when the contract does not provide for any compensation for late-delivery.

2012	E21	Chen, M. Keith, and Alan Schwartz. 2012. "Intertemporal Choice and Legal Constraints." <i>American Law and Economics Review</i> , 14(1): 1-43. We study the effect of legal constraints in an environment in which agents face demand shocks they would like to smooth but also have weakness of will: agents' long and short run preferences are misaligned. Some agents are sophisticated--they know they will make inconsistent intertemporal choices--while other agents are naive. The consequent public policy problem is complex. The state should facilitate consumer borrowing to help agents' smooth consumption and cushion the effect of shocks, but should also facilitate precommitment, to help agents control excessive present-biased preferences. We show that in many simple settings, naive and sophisticated agents make similar consumption/savings choices, which simplifies the policy problem. We also show that all agents borrow when they experience consumption shocks and that agents with relatively strong present-biased preferences who face relatively mild consumption shocks will borrow to finance excessive current consumption. Other agents save appropriately. Legal constraints that severely restrict agents' access to credit thus would be over-inclusive. Offering agents access to both a liquid and an illiquid savings vehicle appears to be welfare improving relative to either allowing agents complete freedom to borrow or strongly restricting their access to the credit market. Creating and regulating such vehicles are public goods that the market will not supply.

2012	E23 G35	Ip, Mary. 2012. "The Global Financial Crisis: Role of Law in China." <i>Chinese Economy</i> , 45(3): 8-23. In general, China's response to the global financial crisis was not very different from that of other countries: a stimulus package worth trillions of renminbi, aimed at encouraging domestic consumption. At the same time, China realized that containing the economic havoc would also require the adoption of new legal measures. Consequently, a series of rules and regulations was promulgated as part of the country's strategic response to the crisis. The objective of this article is to examine the role of law in promoting economic stability in China during the financial crisis. The discussion focuses on contract law and bankruptcy law. How well does the regulatory regime address the economic dislocation of the global downturn? To what extent has the administration of policy contributed to the revitalization of the Chinese economy?

We have developed a self-enforcing contract model to show that better economic fundamentals can help an area or a region under a weak rule of law--but with order--to attract foreign direct investments (FDIs), whereas lowering taxes does not necessarily help. Using a cross-region Chinese dataset, we find evidence consistent with our theoretical analysis. Regional variations in tax rates and the perceived quality of formal contracting institutions are not correlated with regional FDI inflows, but leadership characteristics are. Most conventional economic factors have the predicted effects on FDIs. The finding that FDI is lower in locations where domestic private firms have better access to finance and where the air quality is poor is also new to the literature.
2012	J08 O15	Paraschiv, Elena. 2012. "China's Foundational Law Regulating the Labor Market." <i>Economics, Management, and Financial Markets</i> , 7(1): 126-31. This study is grounded in the considerable body of scholarship examining the governance of contractual relations in China, the courts' willingness to progress towards a modern contract law system, and the implementation of the UCL into judicial practice. These findings highlight the importance of examining structural characteristics of the environment in which Chinese firms operate, China's current labor conditions, and the negotiation, formation, and performance of collective contracts.

2012	L41	Cauffman, C. 2012. "The Impact of Voidness for Infringement of Article 101 TFEU on Related Contracts." <i>European Competition Journal</i> , 8(1): 95-122. Article 101 TFEU declares cartel agreements void, provided they have a significant effect on competition within the internal market and on trade between the member states, and do not fall under any of the exemptions contained in Article 101(3) TFEU. This article investigates whether the voidness of cartel agreements entails or should entail the voidness, voidability, or unenforceability of the agreements concluded between cartelists and third parties on cartelised terms. The starting point for an answer to this question is to be found in the Cements case, where the Court of Justice decided that the consequences of the voidness of an agreement infringing Article 101(1) TFEU for any orders or deliveries made on the basis of that agreement are to be determined by the applicable national law. At present, the status of such agreements under the national laws of the Western European Member States is unclear. Yet, there appears to be a growing consensus that contracts at cartelised prices are unfair and perhaps even immoral or illegal. Since it follows from Courage that any party suffering damage as a result of an infringement of Article 101 TFEU can derive rights from that provision, it could also be argued that the effective enforcement of Article 101 TFEU requires that contracts stipulating cartelised conditions be void(able), at least to the extent of the overcharge. Referring to the advantages of such a rule, the article suggests that the Court of Justice should--when given the opportunity--consider reviewing its decision in Cement.

Cheltenham, U.K. and Northampton, Mass.: Elgar. Explores the relative utility of contract and partnership law in fostering and maintaining emerging business models, focusing on dynamic networks. Discusses case studies from Switzerland, Austria, Germany, Italy, England, and Norway; the precontractual stage; post formation of a virtual enterprise--contractual issues; internal relationship between the parties during performance--good faith as a behavioral criterion; partnership law issues; and contractual networks.
2012	M11	Essaji, Azim, and Kinya Fujiwara. 2012. "Contracting Institutions and Product Quality." <i>Journal of Comparative Economics</i> , 40(2): 269-78. For many goods, quality improvements involve the use of more sophisticated, higher quality inputs. The production of these sophisticated inputs requires greater collaboration between suppliers and final good producers, with suppliers developing relationship-specific inputs, and final good producers customizing their production processes to incorporate them. In countries with poor legal institutions, the relationship-specific investments needed to achieve strong collaboration, and by extension more sophisticated inputs and higher quality outputs, will arguably be hard to achieve. As the incomplete contracts literature suggests, doubts over contract enforcement will render the return on relationship-specific investments less certain, rendering both suppliers and final good producers less willing to undertake the customization necessary to improve quality. Employing a difference-in-difference methodology on highly disaggregated US import data, this paper studies the impact of legal institutions on product quality. It finds that poor contracting institutions substantially impede a country's ability to produce high quality final goods: in

Year	DE	Title and Abstract
		industries where the potential use of customizable inputs is extensive, countries with weaker contract enforcement regimes produce lower quality final goods.

2012	P24	Zweynert, Joachim. 2012. "Money and the Extension of Morals: The Case of the Soviet Union." <i>Critical Review</i> , 24(1): 115-29. Functioning markets require a state that will enforce property rights; contracts mediated by money; and the prevalence of a certain type of morality that prevents people from cheating in complex exchange relationships. Monetary exchange abstracts from the personal loyalties that bind small groups together, but at the same time it creates an overarching commitment to norms that bind people more loosely in national societies--as long as monetary exchanges are enforced by the state. In the Soviet Union, conversely, the abolition of money as a universal medium of exchange led both to a deterioration of the norms of impersonal morality and to a loss of state capacity. The state lost control of the economy to informal, personally binding economic networks, and it lost its monopoly on violence in competition with sub-state, personal enforcers of impersonal economic commitments between these networks. Thus, capitalism can be seen as diverting people from norms of loyalty to the members of the relatively small groups of which they are a part toward loyalty to the abstract norms that make it possible for anonymous people to deal with each other reliably.

"Legal and Economic Issues of the Agricultural Land Rent in Slovakia." <i>Studia Universitatis Babes-Bolyai Oeconomica</i> , 57(2): 58-69. The agricultural land in Slovakia is used mainly by tenants according to the land rent contracts. The land rent plays a very important role; therefore the Slovak law maker approved special legal regulation to stabilize the long-term rent of agricultural land. The paper analyses how these legal norms affect the economic behaviour of the land tenants whose business activities are in agriculture. The research will be realised in county Galanta, one of the counties of Slovakia with the best condition for the agriculture. The primary data were oriented mainly on the rent price, rent period, land quality, acreage of rented land, and legal form of enterprises. According to the results, the rent payment for one hectare of land is not influenced by the minimum rent payment stipulated by law. The larger acreage of land of one agricultural businessman forces down land rent payments. The legal forms of enterprises as well as the land rent period are dominant factors that influence land rent payment. The location of agricultural businessmen in the county Galanta is also an important factor influencing the land rent payment.

2013	D22	Haran, Uriel. 2013. "A Person-Organization Discontinuity in Contract Perception: Why Corporations Can Get Away with Breaking Contracts but Individuals Cannot." <i>Management Science</i> , 59(12): 2837-53. Most legal systems in the world follow the principle of corporate personhood, which grants organizations the same legal status as natural persons. Although debate over the notion of corporate personhood has been fierce, whether and how this principle is applied in people's beliefs and intuitions has yet to be empirically examined. This work addresses the gap in the literature, in the context of formal contracts. While contracts are typically seen as either morally binding promises or morally neutral business instruments, the data presented here show that contracts of individuals are associated more strongly with promises than are contracts of organizations. As a result, breach of contract by an individual is seen as a moral transgression. The same behavior by an organization, however, is viewed more as a legitimate business decision. This paper also finds that contractual obligations should be phrased in "promise" terms to eliminate this person-organization discontinuity.
2013	D22	Gattai, Valeria, and Piergiiovanna Natale. 2013. "What Makes a Joint Venture: Micro-evidence from Sino-Italian Contracts." <i>Review of Financial Economics</i> , 22(4): 194-205. This paper provides new contract-level evidence on control rights allocation in order to define what makes a joint venture. Property rights theory of the firm identifies circumstances under which joint control alleviates investment distortions due to contract incompleteness. We compare predictions of the theoretical literature with actual governance structures of Sino-Italian joint ventures, as reported in a questionnaire submitted to the entire population of Italian enterprises operating in China. With an exceptional response rate of 60%, our evidence confirms most of the theoretical predictions and helps select among competing approaches to model joint ventures.
2013	D22	Caprio, Lorenzo, Mara Faccio, and John J. McConnell. 2013. "Sheltering Corporate Assets from Political Extraction." <i>Journal of Law, Economics, and Organization</i> , 29(2): 332-54. We hypothesize that firms structure their asset holdings so as to shelter assets from extraction by politicians and bureaucrats. In countries where the threat of political extraction is higher, we hypothesize that firms hold a lower fraction of their assets in liquid form. Consistent with this conjecture, using data representing over 30,000 firms across 109 countries, we find that corporate holdings of liquid assets are negatively correlated with measures of political corruption. Further, annual investment in property, plant, equipment, and inventory plus dividends is positively correlated with measures of political corruption suggesting that owners channel their cash into harder to extract assets. To the extent that the threat of political extraction moves firms away from their otherwise optimal levels of liquid assets, our findings suggest that the threat of political extraction may reduce economic development not only through the direct costs of political payoffs but also because the potential for asset extraction moves firms away from their otherwise optimal asset holdings.
2013	D24	Ahsan, Reshad N. 2013. "Input Tariffs, Speed of Contract Enforcement, and the Productivity of Firms in India." <i>Journal of International Economics</i> , 90(1): 181-92. This paper extends the literature on trade liberalization and firm productivity (TFP) by examining the complementarities between the speed of contract enforcement and the productivity gains from input tariff liberalization. It does so by using firm-level panel data from India along with an objective measure of judicial efficiency at the state level. The results suggest that for a 10 percentage point decline in input tariffs, firms in the state at the 75th percentile of judicial efficiency gain an additional 3.6 percentage points in productivity when compared to firms in the state with the median level of judicial efficiency. The results also indicate that the complementarities are strongest for firms in industries that are contract intensive and imported-capital intensive. These results are robust to using a matching estimator to address the self-selection of firms into states with high judicial efficiency and an IV approach to instrument input tariffs. In addition, the results are also robust to the addition of state-year interaction fixed effects to control for time-varying, unobservable state characteristics. Thus, the results indicate that rapid contract enforcement is necessary to maximize the productivity benefits from input tariff liberalization.

2013	D24	Perera, Shrimal, Michael Skully, and Zahida Chaudhry. 2013. "Determinants of Commercial Bank Profitability: South Asian Evidence." <i>Asian Journal of Finance and Accounting</i>, 5(1): 365-80. This study investigates the bank-specific and other determinants of commercial bank profitability in selected South Asian countries (Bangladesh, India, Pakistan and Sri Lanka). The single-equation, dynamic panel data procedure employed accommodates explicit measures of production efficiency, industry competition, profit persistence and country-specific differences in governance. The findings reveal profit persistence in South Asian banking markets. Even though increasing competition exerts negative pressure on bank profitability, high industry concentration still allows these banks to earn higher profits. The well-capitalised banks and those with relatively more efficient production processes are the more profitable. South Asian banks also seem to experience economies of scale as bank size is positively associated with profitability. The results also indicate that slack legal systems in these countries (leading to inferior contract enforcement) positively affect profits as banks probably require higher risk premiums on their loan contracts.
2013	D92	D'Alpaos, Chiara, Michele Moretto, Paola Valbonesi, and Sergio Vergalli. 2013. "Time Overruns as Opportunistic Behavior in Public Procurement." <i>Journal of Economics (Zeitschrift für Nationalökonomie)</i>, 110(1): 25-43. We consider the supplier's strategic choice on delivery time in a public procurement setting as the result of the firm's opportunistic behavior on the optimal investment timing when production costs are uncertain. We model the supplier's trade-off between the option value to defer the contract execution and the penalty payment in the event of delays. We also take into account the issue of penalty enforcement, which in turn depends on both the discretion of the court of law in voiding contractual clauses and the "efficiency" of the judicial system (i.e., the average length of civil trials). We test our main results on Italian public procurement data showing that the supplier's incentive to delay is greater the higher the volatility of production costs and the lower the "efficiency" of the judicial system. We then calibrate the model using parameters that mimic the Italian scenario on public works procurement and calculate the maximum amount that a supplier is "willing to pay" (per day) to postpone the delivery date and infringe the contract provisions. Our calibration results are consistent with the theoretical model's predictions and the empirical findings.
2013	F32	Saygili, Meryem. 2013. "Financial Liberalization, Limited Contract Enforcement and Productivity." <i>Journal of Globalization and Development</i>, 4(1): 95-130. This paper investigates whether opening up to international financial flows improves aggregate productivity in the presence of limited contract enforceability. I present a model of two countries that differ in terms of the degree of contract enforcement and analyze the consequences of financial market integration among them. I then test the predictions of the model empirically. The model predicts that aggregate productivity improves after financial integration, in economies with strong contract enforcement, while it deteriorates in countries with weak enforcement. The empirical analysis confirms the effect of capital account liberalization depends on the strength of contract enforcement.
2013	G12	CV: Hamermesh, Lawrence A. 2013. "A Kinder, Gentler Critique of Van Gorkom and Its Less Celebrated Legacies." In <i>Law and Economics of Mergers and Acquisitions. Volume 1.</i> , ed. 2013	G12	Graff, Richard A. 2013. "A New Generation of Non-debt Fixed-Income Finance." <i>International Journal of Islamic and Middle Eastern Finance and Management</i>, 6(4): 267-77. Purpose--The development of standardized fixed-income securities and organized secondary markets in which to price and trade the securities is a widely recognized factor in the emergence of modern developed economies. However, the ongoing global financial crisis has exposed the existence of a fundamental and costly conflict between lender and borrower property rights when debt is securitized that has imperiled some fixed-income markets in their present form. This paper aims to suggest a new non-debt concept for fixed-income finance that avoids the conflict inherent in securitized debt. Design/methodology/approach--The paper considers how to build the foundation of non-debt fixed-income technology on property law instead of contract law. Findings--Fixed-income products based on the new technology expose investors to lower loss risk than investors incur with analogous debt-based products. Such products could lower the cost of fixed-income finance and contribute to the global restoration of fixed-income market liquidity.

2013	N22	Bardwell, Stephanie Huneycutt. 2013. "Regulatory and Economic Factors Determining the Sub-prime Mortgage Outcome." <i>International Journal of Economic Research</i>, 10(1): 7-18. This paper addresses regulatory and economic factors which the author contends have determined the sub-prime mortgage outcome. Preliminary questions addressed in the paper include deregulation, globalization, normal business cycles and the unbalanced free market; also, from the legal perspective, the use of contracts and debt instruments and regulatory oversight of these legal tools are presented as significant factors. The methodology includes analysis of select historical data from 1938 to current that attempts to compare institutional regulation or intervention with transparency in less controlled markets and business cycles. The paper concludes with development of model preventative solutions using combined legal and economic analyses.
2013	N91	Diss: Macdonald, Daniel Patrick. 2013. <i>Contract as Contested Terrain: An Economic History of Law and the Rise of American Capitalism.</i> PhD diss. University of Massachusetts. This dissertation analyzes the relationship between law and the rise of capitalism in the U.S. First, I analyze the changing relationship between labor productivity and pay at the Lawrence #2 textile mill in Massachusetts between 1834 and 1855. I estimate a model of productivity under a piece rate contract. Results show that the relationship between changes in the wage and changes in productivity was negative in the 1830s, slightly positive in the 1840s, and strongly positive in the late-1840s to 1850s. I argue that changes in relative worker bargaining power, the intensification of work flow, and the importance of liquidity constraints due to the decline of agriculture in the Northeast are the main factors underlying this shift. Second, I study the impact of contract law on state-level economic performance. Using the contrasting cases of Connecticut and Vermont I find that the development of legal thought on contracts was not composed of a single path toward "modernity", as the legal historiography suggests. The Vermont legal system developed outside of the mainstream framework. Using census statistics and histories of labor and manufacturing in the two states, I then argue that this difference had an impact on the nature of state-level economic growth. Finally, I provide the first economic history of the antebellum ten hour movement. I study the historical background as well as the quantitative effects of the movement via the ten hour statutes that were passed in select states between 1847 and 1855. Using historical accounts, I first give an overview of each state's ten hour movement. Using the historical analysis as a light to shed on each state, I then use a difference-in-differences identification strategy to consider whether states that passed more stringent laws (which did not allow workers and employers to "contract out" of the ten hour law) saw a greater reduction in hours worked. I do find that the ten hour laws had an impact, but I suggest that the movement's effects were either amplified or tempered according to the strength and tactics of a state's labor movement.

2013	P36	Gavrilovic, Nenad. 2013. "Unfair Consumer Contract Terms under Macedonian Law: How the Old and the New Function in Practice." <i>Journal of Consumer Policy</i> , 36(3): 315-28. This article analyses the functioning in practice of the system of substantive regulation of unfair terms in consumer contracts, introduced into Macedonian law as part of the harmonization obligations of the EU accession process. Specifically, the article seeks to establish the possible reasons for the absence of substantial evidence of application of the rules on unfair contract terms in consumer contracts in Macedonian practice. In providing an explanation, the focus is on the transposition of the consumer acquis and the Unfair Contract Terms Directive into national law, the enforcement structure for consumer law, and the relationship with the pre-existing civil law. In sum, the inconsistencies and incompleteness of the transposition, the weak and complex enforcement structure, as well as the unsettled relationship with the already existing civil law rules on similar topics have all contributed to weaken the practical significance of the special law on unfair contract terms.

2006	C62	Singh, Ram. 2006. <i>On the Existence and Efficiency of Equilibria Under Liability Rules</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12625. While the focus of mainstream economic analysis of liability rules remains on negligence liability, recently some legal scholars have argued for the sharing of liability. In this paper, our first objective is contribute to the debate regarding the desirability of the sharing of liability for the accident loss. To this end, we study the implications of various approaches toward liability assignment for the existence and efficiency of equilibria. In particular, we analyze the proposal of Calabresi and Cooper (1996). Contrary to what is suggested in the literature, we show that the sharing of liability when parties are either both negligent or both non-negligent does not threaten the existence of equilibria. Moreover, it does not dilute the incentives for the parties to take the due care. Our second objective is to extend the efficiency analysis beyond Shavell (1980, 1987) and Miceli (1997), to search for the second-best liability rules. We show that each of the standard liability rules fails to be efficient even from a second-best perspective. Furthermore, we show that second-best efficiency requires loss sharing between non-negligent parties. As corollaries to our main results, we reexamine some of the existing claims regarding the existence and efficiency of equilibria under liability rules.
2006	D86	Evans, John H., III, Kyonghee Kim, and Nandu J. Nagarajan. 2006. "Uncertainty, Legal Liability, and Incentive Contracts." <i>Accounting Review</i>, 81(5): 1045-71. To address agents' moral hazard over effort, incentive contracts impose risk on the agents. As performance measures become noisier, the conventional agency analysis predicts that principals will reduce the incentive weights assigned to such measures. However, prior empirical results (Prendergast 2002) frequently find the opposite, i.e., incentive weights are larger (agents bear more risk) in more uncertain environments. This paper provides new evidence on the association between the extent of uncertainty and the level of risk imposed on agents. In the context of contracts between managed care organizations and physicians, we examine the effect of task characteristics and the legal liability environment on the extent of risk that physicians bear. We derive the optimal weighting of multiple performance measures in a model of a physician's choice of revenue-generating and cost-control efforts. The model predicts that physicians who face less task uncertainty bear more cost risk in their contracts, as predicted by the conventional moral hazard model. Likewise, the model predicts that as the association between task uncertainty and legal liability uncertainty becomes stronger, physicians bear less cost risk in their contracts. Our empirical results generally support these predictions. We offer an explanation for why these results tend to be consistent with the conventional moral hazard analysis, contrary to empirical results in a number of previous studies.
2006	H41	Di Vita, Giuseppe. 2006. <i>Corruption, Exogenous Changes in Incentives and Deterrence</i>. Fondazione Eni Enrico Mattei, Working Papers: 2006.16. In this article we apply and extend the model elaborated by Acemoglu and Verdier in their seminal paper (2000), to examine how the economy represented in their theoretical framework responds to an exogenous change in the agent's incentive. In particular, we focus on the consequences of a famous sentence of the Italian Supreme Court in plenary session, no. 500 of 1999, in which a revolutionary interpretation of civil liability rules is introduced, allowing private agents of our economy to appear before the court to demand reimbursement for the damages suffered as a consequence of illicit behavior of the public administration. This is one of the few cases in which the judex substantially makes law in a system of civil law, and the modification in incentive whether or not to be corrupted comes from an authority that is not part of the game (the jurisdictional power). Basing our affirmations on the model, we can say that corruption may have declined in Italy since the year 2000, as a result of a change in the incentives for both private agents and bureaucrats.

2006	L59	Dari-Mattiacci, Guiseppe. 2006. <i>Limiting Limited Liability</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 06-070/1. Limited liability may result in inefficient accident prevention, because a relevant portion of the expected harm is

Year	DE	Title and Abstract
		externalized on victims. This paper shows that under some restrictive conditions further limiting liability by means of a liability cap can improve caretaking.
2006	Q56	Myers, Nancy J., and Carolyn Raffensperger, eds. 2006. <i>Precautionary Tools for Reshaping Environmental Policy</i> , Urban and Industrial Environments series. Cambridge and London: MIT Press. Fourteen papers define the precautionary principle and show that implementing it in worldwide environmental policies is both necessary and possible. Papers discuss precautionary procedures as tools of analysis and intention (Nancy J. Myers); precautionary options (Myers); the precautionary principle's challenge to develop a "strong democracy" (Maria B. Pellerano and Peter Montague); green systems (Myers and Carolyn Raffensperger); a checklist for precautionary decisions (Myers); the checklist at work (Myers); answering the critics (Myers and Montague); the public trust and public values applied to elk farming and cattle farming (Mary O'Brien); setting the right goals applied to marine fisheries and sustainability in large ecosystems (Boyce Thorne-Miller); the history of DDT (Ted Schettler); a broad analysis of harm and a detailed analysis of how to prevent it (Kelly Bannister and Katherine Barrett); wrestling with uncertainty and genetically modified organisms (Barrett); a precautionary economic analysis of coalbed methane (Joshua Skov and Myers); and a proposal for tort reform (Raffensperger and Myers).
2007		
2007	B00 D30 J70	Jolls, Christine. 2007. <i>Behavioral Law and Economics</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12879. Behavioral economics has been a growing force in many fields of applied economics, including public economics, labor economics, health economics, and law and economics. This paper describes and assesses the current state of behavioral law and economics. Law and economics had a critical (though underrecognized) early point of contact with behavioral economics through the foundational debate in both fields over the Coase theorem and the endowment effect. In law and economics today, both the endowment effect and other features of behavioral economics feature prominently and have been applied in many important legal domains. The paper concludes with reference to a new emphasis in behavioral law and economics on "debiasing through law" - using existing or proposed legal structures in an attempt to reduce people's departures from the traditional economic assumption of unbounded rationality.

2007	F53	Schmitt, Andre, and Sandrine Spaeter. 2007. "Risque nucléaire civil et responsabilité optimale de l'exploitant. (Nuclear Risk and Optimal Civil Liability of the Operator. With English summary)." <i>Revue Economique</i> , 58(6): 1331-51. The civil liability of nuclear operators are regulated by two sets of international conventions. In particular, strict liability, limited financial responsibility and the obligation of providing financial guarantees are imposed to the nuclear operator by the Paris Convention and the Vienna Convention. Then national legislations are free to increase the financial cap of responsibility fixed by the international regimes. First we present the main elements of these conventions. Then we focus on the impact of a modification in the amount of responsibility of the nuclear operator on his risk mitigation policy and on his financial condition. In particular we show that an increase of the cap beyond a given level determined by the model gives the operator some incentives to lessen the investment in prevention, contrary to what is expected. Besides, the impact of the preventive activities done by the firm on its financial constraint depends on the sensitivity of the risk distribution to the variation of the prevention level: The risk mitigation activities must be discussed with respect to the severity of the incidents and/or to the size of the nuclear park.

2007	G11	Rodriguez, A. E., and Steven J. Shapiro. 2007. "Risk-Adjusted Performance as a Rigorous Approach to Removing Subjectivity from Expert Assessments of Suitability." <i>Journal of Business Valuation and Economic Loss Analysis</i> , 2(2): A broker has an obligation to ensure that his client incorporates suitable assets into his portfolio. Greater objectivity can be brought to assessments of suitability by comparing the performance of the aggrieved investor's portfolio to a benchmark portfolio using the Modigliani & Modigliani risk-adjusted performance measure. The applicable counterfactual benchmark could be either a "market" portfolio or a suitable alternative portfolio. The calculation of confidence intervals associated with the measured difference in risk-adjusted returns is demonstrated. Castaneda-like standards can be used as criteria for whether defendant's actions negatively impacted portfolio performance rather than outside events.

2007	J41	Fenn, Paul, Alastair Gray, and Neil Rickman. 2007. "Standard Fees for Legal Aid: An Empirical Analysis of Incentives and Contracts." <i>Oxford Economic Papers</i> , 59(4): 662-81. This paper asks whether lawyers respond to financial incentives in ways that are consistent with predictions from contract theory. It uses data collected from before/after the introduction of standard fees for legal aid lawyers in England and Wales. For some inputs (not all), these substituted fixed price contracts for retrospective fee-for-service remuneration. We consider the effects of these new contracts on case-level inputs and examine the extent of substitution across inputs remunerated by fixed prices and fee-for-service. We find that lawyers' responses were consistent with theory: (i) high-powered incentives for cost-reduction lowered inputs that may have been difficult to monitor, and (ii) substitution across inputs took place in line with multitask agency. Our results have implications for legal aid expenditure control, and current policies on personal injury litigation, as well as providing empirical evidence on the effects of remuneration contracts.

2008	G23	Barabanov, Sergey S., Onem Ozocak, H. J. Turtle, and Thomas J. Walker. 2008. "Institutional Investors and Shareholder Litigation." <i>Financial Management</i> , 37(2): 227-50. We examine whether institutional investors are able to avoid future litigation. Our results show that institutions provide a fiduciary role by decreasing or eliminating their positions in sued firms well before litigation begins. We also find that institutional groups with high monitoring ability (independent investment advisors and mutual funds) are more proactive in their trading behavior than are institutions with low monitoring ability (banks, insurance companies, and unclassified institutions such as endowments, foundations, and self-managed pension funds). We find that percentage changes in institutional ownership are correlated with public information available more than two quarters before litigation.
2008	L88	Loh, Andrea Y. 2008. "Are Artificial Tans the New Cigarette? How Plaintiffs Can Use the Lessons of Tobacco Litigation in Bringing Claims against the Indoor Tanning Industry." <i>Michigan Law Review</i> , 107(2): 365-90. Indoor tanning salons have grown significantly in popularity during recent years. Scientific research has revealed a strong link between skin cancer and ultraviolet light exposure from indoor tanning lamps. Despite such dangers, federal regulations place minimal restrictions on the labeling of indoor tanning lamps. Indoor tanning salons work vigorously to dispel notions of a link to skin cancer, often falsely promoting various health benefits of indoor tanning. The first lawsuit for injuries resulting from indoor tanning was recently filed against an indoor tanning salon, and other such litigation is poised to follow. This Note examines three potential tort claims against indoor

Year	DE	Title and Abstract
		tanning manufacturers and salons, and suggests ways to formulate compelling arguments in each instance. In doing so it draws on cases finding liability in the context of cigarettes, identifying similarities between the indoor tanning and cigarette industries.

2008	M54	Morantz, Alison D., and Alexandre Mas. 2008. "Does Post-accident Drug Testing Reduce Injuries? Evidence from a Large Retail Chain." <i>American Law and Economics Review</i>, 10(2): 246-302. This study examines the effects on occupational injury claims of a recently implemented post-accident drug testing (PADT) program in a large retail chain. We find that claims have fallen significantly in affected districts, suggesting that PADT programs can reduce injury claims, even in workplaces that already utilize other forms of drug testing. Our results also suggest that some types of employees--such as full-time workers, male workers, and higher-tenure workers--are particularly responsive. Finally, we find some "circumstantial evidence" that a portion of the observed decline could be caused by employees' reduced willingness to report workplace accidents.

2009	C63	Diss : Seagren, Chad W.. 2009. Emergent Order, Agent-Based Modeling, and Economic Analysis of Accident Law. PhD diss. George Mason University. The purpose of this project is to examine the benefits of basing economic analysis of accident law on the notion that individuals form a spontaneous order as they respond to the institution of tort law, each other, and their environment. Furthermore, I examine the efficacy of agent-based modeling as an analytical tool that exploits this realization. I discuss the theoretical implications of the neoclassical analytical perspective and offer an alternative based upon the insights of spontaneous order economics. I develop an artificial society in which virtual agents pursue productive, though inherently accident prone, activity. The accidents that occur are chance encounters and agents bear a private cost for engaging in behavior that reduces their likelihood. First, I employ empirical techniques based on neoclassical theory and fit regression models to simulation data in order to determine the wealth maximizing behavior under various liability rules. I confirm some of the major theoretical conclusions but I also identify several common simplifying assumptions that may adversely affect the accuracy of conclusions under certain circumstances. I contrast the mainstream mode of analysis with an evolutionary approach that uses a computational model comprised of heterogeneous agents that implement satisficing algorithms to select strategies on the basis of their individual experience. The power of this perspective is not simply that it assists in developing a genetic-causal explanation as a means for evaluating the desirability of various liability rules, but it enables the detailed exploration of population dynamics and a close examination of out of equilibrium behavior. I find that for the artificial society under consideration, system level steady-state does not necessarily imply agent equilibrium, agents often elect to be careful even when the neoclassical theory predicts otherwise, and negligence rules differ in their ability to rid society of negligent behavior.

2009	D03	Osti, Cristoforo. 2009. "Interpreting Convergence: Where Antitrust Meets Consumer Law." <i>European Competition Journal</i>, 5(2): 377-408. The article first considers whether and how antitrust and consumer law overlap, as they both share the concept of consumer welfare as their basis. It then addresses the issue of the most effective way to protect consumer welfare in both areas. In so doing, it will examine those situations in which antitrust (and consumer) law may control "consumer failures", namely those

Year	DE	Title and Abstract
		failures which may not have a direct connection to the interplay of the economic agents in the market—a phenomenon normally associated with competition law—but may, by interfering with the economic choices of the final consumer, have an impact upon the market and, thereby, raise issues of consumer law. In such situations, in essence, consumer and antitrust law will compete to provide the most effective remedy. From there it will proceed further, looking at how a better, more focused enforcement of antitrust and consumer law may serve as a means of controlling consumer failures. Drawing upon the most interesting developments in research on consumer conduct, it will investigate how behavioural economics may help in identifying consumer failures and designing better remedies for consumer protection.

2009	G12	Gande, Amar, and Craig M. Lewis. 2009. "Shareholder-Initiated Class Action Lawsuits: Shareholder Wealth Effects and Industry Spillovers." <i>Journal of Financial and Quantitative Analysis</i>, 44(4): 823-50. This paper documents significantly negative stock price reactions to shareholder-initiated class action lawsuits. We find that shareholders partially anticipate these lawsuits based on lawsuit filings against other firms in the same industry and capitalize part of these losses prior to a lawsuit filing date. We show that the more likely a firm is to be sued, the larger the partial anticipation effect (shareholder losses capitalized prior to a lawsuit filing date) and the smaller the filing date effect (shareholder losses measured on the lawsuit filing date). Our evidence suggests that previous research that typically focuses on the filing date effect understates the magnitude of shareholder losses, and that such an understatement is greater for firms with a higher likelihood of being sued.

2009	H20	Viscusi, W. Kip, and Joni Hersch. 2009. <i>Tobacco Regulation through Litigation: The Master Settlement Agreement</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15422. The 1998 Master Settlement Agreement resolved the unprecedented litigation in which the states sought to recoup the cigarette-related Medicaid costs. The litigation was settled through a combination of negotiated regulatory requirements and financial payments of about \$250 billion over 25 years. Settlement payments received by states are strongly related to smoking-related medical costs but are also related to political factors. The payments largely took the form of an excise tax equivalent, raising potential antitrust concerns. The regulatory restrictions imposed by the agreement also raised antitrust concerns. However, there has been no evident shift in industry concentration. The increase in advertising and marketing expenses has largely taken the form of price discounts. The settlement sidestepped the usual procedures pertaining to the imposition of taxes and the promulgation of new regulations.

"A Cross-National Study of Government Social Insurance as an Alternative to Tort Liability Compensation." <i>Journal of Risk and Insurance</i>, 76(2): 367-84. Litigation rates in the United States have long been considered out of proportion with the remainder of the world, leading to a good deal of economic research trying to understand the causes. Much of that literature has focused on lawyer compensation rules and availability of general damage awards. Another possible reason for differences in national litigation rates is the relative generosity of government social programs. Using a sample of 24 countries over a 12-year period, we test the relationship between the size of government social program payments and liability costs as measured by liability insurance premiums, and find a strong negative relationship, controlling for income, accident rates, and a variety of other factors.

2009	R14	Sigman, Hilary. 2009. <i>Environmental Liability and Redevelopment of Old Industrial Land</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15017. Many communities are concerned about the reuse of potentially contaminated land ("brownfields") and believe that environmental liability is a hindrance to redevelopment. However, with land price adjustments, liability might not impede the reuse of this land. Existing literature has found price reductions in response to liability, but few studies have looked for an effect on vacancies. This paper studies variations in state liability rules—specifically, strict liability and joint and several liability—that affect the level and distribution of expected private cleanup costs. It explores the effects of this variation on industrial land prices and vacancy rates and on reported brownfields in a panel of cities across the United States. In the estimated equations, joint and several liability reduces land prices and increases vacancy rates in central cities. Neither a price nor quantity effect is estimated from strict liability. The results suggest that liability is at least partly capitalized, but does still deter redevelopment.

2010	A33	Howells, Geraint, Iain Ramsay, and Thomas Wilhelmsson, eds. 2010. <i>Handbook of Research on International Consumer Law</i>, With David Kraft. Research Handbooks in International Law series. Cheltenham, U.K. and Northampton, Mass.:

Year	DE	Title and Abstract
		Elgar. Seventeen papers provide an international and comparative analysis of central issues in consumer law and policy in developed and developing economies. Papers discuss consumer law in its international dimension; consumer protection and human rights; development and consumer law; the consumer and competition law; misleading and unfair advertising; protecting rational choice--information and the right of withdrawal; unfair terms and standard form contracts; sales and guarantees; products liability law in the United States and Europe; product safety regulation; consumers and services of general interest; consumer protection and the internet; regulation of consumer credit; personal insolvency; financial services regulation and the investor as consumer; individual consumer redress; using class actions to enforce consumer protection law; and enforcing consumer protection laws. Howells is Professor of Commercial Law at Manchester University and Barrister at Gough Square Chambers in London. Ramsay is Professor of Law in the Law School at the University of Kent. Wilhelmsson is Professor of Civil and Commercial Law at the University of Helsinki. Kraft is at Manchester University. Index.
2010	C50 J20	Malani, Anup, and Julian Reif. 2010. <i>Accounting for Anticipation Effects: An Application to Medical Malpractice Tort Reform</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16593. While conducting empirical work, researchers sometimes observe changes in behavior before the adoption of a new treatment program or policy. The conventional diagnosis researchers make is that the treatment is endogenous. Observing behavioral changes prior to treatment is also consistent, however, with anticipation effects. In this paper we provide a framework for comparing the different methods for estimating anticipation effects and propose a new set of instrumental variables that can address the problem that subjects' expectations are unobservable. We use our framework to analyze the effect of tort reform on physician supply. We find that accounting for anticipation effects doubles the estimated effect of tort reform.
2010	G18	Cohn, Stuart R., and Erin M. Swick. 2010. "The Sitting Ducks of Securities Class Action Litigation: Bio-pharmas and the Need for Improved Evaluation of Scientific Data." <i>Delaware Journal of Corporate Law</i>, 35(3): 911-57. Rule 10b-5, a powerful weapon against any publicly-listed company whose share price drops on adverse news, is particularly skewed against pharmaceutical and other bio-technology companies (bio-pharmas). It is not a coincidence that there is a disproportionate number of class actions filed against bio-pharmas. The volume and complexity of data underlying most bio-pharma cases create enormous outcome uncertainties, settlement pressures, and potentially huge contingent liabilities over substantial periods of time. The vulnerability and risks that bio-pharmas face in Rule 10b-5 class actions are unique among all publicly-traded industries, yet many cases proceed along traditional grounds without courts employing either their statutory or inherent powers to obtain objective expert assessment of the data underlying plaintiffs' claims. Most judges have neither the training nor the capacity to differentiate between the positions of opposing experts or to reach their own independent assessment of the research data. The unstated premise of the Supreme Court's <i>Daubert v. Merrell Dow Pharmaceuticals</i> opinion is that courts have an obligation to fully understand the evidence prior to any decision-making, and that the use of court-appointed experts will allow judges to decide motions to dismiss with greater confidence and accuracy. The early appointment of such experts may also have the salutary effect of causing plaintiffs to pause and consider whether the claims are sufficient to warrant the up-front imposition of court-appointed expert costs. If courts begin to recognize in greater numbers the importance of obtaining objective expert testimony, we believe that a more level playing field will evolve to reduce the disproportionate vulnerability of bio-pharmas to securities law class actions.
2010	J20	THE SAME AS C50 Malani, Anup, and Julian Reif. 2010. <i>Accounting for Anticipation Effects: An Application to Medical Malpractice Tort Reform</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16593.
2010	J20	Reyes, Jessica Wolpaw. 2010. <i>The Effect of Malpractice Liability on the Specialty of Obstetrics and Gynecology</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15841. Using data from a 2003 survey of 1,476 obstetrician-gynecologists, the effects of malpractice pressure on the specialty are investigated. Physicians report having made substantial changes to their practice in response to the general environment and to liability pressures. Regression analysis finds that liability pressure increases reports of income and practice reductions, but direct effects on actual income and productivity are less clear. Liability pressures may lead to a specialization effect, with some physicians concentrating more in obstetrics and others in gynecological surgery. Overall, the evidence suggests that liability pressure has moderate but significant effects on the specialty.
2010	L32	Kahan, Marcel, and Edward Rock. 2010. "When the Government Is the Controlling Shareholder: Implications for Delaware." <i>Delaware Journal of Corporate Law</i>, 35(2): 409-36. When the federal government is the controlling shareholder, the doctrine of sovereign immunity transforms the legal structures of accountability. Procedurally, the government and its agents can only be sued in federal court. Substantively, claims must be brought within one of the statutory waivers of sovereign immunity (the Federal Tort Claims Act, the Tucker Act, or the Administrative Procedure Act). Although in the right circumstances plausible claims could be brought in Delaware against the directors of a government-controlled Delaware corporation, we argue that Delaware should avoid a confrontation with Washington, and that the best way to do so is to take advantage of the flexibility provided by Delaware Court of Chancery Rule 19.

For decades Americans have been trying to reverse the momentum of urban decline. In an effort to ensure that abandoned, contaminated properties were cleaned up, Congress enacted the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, or CERCLA, also known as the Superfund Act. With the creation of the Superfund program, a liability scheme was put in place to make sure that brownfields would be cleaned up so they could be put into productive reuse. Unfortunately, the uncertainties associated with this liability framework have been declared by some to be the primary impediment to brownfield redevelopment. Private developers, who might otherwise provide the resources needed for redeveloping brownfields into vital community assets, are driven away from purchasing or investing in brownfield sites by the potential for catastrophic federal and state regulatory and tort liability. As a result, many brownfields continue to sit vacant or underutilized. This article offers a solution to the risk and uncertainty resulting from federal and state cleanup and third-party tort liability often associated with brownfield sites, while preserving the current liability scheme as it pertains to parties actually responsible for the contamination. To mitigate the liability and tort concerns of potential brownfield redevelopers, this article proposes the creation of an absolute waiver of federal and state cleanup and third-party tort liability for truly innocent private parties that undertake to redevelop brownfield sites. Our proposed federal legislative reforms, coupled with incentives for states' participation, should serve as a catalyst for private-party brownfield redevelopment while strengthening the fiscal vitality of the Superfund program without reliance on taxpayer dollars.

2011	C22 C52	Brush, Brian C. 2011. "Using Historical Simulation to Compare the Accuracy of Nine Alternative Methods of Estimating the Present Value of Future Lost Earnings." <i>Journal of Forensic Economics</i> , 22(1): 1-20. To estimate the present value of future lost earnings, forensic economists must employ some method to determine the interest rate and the earnings growth rate, or the net discount rate derived from them, to use in that estimation. Historical simulation can be used to determine how accurate any such method would have been had it been used in the past. In this paper, historical simulation is used to compare the accuracy of nine different methods of choosing the net discount rate to estimate present value for numerous 30-, 20-, and 10-year loss periods. These methods include historical averages, current rates, recent rates, total offset, and a number of methods that combine historical averages with current or recent rates. While no one method is obviously superior in all cases, the results do provide some support for blending historical averages with current or recent rates.
2011	C58	Davis, Louis R., and Linus Wilson. 2011. "Good Timing? How One Bank Cut Its Link to a \$1.2 Billion Ponzi Scheme." <i>Journal of Legal Economics</i> , 18(1): 1-26. This comment builds on Bremser's work by presenting two additional methods for calculating taxable commercial damage awards and examining his example under a progressive tax regime. The two additional methods forensic economists sometimes use to calculate a taxable damage award involve calculating the damage award via a partially iterative process and discounting pre-tax lost cashflows at an after-tax discount rate. Because Bremser assumed a constant tax rate rather than progressive tax rates, his example is considered under a more realistic assumption of a progressive tax regime. Under a progressive tax regime, none of the first four methods discussed in this comment produced a correct economic damage award. In order to calculate a taxable commercial damage award under a progressive tax regime, this paper proffers a fully iterative method modeling the award payout.

2011	D87	Trzaskowski, Jan. 2011. "Behavioural Economics, Neuroscience, and the Unfair Commercial Practices Directive." <i>Journal of Consumer Policy</i> , 34(3): 377-92. This article suggests how and to what extent insights from behavioural economics and neuroscience may be used for the interpretation of the 2005 Unfair Commercial Practices Directive. These disciplines provide useful insight in how the average consumer's decisions are influenced by commercial information and conducts. As the Directive focuses on whether a commercial practise distorts the economic behaviour of consumers, arguments for whether a particular commercial practise should be considered unfair may be found within these disciplines. It is important to bear in mind that the assessment that courts are to make is normative, and that behavioural economics and neuroscience is of a more descriptive nature. Thus these disciplines may not help draw the fine line between the legitimate influence of commercial activities and the illegal distortion of the average consumer's behaviour. However, the average consumer test is at least in principle flexible enough to allow the inclusion of research within human decision-making in order to apply a more realistic average consumer than the "Homo Economicus" applied by the European Court of Justice.
2011	E22 H32	Greenhalgh, Christine, Mark Rogers, and Philipp Schautschick. 2011. <i>Do firms that create intellectual property also create and sustain more good jobs? Evidence for UK firms, 2000-2006</i> . Princeton University, Department of Economics, Industrial Relations Section., Working Papers: 1319. A common assumption in innovation policy circles is that creative and inventive firms will help to sustain employment and wages in high wage countries. The view is that firms in high cost production locations that do not innovate are faced with loss of market share from import competition, so jobs move to producers in developing countries with lower labour costs. Domestic firms are encouraged to innovate, and to obtain intellectual property assets to protect their innovations, so that they can sustain local employment and pay high wages. Policies to subsidise R&D and to encourage intellectual property protection are partly justified on these grounds. Nevertheless the available evidence concerning the employment and wage benefits of such activity is rather sparse. In this paper we first survey some existing literature on innovation and jobs. We outline arguments for using both patents and trade marks as indicators of innovation. We then construct a large sample of UK firms observed from 2000 to 2006, matching records of patents and trade marks to company data. We begin by estimating a cross section employment growth equation for 2003-2006 to discover if there is any impact of stocks of trade marks acquired in 2000-2003. We then explore in more detail the impact of recent trade mark and patenting activity on the level of employment and the average rate of pay in these firms. We do this using the data as a six year panel, estimating both an employment function and a relative earnings equation at the firm level. Our aim throughout is to identify and calibrate the assumed positive effects that underpin modern innovation policy.

2012	C71	DEHEZ, Pierre, and Samuel FERREY. 2012. <i>How to share joint liability: a cooperative game approach</i>. Universite catholique de Louvain, Center for Operations Research and Econometrics (CORE), CORE Discussion Papers: 2012023. Sharing a damage that has been caused jointly by several individuals--called tortfeasors--is a difficult problem that courts often face. Even if there are basic principles and rules to apportion damages among them, legal scholars are still looking for a systematic apportionment method. We analyze that question from a normative point of view, using the theory of cooperative games that offers an axiomatic approach to surplus or cost sharing. We show how this kind of damage can be apportioned on two distinct basis, causation and degree of misconduct. Our analysis is based on the concept of potential damage. The potential damage associated to a subset of tortfeasors is the monetary value of the damage that they would have caused without the participation of the other tortfeasors. It is distinct from the additional damage associated to a subset of tortfeasors that is given by the difference between the total damage and the potential damage of the complementary subset. We distinguish two situations of joint liability, the simultaneous case where the damage would not have occurred in the absence of any one of the tortfeasors and the sequential case where the sequence of acts that has produced the damage is known. In the simultaneous case, the potential damage of an individual tortfeasor is by definition zero. In the sequential case, the only information needed is the immediate damage each tortfeasor has caused, depending on his or her position in the sequence. A judgment specifies for each tortfeasor an amount to be paid. That amount should not exceed his or her additional damage but should not fall below his or her potential damage. This defines two natural bounds, an upper bound and a lower bound, that we extend to subsets of tortfeasors. A judgment is fair if the contribution of any subset of tortfeasors is inferior to his potential damage and superior to his additional damage. Particular fair judgments are then obtained by assigning weights to tortfeasors to reflect difference in degrees of misconduct. In game theoretic terms, potential damages define a transferable utility game whose core defines fair judgments. We show that weighted Shapley values define fair judgments and, vice versa, fair judgments reveal weights. Our paper illustrates how the cooperative approach may bring useful insights into legal questions. The Shapley value appears of particular interest in a legal context because it is founded on axioms that are in line with the fundamental principles of tort law.

2012	D92	Chen, Yongmin, and Xinyu Hua. 2012. "Ex Ante Investment, Ex Post Remedies, and Product Liability." <i>International Economic Review</i>, 53(3): 845-66. A firm can increase product safety through ex ante investment and can remedy quality problems after sales. An increase in product liability raises returns to ex ante investment through higher consumer demand, but may also negatively affect the investment incentive due to more ex post remedial activities. The trade-off between these "output" and "substitution" effects can result in an inverted U-shaped relationship between product liability and ex ante investment. We find that the firm prefers full liability, but consumer surplus can be higher under partial liability. We further identify conditions under which full liability or partial liability is socially optimal.

2012	H75 II3	Diss: Lu, Yi. 2012. Medical Malpractice Liability and Hospital Competition on Obstetric Service. PhD diss. Lehigh University. Since the 1980s, debates over efficiency of current tort system have encouraged various researches on healthcare cost and quality pertaining to the changes in tort pressure, and tort reforms are frequently used as exogenous changes to tort liability to study healthcare provider behaviors. In the first chapter, I examine the effect of medical malpractice liability on obstetric practice pattern, in particular, whether the effect varies by patient health condition. I extend Janet Currie and Bentley MacLeod (2008)'s model that allows for variation of patient's health conditions by relaxing the assumption of purely altruistic physicians. The model predicts that the effects of tort reforms will be mostly concentrated on patients with better health conditions. I use two types of tort reform, specifically Caps on Punitive Damages (CPD) and modification of Joint and Several Liability (JSL), in New Jersey to test our theoretical predictions and find consistent empirical evidence. The second chapter investigates the relationship between medical malpractice liability and the effect of hospital competition on quality of services provided to patients who are covered by private insurance in one of the more frequently sued practices, obstetrics. Medical malpractice lawsuits may send negative quality signals to the consumers, and reduce hospital's market power by increasing quality elasticity of demand among consumers. Therefore, hospitals in a market where consumers are more sensitive to quality may compete over quality more than price. Consistent with theoretical prediction, the findings suggests that hospitals in markets where malpractice lawsuits are frequently filed and jury verdicts are frequently awarded use resources more efficiently, and provide better care.
2012	H83	Oruc, Esad. 2012. "Odgovornost notara u pravnom sistemu Bosne i Hercegovine--De lege lata i de lege ferenda. (Liability of Notaries in Bosnia and Herzegovina: Lex Lata and Lex Ferenda. With English summary.)." <i>Revija za Pravo i Ekonomiju/Review for Law and Economics</i>, 13(1): 37-53. Notaries are independent public officials appointed by the State to confer authenticity on legal deeds and contracts contained in documents drafted by them. They act as independent, impartial and objective advisers to all parties to contract or a transaction. Notaries are individually liable for any damage occurring due to their fault when performing

Year	DE	Title and Abstract
		official duties. In this paper we examine main three types of notarial liability in legal system of Bosnia and Herzegovina: disciplinary, civil and criminal liability. The paper will draw attention towards the inadequacies of the regulation related to notaries' liability in Notarial Law of B&H and make proposals for improvement of current legislation.
2012	I13	Avraham, Ronen, Leemore S. Dafny, and Max M. Schanzenbach. 2012. "The Impact of Tort Reform on Employer-Sponsored Health Insurance Premiums." <i>Journal of Law, Economics, and Organization</i> , 28(4): 657-86. We evaluate the effect of tort reform on employer-sponsored health insurance premiums by exploiting state-level variation in the timing of reforms. Using a dataset of health plans representing over 10 million Americans annually between 1998 and 2006, we find that the most common set of tort reforms during this period reduces premiums of employer-sponsored self-insured health plans by 2.1%. Of the four individual reforms comprising this set, caps on noneconomic damages and collateral source reforms have the greatest impact. We do not find reductions in premiums for fully insured plans, which in our sample are almost entirely Health Maintenance Organizations (HMOs). Further analysis reveals that self-insured HMOs are also unresponsive to reforms. Taken together, these findings suggest that HMOs reduce "defensive medicine," even absent reform. The results are the first direct evidence that tort reform reduces healthcare costs in aggregate; prior research has largely focused on particular medical conditions.
2012	I13	Friedson, Andrew I., and Thomas J. Kniesner. 2012. "Losers and Losers: Some Demographics of Medical Malpractice Tort Reforms." <i>Journal of Risk and Uncertainty</i> , 45(2): 115-33. Our research examines how recent reforms have affected a key aspect of patients' implicit insurance present in medical malpractice torts. Specifically, we estimate how non-economic damages caps affected pre-trial settlement speed and settlement amounts. Maximum entropy (most likely) quantile regressions emphasize that the post-reform settlement effects most informative for policy evaluation differ greatly from OLS (mean) estimates and clarify the conclusion emerging. In particular, the effect of the tort reform here can best be thought of as a 25% tax on the asset value of settlements that exempts settlements involving infants. The social welfare effects of tort reform are less clear than the asset reduction effects due to likely health state dependent utility.

(The Cement Company and the Eternit Asbestos Scandal: Attempt to Explain the Governance. With English summary.)." <i>La Revue des Sciences de Gestion</i> , 47(257): 33-42. This article aims at analyzing the Corporate Governance of the group Eternit cement-manufacturer. We are interested in this company insofar as she known in the past of the medical problems having generated terminal illness. For this reason, several legal initiatives were undertaken by the victims of asbestos or their descendants: the most popularized through the media being the lawsuit of Turin in 2009 and, more recently, the lawsuit of Brussels in 2011. The objective of this research is to consider the orchestration of the negationism of Eternit for the problems generated by the contact of asbestos while being based on the analysis of the methods of governance of this company. We show that the maintenance of the activities of the company without handing-over in question of the methods of production was supported by the consolidation of family interests and the installation of specific structures of governance. The modifications orchestrated at the end of the 90's with the production processes are in fact the reflection of an institutionalization of the problems involved in asbestos and took place thanks to a transfer through media towards the public sphere of problems which long time were remained confined in the professional sphere.

2012	O12	Singh, Hawa, and Monika Singh. 2012. "Working of Redressal Agencies." <i>International Journal of Research in Finance and Marketing</i> , 2(5): 1-9. India is a vast country where a majority of consumers are poor, helpless & disorganised. It is now realised that every consumer is neither knowledgeable nor well informed. He expects support & protection from unscrupulous sellers. The common consumer is not in a state to approach civil courts for quick, cheap & speedy justice of their complaints. The Consumer Protection Act 1986 (CPA) is the nicest gift our government has given to us as consumers. By using consumer courts as redressal machinery framed for the protection & welfare of consumers, many customers have been able to get back their money from sloppy builders, dishonest shopkeepers, shady sellers of a kind and even from government organizations such as railways. The paper focuses on the mechanism of redressal of grievances of consumers regarding how to protect the consumers & how to accept the consumer complaints that can be filed. As per the act, the consumer is entitled to repair of defective goods, refund of price paid for the defective goods or services, replacement of defective goods, and removal of deficiency in services in order to turn them from an unhappy customer into a satisfied one.
2012	O14 P31	Tao, Qian. 2012. "Legal Framework of Online Intermediaries' Liability in China." <i>Info</i> , 14(6): 59-72. The paper aims to outline the legal framework with regards to the civil liability of online intermediaries for users' misconduct in China, to analyze the problems in applying the rules related, and to introduce recent efforts from the State Council, the Supreme People's Court and legislature to combat online misconduct. The paper intends to introduce these rules by studying the legislative history and several important case decisions. Comparisons with European and American approaches have also been made with regard to the self-regulation issue. Chinese courts have made many inconsistent decisions on the liabilities of online intermediaries in the past, but the legal framework is improving and the situation will become better given more clarifications from the Supreme People's Court. The State proactively promotes industry self-regulation, together with public supervision in order to ensure the enforcement of rules.

2012	Y80	Thomas, Anthony, and Raphael J. Heffron. 2012. <i>Third Party Nuclear Liability: The Case of a Supplier in the United Kingdom.</i> Faculty of Economics, University of Cambridge. <i>Cambridge Working Papers in Economics.</i> The law surrounding third party nuclear liability is important to all parties in the nuclear supply chain whether they are providing decommissioning services, project management expertise or a new reactor. This paper examines third party nuclear liability, and in particular, in relation to a

Year	DE	Title and Abstract
		Supplier in the nuclear energy sector in the United Kingdom (UK). The term "Supplier" is used in this paper and, depending on the context, is intended to cover all parties in the supply chain providing services, equipment or technology (e.g. the EPC contractor, the reactor vendor, the owner engineer, architect engineer, or the Parent Body Organisation responsible for decommissioning one the UK legacy nuclear installations). With a return to nuclear new build expected in the UK, the clarification of the position of a Supplier and their potential to be liable for nuclear damage is of vital importance for a functioning nuclear supply chain. The research explores the nuclear liability legislation in the UK and identifies the gaps and limitations in existence. The latter problems pose a risk for the Suppliers to operators in the nuclear energy industry, and consequently some approaches that can mitigate those risks are advanced and assessed. The nuclear liability regime in the UK is largely based on international conventions and hence, the risks posed to the Supplier in the UK also exist for Suppliers in other countries. There are resource shortages already in the nuclear energy industry, and currently the Supplier to the nuclear industry is over exposed. This situation needs to be resolved and a new legal definition of nuclear damage enacted. Further, the level of liability exposure for a UK Supplier involved in a nuclear project outside the UK needs to be reviewed as there remains too much ambiguity regarding liability in an international nuclear law context.
2013		
2013	C83	Slesnick, Frank L., Michael R. Luthy, and Michael L. Brookshire. 2013. "A 2012 Survey of Forensic Economists: Their Methods, Estimates, and Perspectives." <i>Journal of Forensic Economics</i> , 24(1): 67-99. In January 2012, 583 e-mail invitations to complete an electronic survey were sent to National Association of Forensic Economics (NAFE) members, with libraries and attorneys excluded. The return rate was 32.42%, which is almost 9 percentage points higher than the last paper survey in 2003. The survey covered many of the major topics included in earlier surveys, such as values of important economic variables (e.g., discount rates), trends in the practice of forensic economics (e.g., personal sources of earnings), and open-ended questions concerning ethics and reactions to the survey instrument. There were several new questions. Very few respondents have estimated damages in such categories as pain and suffering, companionship, and guidance; few add agency fees to household services estimates; and it is uncommon for respondents to estimate worklife expectancy differently for self-employed persons versus employees.
2013	F54	Michel, Noemi. 2013. "Equality and Postcolonial Claims of Discursive Injury." <i>Swiss Political Science Review</i> , 19(4): 447-71. In Western Europe, individuals and groups increasingly claim that publicly enunciated denigrating racial discourse inflicts an injury upon them, and inscribe this claim under the rubric of equality. By adopting a method of claim-centered critical theorizing, I discuss the possibilities and implications of reading "claims of racialized discursive injury" as claims to equality. A review of contemporary political theorists concerned with equality and injurious discourse establishes the democratic relevance of claims of discursive injury. A discussion of Judith Butler's theory of performativity then identifies the properties of the injurable subject and of discourse's power. Finally, I specify how a postcolonial stance enables us to grasp the actualization of discursive injury as it resonates between past colonial inequalities and threats of future exclusion or death. This equality-focused reading sheds light on the transformative potential of claims of racialized discursive injury for resignifying equality in contexts marked by "race" and postcolonialism.
2013	I20	Kane, John, Lawrence Spizman, and Don Donelson. 2013. "Educational Attainment Model for a Minor Child: The Next Generation." <i>Journal of Forensic Economics</i> , 24(2): 175-90. An ordered probit educational attainment model, used to predict the lost earning capacity of a wrongfully injured minor child, was created by Spizman and Kane (1992) and updated by Kane and Spizman (2001). This paper re-estimates the educational attainment model using the latest round of interviews from the National Longitudinal Survey of Youth--1997. The model specification has been updated to reflect recent findings on the determinants of educational attainment. We also examine the legal framework in which econometric techniques have been accepted and have become standard tools in litigation.
2013	J51 L74	Tinari, Frank, and Kenneth T. Betz. 2013. "Valuing Non-wage Compensation of Private Sector Labor Union Workers in the Construction Trades." <i>Journal of Forensic Economics</i> , 24(2): 205-20. This article presents procedures for calculating the value of non-wage compensation for members of private sector labor unions in the construction industry and cites examples using various collective bargaining agreements. Four major fringe benefit categories are analyzed: welfare, annuity, vacation, and pension funds. When calculating the loss to a private sector union worker, it is necessary to obtain not only the relevant collective bargaining agreements but also information regarding both actual earnings and the number of hours worked. If both cannot be obtained, problems in valuing retirement and other fringe benefit funds arise. In some cases, the union member may work for several different employers during any given year, thus receiving many W-2s, but all hours worked would be recorded through the union. To value employer contributions to annuity and vacation funds a determination needs to be made if the contributions take into account premium pay union workers may receive. To value lost medical insurance, the replacement cost of a comparable medical insurance policy should be used. For lost pension benefits, it is important to establish the typical number of hours per annum that would most likely have been worked but for the injury. In addition, if the history of that union's pension benefit reveals increases over time, then that pattern may need to be considered as a basis for determining the future value of the pension benefit. Valuation of each private sector union benefit, therefore, is not simply a matter of referring to the value of the hourly contribution by the employer but requires its own method appropriate to the nature of the benefit as specified in the union's collective bargaining agreement.
2013	P26	Zhu, Jingwen, and Dayuan Han, eds. 2013. <i>Research Report on the Socialist Legal System with Chinese Characteristics. Volume 3</i> , Translated by Xingquan Zhang. Singapore and Hong Kong: Enrich Professional Publishing. Four papers examine the socialist legal system of China, analyze the current situation and characteristics, and explore development trends. Volume 3 covers the civil and commercial law of China. Papers discuss civil law; the civil code; intellectual property law; and commercial law. Volume 1 introduces the foundation of the formation of the socialist legal system with Chinese characteristics. Volume 2 focuses on the legal branches of administrative law and criminal law in China. Volume 4 covers the economic and social law of China. Volume 5 provides an overview of the procedural and nonprocedural laws of China in three sections.

2006	E62	Tella, Rafael Di, and Juan Dubra. 2006. <i>Crime and Punishment in the "American Dream"</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12641. We observe that countries where belief in the "American dream" (i.e., effort pays) prevails also set harsher punishment for criminals. We know from previous work that beliefs are also correlated with several features of the economic system (taxation, social insurance, etc). Our objective is to study the joint determination of these three features (beliefs, punitiveness and economic system) in a way that replicates the observed empirical patterns. We present a model where beliefs determine the types of contracts that firms offer and whether workers exert effort. Some workers become criminals, depending on their luck in the labor market, the expected punishment, and an individual shock that we call "meanness". It is this meanness level that a penal system based on "retribution" tries to detect when deciding the severity of the punishment. We find that when initial beliefs differ, two equilibria can emerge out of identical fundamentals. In the "American" (as opposed to the "French") equilibrium, belief in the "American dream" is commonplace, workers exert effort, there are high powered contracts (and income is unequally distributed) and punishments are harsh. Economists who believe that deterrence (rather than retribution) shapes punishment can interpret the meanness parameter as pessimism about future economic opportunities and verify that two similar equilibria emerge.

2006	K21 L40	Cseres, Katalin J., Maarten Pieter Schinkel, and Floris O. W. Vogelaaar, eds. 2006. <i>Criminalization of Competition Law Enforcement: Economic and Legal Implications for the EU Member States</i> , Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty papers, originally presented at a conference hosted by the Amsterdam Center for Law and Economics at the University of Amsterdam in February 2005, explore remedies and sanctions in competition policy, focusing on economic and legal implications of the tendency to criminalize antitrust enforcement in the member states of the European Union. Papers concentrate on economic and legal implications of criminal competition law enforcement; criminalization and leniency; and country experiences with criminal law sanctions

2006	P16	Tella, Rafael Di, and Juan Dubra. 2006. <i>Crime and Punishment in the "American Dream"</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12641. We observe that countries where belief in the "American dream" (i.e., effort pays) prevails also set harsher punishment for criminals. We know from previous work that beliefs are also correlated with several features of the economic system (taxation, social insurance, etc). Our objective is to study the joint determination of these three features (beliefs, punitiveness and economic system) in a way that replicates the observed empirical patterns. We present a model where beliefs determine the types of contracts that firms offer and whether workers exert effort. Some workers become criminals, depending on their luck in the labor market, the expected punishment, and an individual shock that we call "meanness". It is this meanness level that a penal system based on "retribution" tries to detect when deciding the severity of the punishment. We find that when initial beliefs differ, two equilibria can emerge out of identical fundamentals. In the "American" (as opposed to the "French") equilibrium, belief in the "American dream" is commonplace, workers exert effort, there are high powered contracts (and income is unequally distributed) and punishments are harsh. Economists who believe that deterrence (rather than retribution) shapes punishment can interpret the meanness parameter as pessimism about future economic opportunities and verify that two similar equilibria emerge.
2007		
2007	D01 I10	Iyengar, Radha. 2007. <i>Does the Certainty of Arrest Reduce Domestic Violence? Evidence from Mandatory and Recommended Arrest laws</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13186. Domestic violence remains a major public policy concern despite two decades of policy intervention. To eliminate police inaction in response to domestic violence, many states have passed mandatory arrest laws, which require the police to arrest abusers when a domestic violence incident is reported. These laws were justified by a randomized experiment in Minnesota which found that arrests reduced future violence. This experiment was conducted during a time period when arrest was optional. Using the FBI Supplementary Homicide Reports, I find mandatory arrest laws actually increased intimate partner homicides. I hypothesize that this increase in homicides is due to decreased reporting. I investigate validity of this reporting hypothesis by examining the effect of mandatory arrest laws on family homicides where the victim is less often responsible for reporting. For family homicides, mandatory arrest laws appear to reduce the number of homicides. This study therefore provides evidence that these laws may have perverse effects on intimate partner violence, harming the very people they seek to help.

2007	F50	Scheipers, Sibylle, and Daniela Sicurelli. 2007. "Normative Power Europe: A Credible Utopia?" <i>Journal of Common Market Studies</i> , 45(2): 435-57. Studies on the international identity of the EU have stressed the normative feature of European foreign policy. At the same time, scholars have pointed out that the inconsistency between the EU's rhetoric and behaviour and the lack of reflexivity undermines its credibility. How does reflexivity affect collective identity? To what extent does the EU's utopian rhetoric affect its credibility as a normative power? In order to address these questions, we investigate the self-representation of the EU as an international actor, the extent to which this self-representation provides a basis for reflexivity and, finally, the impact of the EU's identity narratives on its credibility. We focus on the normative power of the EU in the institutionalization of the International Criminal Court and in the elaboration and ratification of the Kyoto Protocol.

2007	I10	Delavande, Adeline, Dana Goldman, and NeerajSood. 2007. <i>Criminal Prosecution and HIV-related Risky Behavior</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12903. We evaluate the consequences of prosecuting HIV+ people who expose others to the risk of infection. We show that the effect of aggressive prosecutions on the spread of HIV is a priori ambiguous. Aggressive prosecutions tax risky behavior and thus deter unsafe sex and limit the number of sexual partners. However, such penalties might also create unique incentives for having sex with more promiscuous partners such as prostitutes and consequently increase the spread of HIV. We test these predictions using unique nationally representative data on the sexual activity and prosecutions of HIV+ persons. We find that more aggressive prosecutions are associated with a reduction in the number of sexual partners and increased likelihood of safe sex. However, they are also associated with increased likelihood of having sex with prostitutes and not disclosing HIV+ status. Overall, our estimates imply that doubling the prosecution rate could decrease the number of new HIV infections by 12% over a ten-year period.

2007	I11	Golec, Joseph H., and John A. Vernon. 2006. <i>European Pharmaceutical Price Regulation, Firm Profitability, and R&D Spending</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12676. EU countries closely regulate pharmaceutical prices whereas the U.S. does not. This paper shows how price constraints affect the profitability, stock returns, and R&D spending of EU and U.S. firms. Compared to EU firms, U.S. firms are more profitable, earn higher stock returns, and spend more on research and development (R&D). Some differences have increased over time. In 1986, EU pharmaceutical R&D exceeded U.S. R&D by about 24 percent, but by 2004, EU R&D trailed U.S. R&D by about 15 percent. During these 19 years, U.S. R&D spending grew at a real annual compound rate of 8.8 percent, while EU R&D spending grew at a real 5.4 percent rate. Results show that EU consumers enjoyed much lower pharmaceutical price inflation, however, at a cost of 46 fewer new medicines introduced by EU firms and 1680 fewer EU research jobs.

2007	R23	Ludwig, Jens, and Jeffrey R. Kling. 2007. "Is Crime Contagious?" <i>Journal of Law and Economics</i>, 50(3): 491-518. Understanding whether criminal behavior is "contagious" is important for law enforcement and for policies that affect how people are sorted across social settings. We test the hypothesis that criminal behavior is contagious by using data from the Moving to Opportunity (MTO) randomized housing mobility experiment to examine the extent to which lower local area crime rates decrease arrest rates among individuals. Our analysis exploits the fact that the effect of treatment group assignment yields different types of neighborhood changes across the five MTO demonstration sites. We use treatment by site interactions as instruments for measures of neighborhood crime rates, poverty, and racial segregation in our analysis of individual arrest outcomes. We are unable to detect evidence in support of the contagion hypothesis. Neighborhood racial segregation appears to be the most important explanation for across-neighborhood variation in arrests for violent crimes in our sample, perhaps because drug market activity is more common in high-minority neighborhoods.

Indiana University Kelley School of Business, Department of Business Economics and Public Policy, Working Papers: 2008-09. This paper modifies the optimal penalty analysis by incorporating investment incentives with external benefits. In the models examined, the recommendation that the optimal penalty should internalize the marginal social harm is no longer valid as a general rule. We focus on antitrust applications. In light of the benefits from innovation, the optimal policy will punish monopolizing firms more leniently than suggested in the standard static model. It may be optimal not to punish the monopolizing firm at all, or to reward the firm rather than punish it. We examine the precise balance between penalty and reward in the optimal punishment scheme.
2008	D70 Z10	Frey, Bruno S., and Benno Torgler. 2008. <i>Politicians: Be Killed or Survive</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2483. In the course of history, a large number of politicians have been assassinated. Rational choice hypotheses are developed and tested using panel data covering more than 100 countries over a period of 20 years. Several strategies, in addition to security measures, are shown to significantly reduce the probability of politicians being attacked or killed: extended institutional and governance quality, democracy, voice and accountability, a well functioning system of law and order, decentralization via the division of power and federalism, larger cabinet size and strengthened civil society. There is also support for a contagion effect.

With English summary)." <i>Practical Issues in Management and Economics</i> , 1(1): 167-83. The issue of legalization of criminal proceeds, known as "money laundering", has taken huge dimensions within the context of globalized financial markets, the freedom of capital movements and the proliferation of internet and electronic transactions. Addressing and containing this activity at the national and international levels are considered as top priorities, both for ethical legal concerns but also for the protection of the integrity and stability of the financial system. International organizations and unions such as the United Nations, the European Union, the International Monetary Fund, and others have been preoccupied with the issue, while since 1989 a special international body, FATF, has been set up with the special mandate to combat money laundering. The compliance of every country with the complex body of international rules aiming to curb the problem is of vital importance for the integrity of its financial sector. The purpose of the present paper is to describe the main aspects and parameters of money laundering, outline the methods used for its containment and finally, to investigate the degree to which Greek bank employees are familiar with money laundering practices, legislation and techniques for uncovering and reporting money laundering incidents. A pilot survey among the employees of Greek Banks indicates the relative effectiveness of anti-money laundering measures taken so far.

"Case Dismissed: Police Discretion and Racial Differences in Dismissals of Felony Charges." <i>American Law and Economics Review</i> , 10(1): 110-41. Prior research has produced conflicting evidence of racial profiling during traffic stops. We instead analyze rates of case dismissal against felony arrestees by race. Superficial bias based on "unobservables" should be reduced because of the evidentiary requirements and nonnegligible costs of filing charges. Nonetheless, using data from over 58,000 US felony cases from 1990 to 1998, our probit analysis finds higher rates of dismissals for blacks for the subset of crimes that rely on police to make snap judgments. This suggests there may be more aggressive policing of blacks in these situations. Case dismissal rates are also elevated for both whites and blacks when blacks are underrepresented on local police forces.
2008	J22 I58	Iyengar, Radha. 2008. <i>I'd rather be Hanged for a Sheep than a Lamb: The Unintended Consequences of 'Three-Strikes' Laws</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13784. Strong sentences are common "tough on crime" tool used to reduce the incentives for individuals to participate in criminal activity. However, the design of such policies often ignores other margins along which individuals interested in participating in crime may adjust. I use California's Three Strikes law to identify several effects of a large increase in the penalty for a broad set of crimes. Using criminal records data, I estimate that Three Strikes reduced participation in criminal activity by 20 percent for second-strike eligible offenders and a 28 percent decline for third-strike eligible offenders. However, I find two unintended consequences of the law. First, because Three Strikes flattened the penalty gradient with respect to severity, criminals were more likely to commit more violent crimes. Among third-strike eligible offenders, the probability of committing violent crimes increased by 9 percentage points. Second, because California's law was more harsh than the laws of other nearby states, Three Strikes had a "beggar-thy-neighbor" effect increasing

Year	DE	Title and Abstract
		the migration of criminals with second and third-strike eligibility to commit crimes in neighboring states. The high cost of incarceration combined with the high cost of violent crime relative to non-violent crime implies that Three Strikes may not be a cost-effective means of reducing crime.
2008	J52 N32	White, Ahmed A. 2008. "The Crime of Staging an Effective Strike and the Enduring Role of Criminal Law in Modern Labor Relations." <i>WorkingUSA</i> , 11(1): 23-44. This article concerns the role of criminal law in modern, post-New Deal labor relations. I emphasize the continuing function of the criminal law in limiting basic labor rights (to organize, strike, and provoke collective bargaining) as reflected in several common practices: the prosecution of labor organizing and protest activity as crimes; the persistent use of injunctions by the courts to curtail labor rights; and the indirect use of the criminal law by the courts and the NLRB to define unfair labor practices and to limit the scope of worker protections under the labor law. I hope to show how these functions reflect both change and continuity relative to the criminal law in pre-New Deal times. The modern criminal law's labor-repressive functions are far less crude and overt, and administered in a far more professional fashion, than in the days when criminal conspiracy, syndicalism, and vagrancy laws, for example, were used so extensively and blatantly to undermine labor rights. And rather than simply destroying labor rights, these functions operate alongside, and are incorporated into, a body of labor law designed to protect labor rights. On the one hand, this shift has been of real benefit to labor, allowing workers and organizers much more freedom in their struggles with employers. On the other hand, I argue, modern criminal law still plays a significant role in limiting labor rights. The very factors that now ease the criminal law's impact on workers--the subtlety, professionalism, and procedural regularity with which it is applied, and its coexistence alongside a functional system of labor laws--also obscure and rationalize its real effects on labor rights, making it easier for governments to use the criminal law against labor and harder for labor activists to challenge such practices. My goal is to help unmask these functions of the criminal law with the hope that organized labor and its supporters might better work against and around them.

2009	D78	Hyshka, Elaine. 2009. "Turning Failure into Success: What Does the Case of Western Australia Tell Us about Canadian Cannabis Policy-Making?" <i>Policy Studies</i> , 30(5): 513-31. Cannabis policy in Canada is a puzzling affair. Since the 1960s and as recently as 2006, several policy windows have opened promising evidence-based cannabis law reform only to be slammed shut before achieving meaningful change. This 'saga of promise, hesitation, and retreat' has motivated Canadian cannabis researchers to investigate the reasons behind this policy inertia. These single-jurisdiction analyses have resulted in interesting yet necessarily tenuous findings. Fischer's (1999) Policy Studies article suggests the need for an analysis of Canadian cannabis policy in comparative context and offers Australia as a point of departure. This article addresses this analytic task by examining two recent case studies in cannabis policy. Specifically, borrowing Kingdon's (1995) concept of a policy window, it contrasts Canada's failure to decriminalise minor cannabis offences between 2001 and 2006 with Western Australia's successful decriminalisation of cannabis possession and production for personal use between 2001 and 2004. In particular, it appears that a lack of support from law enforcement and cannabis users, conflicting evidence and risk associated with a lack of an evaluation plan all combined with a weakened electoral mandate for the government to contribute to a perception that cannabis decriminalisation was not politically feasible. Additional variables worthy of further inquiry are also discussed.
2009	F51	Neumayer, Eric. 2009. "A New Moral Hazard? Military Intervention, Peacekeeping and Ratification of the International Criminal Court." <i>Journal of Peace Research</i> , 46(5): 659-70. The newly established International Criminal Court (ICC) promises justice to the victims of genocide, war crimes and crimes against humanity. Past offenders can be punished, while future potential offenders may be deterred by the prospect of punishment. Yet, justice is no substitute for intervention for the benefit of people at acute risk of being victimized. The Court may create a new moral hazard problem if the promise of ex post justice makes it easier for states to shy away from incurring the costs of intervention. This article indirectly tests for the relevance of this potential problem by estimating the determinants of ratification delay to the Rome Statute of the ICC. If the Court represents an excuse for inaction, then countries that are unwilling or unable to intervene in foreign conflicts should be among its prime supporters. Results show instead that countries that in the past have been more willing to intervene in foreign civil wars and more willing to contribute troops to multinational peacekeeping missions are more likely to have ratified the Statute (early on). This suggests that the Court is a complement to, not a substitute for intervention.
2009	G01	Prosperetti, Luigi. 2009. "Symposium on Financial Innovation: Effects and Perspectives: Some Regulatory Lessons to Be Drawn from the Financial Crisis." <i>International Review of Economics</i> , 56(3): 265-73. The article briefly outlines how the two major structural causes of the financial crisis have been a massive underestimation of the negative externalities potentially arising from malfunctioning of financial markets, and the policy decision to assign the production of an eminently public good, financial stability, to private parties. Both ideas have been a tenet of the so-called Greenspan doctrine. The crisis also shows that all regulators tend to be captured in the end, and thus any new legislation should contain bright-line rules, that might look inefficient

Year	DE	Title and Abstract
		when assessed with reference to the market they regulate, but are socially efficient, because it would be politically costly to alter them. Criminal sanctions, which after all are a social form of regulation, should also be strengthened.

2009	H21	Cook, Philip J., Jens Ludwig, and Adam Samaha. 2009. Gun Control after Heller: Litigating against Regulation. National Bureau of Economic Research, Inc, NBER Working Papers: 15431. The "core right" established in D.C. vs. Heller (2008) is to keep an operable handgun in the home for self-defense purposes. If the Court extends this right to cover state and local jurisdictions, the result is likely to include the elimination of the most stringent existing regulations--such as Chicago's handgun ban--and could also possibly ban regulations that place substantial restrictions or costs on handgun ownership. We find evidence in support of four conclusions: The effect of Heller may be to increase the prevalence of handgun ownership in jurisdictions that currently have restrictive laws; Given the best evidence on the consequences of increased prevalence of gun ownership, these jurisdictions will experience a greater burden of crime due to more lethal violence and an increased burglary rate; Nonetheless, a regime with greater scope for gun rights is not necessarily inferior--whether restrictive regulations would pass a cost benefit test may depend on whether we accept the Heller viewpoint that there is a legal entitlement to possess a handgun; In any event, the core right defined by Heller leaves room for some regulation that would reduce the negative externalities of gun ownership.

2009	H56	Souare, Issaka K. 2009. "The International Criminal Court and African Conflicts: The Case of Uganda." Review of African Political Economy, 36(121): 369-88. For more than two decades, the rebel Lord's Resistance Army (LRA) has been committing some of the most appalling human rights violations and war crimes against civilian populations in northern Uganda. The Ugandan Government has been unable to defeat the rebel movement and effectively protect the civilian populations from its carnage. This situation led the government to pass the Amnesty Act of 2000 in a bid to entice the group's leaders to end the fighting. Subsequently, the International Criminal Court (ICC), at the request of the Ugandan Government, issued arrest warrants in 2005 for the five main leaders of the movement, a move regarded by some as the main stumbling block to peace in Uganda, as the rebels are insisting on the annulment of these warrants before they can sign a definitive peace agreement. This article examines the dilemma that this situation seems to have created in the peace process in Uganda. It concludes that the ICC should be firm in combating impunity, but flexible in accepting other alternatives to attributive justice whenever necessitated by the situation, as its own statute acknowledges.
2009	J18 O10	Vergara, Rodrigo. 2009. Crime Prevention Programs: Evidence for a Developing Country. Instituto de Economía. Pontificia Universidad Católica de Chile., Documentos de Trabajo: 362 This paper analyzes the impact of two anti-crime programs implemented in Chile in the late 1990s. The first (Quadrant Plan) is related to enhancing the quality of police work and the second one (Secure County Plan) to the involvement of the community in designing specific projects aimed at reducing the crime rate. It is found that only the Quadrant Plan has been successful in terms of reducing crime rates and has caused its impact through the effect of arrests in deterring crime. The Secure County program does not appear to have any impact on crime rates. It is also found that crime is associated with unemployment and that there is persistence in crime rates.
2009	J64	Galenianos, Manolis, Rosalie Liccardo Pacula, and Nicola Persico. 2009. A Search-Theoretic Model of the Retail Market for Illicit Drugs. National Bureau of Economic Research, Inc, NBER Working Papers: 14980. A search-theoretic model of the retail market for illegal drugs is developed. Trade occurs in bilateral, potentially long-lived matches between sellers and buyers. Buyers incur search costs when experimenting with a new seller. Moral hazard is present because buyers learn purity only after a trade is made. The model produces testable implications regarding the distribution of purity offered in equilibrium, and the duration of the relationships between buyers and sellers. These predictions are consistent with available data. The effectiveness of different enforcement strategies is evaluated, including some novel ones which leverage the moral hazard present in the market.
2009	J82	Popescu, Ada-Iuliana. 2009. "European Penal Law--An Instrument to Fight against Human Trafficking." Scientific Annals of the "Alexandru Ioan Cuza" University of Iasi, 56(0): 312-17. Human trafficking has become one of the most versatile and hard to combat social phenomenon. Coordination of national action plans and legislative harmonization are vital for preventing trafficking, punishing traffickers, and protecting victims. Even though national legal rules concerning human trafficking are similar, regional circumstances have to be taken into account, adapting these rules accordingly. Uniform criminal rules could be one solution to prevent and successfully combat transnational human trafficking. Presently, European Union legislation concerning human trafficking is considered to be one of the most complex legal tools, showing clear objectives, precise language and good implementation procedures. However, in spite of its complexity, the positive results in fighting human trafficking are not satisfactory, leaving room for debate and concern.

2010	A33	Benson, Bruce L., and Paul R. Zimmerman, eds. 2010. <i>Handbook on the Economics of Crime</i> , Northampton, Mass. and Cheltenham, U.K.: Elgar. Nineteen papers, originally presented at a conference held at Florida State University, focus on the theoretical and empirical modeling of criminal choice and behavior. Papers discuss the market model of crime--a short review and new directions; estimating the supply of crime--recent advances; the measure of vice and sin--a review of the uses, limitations, and implications of crime data; dynamic perspectives on crime; the historical development of public policing, prosecution, and punishment; police, prisons, and punishment--the empirical evidence on crime deterrence; prison population and crime; the allocation of police; the economic analysis of corruption; economics of crime and drugs--prohibition and public policies for illicit drug control; the economic costs of criminal activity--a discussion of methodological approaches and empirical estimates; crime and housing prices; corruption, crime, and economic growth; labor markets and crime--new evidence on an old puzzle; private policing--experiences, evaluation, and future direction; the economics of capital punishment and deterrence; firearms and homicide; abortion and crime--a review; and casinos and crime in the United States.
2010	D83	Wickelgren, Abraham L. 2010. "A Right to Silence for Civil Defendants?" <i>Journal of Law, Economics, and Organization</i> , 26(1): 92-114. The Fifth Amendment guarantees criminal defendants the right to silence, blocking the court from drawing adverse inferences from the defendant's silence. This article investigates the conditions under which extending such protection to civil defendants might increase (or decrease) social welfare. If discovery is imperfect, then defendants who acquire information about the dangerousness of their actions may hide this evidence at trial if it is bad. This tends to make the private benefit from acquiring such information exceed the social benefit. Furthermore, the private benefit from acquiring this information is greater when the court will infer the information is bad if the defendant does not present it. Thus, there are situations in which a right to silence may be necessary to prevent a defendant from acquiring information for which the social costs exceed the social benefit. On the other hand, if it is hard to hide damaging information and the release of damaging information tends to induce lawsuits, then a right to silence may dampen already insufficient incentives to acquire information.

2010	H10	Anwar, Shamena, Patrick Bayer, and Randi Hjalmarsson. 2010. <i>Jury Discrimination in Criminal Trials</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 16366. This paper examines the impact of jury racial composition on trial outcomes using a unique dataset of all felony trials in Sarasota County, Florida between 2004 and 2009. We utilize a research design that exploits day-to-day variation in the composition of the jury pool to isolate quasi-random variation in the composition of the seated jury. We find strong evidence that all-white juries acquit whites more often and are less favorable to black versus white defendants when compared to juries with at least one black member. Using the Anwar-Fang rank order test, we find strong statistical evidence of discrimination on the basis of defendant race. These results are consistent with racial prejudice on the part of white jurors, black jurors, or both. Using a simple model of jury selection and decision-making, we replicate the entire set of empirical regularities observed in the data, including the fact that blacks in the jury pool are just as likely as whites to be seated. Simulations of the model suggest that jurors of each race are heterogeneous in the standards of evidence that they require to convict and that both black and white defendants would prefer to face jurors of the same race.
2010	J88	Iyengar, Radha. 2010. <i>Id Rather be Hanged for a Sheep than a Lamb: The Unintended Consequences of Three-Strikes Laws</i> . Centre for Economic Performance, LSE. CEP Discussion Papers. Strong sentences are common "tough on crime" tool used to reduce the incentives for individuals to participate in criminal activity. However, the design of such policies often ignores other margins along which individuals interested in participating in crime may adjust. I use California's Three Strikes law to identify several effects of a large increase in the penalty for a broad set of crimes. Using criminal records data, I estimate that Three Strikes reduced participation in criminal activity by 20 percent for second-strike eligible offenders and a 28 percent decline for third-strike eligible offenders. However, I find two unintended consequences of the law. First, because Three Strikes flattened the penalty gradient with respect to severity, criminals were more likely to commit more violent crimes. Among third strike eligible offenders, the probability of committing violent crimes increased by 9 percentage points. Second, because California's law was more harsh than the laws of other nearby states, Three Strikes had a "beggar-thy-neighbor" effect increasing the migration of criminals with second and third-strike eligibility to commit crimes in neighboring states. The high cost of incarceration combined with the high cost of violent crime relative to non-violent crime implies that Three Strikes may not be a cost-effective means of reducing crime.

2010	Q51	D'Alisa, Giacomo, David Buralassi, Hali Healy, and Mariana Walter. 2010. "Conflict in Campania: Waste Emergency or Crisis of Democracy." <i>Ecological Economics</i> , 70(2): 239-49. In 2008, the Italian Government issued a decree according to which obstructions or protests in the vicinity of landfills or incinerators became a penal felony. This was the outcome of a long process that began fifteen years before when regional waste treatment facilities became unable to cope with the waste accumulated in the region of Campania. This article studies the history of this conflict in order to identify a range of values and concerns about nature, health, and democracy. It asserts that the decision-making process adopted by subsequent Italian governments, alongside repressive laws, oversimplified a complex crisis and obscured different emergent perspectives and values. Ultimately, denying the will of a large part of the population caused increased social unrest.

2011	A10 D49 L00	Ghosal, Vivek. 2011. <i>The Law and Economics of Enhancing Cartel Enforcement: Using Information from Non-Cartel Investigations to Prosecute Cartels</i> . CESifo Group Munich. CESifo Working Paper Series: 3506. I present the following proposal: information revealed during non-cartel investigations by competition law enforcement authorities, such as evaluation of M&As or investigation of monopolization (dominance) conduct, should be directly used to investigate and prosecute cartels.

Year	DE	Title and Abstract
	L49 M00	Currently, in several jurisdictions, information acquired in, for example, a M&A investigation typically cannot be directly used for a cartel case due to the underlying statutes and the legal and administrative procedures that govern information use. Reviewing the management and corporate strategy literature, I note that M&As form a vital part of firms' core business strategy, with the longer-run strategic aspects being more important. These longer-run strategies could be jeopardized if the firms were engaging in collusion, as the likelihood of detection and prosecution would increase under the proposed rule change, which would punish bad (collusive) behavior. I argue that irrespective of exactly how many cartels are actually prosecuted via this channel, the proposal has the likelihood of creating a meaningful deterrence effect. I also discuss the potential downsides related to Type 1 errors and administrative costs. Overall, I argue that the proposed rule change could increase the efficiency and effectiveness of cartel enforcement, and open an additional front in the fight against hardcore cartels that operate within jurisdictions as well as internationally.
2011	C21	Manski, Charles F., and John V. Pepper. 2011. <i>Deterrence and the Death Penalty: Partial Identification Analysis Using Repeated Cross Sections</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 17455. Researchers have long used repeated cross sectional observations of homicide rates and sanctions to examine the deterrent effect of the adoption and implementation of death penalty statutes. The empirical literature, however, has failed to achieve consensus. A fundamental problem is that the outcomes of counterfactual policies are not observable. Hence, the data alone cannot identify the deterrent effect of capital punishment. How then should research proceed? It is tempting to impose assumptions strong enough to yield a definitive finding, but strong assumptions may be inaccurate and yield flawed conclusions. Instead, we study the identifying power of relatively weak assumptions restricting variation in treatment response across places and time. The results are findings of partial identification that bound the deterrent effect of capital punishment. By successively adding stronger identifying assumptions, we seek to make transparent how assumptions shape inference. We perform empirical analysis using state-level data in the United States in 1975 and 1977. Under the weakest restrictions, there is substantial ambiguity: we cannot rule out the possibility that having a death penalty statute substantially increases or decreases homicide. This ambiguity is reduced when we impose stronger assumptions, but inferences are sensitive to the maintained restrictions. Combining the data with some assumptions implies that the death penalty increases homicide, but other assumptions imply that the death penalty deters it.

2011	I38	Cook, Philip J., Jens Ludwig, and Justin McCrary, eds. 2011. <i>Controlling Crime: Strategies and Tradeoffs</i> , A National Bureau of Economic Research Conference Report. Chicago and London: University of Chicago Press. Twelve papers and nine comments, originally presented at a National Bureau of Economic Research conference hosted by the Berkeley Law School in January 2010, consider alternatives to traditional crime control techniques that demand fewer resources or channel resources into areas other than the criminal justice system. Papers discuss the deterrent effect of imprisonment; institutional requirements for effective imposition of fines; why so many drug users are in prison if drug treatment works so well; mental health treatment and criminal justice outcomes; rethinking America's illegal drug policy; alcohol regulation and crime; the role of private action in controlling crime; decreasing delinquency, criminal behavior, and recidivism by intervening on psychological factors other than cognitive ability--a review of the intervention literature; family income, neighborhood poverty, and crime; education policy and crime; improving employment prospects for former prison inmates--challenges and policy; and crime and the family--lessons from teenage childbearing. Cook is ITT/Terry Sanford Professor of Public Policy, Professor of Economics and Sociology, and Senior Associate Dean for Faculty and Research at Duke University. Ludwig is McCormick Foundation Professor of Social Service Administration, Law, and Public Policy at the University of Chicago and Director of the University of Chicago Crime Lab. McCrary is Professor of Law at the University of California, Berkeley. Name and subject indexes.
2011	J00	Harbaugh, William T., Naci H. Mocan, and Michael S. Visser. 2011. <i>Theft and Deterrence</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 17059. We report results from economic experiments of decisions that are best described as petty larceny, with high school and college students who can anonymously steal real money from each other. Our design allows exogenous variation in the rewards of crime, and the penalty and probability of detection. We find that the probability of stealing is increasing in the amount of money that can be stolen, and that it is decreasing in the probability of getting caught and in the penalty for getting caught. Furthermore, the impact of the certainty of getting caught is larger when the penalty is bigger, and the impact of the penalty is bigger when the probability of getting caught is larger.

2011	Z19	Silva, Niko De, and Benno Torgler. 2011. <i>Smoke Signals and Mixed Messages: Medical Marijuana & Drug Policy Signalling Effects</i> . School of Economics and Finance, Queensland University of Technology, School of Economics and Finance Discussion Papers and Working Papers Series: 272. Liberal drug policy reform is often criticized for 'sending the wrong message', particularly to youth. Reform opponents argue that liberal policies such as decriminalisation and medical marijuana laws will cause marijuana to be perceived as less risky and lead to an increase in use. We seek to test this claim empirically, exploiting the timing and unique properties of state level medical marijuana laws in the US to isolate policy signalling effects. We use survey-derived state-level estimates of youths' marijuana risk-perceptions and use prevalence, and find evidence of signalling effects on aggregate risk-perceptions of marijuana use that correspond to the introduction of medical marijuana laws. These effects, however, do not conform to what reform opponents predict--medical marijuana provisions appear to send the 'right' message. Further, we find no robust effects on non-medical marijuana use.

2012	C32 I28	Vujic, Suncica, Jacques Commandeur, and Siem Jan Koopman. 2012. <i>Structural Intervention Time Series Analysis of Crime Rates: The Impact of Sentence Reform in Virginia</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 12-007/4, We

Year	DE	Title and Abstract
		adopt a structural time series analysis to investigate the impact of parole abolition and sentence reform in Virginia on reported crime rates. The Commonwealth of Virginia abolished parole and reformed sentencing for all felony offences committed on or after January 1, 1995. To examine the impact of Virginia's change in legislation on reported crime rates from 1995 onwards, we perform an intervention time series analysis based on structural time series models. We empirically find that the change in legislation has significantly reduced the burglary rates and to a lesser extent the murder rates in Virginia. For other violent crimes such as rape and aggravated assault the evidence of a significant reduction in crime rates is less evident or is not found. This empirical study for Virginia also provides an illustration of how an effective intervention time series analysis can be carried out in crime studies.
2012	C91 C92	van Dijk, Frans, Joep H. Sonnemans, and Ed Bauw. 2012. <i>Judicial Error by Groups and Individuals</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 12-027/3. In criminal cases judges evaluate and combine probabilistic evidence to reach verdicts. Unavoidably, errors are made, resulting in unwarranted conviction or acquittal of defendants. This paper addresses the questions (1) whether hearing cases by teams of three persons leads to less error than hearing cases alone; (2) whether deliberation leads to better decisions than mechanical aggregation of individual opinions; and (3) whether participating in deliberations improves future individual decisions. We find that having more than one judge consider cases reduces error effectively. This does not mean that it is necessary to deliberate about all cases. In simple cases many errors can be avoided by mechanical aggregation of independent opinions, and deliberation has no added value. In difficult cases discussion leads to less error. The advantage of deliberation goes beyond the case at hand: although we provide no feedback about the quality of verdicts, it improves individual decisions in subsequent cases.
2012	E52 E58 E63	Homburg, Stefan. 2012. "Der neue Kurs der Europäischen Zentralbank." <i>Wirtschaftsdienst</i> , 92(10): 673-77. In September 2012, the European Central Bank (ECB) announced its new "Outright Monetary Transactions (OMT)" programme, which entails unlimited purchases of member states' government bonds. Following an idea by George Soros, Goldman Sachs and Citigroup, the ECB intends to sterilise these purchases through the liabilities side of its balance sheet, i.e., through the issuance of ECB bonds. The article analyses this plan and argues that the ECB is introducing a second unlimited European Stability Mechanism (ESM). This clearly violates European law and is likely to be punishable under German criminal law.

2012	F55	Thomas, Daniel C. 2012. "Still Punching below Its Weight? Coherence and Effectiveness in European Union Foreign Policy." <i>Journal of Common Market Studies</i> , 50(3): 457-74. Although scholars and practitioners have long argued that greater political coherence will make the European Union a more effective international actor, the relationship between coherence and effectiveness has not been well defined or tested. This article defines the two concepts, proposes three hypotheses regarding the relationship between them, and examines the extent and consequences of EU coherence on an issue that the EU has highlighted as essential to its foreign policy mission: the good functioning of the International Criminal Court (ICC). It finds that the EU exhibited considerable coherence in its response to the United States' campaign for ICC 'non-surrender agreements', yet failed in its effort to shape the behaviour of other states. Coherence may be necessary for the EU to exert its influence abroad, but it is not sufficient in a multi-centric world order where many others do not share the EU's collective policy preferences and are ready to deploy vast resources in pursuit of their goals. The article also considers the implications of this study for future research on EU foreign policy actorness, coherence and effectiveness.
2012	F55 Q48	CV: van den Brink, Ton. 2012. "The Substance of Subsidiarity: The Interpretation and Meaning of the Principle after Lisbon." 2012	H83	Zaksaitė, Salomeja. 2012. "Korupcijos privaciamie sektoriuje kriminalizavimo problemos. (Corruption in the Private Sector: Issues of Criminalization. With English summary.)" <i>Verslo ir Teisės Aktualijos/Current Issues of Business and Law</i> , 7(2): 333-50. This article analyzes the problems of criminalization of corruption in the private sector in the context of national and foreign countries' legal regulation, international documents, case-law, and research. The appropriate theoretical analysis allows to establish which provisions of laws of the Republic of Lithuania, their interpretation or gaps in their interpretation hinder (or, on the contrary, assist) the imposition of criminal liability for corruption in the private sector. The main problems concerning Lithuanian laws are related with the concepts of 'person equalled to a civil servant', 'public service', and 'public administration powers'. These attributes are necessary in order to incriminate corpus delicti of bribery, graft, and other criminal acts against civil service and public interests. Although it is correct to recognize that entities in the private sector do have public administration powers, this does not necessarily mean that Lithuania has properly criminalized corruption in the private sector. This article also reveals transnational problems and indicates that the lack of the (international) concept of the private sector might influence inconsistencies in national regulation. European countries have solved the issues of criminalization of corruption in the private sector differently: some states have not criminalized the intention to offer a bribe; some countries have criminalized corruption in the private sector only in the cases when the appropriate conduct distorts fair business competition; in criminal laws, commercial activity is usually not explicitly related to making profit. The analysis of legal regulation in other countries reveals a trend to introduce a separate corruption-related offense, such as commercial bribery. The article deals with this and other alternatives (for instance, to clarify the concept of a person equalled to a civil servant by adopting an explanation to courts) in the light of international documents and national regulation.
2012	H83	Oruc, Esad. 2012. "Odgovornost notara u pravnom sistemu Bosne i Hercegovine--De lege lata i de lege ferenda. (Liability of Notaries in Bosnia and Herzegovina: Lex Lata and Lex Ferenda. With English summary.)" <i>Revija za Pravo i Ekonomiju/Review for Law and Economics</i> , 13(1): 37-53. Notaries are independent public officials appointed by the State to confer authenticity on legal deeds and contracts contained in documents drafted by them. They act as independent, impartial and objective advisers to all parties to contract or a transaction. Notaries are individually liable for any damage occurring due to their fault when performing official duties. In this paper we examine main three types of notarial liability in legal system of Bosnia and Herzegovina: disciplinary, civil and criminal liability. The paper will draw attention towards the inadequacies of the regulation related to notaries' liability in Notarial Law of B&H and make proposals for improvement of current legislation.

This article aims at analyzing the Corporate Governance of the group Eternit cement-manufacturer. We are interested in this company insofar as she known in the past of the medical problems having generated terminal illness. For this reason, several legal initiatives were undertaken by the victims of asbestos or their descendants : the most popularized through the media being the lawsuit of Turin in 2009 and, more recently, the lawsuit of Brussels in 2011. The objective of this research is to consider the orchestration of the negationism of Eternit for the problems generated by the contact of asbestos while being based on the analysis of the methods of governance of this company. We show that the maintenance of the activities of the company without handing-over in question of the methods of production was supported by the consolidation of family interests and the installation of specific structures of governance. The modifications orchestrated at the end of the 90's with the production processes are in fact the reflection of an institutionalization of the problems involved in asbestos and took place thanks to a transfer through media towards the public sphere of problems which long time were remained confined in the professional sphere.

With English summary.)" <i>Revista de Estudios Cooperativos</i>, 0(108): 173-212. The aim of this work is to know the criminal responsibility for social organs arising from failure to comply with the accounting obligations and the repercussions of the reform of the penal code in the treatment of responsibility. The paper starts with a brief description of the accounting obligations, not only formal but also material obligations, and the specific rules for the valuation of cooperatives that have recently been regulated in the order of December 21, 2010 (BOE December, 29). Of these, the countable aspects of cooperative companies will be analyzed in this paper. In it we will find numerous changes as to which parts of the contributions of the partners will be classified as debts. Finally, this work analyzes various articles of the criminal code in which accounting is most important, highlighting the possibility of responsibility of the companies after the new reform.

2013	C72	CV: Klumpp, Tilman, and Hugo M. Mialon. 2013. "On Hatred." <i>American Law and Economics Review</i> , 15(1): 39-72. This paper investigates the effects of hatred in two-player games. We model hate as "reverse-altruism" or a preference for low opponent payoffs, and derive implications for behavior in conflicts where players are motivated by hate. We use these results to illuminate several policy issues, both historical and contemporary: the strategy of non-violent resistance during the American civil rights era, shifts in U.S. national security strategy following 9/11, and the justification for criminal and civil penalty enhancements for hate crime.

2013	E24	CV: Liu, Yu, Thomas M. Fullerton Jr., and Nathan J. Ashby. 2013. "Assessing the Impacts of Labor Market and Deterrence Variables on Crime Rates in Mexico." <i>Contemporary Economic Policy</i> , 31(4): 669-90. Many studies examine the relationship between crime rates and various economic and/or sociodemographic variables in high income countries, but similar efforts for middle and low income countries are less common. Utilizing an 8-year panel data sample for all 32 states in Mexico, this study assesses the impact of Mexican labor market and deterrence variables on various Mexican crime rates. The principal results indicate that: (1) State gross domestic product (GDP) per capita has ambiguous effect on crime rates under different conditions. Both wages and unemployment rates are negatively linked with crime rates. (2) Although the Mexican judicial and public security systems are widely believed to be ineffective, increased federal police forces and incarceration rates are associated with lower crime rates, but higher public security expenditure per capita is associated with higher crime rates. (3) The impacts from labor market and deterrence variables presented in (1) and (2) continue to hold under the Fox administration as well as for non-border states. Their respective impacts diminish, however, under the Calderon administration as well as for border states because of the small number of observations. Overall, the results indicate that increasing average wages, federal police forces, and incarceration rates would have significant impacts on reducing crime rates in Mexican states.
2013	E41	CV: Ardizzi, Guerino, Massimiliano Piacenza, Carmelo Petraglia, and Gilberto Turati. 2013. "L'economia non osservata fra evasione e crimine: Una rivisitazione del Currency Demand Approach con una applicazione al contesto italiano. (With English summary)." <i>Rivista di Politica Economica</i> , 102(1-3): 229-69. This study contributes to the debate on estimating the size of underground economy, by proposing a reinterpretation of the Currency Demand Approach (CDA). Three main innovations are introduced. First, a direct measure of cash transactions is taken as dependent variable in the money demand equation. Second, indicators of detected tax evasion substitute difficult-to-find proxies for all the relevant determinants of noncompliance. Third, a control for cash used in criminal activities is introduced. The application of this 'modified-CDA' to Italian provinces reveals that the provinces in Centre-North exhibit a higher incidence on GDP of both the underground economy and illegal production.
2013	F41	CV: Guo, Yung-Hsing. 2013. "How China Navigated the Dilemma of Trade Liberalization and Government Revenues." <i>Development and Change</i> , 44(4): 991-1012. Many economists believe that in the long run, the aggregate performance of open economies is better than that of closed ones, and that open policies contribute significantly to economic development. At the same time, many political scientists and policy makers fear that, in the short run, one of the steps towards openness--trade liberalization--may harm government revenues. However, in the 1990s, China successfully navigated the dilemma of trade liberalization and government revenues. In this period, China decreased tariff and non-tariff barriers for WTO accession, but has achieved dramatically increased tariff revenues since 1999. This study explores how China implemented trade liberalization and simultaneously increased tariff revenues in the 1990s. It demonstrates that a series of institutional arrangements, including a reform of Criminal Law, rigorous anti-smuggling activities and a de facto tax imposed on the export sector, successfully curbed smuggling activities through the processing trade, and made foreign-invested manufacturing enterprises the major contributors to the stability of customs revenue. China's case shows that a prosperous, export-oriented and foreign-invested manufacturing sector could potentially provide a developing country with a source of customs revenue.
2013	F60	CV: Andreas, Peter. 2013. "Gangster's Paradise: The Untold History of the United States and International Crime." <i>Foreign Affairs</i> , 92(2): 22-28. Despite media hoopla, cross-border crime--illegal drugs sales, evasion of taxes, intellectual property theft, and money laundering--is hardly a new phenomenon. For much of history, moreover, the United States was as much perpetrator as victim. Recognizing this awkward truth should help cool down overheated debates about today's transnational problems and how to respond to them.

2013	G14	Frijns, Bart, Aaron Gilbert, and Alireza Tourani-Rad. 2013. "Do Criminal Sanctions Deter Insider Trading?" <i>Financial Review</i> 48(2): 205-32. Many developed markets have taken what appears to be a tough stance on illegal insider trading through the use of criminal sanctions. Although criminal sanctions represent a much greater penalty than civil sanctions, the higher burden of proof required makes their enforceability weaker. This trade off between severity and enforceability makes the impact of criminal sanctions ambiguous. We empirically examine this issue by studying the deterrence of insider trading following the introduction of criminal sanctions in a developed market. Significant changes in sanction regimes are rare, especially when criminal sanctions are introduced without other changes. In February 2008, New Zealand introduced criminal sanctions for insider trading. This change of law offers a unique setting in which to examine the deterrence effect of criminalization. Using measures for the cost of trading, degree of information asymmetry, and probability of informed trading, we find that the enactment of this law led to a worsening in these measures. These findings suggest that the weaker enforceability of criminalization outweighs the associated increased severity of the penalties in New Zealand.

2013	H30	Lovenheim, Michael F., and Emily G. Owens. 2013. "Does Federal Financial Aid Affect College Enrollment? Evidence from Drug Offenders and the Higher Education Act of 1998." National Bureau of Economic Research, Inc. NBER Working Papers: 18749. In 2001, amendments to the Higher Education Act made people convicted of drug offenses ineligible for federal financial aid for up to two years after their conviction. Using rich data on educational outcomes and drug charges in the NLSY 1997, we show that this law change had a large negative impact on the college attendance of students with drug convictions. On average, the temporary ban on federal financial aid increased the amount of time between high school graduation and college enrollment by about two years, and we also present suggestive evidence that affected students were less likely to ever enroll in college. Students living in urban areas and those whose mothers did not attend college appear to be the most affected by these amendments. Importantly, we do not find that the law deterred young people from committing drug felonies nor did it substantively change the probability that high school students with drug convictions graduated from high school. We find no evidence of a change in college enrollment of students convicted of non-drug crimes, or of those charged by not convicted of drug offenses. In contrast to much of the existing research, we conclude that, for this high-risk group of students, eligibility for federal financial aid strongly impacts college investment decisions.
2013	H54 R42 R58	Piemontese, Lavinia. 2013. "The Spread of Mafia in Northern Italy: The Role of Public Infrastructure." <i>Rivista di Politica Economica</i>, 102(10-12): 113-40. This paper analyzes the spread of the mafia in Northern Italy. In particular, this study aims at showing that public funding of infrastructure attracts the transplantation of such criminal organizations. I assemble a new dataset on mafia-related crimes, which provide information at the provincial level over the period 1985-2010. By applying a differences-in-differences strategy, I show that public investment for renewal of the A4 motorway increased mafia-related crimes with economic connotation in those provinces that received roadwork.
2013	J31	Mishra, Praveen. 2013. "Wage Discrimination in India: Exploring the Impact of Gender." <i>Economic Affairs</i>, 58(3): 293-300. Reasonable employment opportunities and fair working environments play an important role in determining a country's economic progress. Discrimination of employees on the grounds of caste, sex or religion may be detrimental to the work environment. The wage rates and payment patterns in India differ widely across the country. Wage rates are different for men and women, with women paid less than men for the same work. The division of labour on gender lines has serious implications for earnings of men and women. The legislature has enacted civil and criminal laws to specifically address issues that might hinder productive work or availability of employment opportunities. Despite the presence of various legislations that cover specific aspects of equality it cannot be denied that we need an all-encompassing anti-discrimination law and suitable policies that would extensively address the varied dimensions of inequality.
2013	L13	Fabra, Natalia, and Massimo Motta. 2013. <i>Antitrust Fines in Times of Crisis</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9290. In a model in which firms can go bankrupt because of adverse market shocks or antitrust fines, we find that even large corporate fines may not be able to induce deterrence. Managerial penalties are thus needed. If the policy may be changed according to the state of the business cycle, then the optimal outcome can always be achieved through antitrust fines that are more severe in good times and more lenient in bad times. A time-independent policy may result in either too many bankruptcies or under-deterrence as compared to the optimal policy.
2013	L65	Yu, Su-Yeon, Bong-Min Yang, and Jin-Hyun Kim. 2013. "New Anti-rebate Legislation in South Korea." <i>Applied Health Economics and Health Policy</i>, 11(4): 311-18. The South Korean Government recently announced a reform in the drug anti-rebate law, with the purpose of eradicating pervasive, unethical, and illegal rebate practices in pharmaceutical marketing. The main objective of this reform is to have the ability to bring criminal charges against doctors and pharmacists for receiving illegal kickbacks from drug companies. Previously, provision of illegal kickbacks by drug companies led to criminal punishment of the drug companies alone, leaving doctors and pharmacists unpunished as the recipients. With the introduction of the "Dual Punishment System (DPS)" reform, criminal punishment for illegal rebates is extended to those receiving illegal kickbacks. Although bitter controversy erupted among stakeholders when the reform was first drafted, a civic group participated in the reform process and effectively influenced the legislative process to a successful end. Some interim outcomes from the DPS in terms of bringing illegal practices to account have already been reported since the policy's implementation in November 2010. The reform background, goals, potential issues, and policy implications are explored in this study with the objective of providing further insight into drug policy for other countries that face similar challenges in the area of drug marketing.

2013	N35	Nair, Neeti. 2013. "Beyond the 'Communal' 1920s: The Problem of Intention, Legislative Pragmatism, and the Making of Section 295A of the Indian Penal Code." <i>Indian Economic and Social History Review</i>, 50(3): 317-40. Late nineteenth-early twentieth century Punjab has been commonly regarded as a space for 'competitive communalism' whereby each of the province's major religious communities participated in activities that increased hostilities between the communities. Such an assertion has been substantiated with reference to an increasing number of publications that were quickly deemed offensive to one or the other religious community of the Punjab and then banned. This article examines the controversies following the publication of one such pamphlet 'Rangila Rasul'. These ultimately necessitated the addition of section 295A to the Indian Penal Code (IPC), a section that would punish those who, 'with deliberate and malicious intention,' insulted or attempted to insult 'religious beliefs' of any class of His Majesty's subjects. Reading contemporary newspaper commentaries alongside debates in the legislative assembly, I show that legislators were able to rise above the interests of their religious communities (as Hindu or Muslim publicists) to speak for a larger putative 'Indian' community, collective, or nation. Far from being a textbook example of communalism, the debates bring into sharp relief an alternate moment in the making of an 'Indian' nation.
2013	N35	Ramnath, Kalyani. 2013. "The Colonial Difference between Law and Fact: Notes on the Criminal Jury in India." <i>Indian Economic and Social History Review</i>, 50(3): 341-63. This article tracks the rise and fall of criminal jury in colonial India through official

Year	DE	Title and Abstract
		and non-official debates, discussions and interventions. The discussion on criminal juries in the Anglo-American system has typically focused on the division of legal labour between judge and jury. In colonial India, this conventional difference between 'law' and 'fact' were shaped by notions of belonging to a different race, religion and language. These were frequently articulated as the story of the 'unreliable' juror or the 'religious' native who feared eternal damnation. From the jurors who were allegedly intoxicated by the publicity over the infamous Nanavati trial to women jurors who claimed to be followed on the way home from court, to the religious Brahmin juror who would not swear an oath, the story of the criminal jury is peopled with anxieties over undesirable forms of influence, that impinge on legal impartiality. Using the criminal jury as a lens, I look at the claims of universal legal reform as particularly lending themselves to contestations over sovereignty.
2013	O12	Willems, Tim, Shaun Larcom, and Mare Sarr. 2013. <i>What shall we do with the bad dictator?</i>. University of Oxford, Department of Economics, Economics Series Working Papers: 671. Recently, the international community has increased its commitment to prosecute malicious dictators--for example by establishing the International Criminal Court. This has raised the international community's loss associated with being time-inconsistent (i.e.: granting amnesties ex post), the idea being that a reduced prospect of amnesty deters dictators from committing atrocities ex ante. Simultaneously, however, this elects dictators of a worse type. Moreover, when the costs of being time-inconsistent are lower than those associated with keeping the dictator in place, the international community will still grant amnesty--thereby making the effective punishment function non-monotonic. Consequently, increased commitment to ex post punishment may actually induce dictators to worsen their behaviour, purely to "unlock" the amnesty option by forcing the international community into time-inconsistency.

2013	R12	Cook, Steve, and Tom Winfield. 2013. "Crime across the States: Are US Crime Rates Converging?" <i>Urban Studies</i>, 50(9): 1724-41. Recent research concerning the potential presence of a national trend in regionally disaggregated US crime data is extended. In light of the varying levels of criminal activity noted in differing regions of the US, the present analysis considers whether a trend is emerging rather than currently present. Using alternative methods, potential convergence in criminal activity across the states of the US is examined. The results presented provide clear evidence of a previously undetected finding of convergence over the period 1960-2009 for all classifications of criminal activity considered. The importance and implications of these findings, along with their support in previous research on, inter alia, socioeconomic conditions, sentencing policies and alternative theories, are discussed.
2013	R32	Walby, Kevin, and Sean Hier. 2013. "Business Improvement Associations and Public Area Video Surveillance in Canadian Cities." <i>Urban Studies</i>, 50(10): 2102-17. This article examines how business improvement associations (BIAs) become involved in implementing public video surveillance systems in Canadian cities. The approach of BIAs to urban security is more complex than the literature on neo-liberalisation of public space suggests and it is shown how BIAs adopt lead, junior or reluctant partnership roles in implementing and writing policy for public video surveillance. Interview data from four Canadian cities are used to demonstrate how BIAs take on different positions in video surveillance policy-making and implementation. The article explores how local and regional policy contexts shape a BIA's ability to pursue revitalisation projects and illustrates the way that provincial privacy guidelines function as a key policy instrument in the Canadian context. The article concludes by assessing what these findings add to literature on the neo-liberalisation of public space and urban studies.

Z11	Cultural Economics: Economics of the Arts and Literature
Z18	Cultural Economics: Public Policy

Intersections with the micro categories marked in yellow appeared in 2014—2015.

Пересечения с микрокатегориями, помеченными желтым, появились в 2014—2015 гг.

K14: Balance of Links

108	Links in 2005
137	New links in 2006-2013
577	Potential links at the end of 2013
822	Total

The date of final verification: November 28, 2016.

K14 — Contributors — Авторы

Ilina, Darya V. — Ильина Дарья Викторовна — 0.3 AS²;
 Lisitsa, Valerii N. — Лисица, Валерий Николаевич — 0.4 AS;
 Lychagin, Anton M. — Лычагин Антон Михайлович — 0.72 AS;
 Lychagin, Dmitry M. — Лычагин Дмитрий Михайлович — 0.4 AS;
 Lychagin, Mikhail V. — Лычагин Михаил Васильевич — 0.8 AS;
 Mkrtchyan, Gagik M. — Мкртчян Гагик Мкртчичевич — 0.4 AS;
 Muhina, Irina K. — Мухина Ирина Константиновна — 0.4 AS;
 Popov, Ilya Y. — Попов Илья Юрьевич — 0.4 AS;
 Rybachenko, Ekaterina A. — Рыбаченко Екатерина Александровна — 0.2 AS;
 Suslov, Victor I. — Суслов Виктор Иванович — 0.4 AS.

The total volume of derivative works for K14 is equal to 4.42 AS.

Общий объем раздела K14 — 4,42 авторских (уч.-изд.) л.

² AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40,000 characters (including the spaces between words), or 3,000 sq cm of illustrations (maps) like the table K14.E.

2006		
2006	K29 O34 O40 O53	Yueh, Linda Y. 2006. <i>Patent Laws and Innovation in China</i> . University of Oxford, Department of Economics, Economics Series Working Papers: 271. This paper explores whether the patent law and intellectual property rights (IPR) system have resulted in innovation in China during the reform period. It appears that the patent laws have produced a stock of patents, where the success rates of patent applications are fairly uniform across the country. As the IPR framework does not vary across provinces, we asked which factors would explain innovation in China. We find the main determinants of patents to be R&D expenditure and foreign direct investment, but not the number of researchers, though the level of human capital matters. We conclude that the patent laws in China have been associated with innovation that has accompanied economic growth despite imperfections in the legal system.
2006	L20	Daughety, Andrew, and Jennifer Reinganum. 2006. <i>Hidden Talents: Partnerships with Pareto-Improving Private Information</i> . Department of Economics, Vanderbilt University, Working Papers: 0613. Can the presence of private information in a transaction yield a Pareto-improvement over complete information? In this paper we show that the combination of multi-agent simultaneous signaling of private information, and the nature of the strategic interaction, can result in non-cooperative equilibria which are Pareto superior to the complete-information non-cooperative equilibrium. Our application involves two agents who become partners in the production of a product (or the undertaking of a project). The partners' efforts are complementary and, in addition to its direct contribution to product quality, observable (but non-verifiable) effort serves as a signal for the unobservable component, talent; each partner is privately informed only about her own talent. Because the partners share the payoff from the project, each is tempted to shirk in providing effort. However, the need for each partner to signal the quality of the product to

Year	DE	Title and Abstract
		potential buyers serves as a credible commitment to provide greater effort. We find that this non-cooperative, simultaneous signaling need not be wasteful, and can actually be welfare-enhancing in the strongest sense: there is a portion of the parameter space wherein incomplete information is Pareto-improving relative to the complete-information non-cooperative outcome for all possible non-degenerate prior distributions over the private information. Therefore, the combination of simultaneous-move strategic interaction and incomplete information can lead to conditions wherein the "problem" of adverse selection actually mitigates the problem of moral hazard.
2006	L86	Vincent, Charles B. 2006. "Cybersmear II: Blogging and the Corporate Rematch against John Doe Version 2.006." <i>Delaware Journal of Corporate Law</i> , 31(3): 987-1009. Blogging, the act of posting a regular journal on the Internet, has quickly become one of the most prevalent methods for obtaining and disseminating decentralized information. In part because the barriers to creating a blog are virtually nonexistent, a person can write about anything, from the weather in Tonga to how Company X's president typically handles a controversial client. Given the lack of limitations in the content of a blog and the increasing number of people who use them, corporations are finally realizing the marketing potential behind this latest technology. Simultaneous to trying to harness the marketing power of blogging, corporations have begun to develop methods to control their constituents' (including employees) use of them. When a company has been cybersmeared, e-defamed, or virtually abused by someone through a blog, decisions have to be made to determine the most effective way of countering the attack. Where the attack comes from an anonymous source, the company must first tackle the problem of determining who smeared them. This note explains the standards a court may apply when a cybersmeared company seeks to discover the identity of a John Doe. This note also suggests that the summary judgment standard, recently imposed by the Delaware Supreme Court in such cases, clearly, adequately, and most fairly balances the corporation's interest in obtaining relief against John Doe's First Amendment rights.
2006	N37 N47 N77	Helfman, Tara. 2006. "The Court of Vice Admiralty at Sierra Leone and the Abolition of the West African Slave Trade." <i>Yale Law Journal</i> , 115(5): 1122-56. Drawing on archival sources, this Note explores an early experiment in humanitarian intervention undertaken by the Court of Vice Admiralty at Sierra Leone through the suppression of the West African slave trade during the early decades of the nineteenth century. Part I discusses the social and geopolitical pressures that helped British abolitionists realize their hopes of creating a free colony in Africa. Part II demonstrates the manner in which Robert Thorpe, Chief Judge of the Court of Vice Admiralty at Sierra Leone, enforced Britain's 1807 Act for the Abolition of the Slave Trade against British and foreign traders alike. Part III argues that Thorpe's court, in conjunction with aggressive interdictions by the British Navy and privateers, forced Europe's great slaving powers to the negotiating table and secured their abandonment of the slave trade through the creation of multilateral institutions equipped to adjudicate captured slave ships. This Part also discusses the Le Louis case, which demonstrated the impact of Thorpe's court on the legal regime governing free navigation. Part IV then analyzes the relevance of Thorpe's experiment in humanitarian intervention to current interdiction efforts undertaken by the Proliferation Security Initiative.

2007		
2007	D31	Nussim, Jacob. 2007. "Redistribution Mechanisms." <i>Review of Law and Economics</i> , 3(2): . Many legal scholars believe that equity should be considered in designing legal rules. Kaplow and Shavell (1994) seriously challenged this approach. They proved that the tax transfer system is superior to legal rules in redistributing wealth. This paper reexamines their 'double distortion' claim, presenting two main arguments. The first shows that the 'double distortion' claim is not necessarily valid under welfarism. In particular, under an ex post approach to welfarism, which generally implies that society pays attention to the ex post (actual) rather than expected redistribution, the proof of the tax superiority breaks down. Secondly, and more importantly, it is proven that, in principle, tort rules can easily be designed to circumvent 'double distortion' effects. Thus, the tort system is not inherently more inefficient than the tax-transfer system in accomplishing redistribution. The paper generally concludes that although there are often no good reasons for redistribution within the legal system, theoretically and a priori it is not an inferior redistribution mechanism.
2007	H70	Fryer, Roland G., Jr., and Richard T. Holden. 2007. <i>Measuring the Compactness of Political Districting Plans</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13456. The United States Supreme Court has long recognized compactness as an important principle in assessing the constitutionality of political districting plans. We propose a measure of compactness based on the distance between voters within the same district relative to the minimum distance achievable--which we coin the relative proximity index. We prove that any compactness measure which satisfies three desirable properties (anonymity of voters, efficient clustering, and invariance to scale, population density, and number of districts) ranks districting plans identically to our index. We then calculate the relative proximity index for the 106th Congress, requiring us to solve for each state's maximal compactness; an NP-hard problem. Using two properties of maximally compact districts, we prove they are power diagrams and develop an algorithm based on these insights. The correlation between our index and the commonly-used measures of dispersion and perimeter is -.22 and -.06, respectively. We conclude by estimating seat-vote curves under maximally compact districts for several large states. The fraction of additional seats a party obtains when their average vote increases is significantly greater under maximally compact districting plans, relative to the existing plans.
2007	I32 Q21	Deaton, B. James. 2007. "Intestate Succession and Heir Property: Implications for Future Research on the Persistence of Poverty in Central Appalachia." <i>Journal of Economic Issues</i> , 41(4): 927-42. When a person dies without a will, the State effectively supplies a will by default via the laws of intestate succession. In some cases these laws result in a transfer of real property in the form of tenancy in common. Tenancy in common is a form of joint ownership in which cotenants have an undivided partial interest in property. Should a cotenant die intestate, their interest in property passes to his/her heirs. Tenancy in common that is the result of an inter-generational transfer of property through intestate succession is often referred to as heir property. The theory of the anticommons provides a useful analytical framework for hypothesizing that heir property may be under-utilized. Empirical evidence provides insight into the pervasiveness of heir property in Letcher County, Kentucky. The potential pervasiveness of heir property and the theory of the anticommons provide the basis for developing a hypothesis that heir property is a factor contributing to the persistence of poverty in some areas.
2008		

Year	DE	Title and Abstract
2008	L82	Dalvi, Manoj, and James F. Refalo. 2008. "An Economic Analysis of Libel Law." <i>Eastern Economic Journal</i>, 34(1): 74-94. This paper examines the welfare implications of different libel law standards as applied to newspapers in publishing stories. Our work extends the current literature by permitting private and public incentives to deviate, giving rise to an agency problem, and by formulating a two-stage decision model based on a story's expected value. We show that the negligence standard provides incentives for the agent to take actions, merely to insure itself against liability. This results in a deadweight loss to society. We also show that both standards can be socially inefficient; however, correction using policy tools under strict liability places a lower informational burden on policy makers, than does the negligence standard.
2008	L82	Heubeck, Steven. 2008. "Measuring Skill in Games with Random Payoffs: Evaluating Legality." <i>Review of Law and Economics</i>, 4(1): . Games, such as carnival or electronic/video games, may award prizes in some U.S. states only if the game's outcome depends sufficiently on skill. Otherwise, the game is classified as a gambling device and therefore illegal in most jurisdictions and states. This paper offers a practical methodology to determine what percentage of a game's payoff deviation can be attributed to skill. This measure of skill is designed to apply to a new class of games that have come to market in which a player in given a task, with no hidden elements, to complete. For completing this task, a random prize is awarded.
2009		
2009	D64	Harnay, Sophie, and Alain Marciano. 2009. "Should I Help My Neighbor? Self-Interest, Altruism and Economic Analyses of Rescue Laws." <i>European Journal of Law and Economics</i>, 28(2): 103-31. This article shows that the economic analyses of rescue laws developed in the '70s are the outcome of a long-term process that began at the end of the 1950s with the passing of the first legislations intended to promote and control rescue behaviour (the so-called "good Samaritan" legislations, acts or statutes) and that finally results in the economic models of rescue developed by Landes and Posner (The Journal of Legal Studies, 7(1):83-128, 1978a; The American Economic Review, 68(2):417-421, 1978b). The article investigates the context that made the occurrence of the economic analysis of rescue law possible and the controversies that it fueled in both the legal and economic fields. It also highlights the influence of the economic analysis of altruism on this particular field of law and economics.
2010		
2010	D81	Gaidarov, Pavel. 2010. "Justifiable Economic Risk. (In Bulgarian. With English summary.)." <i>Economic Alternatives</i>, 0(3): 83-90. The following work aims to note the basic elements of the institute of acquitted economic risk, to make some terminological distinctions and comparisons in order to understand better the nature, scope, and significance of the acquitted economic risk as a ground of exoneration of liability.
2010	M59	Tsakova, Violeta. 2010. "Ownership Regimes over Scientific Works. (In Bulgarian. With English summary.)." <i>Economic Alternatives</i>, 0(1): 35-41. Every scientist creates scientific products. Many of the scientific workers know or at least presume that they are their owners, but not all of them know what this ownership is, what conditions it arises out of, whom it arises for, and how it can be practiced. This article is created for the benefit of colleagues that want to get answers to this and other fundamental questions about ownership over their scientific products. The article is developed under principle formulation in Copyright and Related Rights Law and the existing practice in the country. In the article are presented the three basic regimes that ownership over scientific products arises out of the preconditions for its rise and the characteristics of its realization.
2011		
2011	D02 D63 K40 K41	Eisenberg, Theodore, and Henry Farber. 2011. <i>Why do Plaintiffs Lose Appeals? Biased Trial Courts, Litigious Losers, or Low Trial Win Rates?</i>. Princeton University, Department of Economics, Industrial Relations Section., Working Papers: 1329. Multiple studies find that plaintiffs who lose at trial and subsequently appeal are less successful on appeal than are losing defendants who appeal. The studies attribute this to a perception by appellate judges that trial courts are biased in favor of plaintiffs. However, at least two alternative explanations exist. First, losing plaintiffs may appeal at higher rates independent of the potential merits. Second, if plaintiffs tend to pursue to trial lawsuits where they should win on the merits less than half the time, then errors at trial will be more likely to adversely affect defendants. This study revisits the analysis of the appellate process with a theoretical model that has implications not only for appellate outcomes but for the rate of appeal. By tying together win rates at trial, appeals rates, and success rates on appeal, the model can distinguish the competing explanations for differential appellate success rates. We estimate this model using matched data on Federal District Court trials and appeals to the U. S. Circuit Courts of Appeal. We provide evidence that the lower plaintiffs success rate on appeal is due to plaintiffs' pursuing lawsuits where they should win on the merits (which we define to be an outcome that will not be reversed or remanded on appeal) less than half the time. We also provide evidence against explaining asymmetric success on appeal being attributable to trial courts favoring plaintiffs and evidence against juries being favorable to plaintiffs compared to judges.
2011	I23	Lott, John R., Jr., J. Mark Ramseyer, and Jeffrey Standen. 2011. "Peer Effects in Affirmative Action: Evidence from Law Student Performance." <i>International Review of Law and Economics</i>, 31(1): 1-15. In the Grutter case, Justice O'Connor suggested that universities could justifiably try to enroll a "critical mass" of minority students. Enroll fewer than that "critical mass," reason some observers, and minority students will feel too marginalized to perform at their highest levels. In this article, we test whether minority students perform better with other students from their ethnic group in a class or school. To do so, we assemble data on the ethnicity and performance of each student in all classes at two law schools--for three years at one, and for 16 years at the other. Although these schools enrolled a smaller fraction of African-Americans than most law schools, they are located in states with a much smaller fraction of African-Americans than in the United States as a whole. There is also a large amount of variation in the percent African-American across classes. At these schools, we find no consistent evidence that having additional students from one's ethnic group raises a student's performance. Instead, we find some evidence that having additional ethnic peers lowers performance--albeit by a very small amount.
2011	K11	Marr, Emily. 2011. "The Citizenship Shibboleth: Is the American Dream Everyone Else's Nightmare?: Book Notice." <i>Michigan Law Review</i>, 109(6): 1163-73. The American Dream is a trope with global reach. Although the "city upon a hill" may have lost some of its luster in recent years, the idea that America is a country where citizens can rise above "the fortuitous circumstances of birth or position" largely continues to resonate. Professor Ayelet Shachar's provocative new book, however, suggests otherwise. In <i>The Birthright Lottery</i> , Shachar condemns birthright citizenship laws as a feudal anachronism analogous to an inherited-property regime. For her, birthright citizenship in a prosperous nation confers a morally arbitrary windfall that determines life opportunities. Shachar further argues that in a world of material inequalities, the winners of the "birthright lottery" live large at the losers' expense, often with deadly results. Shachar's arguments, if embraced, profoundly undermine both the feasibility and

Year	DE	Title and Abstract
		the desirability of the American Dream. If birthright citizenship is akin to entailed property, it is impossible to meaningfully exercise the agency embodied in the American Dream. And if birthright citizenship really is a zero-sum game, anybody living the American Dream is necessarily responsible for somebody else's nightmare.

2013	C21 O33	Goderis, B. V. G., and M. Versteeg. 2013. <i>The Transnational Origins of Constitutions: Evidence From a New Global Data Set On Constitutional Rights</i> . Tilburg University, Center for Economic Research, Discussion Paper: 2013-010. Abstract Constitutions are commonly described as national products shaped by domestic politics. This paper develops and empirically tests a different hypothesis, which is that constitutions are also shaped by transnational influence, or "diffusion". Constitutional rights can diffuse through four mechanisms: coercion, competition, learning and acculturation. To test diffusion, we traced the historical documents of all post-WWII constitutions and documented the presence of 108 constitutional rights. Using a sample of these rights in 180 countries between 1948 and 2001, we estimate a spatial lag model to explain their adoption. Our results show that countries follow the choices of their former colonizer, countries with the same legal origin, the same religion, the same former colonizer, and the same aid donor. We also find that diffusion explains only 3 percent of the variation in adoption. However, when a country adopts its first constitution, diffusion is much stronger and explains 46 percent of the variation.
2013	D71	Hummel, Patrick, and Richard Holden. 2013. <i>Optimal Primaries</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 19340. We analyze a model of US presidential primary elections for a given party. There are two candidates, one of whom is a higher quality candidate. Voters reside in m different states and receive noisy private information about the identity of the superior candidate. States vote in some order, and this order is chosen by a social planner. We provide conditions under which the ordering of the states that maximizes the probability that the higher quality candidate is elected is for states to vote in order from smallest to largest populations and most accurate private information to least accurate private information.
2013	H11 O11	Bjornskov, Christian, and Jacob Mchangama. 2013. <i>Do Social Rights Affect Social Outcomes?</i> . School of Economics and Management, University of Aarhus, Economics Working Papers. While the United Nations and NGOs are pushing for global judicialization of economic, social and cultural rights (ESCRs), little is known of their consequences. We provide evidence of the effects of introducing three types of ESCRs into the constitution: the rights to education, health and social security. Employing a large panel covering annual data from 160 countries in the period 1960-2010, we find no robust evidence of positive effects of ESCRs. We do, however, document adverse medium-term effects on education and inflation.
2013	M14	Krishnamurthi, Malini, and Anthony Chu. 2013. "Analyzing Data in Social Networks--An Ethical Dilemma?" <i>Journal of International Management Studies</i> , 13(1): 61-64. Social networking websites such as Facebook, MySpace, and Twitter contain enormous amounts of personal information that users knowingly or unknowingly reveal about themselves. Such information could be of interest to employers, governmental institutions, retail firms, financial institutions and other entities. However, if the data is not used appropriately it could harm the users and pose a legal threat to the organizations that are seeking such information. This paper explores whether mining data in social networks violates an individual's right to privacy and what if any current laws exist to protect users.

2006	D02 K00 P26	Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Paper. This paper surveys China's legal system in the economic reform era. We analyze the role of law in the economy, assessing whether China's formal legal system contributed to those expectations of stable and predictable rights of property and contract that are prerequisites for growth. The paper begins by detailing legal developments. The relationship between legal and economic development was bidirectional - a coevolutionary process. We then examine three spheres of activity - property rights, agreements to trade, and corporate governance - asking whether law plays an important role, how that role has changed, and what the current problems are. Common themes arise. First, there have been profound changes, with law playing an increasingly important role. Second, formal legal institutions have not made a critical contribution to China's remarkable economic success. This latter conclusion leaves open the question of which mechanisms generated the necessary expectations of reasonable returns from decentralized economic activity. We briefly reflect on mechanisms other than law that might have produced such expectations, for example, the role of local Communist Party officials. However, lack of empirical information suggests this is a topic for future research.
2006	H00	Almeida, Rita, and Pedro Carneiro. 2006. <i>Enforcement of Regulation, Informal Labour, Firm Size and Firm Performance</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5976. This paper investigates how enforcement of labour regulation affects the firm's use of informal labour, firm size and firm performance. Using firm level data on employment, capita, and output, census data on informal employment at the city level, and administrative data on enforcement of regulation at the city level, we show that in areas where law enforcement is stricter firms employ a smaller proportion of informal workers. Furthermore, by reducing the firm's access to unregulated labour stricter enforcement is also associated with smaller firms, less fluid labour markets, and (possibly) lower labour productivity. We control for different regional and firm characteristics, and we instrument enforcement with the distance between firm location and the location of an enforcement office, a measure of access of labour inspectors to firms. Taken together, our findings suggest that increased access to labour flexibility frees the firm from growth constraints, and it is likely to contribute to an improvement in productivity.

Economic Approaches to Law series, vol. 1. An Elgar Reference Collection. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	I11 I18	Golec, Joseph H., and John A. Vernon. 2006. <i>European Pharmaceutical Price Regulation, Firm Profitability, and R&D Spending</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12676. EU countries closely regulate pharmaceutical prices whereas the U.S. does not. This paper shows how price constraints affect the profitability, stock returns, and R&D spending of EU and U.S. firms. Compared to EU firms, U.S. firms are more profitable, earn higher stock returns, and spend more on research and development (R&D). Some differences have increased over time. In 1986, EU pharmaceutical R&D exceeded U.S. R&D by about 24 percent, but by 2004, EU R&D trailed U.S. R&D by about 15 percent. During these 19 years, U.S. R&D spending grew at a real annual compound rate of 8.8 percent, while EU R&D spending grew at a real 5.4 percent rate. Results show that EU consumers enjoyed much lower pharmaceutical price inflation, however, at a cost of 46 fewer new medicines introduced by EU firms and 1680 fewer EU research jobs.
2006	I11 I18 K32	Begosh, Allan, John Goldsmith, Ed Hass, Randall W. Lutter, Clark Nardinelli, and John A. Vernon. 2006. <i>Black Box Warnings and Drug Safety: Examining the Determinants and Timing of FDA Warning Labels</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12803. Comparing the safety of prescription drugs over time is difficult due to the paucity of reliable quantitative measures of drug safety. Both the academic literature and popular press have focused on drug withdrawals as a proxy for breakdowns in the drug safety system. This metric, however, is problematic because withdrawals are rare events, and they may be influenced by factors beyond a drug's safety profile. In the current paper, we propose a new measure: the incidence and timing of Black Box Warnings (BBWs). BBWs are warnings placed on prescription drug labels when a drug is determined to carry a significant risk of a serious or life-threatening adverse event. Using a unique data set, one that includes all new molecular entities (NMEs) submitted to the FDA between May 1981 and February 2006, and subsequently approved and marketed, we analyze the timing and incidence of BBWs. Our analyses also use data on several drug characteristics likely to affect the probability a new drug will receive a BBW. We draw several conclusions from our analyses. For example, drugs receiving priority FDA review are more likely to have BBWs at the time of approval than NMEs receiving standard review. We also find that early prescription volume and orphan drug status are associated with an increased likelihood of receiving a BBW. We do not, however, find a significant difference in the rate of BBWs across time cohorts. A comparison of NMEs approved before and after the 1992 Prescription Drug User Fee Act (PDUFA), which authorized the payment of user fees from drug manufacturers to the FDA in an effort to expedite new drug application (NDAs) review times, did not reveal a statistically significant difference in the rate of BBWs. Critics of PDUFA maintain that reduced FDA-approval times under PDUFA have compromised drug safety. We do not find empirical support for this contention.
2006	K00	THE SAME AS D02 Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers.
2006	K00 P51	Siems, Mathias M. 2006. <i>Legal origins: reconciling law and finance and comparative law</i> . ESRC Centre for Business Research. ESRC Centre for Business Research - Working Papers. In the last few years law and finance scholars have 'discovered' the usefulness of comparative law. Their studies look at the quantifiable effect that legal rules and their enforcement have on financial development in different countries. Moreover, they link their results with the long-standing distinction between Civil Law and Common Law countries. Whether this revival of 'legal families' is a useful way forward is, however, a matter of debate. The following article challenges these studies and looks for characteristic features which are more precise and meaningful than the use of legal families as such.
2006	K32	THE SAME AS I11 Begosh, Allan, John Goldsmith, Ed Hass, Randall W. Lutter, Clark Nardinelli, and John A. Evaluates the necessity for American firms to go global. Discusses American entrepreneurship in the 1990s. Considers how reform of the legal architecture of the United

Year	DE	Title and Abstract
		States can cause the culture to encourage increased breadth and intensity of entrepreneurship. Examines the power of ideas and the Internet in American entrepreneurship.
2006	L70	Chakravarty, Surajeet, and W. Bentley MacLeod. 2006. <i>Construction Contracts (or How to Get the Right Building at the Right Price?)</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 1714. Most contracts that individuals enter into are not written from scratch; rather, they depend upon forms and terms that have been successful in the past. In this paper, we study the structure of form construction contracts published by the American Institute of Architects (AIA). We show that these contracts are an efficient solution to the problem of procuring large, complex projects when unforeseen contingencies are inevitable. This is achieved by carefully structuring the ex post bargaining game between the Principal and the Agent. The optimal mechanism corresponding to the AIA construction form is consistent with decisions of the courts in several prominent but controversial cases, and hence it provides an economic foundation for a number of the common-law excuses from performance. Finally, the case of form contracts for construction is an example of how markets, as opposed to private negotiations, can be used to determine efficient contract terms.
2006	O47	CV: Levine, Ross. 2006. "Law, Finance, and Economic Growth." In <i>Law and Economic Development</i> , ed. Hans-Bernd Schafer and Angara V. Raja, 236-63. Economic Approaches to Law series, vol. 1. An Elgar Reference Collection. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	P26	THE SAME AS D02 Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers.

2006	P52	McLeod, Ross H. 2006. <i>Doing Business in Indonesia: Legal and Bureaucratic Constraints</i> . Australian National University, Economics RSPAS, Departmental Working Papers. The World Bank's new series of Doing Business reports attempt to measure the relative ease of doing business in countries around the world. The output of this research is a set of rankings that enable each country to see how it looks relative to the others from the point of view of private sector businesses. This paper highlights a number of concerns about the Doing Business methodology, and presents a critique of the 'law and finance' view regarding the influence of legal system origins on countries' economic performance, which was highly influential in the first of the Doing Business reports. Selected data from the 2006 report are used to explain why Indonesia is having difficulty getting back to Soeharto-era rates of economic growth. The report's findings in relation to Indonesia are then interpreted within the framework of an analysis of the way the Soeharto 'franchise' operated.
2007		
2007	J18 J44 J80 L38	Kleiner, Morris M., and Richard M. Todd. 2007. <i>Mortgage Broker Regulations That Matter: Analyzing Earnings, Employment, and Outcomes for Consumers</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 13684. As the role of mortgage brokers in mortgage origination grew from insignificant in the 1980s to dominant in recent years, questions have arisen about whether its services help or harm consumers. In response, states have increasingly regulated the business, largely by creating and tightening occupational licensing requirements for mortgage brokers. The question of whether increased occupational licensing of mortgage brokers improves consumer outcomes is theoretically ambiguous and has been little studied empirically. This study introduces a new database of mortgage broker licensing requirements and assesses the relationships between these requirements and outcomes in both the labor market for brokers and the consumer market for mortgages. We find that most aspects of mortgage broker licensing systems, such as mandatory professional education, do not have a significant and consistent statistical association with market outcomes. However, one component--the requirement in many states that mortgage brokers maintain a surety bond or minimum net worth--does have a significant and fairly consistent statistical relationship with both labor and consumer market outcomes. In particular, we find that tighter bonding/net worth requirements are associated with fewer brokers, fewer subprime mortgages, higher foreclosure rates, and a greater percentage of high-interest-rate mortgages. Although we do not provide a full causal interpretation of these results, we take seriously the possibility that restrictive bonding requirements for mortgage brokers have unintended negative consequences for many consumers. On balance, our results also seem to support theories of occupational licensing that stress the importance of pure entry and exit barriers over those that focus more on the human capital effects of licensing.
2007	L83	Depken, Craig A., II. 2007. "Another Look at Anti-scalping Laws: Theory and Evidence." <i>Public Choice</i> , 130(1-2): 55-77. This paper investigates the impact of anti-scalping laws on the face value of tickets in professional football and baseball. Previous theoretical models have suggested that scalpers might cause an increase in prices at the ticket window because they represent an increase in demand. This paper provides a model in which ticket scalping has an ambiguous impact on ticket window prices, making the actual impact an empirical question. Empirical analysis suggest that in cities with anti-scalping laws average per-game season ticket prices are approximately \$2 greater in baseball and \$10 greater in football. Anti-scalping laws actually increase team revenues, as the laws have no adverse effect on attendance. Thus, event promoters might have sufficient pecuniary incentive to tacitly or explicitly support anti-scalping legislation.
2007	O24	Corbi, Raphael B. 2007. "The Components of Economic Freedom, Income and Growth: An Empirical Analysis." <i>Estudios Economicos</i> , 37(3): 515-45. This paper seeks to bring a better understanding of the relationship between economic growth and the disaggregated factors which constitute the elements of economic freedom. The two main objectives of this paper are to: (1) based on the Solow augmented growth model, test which of the elements of economic freedom demonstrate a statistically significant relationship to economic growth; and (2) establish which way the main causality direction between economic freedom and growth runs from. Finally, we identify desirable directions for further research and policy implications.
2007	O50	Acharya, Viral V., and Krishnamurthy Subramanian. 2007. <i>Bankruptcy Codes and Innovation</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6307. Do legal institutions governing financial contracts affect the nature of real investments in the economy? We develop a simple model and provide evidence that the answer to this question is yes. We consider a levered firm's choice of investment between innovative and conservative technologies, on the one hand, and of financing between debt and equity, on the other. Bankruptcy code plays a central role in these choices by determining whether the firm is continued or liquidated in case of financial distress. When the code is creditor-friendly, excessive liquidations cause the firm to shy away from innovation. In contrast, by promoting continuation upon failure, a debtor-friendly code induces greater innovation. This effect remains robust when the firm attempts to sustain innovation by reducing its debt under creditor-friendly codes. Employing patents as a proxy for innovation, we find support for the real as well as the financial implications of the model: (1) In countries with weaker creditor rights, technologically innovative industries create disproportionately more patents and generate disproportionately more citations to these patents relative to other industries; (2) This difference of difference result is further confirmed by within-country analysis

Year	DE	Title and Abstract
		that exploits time-series changes in creditor rights, suggesting a causal effect of bankruptcy codes on innovation; (3) When creditor rights are stronger, innovative industries employ relatively less leverage compared to other industries; and (4) In countries with weaker creditor rights, technologically innovative industries grow disproportionately faster compared to other industries. Finally, while overall financial development fosters innovation, stronger creditor rights weaken this effect, especially for highly innovative industries.
2008		
2008	B41	CV: Shiels, Wade E. 2008. "Making McCloskey's Rhetoric Empirical: Company Law and Tragedies of the Commons in Nineteenth-Century Britain." In <i>How Language Is Used to Do Business: Essays on the Rhetoric of Economics</i> , ed. Edward M. Clift, 227-65. With a foreword by Deirdre McCloskey. Lewiston, N.Y. and Queenston, Ont.: Edwin Mellen Press.
2008	E52 F33	International Monetary Fund. 2008. <i>Current Developments in Monetary and Financial Law. Volume 5</i> , Washington, D.C.: International Monetary Fund. Twenty-one papers, based on presentations from the International Monetary Fund's tenth biennial seminar for legal advisers of central banks of member countries held in 2006, explore the legal instruments available to central banks, supervisors, international institutions, and others to promote a better understanding of financial stability. Papers discuss legal developments in the IMF; central bank law; financial stability; the rationale for regulation of derivatives and hedge funds; financial disclosure, liability of supervisors, and legal risk in financial markets; anti-money laundering--terrorist financing and financial stability; governance, deposit insurance, and market discipline; and payments, settlement, and securities infrastructure. No index.
2008	E62	Shin, Inseok. 2008. "Understanding State Intervention in the Financial System: A Simple Framework." <i>Journal of Economic Development</i> , 33(1): 165-85. I offer a simple framework to address why state intervention in the financial system, prevalent in less developed economies, yields various welfare outcomes, and why such conventional reforms as privatization and fiscal reforms prove insufficient to eliminate state intervention. In the model three institutional factors are in play: 1) control rights over financial institutions; 2) cash-flow rights of the private over financial institutions; 3) monitoring capability of the public on tax/resource collection by the state. Based on the model, I show that state intervention can be developmental or derogatory depending on institutional traits including degree of privatization and monitoring capability of the public over the tax collection by the state. Further I illustrate that as long as state has control rights, conventional reforms such as fiscal reform, and privatization may not be enough in eliminating state intervention in the financial system.
2008	E66	Rossi, Salvatore. 2008. "Lo stato dell'industria italiana e le sue prospettive. (The State of Italian Industry and Its Outlook. With English summary.)" <i>L'Industria, Nuova Serie</i> , 29(0): 81-97. The world economy has been going through two main changes over the last fifteen years: globalization and the ICT-based revolution. Italy has only partially responded to the new global scenario. The first results of a survey conducted by the Bank of Italy on the structural transformations of the Italian industry show that, over the last five-six years, Italian enterprises have introduced some innovating elements in the fields of technology, organization and localization, in order to face the changing competition environment worldwide. The scenario still looks uncertain. Italian structural policies ought to be updated and adapted to the new global context, through the liberalization of protected markets, adjustments in the financial structure and a revolution of juridical and administrative culture.
2008	F33	THE SAME AS E52 International Monetary Fund. 2008. <i>Current Developments in Monetary and Financial Law. Volume 5</i> , Washington, D.C.: International Monetary Fund.
2008	J21	Dougherty, Sean. 2008. <i>Labour Regulation and Employment Dynamics at the State Level in India.</i> OECD Economics Department. OECD Economics Department Working Papers: 624. Over the past decade, labour market outcomes have improved in India, with net employment rising markedly for the economy as a whole. However, these gains have arisen primarily in the unorganized and informal sectors of the economy, where productivity and wages are generally much lower than in the formal organized sector. It is only India's organized sector that is subject to labour market regulation, and here employment has fallen. The role of employment protection legislation in affecting employment outcomes is controversial both in the OECD area and in India. This paper looks at the impact of employment protection legislation and related regulation on the dynamics of employment in the organized sector of the economy, using newly constructed measures of national regulation and state labour reforms. We find that while reforms have taken some of the bite out of core labour laws, more comprehensive reforms are needed to address the distortions that have emerged. This working paper relates to the 2007 Economic Survey of India (www.oecd.org/eco/surveys/india).
2008	N23	Gelman, Sergey, and Carsten Burhop. 2008. "Taxation, Regulation and the Information Efficiency of the Berlin Stock Exchange, 1892-1913." <i>European Review of Economic History</i> , 12(1): 39-66. In this article, we investigate the information efficiency of the Berlin stock exchange using returns of a new daily stock-market index for the years 1892-1913. We focus on the impact of the 1896 stock exchange law and of the increases of the stock-market turnover tax in 1894 and 1900 on information efficiency. We fit an ARMA(0,1)-GARCH(1,1) model to the data and search for structural breaks. This approach yields no convincing evidence that the tax increases had a negative influence on weak information efficiency. In addition, the restriction of derivative trading by the 1896 stock exchange law did not result in measurable changes in the autocorrelation of daily returns.
2008	N33 N63	Gonzalez Arce, Jose Damian. 2008. "Asociacionismo, gremios y restricciones corporativas en la Espana medieval (siglos XIII-XV). (Associationism, Guilds and Corporate Restrictions in Medieval Spain [Thirteenth-Fifteenth Centuries]. With English summary.)" <i>Investigaciones de Historia Economica</i> , 0(10): 9-34. This article asserts that the Spanish associations banned in the Low Middle Ages were not trade corporations and that those restrictions were both Spanish and European monarchs response to nobility and urban oligarchy's attempts to gain power, above all in politics, through different organizations. Guilds were indeed affected only when they took part of those political leagues or when craftsmen tried to control the market in their own benefit. And even in those cases the restrictions entailed just specific or temporal limitations. This assessment is based on a comprehensive author's review of the extensive non-corporate laws developed in medieval Spain and of the explanations provided by literature in the last decades. A new possible explanation is proposed: the impact of the Roman law from the 12th century onwards.
2008	N81	Hilt, Eric, and Katharine E. O'Banion. 2008. <i>The Limited Partnership in New York, 1822-1853: Partnerships without Kinship.</i> National Bureau of Economic Research, Inc. NBER Working Papers: 14412. In 1822, New York became the first common-law state to authorize the formation of limited partnerships, and over the ensuing decades, many other states followed. Most prior research has suggested that these statutes were utilized only rarely, but little is known about their effects. Using newly collected data, this paper analyzes the use of the limited partnership in nineteenth-century New York City. We find that the limited partnership form was adopted by a surprising number of firms, and that limited partnerships had more capital, failed at lower rates, and were less likely to be formed on the basis of kinship ties, compared to ordinary partnerships. The latter differences were not simply due to selection: even though the merchants who invested in limited partnerships were a wealthy and successful elite,

Year	DE	Title and Abstract
		their own ordinary partnerships were quite different from their limited partnerships. The results suggest that the limited partnership facilitated investments outside kinship networks, and into the hands of talented young merchants.

2009	H83	Conway, Paul, Tatiana Lysenko, and Geoff Barnard. 2009. <i>Product Market Regulation in Russia</i>. OECD, Economics Department OECD Economics Department Working Papers: 742. This paper uses the OECD's indicators of product market regulation (PMR) to assess the extent to which the regulatory environment in Russia supports competition and to draw attention to the areas where further reform efforts would pay dividends. The indicators show that, despite improvements in some areas, many aspects of Russia's regulatory framework are still restrictive, which provides considerable scope for reaping gains from bringing regulation into line with international best practice. In particular, the scores suggest that Russia's economic performance would greatly benefit from a reduction in the role of the state enterprise sector in markets that are inherently competitive and reinvigorated efforts to liberalise foreign trade and direct investment regimes. In some network sectors, recent regulatory changes have significantly improved the scope for competition. However, ongoing work needs to focus on separating competitive and monopoly market segments and eliminating barriers to entry. In addition, the authorities need to develop the capacity and strengthen the hands of the sectoral regulators. Introducing an overarching competition policy would also help bring the issue of competition to centre stage and spread a competition ethos through different levels of government.
2009	J24 J33 J41 J62	Prantl, Susanne, and Alexandra Spitz-Oener. 2009. <i>How does entry regulation influence entry into self-employment and occupational mobility?</i>. Institute for Fiscal Studies, IFS Working Papers: W09/14. We analyze how an entry regulation that imposes a mandatory educational standard affects entry into self-employment and occupational mobility. We exploit the German reunification as a natural experiment and identify regulatory effects by comparing differences between regulated occupations and unregulated occupations in East Germany with the corresponding differences in West Germany after reunification. Consistent with our expectations, we find that entry regulation reduces entry into self-employment and occupational mobility after reunification more in regulated occupations in East Germany than in West Germany. Our findings are relevant for transition or emerging economies as well as for mature market economies requiring large structural changes after unforeseen economic shocks.

Sonderforschungsbereich 649, Humboldt University, Berlin, Germany, SFB 649 Discussion Papers: SFB649DP2009-034. This paper examines the structure and evolution of consumption and consumption growth inequality. Once heterogeneous agents relate their neighbors' consumption to their own, consumption volatility and inequality are affected. The relationship predicted between the group average consumption growth and within-group growth inequality was shown as only slightly positive yet significant using survey data from the German Socio-Economic Panel (GSOEP, 1984-2005). Age and household size are crucial for within group inequality, as young and/or small households are more sensitive to income and consumption shocks. Large and well-educated households with unskilled jobs have shown surprisingly inferior performance in consumption growth and variance. The data also shows increases of within-group inequality directly after the reunification and the introduction of the euro.

2010	E21 F41 H23 H55	Kerdrain, Clovis, Isabell Koske, and Isabelle Wanner. 2010. <i>The Impact of Structural Policies on Saving, Investment and Current Accounts</i>. OECD, Economics Department, OECD Economics Department Working Papers: 815. This paper explores the impact of structural policies on saving, investment, and current accounts in OECD and non-OECD economies. Since the current account effects of structural reforms are often complex and ambiguous from a theoretical perspective, new OECD empirical analysis is carried out. Reduced-form equations are estimated for a panel of 30 OECD countries as well as for a panel/cross-section of 117 OECD and non-OECD countries that relate saving, investment and current accounts to policy indicators and a set of macroeconomic control variables. This work suggests that structural reforms may influence saving, investment and current accounts through their impact on macroeconomic conditions such as productivity growth or public revenues and expenditures, but also more directly: i) higher social spending (in particular on health care) is found to lower the saving rate and thereby to weaken the current account, most likely reflecting lower precautionary saving; ii) product market liberalisation temporarily boosts investment and thus also weakens the current account; iii) financial market deregulation may lower the saving rate, though only in less developed countries; iv) stricter employment protection may be associated with lower saving rates if unemployment benefits are low, as well as with higher investment rates possibly due to greater substitution of capital for labour. A scenario analysis indicates that fiscal consolidation and structural reforms in the main world economies could significantly reduce current global imbalances, possibly by about a third.
2010	E40	Conway, Paul, Richard Herd, and Thomas Chalaux. 2010. <i>Reforming China's Monetary Policy Framework to Meet Domestic Objectives</i>. OECD Publishing, OECD Economics Department Working Papers: 822. As a result of reforms and financial sector development, the People's Bank of China (PBoC) now exerts significant control over money market interest rates. With money market conditions increasingly influencing effective commercial lending rates, the PBoC is also able to affect the cost of credit without recourse to its benchmark commercial bank rates. Furthermore, interest rates are an important determinant of investment spending in China, via the user cost of capital, and aggregate economic activity influences inflation. Hence, greater use of interest rates in implementing monetary policy would enhance macroeconomic stabilisation while avoiding a number of drawbacks of the current quantity-based approach. In addition, increased flexibility in the exchange rate would enhance its role in offsetting macroeconomic shocks and allow the PBoC more scope to tailor monetary policy to domestic macroeconomic conditions. Concurrently, changes in the PBoC's policy stance should be predicated on informed judgments based on the monitoring of a set of indicators in conjunction with a flexible inflation objective as the nominal anchor. This paper relates to the 2010 OECD Economic Review of China (www.oecd.org/eco/surveys/china).
2010	F16	Koske, Isabell, and Andreas Worgotter. 2010. <i>Germany's Growth Potential, Structural Reforms and Global Imbalances</i>. OECD, Economics Department, OECD Economics Department Working Papers: 780. The potential growth rate of the economy has been low for a long time and the crisis has had a further adverse impact. The meagre growth performance mainly reflects low growth in a number of services sectors; most manufacturing sectors, by contrast, expanded at a rapid pace in the years preceding the recent crisis, on the back of robust foreign demand. The challenge is to consolidate the past success of the export sector and to broaden it to the whole economy by making the policy framework more conducive to innovation and structural change. Specifically, product market regulation needs to be eased to prevent it from sheltering uncompetitive industries; the framework conditions for innovation need to be improved; the education system needs to be reformed further to supply a sufficiently large pool of highly qualified labour; and immigration policy needs to become more favourable to the immigration of high-skilled. Strengthening Germany's attractiveness as a location for investment would contribute to a higher trend growth rate through lifting barriers to higher growth, which are particular binding in the non-traded goods sector. This would reduce Germany's current account surplus and make a contribution to reduce global imbalances. This paper relates to the 2010 OECD Economic Survey of Germany (www.oecd.org/eco/surveys/germany).

National Bureau of Economic Research, Inc, NBER Working Papers: 16001. Firms in Africa report "regulatory and economic policy uncertainty" as a top constraint to their growth. We argue that often firms in Africa do not cope with policy rules, rather they face deals; firm-specific policy actions that can be influenced by firm actions (e.g. bribes) and characteristics (e.g. political connections). Using Enterprise Survey data we demonstrate huge variability in reported policy actions across firms notionally facing the same policy. The within-country dispersion in firm-specific policy actions is larger than the cross-national differences in average policy. We show that variability in this policy implementation uncertainty within location-sector-size cells is correlated with firm growth rates. These measures of implementation variability are more strongly related to lower firm employment growth than are measures of "average" policy action. Finally, we show that the de jure measures such as Doing Business indicators are virtually uncorrelated with ex-post firm-level responses, further evidence that deals rather than rules prevail in Africa. Strikingly, the gap between de jure and de facto conditions grows with the formal regulatory burden. The evidence also shows more burdensome processes open up more space for making deals; firms may not incur the official costs of compliance, but they still pay to avoid them. Finally, measures of institutional capacity and better governance are closely associated with perceived consistency in implementation.

National Bureau of Economic Research, Inc, NBER Working Papers: 16560. Occupational licensing is among the fastest-growing labor market institutions in the U.S. economy. One of the key features of occupational licensing is that the law determines who gets to do the work. In those cases where universally licensed occupations are both complements to and substitutes for one another in providing a service, the government determines who can do the tasks that are required for the consumer. In this study, we examine dentists and dental hygienists, who are both universally licensed and provide complementary services to patients, but may also be substitutes as service providers. We focus on the labor market implications of governmental requirements on permissible tasks and the supervision of hygienists' activities by dentists. Since there are elements of monopsony in the market we examine, we use the model as a guide for our analysis. We find that states that allow hygienists to be self-employed have about 10 percent higher earnings, and that dentists in those states have lower earnings and slower employment growth. Several sensitivity and falsification tests using other regulated and partially regulated occupations show that our licensing measures are generally robust to alternative specifications. Our estimates are consistent with the view that winning the policy and legal battle in the legislature and courts on the independence of work rules matters in the labor market for these occupations.

2010	O41	Mosel, Malte. 2010. <i>Competition, Imitation, and R&D Productivity in a Growth Model with Sector-Specific Patent Protection</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 3109. Recent empirical studies suggest a need for a flexible patent regime responding to industry characteristics. In practice, sector-specific modifications of patent strength already exist but lack theoretical foundation. This paper intends to make up for this neglect by scrutinizing in what direction industry characteristics influence optimal patent strength. It is found that patents ought to be weaker, the more intense competition, the higher R&D productivity, and the more intricate reverse engineering are. Unlike similar step-by-step innovation models of economic growth, the model assumes Cournot competition and introduces an empirically substantiated measure of sector differences in the ability to catch up with the technological leader. It is found that for most empirically plausible cases the familiar inverted-U relation between patent length and growth carries over to the Cournot set-up.
2010	O43	Wolfl, Anita, Isabelle Wanner, Oliver Rohn, and Giuseppe Nicoletti. 2010. <i>Product Market Regulation: Extending the Analysis Beyond OECD Countries</i> . OECD, Economics Department, OECD Economics Department Working Papers: 799. In this paper the recently updated product market regulation (PMR) indicators are extended to a larger set of countries including several non-OECD members. It investigates regulatory patterns in this extended set of countries as compared to the OECD countries and analyses the link between regulation and growth. On average, regulation is more restrictive of competition in non-member countries than in the OECD area. However, there exists considerable heterogeneity within this country grouping as concerns the level of the regulatory stance and its composition as well as the potential past evolution of regulatory processes. Furthermore, growth regressions provide evidence that less restrictive product market regulation is conducive to growth. An improvement of 1/2 index points of barriers to entrepreneurship would translate into approximately a 0.4% higher average annual rate of GDP per capita growth. However, the results also suggest that for countries that are less advanced, the potential growth benefits of enhancing product market competition may be impaired by other structural weaknesses. In particular, some restrictions of foreign trade and investment might be beneficial for growth in early stages of development.

Penn Institute for Economic Research, Department of Economics, University of Pennsylvania, PIER Working Paper Archive. This paper analyzes the causes and implications of recent financial crises. Financial crises in general lead to changes in both theory and practice of economics. The paper takes an historical overview. The global consensus of economic theory during the 20th century is discussed. The paper describes the Bretton Woods regime after World War II, details the era of adaptive expectations and motivates the emerging of the rational expectations school of thoughts. Various perspectives on the causes of the financial crisis are incorporated. The paper provides some policy suggestions and remarks on the consequences of ever-changing capital markets.
2011	D22 L95	Araujo, Sonia. 2011. <i>Has Deregulation Increased Investment in Infrastructure?: Firm-Level Evidence from OECD Countries</i> . OECD Publishing, OECD Economics Department Working Papers: 892. This paper investigates the role played by deregulation on firms' investment decisions in infrastructure sectors. The analysis covers the period 1980-2006, which was characterised by increased liberalisation and privatisation across OECD countries. We assess the relationship of different dimensions of the regulatory framework, such as the degree of barriers to entry, public ownership, vertical unbundling and the existence of an independent regulator with firm level investment behaviour. We find that the impact of regulation on investment is both sector and firm specific. A reduction in the degree of legal barriers to entry spurs investment in the electricity sector, but only for large firms. In telecommunications, the converse is true with barriers to entry having a negative effect on smaller firms' investment rates. The existence of an independent regulatory authority spurs investment by telecommunication companies but this effect seems to be driven by large firms alone while it is associated with a reduction in investment levels by smaller companies in the gas sector. In Europe, the degree of vertical integration is positively associated with investment rates in the electricity sector.

Kane, and Francisco Rodriguez-Fernandez. 2011. <i>Safety-Net Benefits Conferred on Difficult-to-Fail-and-Unwind Banks in the US and EU Before and During the Great Recession</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16787. This paper models and estimates ex ante safety-net benefits at a sample of large banks in US and Europe during 2003-2008. Our results suggest that difficult-to-fail and unwind (DFU) banks enjoyed substantially higher ex ante benefits than other institutions. Safety-net benefits prove significantly larger for DFU firms in Europe and bailout decisions less driven by asset size than in the US. We also find that a proxy for regulatory capture helps to explain bailout decisions in Europe. A policy implication of our findings is that authorities could better contain safety-net benefits if they refocused their information systems on measuring volatility as well as capital.

2011	I00	David, Guy, and Sara Markowitz. 2011. <i>Side Effects of Competition: the Role of Advertising and Promotion in Pharmaceutical Markets</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17162. The extent of pharmaceutical advertising and promotion can be characterized by a balancing act between profitable demand expansions and potentially unfavorable subsequent regulatory actions. However, this balance also depends on the nature of competition (e.g. monopoly versus oligopoly). In this paper we model the firm's behavior under different competitive scenarios and test the model's predictions using a novel combination of sales, promotion, advertising, and adverse event reports data. We focus on the market for erectile dysfunction drugs as the basis for estimation. This market is ideal for analysis as it is characterized by an abrupt shift in structure, all drugs are branded, the drugs are associated with adverse health events, and have extensive advertising and promotion. We find that advertising and promotion expenditures increase own market share but also increase the share of adverse drug reactions. Competitors' spending decreases market share, while also having an influence on adverse drug reactions.
2011	K35	White, Michelle J. 2011. <i>Corporate and Personal Bankruptcy Law</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17237. Bankruptcy is the legal process by which the debts of firms, individuals, and occasionally governments in financial distress are resolved. Bankruptcy law always includes three components. First, it provides a collective framework for simultaneously resolving all debts of the bankrupt entity, regardless of when they are due. Second, it provides rules for determining how the assets and earnings used to repay are divided among creditors. Third, bankruptcy law specifies punishments intended to discourage debtors from defaulting on their debts and filing for bankruptcy. This review discusses and evaluates bankruptcy law by examining whether and when the law encourages debtors and creditors to behave in economically efficient ways. It also considers how bankruptcy law might be changed to improve economic efficiency. The review shows that there are multiple economic objectives of bankruptcy law, because the law affects has very diverse effects. Some of these objectives differ for individuals versus corporations in bankruptcy.

2011	N21	Bodenhorn, Howard. 2011. <i>Partnership Law and Credit Availability</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16689. Legal and economic historians now emphasize the centrality of organizational law in determining the contractual boundaries of the firm. Nineteenth-century US law recognized a small set of firm types--proprietorship, partnership and corporation--and enforced the creditor rights and priorities associated with them. This paper investigates how those creditor rights and priorities influenced the availability of credit. Using a unique data set from the nineteenth century United States and borrower fixed effects, I find that partnerships paid more for credit than proprietorships. The interest rate disadvantage for partnerships was offset by their ability to finance larger and longer-horizon entrepreneurial ventures.

2011	O53	Allen, William T., and Han Shen. 2011. <i>Assessing China's Top-Down Securities Markets</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16713. China's securities markets are unlike those of Amsterdam, London or New York. Those markets evolved over centuries from myriad interactions among those seeking finance on the one hand and savers seeking rewarding investments on the other. Such spontaneous securities markets did emerge throughout China in the 1980s following the start of economic liberalization, but these spontaneous markets were closed by the government in favor of new and tightly controlled exchanges established in the early 1990s in Shanghai and Shenzhen. These new markets, have been designed to and largely limited to, serving state purposes, that is to assist in the financing of the state sector of the economy. Rather than evolving in a bottom-up pattern, they are controlled, top-down securities markets. This essay reviews as of June 2010, the development of these markets, the economic functions they perform, the regulatory structure that controls and shapes them, and the governance mechanisms--legal and otherwise--that controls the management of the PRC listed companies. These markets represent a signal accomplishment of the Chinese leadership in producing in less than twenty years' modern, albeit not yet fully developed, securities markets. Whether they can be further developed to serve more basic economic role than they have been permitted to play is a question with which the essay concludes.

2012	D10 D14	Campen, Jim. 2012. <i>Small-Dollar Lending: Is There A Responsible Path Forward?</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report examines the problem of access to credit for low- and moderate- income households. It notes that this problem has two dimensions. On the one hand, there are millions of consumers without access to mainstream sources of consumer credit. On the other hand, many of these same consumers do obtain high-cost credit that ends up harming rather than helping them.
2012	F32	Coricelli, Fabrizio, and Andreas Worgotter. 2012. <i>Structural Change and the Current Account: The Case of Germany</i>. OECD Publishing, OECD Economics Department Working Papers: 940. Using empirical evidence from panel analysis of current account dynamics and of bilateral trade balances, the paper argues that the large German current account surplus during the 2000s can be explained by an increasing gap between productivity growth in manufacturing vis-a-vis services. Such a gap is due not only to improvements in the manufacturing sector but also to a significant slowdown of productivity growth in services. Therefore, despite the success in export markets, the German surplus may signal long-run weaknesses associated with constraints on service sector productivity growth and the inability of productivity growth in manufacturing to create positive spill-over effects on

Year	DE	Title and Abstract
		services. Persistence of barriers to liberalisation in services as well as the dominant type of technological progress in manufacturing, based on improving the efficiency of existing products, may partly explain these phenomena. A key factor behind these sectoral differences is the education system, which relies on highly specialised vocational schools, generating high returns for on the job training and creating incentives for efficiency gains in existing products and sectors. The paper concludes that there is room for comprehensive structural policies consistent with an equilibrium reduction in the current account surplus, accompanied by higher and more balanced growth.
2012	H25	World Bank. 2012. <i>Doing Business 2012: Doing Business in a More Transparent World</i> , Washington, D.C.: World Bank. Presents quantitative indicators on business regulation and the protection of property rights across 183 economies and over time in order to investigate the regulations that enhance business activity and those that constrain it. Discusses starting a business; dealing with construction permits; registering property; getting credit; protecting investors; paying taxes; trading across borders; enforcing contracts; resolving insolvency; and employing workers. Economy case studies cover South Korea--better business regulation and improved competitiveness; the former Yugoslav Republic of Macedonia--major changes spurred by regional integration; Mexico--unleashing regulatory reform at the local level; and the United Kingdom--rethinking regulation. Includes country tables that highlight individual performance for each of the indicators. No index.
2012	I13	CV: Siegelman, Peter. 2012. "Adverse Selection in Insurance Markets: An Exaggerated Threat." In <i>Law and Economics of Insurance. Volume 1.</i> , ed. Daniel Schwarcz, 28-86. Elgar Research Collection. Economic Approaches to Law. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2012	O52	Herinckx, Astrid, and Ariane Szafarz. 2012. <i>Which Short-Selling Regulation is the Least Damaging to Market Efficiency? Evidence from Europe</i> . ULB--UniversiteLibre de Bruxelles, Working Papers CEB: 12-002. Exploiting cross-sectional and time-series variations in European regulations during the July 2008-June 2009 period, we show that: 1) Prohibition on covered short selling raises bid-ask spread and reduces trading volume, 2) Prohibition on naked short selling raises both volatility and bid-ask spread, 3) Disclosure requirements raise volatility and reduce trading volume, and 4) No regulation is effective against price decline. Overall, all short-sale regulations are detrimental to market efficiency. However, naked short-selling prohibition is the only regulation that leaves volumes unchanged while addressing the failure to deliver. Therefore, we argue that this is the least damaging to market efficiency.

2013	D03 G02 G17 G23 L85 R21 R31 R51	Agarwal, Sumit, Itzhak Ben-David, and Vincent Yao. 2013. <i>Collateral Valuation and Borrower Financial Constraints: Evidence from the Residential Real Estate Market</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 19606. Financially constrained borrowers have the incentive to influence the appraisal process in order to increase borrowing or reduce the interest rate. We document that the average valuation bias for residential refinance transactions is above 5%. The bias is larger for highly leveraged transactions, around critical leverage thresholds, and for transactions mediated through a broker. Mortgages with inflated valuations default more often; however, lenders partly account for the valuation bias through pricing.
2013	H73	O'Brien, Paul. 2013. <i>Policy Implementation in Italy: Legislation, Public Administration and the Rule of Law</i> . OECD Publishing. OECD Economics Department Working Papers: 1064. OECD indicators of structural policy show that policy changes in Italy since 1998 should have improved the environment for entrepreneurship significantly, but in the same period its economic performance has deteriorated noticeably. This may be partly because there is a difference between policy measures intended by the government or parliament and their impact on the business environment perceived by entrepreneurs. There is no certainty as to what are the main culprits, but a number of policy steps would help to improve the situation. These include better thought out and better written legislation and implementing regulations, more use of performance-oriented management in public administration, and further streamlining and reduction of incentives to procrastination in the judicial system. Legislative simplification and transparency will increase economic efficiency in themselves, while also making a contribution to reducing the incentives and opportunities for corruption and organised crime to flourish. Clear operational independence with accountability is essential for bodies monitoring and assessing the extent of corruption. This Working Paper relates to the 2013 OECD Economic Survey of Italy (www.oecd.org/eco/surveys/Italy).
2013	J51 J82 J88	Gittleman, Maury, and Morris M. Kleiner. 2013. <i>Wage Effects of Unionization and Occupational Licensing Coverage in the United States</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 19061. Recent estimates in standard models of wage determination for both unionization and occupational licensing have shown wage effects that are similar across the two institutions. These cross-sectional estimates use specialized data sets, with small sample sizes, for the period 2006 through 2008. Our analysis examines the impact of unions and licensing coverage on wage determination using new data collected on licensing statutes that are then linked to longitudinal data from the National Longitudinal Survey of Youth (NLSY79) from 1979 to 2010. We develop several approaches, using both cross-sectional and longitudinal analyses, to measure the impact of these two labor market institutions on wage determination. Our estimates of the economic returns to union coverage are greater than those for licensing requirements.

Table K21.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	B29	Grillo, Michele. 2006. "The Theory and Practice of Antitrust: A Perspective in the History of Economic Ideas." <i>Storia del Pensiero Economico: Nuova Serie</i> , 0(2): 33-63. This work examines the theoretical evolution of antitrust theory and practice from a history of economic thought point of view. The paper is organised as follows. Section 1 presents the institutional setting of antitrust. Section 2 argues that the intellectual roots of the received institutional design of antitrust rest on the combination of the normatively-bent approach of utilitarian liberalism and the 'structural' analysis of the competitive process provided by the neo-classical school. Section 3 presents some alternative views of market decentralisation in the history of economic thought. Section 4 discusses the main characteristics of the current institutional design of antitrust grounded on economic structuralism. Section 5

Year	DE	Title and Abstract
		is concerned with the Chicago critique of antitrust structuralism. Section 6 discusses post-Chicago developments and the challenges they pose today for the design of an antitrust institution.
2006	C32 C50	Sapozhnikov, Margarita. 2006. <i>Mergers and Government Policy</i> . Boston College Department of Economics, Boston College Working Papers in Economics: 656. It has long been thought that government antitrust policy has an effect on aggregate merger and acquisition activity, but the empirical support for this hypothesis has been weak and inconsistent. This paper uses a new empirical specification and a new dataset on mergers and acquisitions to provide support for this conjecture. Regression analysis shows that government policy has a significant influence on mergers and that the nature of the effects depends on the type of merger. Fitting the time series into a two-state Markov switching model shows that conglomerate and horizontal time series follow different dynamics for the last half century, which is most likely caused by the dissimilar treatment of the two types of merger by the government. Only the conglomerate merger and acquisition time series is well described by a two-state Markov switching model. In contrast, the horizontal time series has a break in the early 1980s that may be attributed to the dramatic change in government policy.
2006	D78	Buccirossi, Paolo, and Giancarlo Spagnolo. 2006. <i>Optimal Fines in the Era of Whistleblowers</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5465. We review current methods for calculating fines against cartels in the US and EU, and simulate their deterrence effects under different assumptions on the legal and economic environment. It is likely that European fines have not had significant deterrence effects before leniency programs were introduced. Previous simulations of the effects of fines ignore the different type of deterrence that leniency programs bring about, and, therefore, grossly overstate the minimum fine likely to have deterrence effects. With schemes that reward whistleblowers, the minimum fine with deterrence effects falls to extremely low levels (below 10% of the optimal "Beckerian" fine). Strategic judgement-proofness can and should be prevented by suitable regulation or extended liability. Criminal sanctions, in the form of imprisonment, certainly bring benefits (and costs) in terms of cartel deterrence, but the firms' limited ability to pay does not appear any longer such a strong argument for their introduction.

2006	D85	Wilkinson, Ian. 2006. "The Evolvability of Business and the Role of Antitrust." <i>Antitrust Bulletin</i> , 51(1): 111-41. Focusing on the "evolvability" of economic organization that attends business ecosystems and other related perspectives, Professor Ian Wilkinson contends complexity science has relevance for antitrust policy because the economy is a complex system of economic and noneconomic actors, and the study of such systems through the science of complexity focuses attention and understanding on the way such systems evolve, adapt, and change over time. Viewing antitrust's role as influencing the rules of interaction and evolution of such complex adaptive systems, Professor Wilkinson contends that antitrust can benefit from consideration of complexity-science-based thinking. According to Professor Wilkinson, incorporation and application of complexity science insights within antitrust would permit greater clarity and comprehension of dynamic market efficiency and the evolutionary strategies of business systems compared to extant approaches currently found in antitrust that emphasize static market efficiency and price competition. Articulating the main case for including complexity science in antitrust as its consideration and study of the evolvability of complex adaptive systems, he describes their inherent evolutionary processes and a number of characteristics of such systems deriving implications from each for firm strategy and antitrust policy. According to Professor Wilkinson, evolutionary considerations are important for antitrust given the challenge of improving the evolvability of business systems within an economy. Describing the main characteristics of complex adaptive systems to include history in terms of temporal and sequence effects, interaction and feedback in terms of connections among interacting entities, dissipative structures in terms of the continual process of structural evolution, and change and networks in terms of the larger structure of trading and nontrading partners and the patterns and architecture of exchange taking place between them, he describes some implications of such thinking for antitrust. Focusing on scale-free business networks like those found in Microsoft's operating system, Professor Wilkinson considers their complexity-based characteristics, their evolution and evolvability, and the potential role antitrust policy could play in such systems. He observes that for such systems, an important role for antitrust is to ensure their natural development and evolution. Professor Wilkinson concludes that incorporating the perspective and insights of complexity science into antitrust is not without difficulties, but that such understanding and perspective provides promise for enhancing antitrust policy.
2006	E66 I28	CESifo European Economic Advisory Group. 2006. <i>Report on the European Economy 2006</i> , Munich: Ifo Institute for Economic Research. Fifth annual report of the European Economic Advisory Group at CESifo comments on the state and prospects of the European economy. Discusses the short-term macroeconomic outlook and policy options for the European economy. Reviews the current debate about global imbalances. 2006	F55	Prete, Luca. 2006. "State Aid Reform: Some Reflections on the Need to Revise the Notice on Guarantees." <i>World Competition: Law and Economics Review</i> , 29(3): 421-39. In June 2005, the Commission launched the "State Aid Action Plan", which is a roadmap for a comprehensive reform of EC State aid rules that the Commission intends to undertake in the 2005/2009 period.

Year	DE	Title and Abstract
		Among the texts which the Commission is planning to revise is its Notice on State Aid in the form of guarantees, a communication published in 1999 with the aim of outlining the Commission's approach to State aid awarded by means of public guarantees. The purpose of this article is to briefly illustrate some flaws and shortfalls of the current Notice, and how this has negatively affected the Commission's past practice. In fact, in the last years the Commission has had to deal with a large number of cases which concerned aid granted through public guarantees or other equivalent forms of support, and these cases have highlighted the limits of this piece of legislation. It is therefore submitted that the Commission should not miss the momentum created by the publication of the State Aid Action Plan, in order to conduct a careful reflection on the rules laid down in the Notice on Guarantees, and to produce a new text, more in line with the fundamental principles of EC State aid law developed in the jurisprudence of the Community Courts. This article has been shortlisted for the 1st World Competition Young Writers Award.
2006	H20	Alonso Arce, Inaki. 2006. "Las normas fiscales vascas y el Derecho europeo de la competencia. (With English summary.)." <i>Ekonomiaz</i> , 0(61): 254-77. The present work sets out the principal points of friction between the Community regulation about Antitrust law, which grounds are in the European Union Treaty, specifically the Community rules about State Helps, and the capacity that the Economic Accord give to the Basque Historical Territories in terms of corporation tax, highlighted by the Supreme Court, December 9, 2004 order. After a review of the history of the complex relations between the Economic Accord and the European Law, a detailed analysis is presented about the doctrine of States helps. Then, taking into account the decision of the European Court of Justice of September 6, 2006 and the Opinion of the Advocate General Mr. Geelhoed in "Azores" case, it is discussed which must be the frame of understanding within the European Competition Law to allow to the Basque Historical Territories to manage their own tax system.
2006	H24 H55 J14 J26	Pestiau, Pierre, Helmuth Cremmer, and Jean Marie Lozachmeur. 2006. "Recent Work on the Theory of Early Retirement." <i>Hacienda Publica Espanola/Revista de Economia Publica</i> , 0(179): 9-24. Pension systems are often blamed for distorting the retirement age and they are held responsible for the widely observed trend towards early retirement. In a world of laissez-faire or in a first-best setting, there would be no such distortions. However, they may be unavoidable when first-best instruments are not available, because health and productivity are not observable. We show that while there is no doubt that retirement age is too low in many countries, a complete elimination of this bias is not the right answer. In other words, reforms that involve a switch to an actuarially fair system would be overshooting. We present normative and positive arguments. First, some distortions are second-best optimal. Second, and on the positive side, the elimination of the bias might be problematic from a political perspective.

With English summary.)." <i>L'Industria, Nuova Serie</i> , 27(4): 753-70. Reconsidering the model of dynamic competition originally presented by J. Steindl (in: Essays in Honour of M. Kalecky, 1964) relating profit margins and concentration with the rate of growth of the market demand, in a more broad and general purpose, this article states that the optimal structure of an industry is not a constant, but it varies with the industry's life cycle not only in concentration and profit margins, but in other elements of the industrial structure (vertical integration, financing, rate of investments, cooperation policies) as well. This broader interpretation is subsequently tested on the dynamics of the US defence industry for the period when a substantial decrease of military spending of the US Government forced the defence industry into a sharp reorganization process. The conclusion is in favour of a flexible model of industrial policies, including antitrust regulation, to take into account the "natural" trends of change of industries over time, and according to the key conditions of the market demand, the costs and the technologies.

2006	H84 Q54	Van den Bergh, Roger, and Michael Faure. 2006. "Compulsory Insurance of Loss to Property Caused by Natural Disasters: Competition or Solidarity?" <i>World Competition: Law and Economics Review</i> , 29(1): 25-54. There are three types of public intervention to make sure that property damage caused by natural disasters is compensated: ad hoc solutions, payments through compensation funds, and a compulsory catastrophe extension of property insurance contracts. The best known example of the latter approach is the French law, which imposes a mandatory catastrophe insurance on all owners of property (tying clause), fixes the premiums, and arranges re-insurance by the State. This French scheme creates distortions that competition law is willing to prevent and it is also at odds with the principles of the group exemption for the insurance industry. However, both efficiency reasons and grounds of national solidarity may provide powerful arguments to justify a compulsory catastrophe extension of voluntarily subscribed property insurance contracts. The concerns about competitive distortions are legitimate but should be discussed in a broader social welfare context. Since pure forms of public intervention (ad hoc solutions and compensation funds) provide insufficient incentives for risk prevention and mitigation of losses, forms of public-private cooperation that avoid the latter efficiencies may generate benefits outweighing the costs of anti-competitive distortions.

Year	DE	Title and Abstract
2006	K14	Cseres, Katalin J., Maarten Pieter Schinkel, and Floris O. W. Vogelaar, eds. 2006. <i>Criminalization of Competition Law Enforcement: Economic and Legal Implications for the EU Member States</i> , Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty papers, originally presented at a conference hosted by the Amsterdam Center for Law and Economics at the University of Amsterdam in February 2005, explore remedies and sanctions in competition policy, focusing on economic and legal implications of the tendency to criminalize antitrust enforcement in the member states of the European Union. Papers concentrate on economic and legal implications of criminal competition law enforcement; criminalization and leniency; and country experiences with criminal law sanctions.
2006	L73	Strand, Niklas. 2006. "A Simple Critical Loss Test for the Geographical Market." <i>Journal of Competition Law and Economics</i> , 2(4): 697-707. To apply competition law, markets have to be defined, both in the product space and in the geographical space. A rigorous approach requires the estimation of cross price elasticities, which is always time-consuming and often impossible. This paper proposes a simple method for defining geographical markets when there are substantial transport costs. We derive results corresponding to a critical loss test and give an example of how the test can be applied using data from the Swedish pulpwood industry.

2006	M20	Lafontaine, Francine. 2006. "Vertical Restraints Fundamentals for MBAs." <i>Journal of Industrial Organization Education</i> , 1(1): This lecture on vertical restraint is a transcript of a second-year MBA class at the Stephen M. Ross School of Business, University of Michigan. At various points, student comments and comments by Valerie Suslow, the co-teacher of this course, appear. Accompanying this lecture are the PowerPoint slides and a few film clips from the lecture. The lecture begins with a discussion of vertical boundaries of the firm, and reasons why firms might want to vertically integrate. The bulk of the lecture, however, focuses on vertical restraints. After defining the different types of restraints found in manufacturer retailer contracts, the lecture covers the potential reasons--both efficiency and anti-competitive arguments--why these restraints are used. Finally, the lecture provides a short discussion of public policy towards these restraints, including their treatment under antitrust and various conflicting industry laws. This last section also contains a few examples of recent cases.
2006	M42	Buccirossi, Paolo, and Giancarlo Spagnolo. 2006. <i>Leniency Policies and Illegal Transactions</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5442. We study the consequences of leniency - reduced legal sanctions for wrongdoers who spontaneously self-report to law enforcers - on sequential, bilateral, illegal transactions such as corruption, manager-auditor collusion, or drug deals. It is known that leniency helps to deter illegal relationships sustained by repeated interaction. Here we find that - when not properly designed - leniency may simultaneously provide an effective governance mechanism for occasional sequential illegal transactions that would not be feasible in its absence.
2006	O20	Kronthaler, Franz, and Johannes Stephan. 2006. <i>Progressivity and Flexibility in Developing an Effective Competition Regime: Using Experiences of Poland, Ukraine, and South Africa for developing countries</i> . Halle Institute for Economic Research, IWH Discussion Papers: 6-06. The paper discusses the role of the concept of special and differential treatment in the framework of regional trade agreements for the development of a competition regime. After a discussion of the main characteristics and possible shortfalls of those concepts, three case countries are assessed in terms of their experience with progressivity, flexibility, and technical and financial assistance: Poland was led to align its competition laws to match the model of the EU. The Ukraine opted voluntarily for the European model, this despite its intense integration mainly with Russia. South Africa, a developing country that emerged from a highly segregated social fabric and an economy dominated by large conglomerates with concentrated ownership. All three countries enacted (or comprehensively reformed) their competition laws in an attempt to face the challenges of economic integration and catch up development on the one hand and particular social problems on the other. Hence, their experience may be pivotal for a variety of different developing countries who are in negotiations to include competition issues in regional trade agreements. The results suggest that the design of such competition issues have to reflect country-particularities to achieve an efficient competition regime.
2006	Q12	MacDonald, James M. 2006. "Agricultural Contracting, Competition, and Antitrust." <i>American Journal of Agricultural Economics</i> , 88(5): 1244-50.
2006	Q30	Fuentes, Andres, Eckhard Wurzel, and Andreas Reindl. 2006. <i>Raising Economic Performance by Fostering Product Market Competition in Germany</i> . OECD Economics Department, OECD Economics Department Working Papers: 507. Much scope remains to make regulation of product markets more conducive to competition ? notwithstanding progress in recent years ? with substantial benefits for consumer welfare, productivity and employment. While the general competition legislation and enforcement framework is mostly effective, measures need to be taken to reduce administrative burdens on entrepreneurship and reduce the involvement of the government in business sector activities, notably through accelerated privatisation. Policies favouring small enterprises need to be revised, with a view to fully exposing them to competition and avoiding disincentives for small firms to grow. Substantial regulatory challenges exist in specific sectors, notably in the energy and railway industries where non-discriminatory access of market entrants to networks needs to be improved. Environmental objectives in energy market regulation could be achieved at lower cost. In the telecommunications industry, competition in the local loop can be strengthened. Regulation of the liberal professions is among the most restrictive in the OECD. Entry barriers need to be eliminated in crafts. and restrictions on large-scale retailing development could be eased. This paper relates to the 2006 Economic Survey of Germany (www.oecd.org/eco/surveys/germany). Ameliorer la performance economique en stimulant la concurrence sur les marches de produits en Allemagne En depit des progres accomplis ces dernieres annees, beaucoup reste a faire pour rendre la reglementation des marches de produits plus propice a la concurrence, ce qui induira de substantiels avantages en termes de bien-etre du consommateur, de productivite et d'emploi. Le droit commun de la concurrence et son cadre d'application sont dans l'ensemble efficaces, mais il faut alliger les charges administratives qui pesent sur l'entrepreneuriat et reduire l'intervention de l'Etat dans les activites du secteur des entreprises, notamment par une privatisation acceleree. Il convient de reviser les dispositifs favorables aux petites entreprises, pour les exposer pleinement a la concurrence et eviter de les decourager de croitre. De serieux problemes de reglementation persistent dans certains secteurs, notamment l'energie et les chemins de fer, o--l'acces non discriminatoire des entrants aux reseaux demande a etre ameliore. Les objectifs environnementaux de la reglementation des marches de l'energie pourraient etre realises a moindre co-t. Dans l'industrie des telecommunications, la concurrence sur la boucle locale peut etre renforcee. La reglementation des professions liberales est parmi les plus restrictives de la zone OCDE. Dans le secteur de l'artisanat, les obstacles a l'entree doivent etre supprimes, et il convient d'assouplir les restrictions qui limitent le developpement

2007	C78	Stennek, Johan. 2007. Exclusive Quality - Why Exclusive Distribution May Benefit the TV Viewers. C.E.P.R. Discussion Papers CEPR Discussion Papers: 6072. Sports organizations, Hollywood studios and TV channels grant satellite and cable networks exclusive rights to televise their matches, movies and media contents. Exclusive distribution prevents viewers from watching attractive programs, and reduces the TV-distributors incentives to compete in prices. This paper demonstrates that exclusive distribution may also give providers of contents incentives to invest in higher quality and, as a result, force competitors to reduce their prices. Exclusive distribution may benefit all viewers, including those who are excluded.
2007	D02	Iacobucci, Edward M., and Michael J. Trebilcock. 2007. "The Design of Regulatory Institutions for the Canadian Telecommunications Sector." <i>Canadian Public Policy</i> , 33(2): 127-45. As the result of competition arising from new technology, extensive economic regulation of the telecommunications industry has become less appropriate over time. In this article we consider corresponding institutional reform. Both the Canadian Radio-television and Telecommunications Commission (CRTC) and the Competition Bureau/Tribunal are presently involved in telecom regulation. We propose a framework in which there is a clearer division of responsibility between the CRTC and the Bureau/Tribunal. The latter would be responsible for enforcing laws against predatory pricing, price discrimination, and other standard competition policy matters in the telecom industry. Where there is concern simply about high prices, a matter that competition policy does not ordinarily address directly, we propose that the Bureau/Tribunal assume responsibility for identifying markets in which there is market power, and only then would the CRTC have the authority to regulate prices. We argue that such an arrangement would allow each agency to exploit its comparative advantage, would reduce costly duplication across agencies, and would address concerns about regulatory overreach.
2007	D02 D31	Pittman, Russell. 2007. Consumer Surplus as the Appropriate Standard for Antitrust Enforcement. Department of Justice, Antitrust Division, EAG Discussions Papers: 200709. In antitrust enforcement as in cost-benefit analysis, neoclassical economics may be interpreted as arguing for the use of a "total welfare" standard whose implementation treats transfers as welfare-neutral. Several recent papers call for antitrust agencies to move in the direction of this version of a total welfare standard for enforcement. However, as Williamson (1968) noted, horizontal mergers typically result in transfers that may greatly exceed in magnitude any deadweight loss or efficiency gain, so that a decision to ignore transfers may be quite important. I argue that such transfers are likely overall to be quite regressive, and thus that a consumer surplus standard rather than a total welfare standard may be appropriate for antitrust. Two common arguments against this standard--that most mergers are in markets for intermediate goods, and that a consumer welfare standard implies a tolerance for monopsony--are examined and found wanting. I argue in addition that, even if a total welfare standard is used, both the finance literature on merger outcomes and the structure of the U.S. enforcement agencies suggest that the use of a consumer surplus standard by the agencies is more likely to achieve that goal.
2007	E43	Rosen, Richard J. 2007. "Banking Market Conditions and Deposit Interest Rates." <i>Journal of Banking and Finance</i>, 31(12): 3862-84. This paper shows that the impact of market structure on bank deposit interest rates is complex. Both market size structure and multimarket bank presence have independent effects on rates. There is evidence that mid-size banks were more aggressive competitors than other banks, but that the effect of market structure on deposit rates has evolved over time, with mega-banks recently becoming more aggressive competitors. This may be related to the growth of mega-banks in many markets. These findings have implications for existing theories of deposit pricing and, by extension, antitrust policy in banking.

2007	H00	Edlin, Aaron, Andrew Gelman, and Noah Kaplan. 2007. Voting as a Rational Choice: Why and How People Vote to Improve the Well-Being of Others. National Bureau of Economic Research, Inc. NBER Working Papers: 13562. For voters with "social" preferences, the expected utility of voting is approximately independent of the size of the electorate, suggesting that rational voter turnouts can be substantial even in large elections. Less important elections are predicted to have lower turnout, but a feedback mechanism keeps turnout at a reasonable level under a wide range of conditions. The main contributions of this paper are: (1) to show how, for an individual with both selfish and social preferences, the social preferences will dominate and make it rational for a typical person to vote even in large elections;(2) to show that rational socially-motivated voting has a feedback mechanism that stabilizes turnout at reasonable levels (e.g., 50% of the electorate); (3) to link the rational social-utility model of voter turnout with survey findings on socially-motivated vote choice.
2007	H23	Matsumoto, Shigeru, and Hajime Sugeta. 2007. "Antitrust Policy and Environmental Protection." <i>Economics Bulletin</i>, 17(2): 1-10. State antitrust laws ordinarily supplement federal law by providing a cause of action for anticompetitive activity that occurs in the state. Some states, however, have construed their antitrust regimes to reach

Year	DE	Title and Abstract
		conduct that occurs outside the state's boundaries. Such regulation raises significant federalism and Commerce Clause concerns by creating possible extraterritorial liability for conduct with virtually no in-state effect. This note examines two Commerce Clause standards that may limit the degree to which state antitrust laws may exercise extraterritorial force--the "dormant" or "negative" Commerce Clause and the so-called "Extraterritorial Principle." Unfortunately, the dormant Commerce Clause test, as articulated in <i>Pike v. Bruce Church, Inc.</i> , is an overly malleable and ineffective limit. In contrast, the Extraterritoriality Principle is a powerful per se restraint; however, the Supreme Court has not provided clear guidance for when to apply the rule. Accordingly, this note advocates an "Inconsistency Principle" as the best way to understand the Court's concern with extraterritorial regulation. State antitrust laws should not have extraterritorial force when they would impose inconsistent legal obligations on the out-of-state defendant.

2007	N84	Taylor, Jason E. 2007. "Cartel Code Attributes and Cartel Performance: An Industry-Level Analysis of the National Industrial Recovery Act." <i>Journal of Law and Economics</i>, 50(3): 597-624. This paper uses the cartel-enabling National Industrial Recovery Act (NIRA) of 1933 to gain insight into cartel performance. I employ a monthly panel of 66 industries that passed an NIRA code of fair competition to examine how specific attributes of these cartel codes affected the ability to achieve collusive outcomes. I find that output growth was significantly lower during cartel months, consistent with cartel theory, and that industries with more complex codes were more successful than those with simpler ones. Furthermore, industries with code restrictions on new productive capacity, production quotas, and requirements to file data with a central board were the most successful at reducing output, which suggests that these types of provisions were the most effective in helping firms attain collusive outcomes. Finally, I find that the effectiveness of data-filing provisions was limited to the early months of the NIRA, prior to a wave of cartel breakdown occurring in spring 1934.
2007	O13 O18	Boshoff, Willem H. 2007. "Stationarity Tests in Geographic Markets: An Application to South African Milk Markets." <i>South African Journal of Economics</i>, 75(1): 52-65. The paper focuses on the delineation of geographic markets in competition analysis, investigating the use of tests of price co-movement in the market definition exercise. To this end, the first part is devoted to a conceptual framework for market definition (adopted from Haldrup (2003)). Thereafter, a variety of price tests are explored that can be applied within the quantitative part of the framework. Similar to Forni (2004), the paper emphasizes the use of stationarity tests (that is, tests for the existence of unit roots)--illustrating their application to a recent competition investigation in South Africa.

2008	A33	Buccirosi, Paolo, ed. 2008. <i>Handbook of Antitrust Economics</i>. Cambridge and London: MIT Press. Seventeen papers, some originally presented at the 2005 Lear Conference on the Economics of Competition Law, provide an economist's view of antitrust economics for students and professionals. Papers discuss economic evidence in antitrust--defining markets and measuring market power; unilateral competitive effects of horizontal mergers; the coordinated effects of mergers; competitive effects of vertical integration; analysis of conglomerate effects in EU merger control; detecting cartels; leniency and whistleblowers in antitrust; facilitating practices; economics of vertical restraints; exclusive contracts and vertical restraints--empirical evidence and public policy; abuse of market power; price discrimination; public policy in network industries; competition policy for intellectual property; competition policy in two-sided markets, with a special emphasis on payment cards; competition policy in auctions and "bidding markets"; and European state aid control--an economic framework.
2008	C72	Houba, Harold, Evgenia Motchenkova, and Quan Wen. 2008. <i>Maximal Cartel Pricing and Leniency Programs</i>. Tinbergen Institute. Tinbergen Institute Discussion Papers: 08-120/1. For a general class of oligopoly models with price competition, we analyze the impact of ex-ante leniency programs in antitrust regulation on the endogenous maximal-sustainable cartel price. This impact depends upon industry characteristics including its cartel culture. Our analysis disentangles the effects of traditional antitrust regulation and the leniency program. Ex-ante leniency programs are effective if and only if these offer substantial rewards to the self-reporting firm. This is in contrast to currently employed programs that are therefore ineffective.
2008	C72 C90	Landeo, Claudia M., and Kathryn E. Spier. 2008. <i>Naked Exclusion: An Experimental Study of Contracts with Externalities</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14115. This paper reports the results of an experiment designed to assess the ability of an incumbent seller to profitably foreclose a market with exclusive contracts. We use the strategic environment described by Rasmusen, Ramseyer, and Wiley (1991) and Segal and Whinston (2000) where entry is unprofitable when sufficiently many downstream buyers sign exclusive contracts with the incumbent. When discrimination is impossible, the game resembles a stag-hunt (coordination) game in which the buyers' payoffs are endogenously chosen by the incumbent seller. Exclusion occurs when the buyers fail to coordinate on their preferred equilibrium. Two-way non-binding pre-play communication among the buyers lowers the power of exclusive contracts and induces more generous contract terms from the seller. When discrimination and communication are possible, the exclusion rate rises. Divide-and-conquer strategies are observed more frequently when buyers can communicate with each other. Exclusion rates are significantly higher when the buyers' payoffs are endogenously chosen rather than exogenously given. Finally, secret offers are shown to decrease the incumbent's power to profitably exclude.
2008	F12	Sudekum, Jens. 2008. "Cross-Border Mergers and National Champions in an Integrating Economy." <i>Journal of Institutional and Theoretical Economics</i>, 164(3): 477-508. We present a simple oligopolistic model with three countries and illustrate the strategic aspects of merger policy. Mergers can be used to appropriate rents on consumptive third markets, even when the trade policy of these countries reacts endogenously. Competition policy inside the bloc of the two producing countries is too permissive towards mergers and acquisitions. A policy of cross-border mergers (European champions) need not imply a conflict between regional and global welfare. In contrast, the promotion of national champions may be in the interest of individual countries, but global welfare is always adversely affected.

"Public Financing of Urban Transport: The Application of EC State Aid Rules." <i>World Competition: Law and Economics Review</i>, 31(3): 421-48. This article provides an overview of the relevant legislation concerning the granting of State aid to transport and considers how Articles 87 and 73 of the EC Treaty apply. It outlines in detail the main provisions of Regulations Nos 1191/69 and 1107/70 which lay down the main rules on State aid for urban transport and analyses how they have been interpreted and applied in the Commission's decisions and Courts' jurisprudence. Consideration is given to the concept of services of general economic interest and how public service obligations may be compensated by the State. The link between transport services and infrastructure and how the acquisition or replacement of rolling stock is treated under various State aid rules is also examined, as well as the relationship between structural funds and State aid and the concept of "internal operator", which plays a predominant role in the context of Regulation No. 1370/2007. The article outlines the main provisions of the new regulation and concludes by introducing the steps to be followed by Member States that wish to provide public support via the discharge of public service obligations to transport operators.
2008	M11	Marvel, Howard P., and James Peck. 2008. "Inventory Turnover and Product Variety." <i>Journal of Law and Economics</i>, 51(3): 461-78. Retailers face powerful incentives to limit the inventories they stock, and this leads them to focus on inventory turn as a performance measure. Their desire to pare inventory holding costs yields a misalignment of their incentives with those of a supplier seeking to have a broad line of products held. We identify the source of the vertical misalignment and demonstrate its impact on product variety. We then consider a series of vertical restraints that can potentially correct the problem. The analysis is used to explain the otherwise puzzling behavior of suppliers in several recent and significant antitrust matters.

2009	C01	Carlton, Dennis W. 2009. Why We Need to Measure the Effect of Merger Policy and How to Do It. National Bureau of Economic Research, Inc. NBER Working Papers: 14719. In this article, I explain the inadequacy of our current state of knowledge regarding the effectiveness of antitrust policy towards mergers. I then discuss the types of data that one must collect in order to be able to perform an analysis of the effectiveness of antitrust policy. There are two types of data one requires in order to perform such an analysis. One is data on the relevant market pre and post merger. The second is data on the specific predictions of the government agencies about the market post-merger. A key point of this article is to stress how weak an analysis of only the first type of data is. The frequent call for retrospective studies typically envisions relying on just this type of data, but the limitations on the analysis are not well understood. As I explain below, retrospective studies that ask whether prices went up post merger are surprisingly poor guides for analyzing merger policy. It is only when the second type of data is combined with the first type that a reliable analysis of antitrust policy can be carried out. There is a need both to collect the necessary data and to analyze it correctly.
2009	C23	Buccirossi, Paolo, Lorenzo Ciari, Tomaso Duso, Giancarlo Spagnolo, and Cristiana Vitale. 2009. Competition Policy and Productivity Growth: An Empirical Assessment. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7470. This paper empirically investigates the effectiveness of competition policy by estimating its impact on Total Factor Productivity (TFP) growth for 22 industries in 12 OECD countries over the period 1995-2005. We find a robust positive and significant effect of competition policy as measured by newly created indexes. We provide several arguments and results based on instrumental variables estimators as well as non-linearities to support the claim that the established link can be interpreted in a causal way. At a disaggregated level, the effect on TFP growth is particularly strong for specific aspects of competition policy related to its institutional set up and antitrust activities (rather than merger control). The effect is strengthened by good legal systems, suggesting complementarities between competition policy and the efficiency of law enforcement institutions.
2009	C23	Clougherty, Joseph A. 2009. Competition Policy Trends and Economic Growth: Cross-National Empirical Evidence. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7515. Motivated by the general lack of empirical scholarship concerning the cross-national environment for competition policy, I present measures here of the overall resources dedicated to competition policy and the merger policy work-load for thirty-two antitrust jurisdictions over the 1992-2007 period. The data allow analysing a number of perceived trends in competition policy over the last two decades, and allow the generation of some factual insights concerning these trends: e.g., the budgetary commitment to competition policy in the cross-national environment for antitrust has substantially increased over this period; budgetary increases appear to be commensurate with increased antitrust workloads; yet, the role of economics does not appear to have substantially increased relative to the role of law. Moreover, I am also able to provide some evidence that budgetary commitments to antitrust institutions yield economic benefits in terms of improved economic growth: i.e., higher budgetary commitments to competition policy are associated with higher levels per-capita GDP growth.
2009	C43	Brezina, Ivan, Anna Orsulova, and Juraj Pekar. 2009. "Analýza absolútnej koncentracie vybraného odvetvia pomocou Herfindahl-Hirschmanovho indexu. (Analyses of Absolute Concentration of the Selected Branch by Herfindahl-Hirschman Index. With English summary.)" Ekonomický Casopis/Journal of Economics, 57(1): 77-94. This article examines the use of the Herfindahl-Hirschman index in the anti-monopoly policy of Slovak Republic. This index is a commonly accepted indicator that is focused on absolute concentration of the industry and in that way it allows to measure market concentration for purposes of antitrust enforcement. The index is used for the analyses of absolute concentration of the branch: electricity, gas, steam, and hot water during the years 2004-2006. Besides it, the sensitivity analysis that gives the information about characteristics of the industry after the entrance of the new subject on the market is presented. Presented analysis of the branch indicates that by increasing the number of subjects the absolute concentration does not have decrease.
2009	C91	Landeo, Claudia M., and Kathryn E. Spier. 2009. "Naked Exclusion: An Experimental Study of Contracts with Externalities." American Economic Review, 99(5): 1850-77. This paper reports the results of an experiment on exclusive contracts. We replicate the strategic environment described by Rasmusen, Ramseyer, and Wiley (1991) and Segal and Whinston (2000). Our findings are as follows. First, when the buyers can communicate, discrimination raises the likelihood of exclusion. Second, when the incumbent seller is unable to discriminate and must make the same offers to the buyers, communication reduces the likelihood of exclusion. Communication also induces more generous offers when the seller cannot discriminate, and divide-and-conquer offers when the seller can discriminate. Third, when communication is allowed, payoff endogeneity increases the likelihood of exclusion.
2009	C92	Bigoni, Maria, Sven-Olof Fridolfsson, Chloe Le Coq, and Giancarlo Spagnolo. 2009. Fines, Leniency and Rewards in Antitrust: An Experiment. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7417. This paper reports results from an experiment studying how fines, leniency programs and reward schemes for whistleblowers affect cartel formation and prices. Antitrust without leniency reduces cartel formation, but increases cartel prices: subjects use costly fines as (altruistic) punishments. Leniency further increases deterrence, but stabilizes surviving cartels: subjects appear to anticipate harsher times after defections as leniency reduces recidivism and lowers post-conviction prices. With rewards, cartels are reported systematically and prices finally fall. If a ringleader is excluded from leniency, deterrence is unaffected but prices grow. Differences between treatments in Stockholm and Rome suggest culture may affect optimal law enforcement.
2009	D03	Osti, Cristoforo. 2009. "Interpreting Convergence: Where Antitrust Meets Consumer Law." European Competition Journal, 5(2): 377-408. The article first considers whether and how antitrust and consumer law overlap, as they both share the concept of consumer welfare as their basis. It then addresses the issue of the most effective way to protect consumer welfare in both areas. In so doing, it will examine those situations in which antitrust (and consumer) law may control "consumer failures", namely those failures which may not have a direct connection to the interplay of the economic agents in the market--a phenomenon normally associated with competition law--but may, by interfering with the economic choices of the final consumer, have an impact upon the market and, thereby, raise issues of consumer law. In such situations, in essence, consumer and antitrust law will compete to

Year	DE	Title and Abstract
		provide the most effective remedy. From there it will proceed further, looking at how a better, more focused enforcement of antitrust and consumer law may serve as a means of controlling consumer failures. Drawing upon the most interesting developments in research on consumer conduct, it will investigate how behavioural economics may help in identifying consumer failures and designing better remedies for consumer protection.

2009	E32 G01	Lowe, Philip. 2009. "Competition Policy and the Economic Crisis." <i>Competition Policy International</i>, 5(2): 3-24. The Commission stands firm on the importance of maintaining the competition rules and a policy of robust competition policy enforcement. I propose to discuss in this article first why we believe that competition policy is one of the tools we need to deploy to help maintain the integrity of the EU single market and to help our economies out of the crisis, and then to examine, concretely, how the crisis has affected and is affecting our approach to enforcing the EC State aid rules, as well as the EC antitrust and merger control rules.
2009	E32	Wilks, Stephen. 2009. "The Impact of the Recession on Competition Policy: Amending the Economic Constitution?" <i>International Journal of the Economics of Business</i>, 16(3): 269-88. The strengths of the European competition regime are outlined before identifying challenges presented by the financial crisis. The argument moves from enforcement to systemic threats to the credibility of the economic models on which modern competition policy is based. It then turns from banking failures to the crisis in the European motor industry. It suggests that competition policy comprises an 'economic constitution' for the EU which is under threat, but registers the relative complacency of the competition agencies, and argues for a redefinition of policy. The conclusion suggests that the regulatory relationship between the state and the private sector will reflect scepticism about the market and that political changes in the UK and Europe offer radical choices between a reinforced or a marginalised competition policy which the competition policy 'community' needs to confront.
2009	E32 G01	Lyons, Bruce. 2009. "Competition Policy, Bailouts, and the Economic Crisis." <i>Competition Policy International</i>, 5(2): 25-48. The aims of this paper are twofold. First, I explain the economics of bank bailouts as distinct from bailouts for other sectors of the economy. Why do all the rules of good competition policy appear to fly out of the window when the banks get into trouble? Does this mean that we should abandon the rules equally for car manufacturers and other industries in trouble? I argue that a unique combination of two characteristics made it essential to bailout or nationalize the banks in the current crisis. No other sector of the economy can claim the same justification. Second, I review the threat of a retreat to politically-determined industrial policy and the need for vigilant implementation of economic effects-based competition policy.
2009	E44	Fingleton, John. 2009. "La politica della concorrenza in tempo di crisi. (Competition Policy in Troubled Times. With English summary)." <i>Mercato Concorrenza Regole</i>, 11(1): 7-22. The article analyses the link between competition policy and credit crunch. In particular, the public confidence in the ability of competitive markets to deliver positive outcomes is scrutinised by underlining the risks that the financial crisis and the economic downturn can facilitate. In this respect, it is also discussed the role of competition agencies, which need to be able to respond quickly to changing priorities, display a degree of pragmatism in recognising times when other policy interests may over-ride competition policy and support governments in tackling powerful private vested interests.
2009	G01	THE SAME AS E32 Lowe, Philip. 2009. "Competition Policy and the Economic Crisis." <i>Competition Policy International</i>, 5(2): 3-24.
2009	G01	Niminet, Liviana Andreea. 2009. "Competition Policy in EU and Romania during the Economic Crisis." <i>Romanian Economic and Business Review</i>, 4(4): 89-94. The article focuses on the most important aspects of Competition Policy as a guarantor of an undistorted single market and on the harmonization of Romania's legislation regarding competition to the European corresponding acquis. Furthermore, for a better understanding of the mechanisms involved in competition policy, a study case is brought to attention, concerning one of the most recent decisions of the Competition Council on issues related to an economic concentration on the market of financial leasing.
2009	G01	Jenny, Frederic. 2009. "The Economic and Financial Crisis, Regulation and Competition." <i>World Competition: Law and Economics Review</i>, 32(4): 449-64. The financial crisis and the economic crisis it sparked are raising legitimate questions about the market economy's capacity to promote growth and well-being. Although the 1990s and the early 2000s saw competition law acquire growing power to shape our economic activity, it is government intervention and regulation--more intrusive than competition law--on which hopes for economic recovery and a return to prosperity are now pinned. However, we need to qualify the arguments of those who proclaim the death of economic liberalism and the end of competition law as the pre-eminent tool for regulating the functioning of markets, by analysing closely the roots of the crisis, its symptoms and the remedies envisaged, and then looking at the role of competition authorities in a time of crisis and how the crisis will influence the application of competition law. The competition authorities of the Organization for Economic Cooperation and Development (OECD) member countries engaged in just such an exercise in mid-February 2009 at a meeting of the Organisation's Competition Committee. The remarks that follow are not a summary of these discussions, but rather a commentary on the main themes that were addressed.

2009	H10 H83 P20 P30	Conway, Paul, Tatiana Lysenko, and Geoff Barnard. 2009. <i>Product Market Regulation in Russia</i>. OECD, Economics Department OECD Economics Department Working Papers: 742. This paper uses the OECD's indicators of product market regulation (PMR) to assess the extent to which the regulatory environment in Russia supports competition and to draw attention to the areas where further reform efforts would pay dividends. The indicators show that, despite improvements in some areas, many aspects of Russia's regulatory framework are still restrictive, which provides considerable scope for reaping gains from bringing regulation into line with international best practice. In particular, the scores suggest that Russia's economic performance would greatly benefit from a reduction in the role of the state enterprise sector in markets that are inherently competitive and reinvigorated efforts to liberalise foreign trade and direct investment regimes. In some network sectors, recent regulatory changes have significantly improved the scope for competition. However, ongoing work needs to focus on separating competitive and monopoly market segments and eliminating barriers to entry. In addition, the authorities need to develop the capacity and strengthen the hands of the sectoral regulators. Introducing an overarching competition policy would also help bring the issue of competition to centre stage and spread a competition ethos through different levels of government.

2009	H70	Schulhofer-Wohl, Sam, and Miguel Garrido. 2009. Do Newspapers Matter? Evidence from the Closure of The Cincinnati Post . National Bureau of Economic Research, Inc, NBER Working Papers: 14817. The Cincinnati Post published its last edition on New Year's Eve 2007, leaving the Cincinnati Enquirer as the only daily newspaper in the market. The next year, fewer candidates ran for municipal office in the suburbs most reliant on the Post, incumbents became more likely to win re-election, and voter turnout fell. We exploit a difference-in-differences strategy--comparing changes in outcomes before and after the Post's closure in suburbs where the newspaper offered more or less intensive coverage--and the fact that the Post's closing date was fixed 30 years in advance to rule out some non-causal explanations for these results. Although our findings are statistically imprecise, they demonstrate that newspapers--even underdogs such as the Post, which had a circulation of just 27,000 when it closed--can have a substantial and measurable impact on public life.

2009	J68	Rodriguez Miguez, Jose Antonio. 2009. "La política de la competencia versus la política social y de empleo en la UE. (The Competition Policy versus the Social and Employment Policy in the EU. With English summary)." <i>Estudios de Economía Aplicada</i> , 27(3): 699-720. The object of the present work, inside a monographic number dedicated to the Social Community Policy, is to offer a vision different from the one that traditionally has been assigned to the relations between the Social and Employment Policy and that of the Competition, which traditionally have been seen as antagonistic. Opposite to this consideration perceived by many economic operators, we will try to put in evidence the complementarity of both, since the Competition Policy has a fundamental social dimension in the measure in which it promotes the efficiency of the companies and the best assignment of public resources, stimulating the economic progress and the well-being of workers and consumers.
2009	N70	Lampe, Ryan L., and Petra Moser. 2009. Do Patent Pools Encourage Innovation? Evidence from the 19th-Century Sewing Machine Industry . National Bureau of Economic Research, Inc, NBER Working Papers: 15061. Members of a patent pool agree to use a set of patents as if they were jointly owned by all members and license them as a package to other firms. Regulators favor pools as a means to encourage innovation: Pools are expected to reduce litigation risks for their members and lower license fees and transactions costs for other firms. This paper uses the example of the first patent pool in U.S. history, the Sewing Machine Combination (1856-1877) to perform the first empirical test of the effects of a patent pool on innovation. Contrary to theoretical predictions, the sewing machine pool appears to have discouraged patenting and innovation, in particular for the members of the pool. Data on stitches per minute, as an objectively quantifiable measure of innovation, confirm these findings. Innovation for both members and outside firms slowed as soon as the pool had been established and resumed only after it had dissolved.
2009	N87	Shanahan, Martin P., and David K. Round. 2009. "Serious Cartel Conduct, Criminalisation and Evidentiary Standards: Lessons from the Coal Vend Case of 1911 in Australia." <i>Business History</i> , 51(6): 875-906. The criminalisation of anti-competitive behaviour such as price fixing has long been a feature of US antitrust law. Some European countries have introduced criminal penalties for price fixing while in others the matter is under debate. Australia introduced such laws in 2009. Of critical importance when considering criminalisation is the evidentiary standard expected in criminal prosecutions. A century ago, in the Coal Vend case, the High Court of Australia broke new evidentiary ground in applying forensic accounting and economic methods to examine price fixing. Subsequently overturned, much could still be learnt by policy makers and competition agencies from this case.

2009	P24	Shastitko, A., S. Avdasheva, and S. Golovanova. 2009. "Competition Policy during a Crisis." <i>Problems of Economic Transition</i> , 52(5): 74-95. The analysis of competition policy during economic crisis is motivated by the fact that competition is a key factor in productivity levels. The latter, in turn, influences the scope and length of economic recession. In many Russian markets, buyers' gains decline because of weak competition, since suppliers are reluctant to cut prices despite decreasing demand. Data on prices in Russia and abroad in the second half of 2008 show asymmetric price rigidity. At least two questions are important in an economic crisis: the "division of labor" between proactive and protective tools of competition policy and the impact of anticrisis policy on competition. Protective competition policy is insufficient in a transition economy, especially during a crisis, and it should be supplemented with well-designed industrial policy measures that do not contradict the goals of competition. The preferred tools of anticrisis policy are those that do not restrain competition.

2010	C51	Rubinfeld, Daniel L. 2010. "Econometric Issues in Antitrust Analysis." <i>Journal of Institutional and Theoretical Economics</i> , 166(1): 62-77. This paper critically views a number of econometric methods that have been utilized in investigations by competition agencies and in private litigation. The focus is on market definition and unilateral competitive effects. Specific topics include critical-loss analysis, price-correlation analysis, merger simulation, and difference-in-differences analysis. When used appropriately and with caution, each of these methodologies can be of substantial value.

2010	D14	Janger, Edward J., and Susan Block-Lieb. 2010. "Consumer Credit and Competition: The Puzzle of Competitive Credit Markets." <i>European Competition Journal</i> , 6(1): 68-89. Consumer credit in the US presents a puzzle. While consumer credit markets are, by all accounts, competitive, consumers find themselves saddled with unsustainable amounts of debt that accrue interest at exorbitant rates and contain other hidden costs. To untangle the relationship between competition and consumer credit, we identify four interrelated "competition" stories. The first is the standard competition story between and among lenders for customers. The second is competition between and among lending technologies driven by regulatory arbitrage. The third is competition based on product innovation and differentiation, and the fourth is competition among regulators. Each of these "competition" stories offers a distinct set of lessons for those who would try to reform consumer credit markets. In this short essay, we first seek to sketch the paradox of competition and consumer protection. Then we sketch each of the four competition stories and the concerns they raise. Next, we evaluate a number of pending regulatory reforms in light of the concerns raised by the four competition stories. Finally, we suggest the outlines of a coordinated regulatory architecture that seeks to channel the various forms of competition in productive directions, without unduly stifling those competitive efforts.
2010	D22	Duso, Tomaso, Lars-Hendrik Roeller, and Jo Seldeslachts. 2010. <i>Collusion through Joint R&D: An Empirical Assessment</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 10-112/1. This paper tests whether upstream R&D cooperation leads to downstream collusion. We consider an oligopolistic setting where firms enter in research joint ventures (RJVs) to lower production costs or coordinate on collusion in the product market. We show that a sufficient condition for identifying collusive behavior is a decline in the market share of RJV-participating firms, which is also necessary and sufficient for a decrease in consumer welfare. Using information from the US National Cooperation Research Act, we estimate a market share equation correcting for the endogeneity of RJV participation and R&D expenditures. We find robust evidence that large networks between direct competitors--created through firms being members in several RJVs at the same time--are conducive to collusive outcomes in the product market which reduce consumer welfare. By contrast, RJVs among non-competitors are efficiency enhancing.
2010	E22	Sudsawasdi, Sasatra. 2010. "An Empirical Assessment of the Relationship between Competition Policy and Investment." <i>Journal of Asian Economics</i> , 21(5): 466-75. The relationship between competition policy and investment is empirically examined. Empirical findings suggest that increasing market competition has a positive and robust impact on the share of total investment in GDP per capita. Developing countries enjoy benefits from competition legislation efficiency improvement, whereas the reduction of government anti-competitive price control intervention enhances the good investment environment in developed countries. In relation to the potential impacts of ASEAN competition policies, if ASEAN-4 countries (Indonesia, Malaysia, Philippines, and Thailand) become as competitive as Singapore, the investment shares are expected to increase to approximately 2-4%. Further, foreign direct investment inflows from the 30 OECD countries are expected to increase roughly 0.6-1.2%.
2010	H51	Baake, Pio, Bjorn A. Kuchinke, and Christian Wey. 2010. "Die Anwendung der Wettbewerbs- und Kartellvorschriften im Gesundheitswesen--Status Quo und wettbewerbsökonomische Implikationen. (German Competition Law in the Field of Health Care. With English summary.)" <i>Wirtschaft und Wettbewerb</i> , 60(5): 502-13. The latest health care reforms in Germany considerably increased the scope for competition in Germany's compulsory health care system. Health insurances can now negotiate bilaterally contracts with service providers as well as so-called rebate contracts with pharmaceutical firms. In addition, health insurances can offer a greater variety of contractual options (returns and allowances) to their customers. In this paper, we examine the still existing restrictions on the application of competition law in the field of health care and how they affect customers, insurances, and health care providers. Given our economic analysis, we recommend to abolish still existing restrictions and to apply the German antitrust law fully to protect competition and its positive effects on efficiency more effectively.
2010	I10 Q55	Lerner, Josh, and Scott Stern, eds. 2010. <i>Innovation Policy and the Economy. Volume 11</i> , Chicago and London: University of Chicago Press. Five papers, revised versions of papers presented at the National Bureau of Economic Research Innovation Policy and the Economy group meeting held in Washington, D.C. in April 2010, examine innovation in the health care and clean technology industries. Papers discuss where the health care entrepreneurs are--the failure of organizational innovation in health care (David M. Cutler); cap-and-trade, emissions taxes, and innovation (Suzanne Scotchmer); when static analysis is a sufficient proxy for dynamic considerations--reconsidering antitrust and innovation (Joshua S. Gans); innovations in governance (Raymond Fisman and Eric Werker); and how science policy can evolve as science evolves (Benjamin F. Jones). Lerner is Jacob H. Schiff Professor of Investment Banking at Harvard Business School, with a joint appointment in the finance and entrepreneurial management units. Stern is Associate Professor of Management and Strategy in the Kellogg School of Management at Northwestern University. No index.
2010	K34	Gaukrodger, David. 2010. <i>Foreign State Immunity and Foreign Government Controlled Investors</i> . OECD, Directorate for Financial and Enterprise Affairs, OECD Working Papers on International Investment: 2010/2. Discussions at the "Freedom of Investment" Roundtables, hosted by the OECD Investment Committee, have stressed that increased investments by foreign State-controlled investors can bring significant benefits to home and host societies, but have also noted that they can raise concerns. This paper examines two principal issues concerning foreign State-controlled investors: whether the doctrine of foreign state immunity may make it difficult for private parties to pursue legitimate claims against them and whether that doctrine creates regulatory enforcement gaps for host countries. Although the restrictive approach to immunity is now widely recognised, important issues, such as whether the financial investment activities of a sovereign wealth fund are commercial or sovereign acts, remain uncertain. In the area of regulation, the paper analyses state policies in the area of tax, competition law and criminal law, and notes key factors that may influence immunity in such cases.

2010	R42	Huschelrath, Kai, Nina Leheyda, and Patrick Beschorner. 2010. "Assessing the Effects of a Road-Surfacing Cartel in Switzerland." <i>Journal of Competition Law and Economics</i> , 6(2): 335-74. The paper assesses the impact of the detection of a hard-core cartel in the Swiss market for road surfacing on post-cartel competition. In addition to an investigation of supply-side factors,

Year	DE	Title and Abstract
		demand-side factors, and market prices, the paper also derives estimates of the economic effects of the Swiss Competition Commission's decision in the road-surfacing cartel case. The results indicate that the detection of the cartel may have led to short-term price reductions; however, the persistent collusion-friendly industry structure forecloses larger and durable gains for the customers.
2010	R48	White, Peter R. 2010. "The Conflict between Competition Policy and the Wider Role of the Local Bus Industry in Britain." <i>Research in Transportation Economics</i>, 29(1): 152-58. Since the Transport Act of 1985, the local bus industry in Britain (outside London and Northern Ireland) has been subject to deregulation, removing previous restrictions on routes, service levels and fares. This also marked a reversal of the previous emphasis on co-ordination of services provided by different operators, and introduced competition law as applying to other industries to the local bus sector. This has been in conflict with other policy objectives aimed at stimulating greater use of public transport, such as harmonisation of ticketing systems. The underlying issues are examined, and recent changes in policy. The Local Transport Act of 2008 offers an opportunity to resolve some of these problems, and its application in Oxford is discussed as the first substantial example to date. However, a strong conflict remains between the role of competition agencies and other aspects of policy.
2011		
2011	B24 E52 E62 P11	Soliani, Riccardo. 2011. "Antonio Pesenti e la sua "Critica economica". (Antonio Pesenti and His "Critica Economica". With English summary.)" <i>Il Pensiero Economico Italiano</i>, 19(1): 117-37. Antonio Pesenti was a prominent Italian economist and politician of the twentieth century, strong opponent of Fascism and Minister and deputy of the Communist Party. In the present paper we deal with "Critica economica", the journal founded in 1946 and directed by him until 1956, when it merged with "Notizie economiche" and "Riforma agraria", giving birth to "Politica ed economia". The paper considers a group of several columns (Nostro paese), useful to understand his opinion on the economic and social situation of Italy in the European and Occidental context. Then we examine a few essays, relevant to explain his theoretical position on monetary policies and international monopolistic competition. Pesenti and other authors debated in the journal the Italian financial and anti-trust policy thoroughly. Two important projects of economic planning, never implemented, were proposed in Italy at the end of the forties and in the fifties: the Piano del lavoro (1949-1950), promoted by CGIL (the Italian Trade Union near the Socialist and Communist Parties), and the "Piano Vanoni" (1954), elaborated by minister Ezio Vanoni; "Critica economica" paid great attention to them. "Critica economica" was very interested in the Socialist world, and Pesenti looked at Socialism as the final stage of the dialectical evolution of Capitalism, not so far in the time. We have chosen to focus on one specific point: the lively controversy about the book <i>Esperienze di economia pianificata</i> by Cesare Dami, which witnesses the different theoretical insight of Pesenti, Dami and others scholars, and gives a few clues as to the atmosphere of that cultural and political community.
2011	C83	Hurley, Stephen. 2011. "The Use of Surveys in Merger and Competition Analysis." <i>Journal of Competition Law and Economics</i>, 7(1): 45-68. Data generated from surveys have long been used to gather information from a large population efficiently. Used properly by competition authorities and professional advisors, surveys can assist in measuring how consumers value product attributes and make purchasing decisions, which can be invaluable information in assessing whether a particular transaction or conduct is ultimately likely to result in harm to consumer welfare. However, a robust survey takes time, effort, and substantial resources to construct and carry out. There are a significant number of potential pitfalls that, if not carefully considered and managed, can render results wholly unreliable. Nevertheless, by taking appropriate care and applying best practices, surveys and the data they generate are valuable additional empirical tools that can assist competition authorities and advisors in assessing how markets work.
2011	D49 M00	Ghosal, Vivek. 2011. <i>The Law and Economics of Enhancing Cartel Enforcement: Using Information from Non-Cartel Investigations to Prosecute Cartels</i>. CESifo Group Munich, CESifo Working Paper Series: 3506. I present the following proposal: information revealed during non-cartel investigations by competition law enforcement authorities, such as evaluation of M&As or investigation of monopolization (dominance) conduct, should be directly used to investigate and prosecute cartels. Currently, in several jurisdictions, information acquired in, for example, a M&A investigation typically cannot be directly used for a cartel case due to the underlying statutes and the legal and administrative procedures that govern information use. Reviewing the management and corporate strategy literature, I note that M&As form a vital part of firms' core business strategy, with the longer-run strategic aspects being more important. These longer-run strategies could be jeopardized if the firms were engaging in collusion, as the likelihood of detection and prosecution would increase under the proposed rule change, which would punish bad (collusive) behavior. I argue that irrespective of exactly how many cartels are actually prosecuted via this channel, the proposal has the likelihood of creating a meaningful deterrence effect. I also discuss the potential downsides related to Type 1 errors and administrative costs. Overall, I argue that the proposed rule change could increase the efficiency and effectiveness of cartel enforcement, and open an additional front in the fight against hardcore cartels that operate within jurisdictions as well as internationally.
2011	E02	Fuders, Felix. 2011. "Zum so genannten freien Wettbewerb und dem vermeintlichen Verbot vertikaler Kartelle im EU-Wettbewerbsrecht. (With English summary.)" <i>Zeitschrift für Wirtschaftspolitik</i>, 60(3): 271-84. Although a lot has been philosophised about the relationship between competition and freedom, especially in the Freiburg School of Economics, there is still no universal or generally accepted definition of so-called free competition. The article attempts to find such a definition based on the Kantian notion of freedom. The definition found then seems to make necessary a new assessment of the prohibition of vertical agreements in EU competition law.

2011	F44	Funta, Rastislav. 2011. "Economic Law and Economic Crisis: Where Do We Go from Here? Economic, Legal and Political Dimension." <i>Danube: Law and Economics Review</i>, 0(1): 65-71. The impact of the economic crisis, which has rapidly developed and spread into a global economic shock, has become increasingly severe. The period immediately before the crisis was characterized by a combination of the following factors (hereinafter "origins of the crisis"): Blind belief in the strength of large financial institutions; incapacity of management to assess real risk; accumulation of public and private debt; low interests rates and high world growth; failure of a Shadow banking system and its risks; rating agencies practices, etc. Developing a system that comes closer to the ideal combination of economic freedom and open competition seems to be necessary. This is of paramount importance, because a healthy financial system is crucial to any working market economy.
2011	G11	Strong, Winslow, and Jean-Pierre Fouque. 2011. "Diversity and Arbitrage in a Regulatory Breakup Model." <i>Annals of Finance</i>, 7(3): 349-74. In 1999 Robert Fernholz observed an inconsistency between the normative assumption of existence of an equivalent martingale measure (EMM) and the empirical reality of diversity in equity markets. We explore a method of imposing diversity on market models by a type of antitrust regulation that is compatible with EMMs. The regulatory procedure breaks up companies that become too large, while holding the total number of companies constant by imposing a simultaneous merge of other companies. The regulatory events are assumed to have no impact on portfolio values. As an example, regulation is imposed on a market model in which diversity is maintained via a log-pole in the drift of the largest company. The result is the removal of arbitrage opportunities from this market while maintaining the market's diversity.
2011	G24	Petit, Nicolas. 2011. "Credit Rating Agencies, the Sovereign Debt Crisis and Competition Law." <i>European Competition Journal</i>, 7(3): 587-632. With the outburst of the sovereign debt crisis, the "big three" credit rating agencies ("CRAs") have come under a flood of criticism. Controversial proposals have flourished, with calls to dismantle the credit rating oligopoly or to set-up public, State-sponsored rating agencies. Interestingly, while all the evidence points to the existence of a competition problem in the credit rating industry, almost nothing has been written on whether the CRAs could be amenable to competition law scrutiny. In this context, this paper seeks to assess the possibility of intervention in the credit ratings industry on the basis of the EU competition rules. It shows that, under a somewhat creative interpretation of existing rules, the case can be made for competition law intervention in the credit rating industry.
2011	G35	Francis, Bill B., Iftekhar Hasan, Kose John, and Liang Song. 2011. "Corporate Governance and Dividend Payout Policy: A Test Using Antitakeover Legislation." <i>Financial Management</i>, 40(1): 83-112. Managers strongly prefer not to pay dividends as dividend payouts reduce the amount of cash subject to managerial discretion (Easterbrook, 1984; Jensen, 1986). Previous empirical tests of the relationship between corporate governance and dividend payout policy employ endogenous measures of this agency problem. Using a relatively exogenous measure that incorporates state antitakeover laws and the differences-in-differences approach, our analysis indicates that dividend payout ratios and propensities fall when managers are insulated from takeovers. The impact of antitakeover laws on dividend payouts is more pronounced for firms with poor corporate governance and small firms.
2011	I13	Hoffmann, Jens. 2011. "Die gesetzlichen Krankenkassen im Anwendungsbereich des deutschen Kartellrechts. (Statutory Health Insurance Funds in the Area of German Competition Law. With English summary.)." <i>Wirtschaft und Wettbewerb</i>, 61(5): 472-82. The article discusses the applicability of German Competition Law to statutory health insurance funds. It starts with an overview of the ECJ's decision practice which in principle does not recognize the statutory health insurance funds' quality as an undertaking. Based on article 3 para. 2 VO 1/2003 and the absence of an effect on trade between Member States, the article then points out that the definition of undertaking under European Competition Law does not oppose the applicability of German Competition Law to statutory health insurance funds. Thereafter, the traditional understanding of the notion of undertaking as defined by German Competition Law is described. Furthermore, the applicability of German Competition Law to statutory health insurance funds is analysed in light of the specific provision in Section 69 SGB V before and after "AMNOG".
2011	J16	Zimbalist, Andrew. 2011. <i>Circling the Bases: Essays on the Challenges and Prospects of the Sports Industry</i>. Philadelphia: Temple University Press. Explores the sports industry's biggest economic challenges as it enters the second decade of the twenty-first century and beyond. Discusses perspectives on the sports industry toward the second decade of the twenty-first century; dollar dilemmas during the downturn--a financial crossroads for college sports; the Bowl Championship Series, antitrust, and public policy; gender equity in intercollegiate athletics--economic considerations and possible fixes; reflections on salary shares and salary caps; facility finance--measurement, trends, and analysis; going for gold--the financing and economic impact of the Olympic Games; and performance-enhancing drugs and antidoping policy in major league baseball--experience, incentives, and challenges. Zimbalist is Robert A. Woods Professor of Economics at Smith College. Index.
2011	J53	Jeitschko, Thomas D., and Byung-Cheol Kim. 2011. <i>Signaling, Learning and Screening Prior to Trial: Informational Implications of Preliminary Injunctions</i>. Department of Justice, Antitrust Division, EAG Discussions Papers: 201102. The decision to request a preliminary injunction--a court order that bans a party from certain actions until their lawfulness are ascertained in a final court ruling at trial--is an important litigation instrument in many areas of the law including antitrust, copyright, patents, trademarks, employment and labor relations as well as contracts. The process of filing for a preliminary injunction and the court's ruling on such a request generates information that can affect possible settlement decisions. We consider these implications when there is uncertainty about both the plaintiff's damages as well as the merits of case in the eyes of the court. Both plaintiff and defendant revise their beliefs about the case strength in dispute once they observe the court's ruling on preliminary injunctive relief. We study how such learning affects the likelihood of settlement. A precursor to this analysis is the study of the strategic role of preliminary injunctions as a means to signal the plaintiff's willingness to settle.
2011	L59	Brouwer, E., and F. C. Ozbugday. 2011. <i>Measuring the Extent of European State Aid Control: An Econometric Analysis of the European Commission Decisions</i>. Tilburg University, Center for Economic Research, Discussion Paper: 2011-010. This paper provides an analysis of the European Commission (EC) decisions on state aid control using data on 550 state aid cases approved by the EC between 1998 and 2009. More specifically, we measure the determinants of the duration of state aid, total budget of state aid and daily budget of state aid. By using these imperfect proxies, we try to identify the extent of European state aid control. Our results suggest that aid with multiple objectives to achieve has both longer durations and higher amounts of budget. We also find that for some aid objectives or industries, the EC approves cases of aid with both longer durations and higher levels of budget. On the other hand, for some class of aid objectives and industries, there is a trade-off between duration and the level of budget so as to counter-balance the undesired effects. The interpretation of the results imply that the European state aid control, which once

Year	DE	Title and Abstract
		was originally intended to address concerns about export subsidies and strategic trade, recently puts more emphasis on market failures mostly associated with externalities and public goods.
2011	M00	THE SAME AS D49 Ghosal, Vivek. 2011. <i>The Law and Economics of Enhancing Cartel Enforcement: Using Information from Non-Cartel Investigations to Prosecute Cartels</i> . CESifo Group Munich, CESifo Working Paper Series: 3506.
2011	M10	Nakamura, Yasuhiko. 2011. "Bargaining over Managerial Delegation Contracts and Merger Incentives with Asymmetric Costs." <i>Manchester School</i> , 79(4): 718-39. In this paper, we examine how managerial delegation contracts within each firm affect the correspondence between the equilibrium ownership structure and the most socially preferred ownership structure. We consider the disclosure of managerial delegation contracts by studying the bargaining over the relative weightage of each firm's sales in a sales delegation contract between an owner and a manager under a model of endogenous merger formation in a three-firm asymmetric Cournot industry. We show that such a bargaining may reduce the requirement of an antitrust policy, since the equilibrium ownership structure can coincide with the most socially preferred ownership structure.

2011	N61	Lampe, Ryan L., and Petra Moser. 2011. <i>Patent Pools and the Direction of Innovation--Evidence from the 19th-century Sewing Machine Industry</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 17573. Patent pools allow a group of firms to combine their patents as if they were a single firm. Theoretical models predict that pools encourage innovation in pool technologies, albeit at the cost of innovation in substitutes. Empirical evidence is scarce because modern pools are too recent to allow empirical analyses. This article examines data on patents and innovations by new firms for a historical pool in the sewing machine industry (1856-1877) to examine effects on innovation. Contrary to theoretical predictions, this analysis suggests that pools may discourage innovation in pool technologies and shift R&D towards technologically inferior substitutes.
2011	P11	THE SAME AS B24 Soliani, Riccardo. 2011. "Antonio Pesenti e la sua "Critica economica". (Antonio Pesenti and His "Critica Economica". With English summary.)" <i>Il Pensiero Economico Italiano</i> , 19(1): 117-37.

2011	R41	Reksulak, Michael, and William F. Shughart II. 2011. "Of Rebates and Drawbacks: The Standard Oil (N.J.) Company and the Railroads." <i>Review of Industrial Organization</i> , 38(3): 267-83. Standard Oil formed the South Improvement Company in the fall of 1871, supposedly to negotiate "secret" discounts on published railroad tariffs and place independent refiners at a transportation cost disadvantage. We argue that discriminatory railway rates were common both before and after Standard Oil's founding in 1870, played little or no part in its rise to prominence and were not necessarily even illegal. Rebates and drawbacks were in fact ways of sharing the efficiency gains that flowed from the dependable high-volume rail traffic Rockefeller was able to guarantee as well as from other investments that he undertook that lowered the railroads' costs.
2012		
2012	B00	Giocoli, Nicola. 2012. "Crossed Destinies: Law and Economics Meets the History of Economic Thought." <i>History of Economic Ideas</i> , 20(3): 15-23. The paper argues that antitrust law and economics is a proper subfield for applying the method and viewpoint of the history of economic thought (HET). Hence, antitrust scholars should pay attention to what historians of economics have to say about their subfield. Beyond law and economics, it is argued that there are normative and positive arguments for economists in general to avail themselves of HET research.

2012	C20	Starr, Martha, and Forrest McCluer. 2012. <i>Using Difference-in-Differences to Estimate Damages in Healthcare Antitrust: A Case Study of Marshfield Clinic</i> . American University, Department of Economics, Working Papers: 2012-07. In calculating damages in healthcare antitrust cases, the difference-in-difference (DID) approach provides a potentially valuable means of controlling for lawful factors that influence prices, such as case-mix and quality of care, as distinct from price differentials due to unlawful behavior. After first comparing DID to traditional methods of estimating damages, this paper uses DID to analyze data from a well-known case against Marshfield Clinic, a large multispecialty group practice that was found to have illegally allocated markets for physician services in Central Wisconsin. Using a specification similar to what was used in the case, we find that illegal behavior accounted for about two-fifths of the Clinic's extra increase in costs per patient during the damage period. The courts, however, were not persuaded that the analysis adequately controlled for legal factors. We discuss potential pitfalls in using DID to estimate damages suggested by the case, as well as possible ways around them.

2012	N46	Todorov, Francisco Ribeiro, and Marcelo Maciel Torres Filho. 2012. "History of Competition Policy in Brazil: 1930-2010." <i>Antitrust Bulletin</i> , 57(2): 207-57. As Brazil moved from a highly controlled and concentrated economy to a freer and more competitive one, the antitrust regime developed. The article outlines this historical process. We begin by addressing how the first norms with antitrust-like provisions were created from the 1930s until 1962. We then discuss the difficult operation of the competition authority (CADE) during the military regime from 1964 to 1985. After examining a transition period marked by democratization and a new constitutional order, we correlate the market-oriented reforms of the 1990s with what became the first

Year	DE	Title and Abstract
		antitrust statute to be effectively implemented. We then present the more well-known history of this 1994 statute: the initial focus on merger control and the subsequent shift toward cartel enforcement. The article concludes by examining the main challenges facing the Brazilian competition authorities today, including the implementation of the new antitrust statute passed in December 2011.
2012	N64	Morelli, Carlo Joseph, Jim Tomlinson, and Valerie Wright. 2012. "The Managing of Competition: Government and Industry Relationships in the Jute Industry 1957-63." <i>Business History</i>, 54(5): 765-82. This paper examines the development of the 1963 court case brought by the Board of Trade's Restrictive Trading Agreements Office against jute manufacturers, in order to examine the impact of the newly introduced competition policy for government-business relationships. Government's active enforcement of competition marked an important change in the direction of industrial policy in the UK and the jute industry was one of the cases to be examined.
2012	O43	Ma, Tay-Cheng. 2012. "Institutions, Antitrust Effectiveness, and Market Competition: Empirical Evidence from Cross-Country Variations." <i>Applied Economics Quarterly</i>, 58(3): 223-62. This paper investigates the channels through which institutions may have an effect on market competition. The main result of the investigation is that there is a strong and robust relationship between institutions and market competition: economies with better institutions are much more likely to experience a high intensity of competition. However, once the effect of trade openness is controlled for, the effect of institutions on competition must be mediated through the effective enforcement of competition law. Taking the case of Bulgaria, if it were to improve its antitrust effectiveness from the level at the 25th percentile to the one at the 75th percentile of the distribution, then the maximum increase in market competition that would result is 0.57 percentage points. This implies that trade liberalization does not replace the competition regime, as markets are segmented by more than just trade barriers. The beneficial functioning of competition is not secured spontaneously but must be supported by competition laws.
2012	Q15	Mahony, Greg. 2012. "Foreign Acquisition of Agricultural Land and Food Security: A Cautionary Note on Public Policy." <i>Economic Papers</i>, 31(4): 501-07. Proposed amendments to the Foreign Acquisitions and Takeovers Act 1975 appear motivated by concern with food security and foreign ownership. Approval would be required for acquisitions by foreigners of agricultural land over five hectares, a register of agricultural land would be established and there would be a new explicit national interest test. This article explores the variegated social, political and economic opposition to foreign acquisition of agricultural land and finds it misplaced. Increased agricultural productivity to address the challenge of global food security requires that the sector emulates the success of global manufacturing within a network of alliances global supply chain. Productivity considerations should override populism as the main driver of policy for the regulation of Foreign Direct Investment.

2013	D11	Kenning, Peter, and Inga Wobker. 2013. "Ist der "mundige Verbraucher" eine Fiktion? Ein kritischer Beitrag zum aktuellen Stand der Diskussion um das Verbraucherleitbild in den Wirtschaftswissenschaften und der Wirtschaftspolitik. (A Critical Contribution to the Current State of the Debate on the Consumer Model in Economics and Economic Policy. With English summary.)." <i>Zeitschrift für Wirtschafts- und Unternehmensethik</i>, 14(2): 282-300. In Germany there is still no uniform, policy field-spanning and economic research-based consumer model. This paper provides an overview of the contributions of economic research to the discussion about the consumer model. Scrutinizing this model with an empirical analysis, we find that the picture of "the empowered consumer" does not exist, and rather a more differentiating approach would be necessary. Using the consumer concept of the Law against Restraints in Competition, implications of this evidence-based differentiation for economic policy are discussed.
2013	E26 H26	Baumann, Florian, and Tim Friehe. 2013. "Tax Evasion and Tacit Collusion." <i>Public Finance Review</i>, 41(5): 633-57. This article analyzes the interaction between tax evasion and tacit collusion. We show that the possibility of evading taxes generally influences the incentives to form a cartel. We establish that whether tax evasion increases or decreases the set of circumstances allowing stable collusion depends on (1) the relation between the benefits of tax evasion and legal after-tax profits and (2) effective enforcement of antitrust laws. In considering variations in tax enforcement and antitrust enforcement, we find that stricter tax enforcement may actually increase the level of tax evasion, as it may promote the cartelization of industries. In contrast, stricter antitrust enforcement lowers incentives for cartelization, thereby possibly reducing tax evasion at the same time.

2013	F62	Carstea, Vlad. 2013. "EU's Competition's Policy Reform." <i>Romanian Economic and Business Review</i>, 8(1): 99-106. A globalized space means a bigger challenge for European Union, especially in the field of fair competition. The Common Policy needs to be reformed in order to become a more efficient tool in a global world. The reform must focus on anti-competitive agreements, dominant market position abuse, reviewing of the Merger Regulation adopted in 1989 and the state aid control policy. The current economic crisis has influenced the reform especially in the state aid field.
2013	H21	Lee, Sang-Ho. 2013. "An Optimal Incentive Tax Policy on Horizontal Mergers." <i>Seoul Journal of Economics</i>, 26(2): 239-54. This paper analyzes an optimal antitrust policy on horizontal mergers under asymmetric information when antitrust agency cannot observe the post-merger private cost of merged firms. By using a discrete mechanism design approach with self-selection, this paper proposes an incentive compatible lump-sum tax scheme to provide an efficient decision on whether the application for merger should be accepted or rejected. Results show that the optimal size of lump-sum tax is not affected by the informational rent of private post-merger cost information of merged firms.

2013	N73	Jensen-Eriksen, Niklas. 2013. "A Potentially Crucial Advantage: Export Cartels as a Source of Power for Weak Nations." <i>Revue Economique</i>, 64(6): 1085-1104. This article argues that cartels can in certain circumstances be a source of power for the small and weak nations, and that this aspect has often been overlooked in current public discussions about cartels, which tend to emphasize their negative effects. In particular, we will look at export cartels, which, in most countries, are exempted from the scope of tough competition laws, but which have since the end of the 1980s received an increasing amount of criticism. Yet, as several writers have noted, the available empirical evidence on the actual effects and activities of export cartels is very limited. This article expands our knowledge by analyzing one country, Finland, where these institutions played an exceptionally important role. The Finnish export associations helped the country's small and insignificant producers become significant players in world markets, and promoted economic and technical development in their home country. Yet, the Finnish cartels also promoted the cartelization of international trade.
2013	O15 O21	CV: Svetiev, Yane. 2013. "Competition Law and Development Policy: Subordination, Self-Sufficiency or Integration?." In <i>European Yearbook of International Economic Law 2013</i> , ed. 2013	Q25	Gawel, Erik, and Norman Bedtke. 2013. "Wasserpreise zwischen Kartellkontrolle und Nachhaltigkeit. (Water Pricing in Germany between Control of Abusive Practice and Sustainability. With English summary.)." <i>Wirtschaftsdienst</i>, 93(2): 94-102. The regulatory framework of the German water sector is currently undergoing a reorientation process at both the EU and national levels. Price regulation of water utilities is particularly controversial. Recently, some national antitrust authorities have significantly increased their oversight of abusive practices. However, the focus of the regulation in this field is exclusively on efficiency while neglecting other pricing objectives (e.g., internalisation of environmental costs). The article examines the current practice of different price regulation schemes (cost plus pricing and control of abusive practice) and identifies its shortcomings. It is shown that different regulating principles of relevant laws (law of charges, competition law, and water law) have to be better aligned and sustainability issues need to be taken into account in theory and practice when addressing efficiency requirements for water utilities.

Table K22.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	B14 F29	Connor, John, and C. Gustav Helmers. 2006. <i>STATISTICS ON MODERN PRIVATE INTERNATIONAL CARTELS, 1990-2005</i> . Purdue University, College of Agriculture, Department of Agricultural Economics, Working Papers: 06-11. This report explains the principal economic and legal features of a unique set of data on 283 modern private international cartels discovered anywhere in the world from January 1990 to the end of 2005. Measured in real 2005 money, aggregate cartel sales and overcharges totaled about \$1.2 trillion and \$500 billion, respectively. In the early 2000s, about 35 such cartels were discovered each year. We find that global cartels comprise more than half of the sample's affected sales and are larger, longer lasting, and more injurious than other types. In the early 2000s world-wide corporate penalties stabilized at or above \$2 billion per year, one-thousand times penalties in the early 1990s. More than 40% of those penalties were from settlements in private suits, and most of the rest are fines imposed by U.S. and EU antitrust authorities. Median penalties are low: from 1.4% to 4.9% of affected sales, depending on the type of prosecution. As a proportion of damages, median fines ranged from less than 1% for EU-wide cartels to 17.6% for Canada. Private plaintiffs obtained 38% of damages from international cartelists. World wide, median real cartel penalties of all types amounted to less than 5% of overcharges. [See Summary next page for more details]
2006	D13	McCormick, Robert E., William F. Shughart II, and Robert D. Tollison. 2006. "A Theory of Commodity Bundling in Final Product Markets: Professor Hirshleifer Meets Professor Becker." <i>International Review of Law and Economics</i> , 26(2): 162-79. This article advances a theory of commodity bundling as an alternative to forward integration in household production. We argue, in particular, that a producer having market power over the sale of a final consumption good will sometimes find it profitable to bundle that good with one or more complements--and to sell the preassembled package to consumers at a lump-sum price--for the same reason that a monopolist of an intermediate input profits from vertically integrating his supply chain. In both cases, substitution against a monopoly-priced input is avoided and competitively determined input-price ratios are restored downstream. Combining the theories of transfer pricing and household production also suggests that the not uncommon practice of "mixed bundling", whereby sellers offer the same final consumption good both bundled and unbundled, can be explained as a way of segmenting consumers into groups based on differences in their skills, tastes, and preferences for home production.

Year	DE	Title and Abstract
2006	D71	Rock, Edward B. 2006. "The Corporate Form as a Solution to a Discursive Dilemma." <i>Journal of Institutional and Theoretical Economics</i> , 162(1): 57-71. I examine the connection between the discursive dilemma and corporate law. The discursive dilemma (or doctrinal paradox) is a distinctive social choice problem that was first identified by Kornhauser and Sager and later used as the basis for a theory of organizational personality by Pettit. I examine the ways in which the corporate form prevents the emergence of the discursive dilemma in the firm context and the extent to which the presence of the discursive dilemma can provide the foundation for a theory of corporate personality.
2006	D71	Schanze, Erich. 2006. "The Advantage of the Corporate Form: Premise-Based Decision-Making in Teams and Its Relation to Specialization, Professionalization, and Delegated Responsibility: Comment." <i>Journal of Institutional and Theoretical Economics</i> , 162(1): 72-75.
2006	D71	Scott, Kenneth E. 2006. "Decision Cycling: Corporate Dilemma or Academic Frolic? Comment." <i>Journal of Institutional and Theoretical Economics</i> , 162(1): 76-79.
2006	D86 N80	Lamoreaux, Naomi R., and Jean-Laurent Rosenthal. 2006. <i>Contractual Tradeoffs and SMEs Choice of Organizational Form, A View from U.S. and French History, 1830-2000</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12455. Today the vast majority of multi-owner firms in the United States are corporations, but that was not the case in the past. Before the advent of the income tax, tort litigation, and significant federal regulation, entrepreneurs more often than not chose to organize as partnerships, a form that economists consider seriously flawed. Why would they make such a terrible mistake? We begin by noting that corporations created new types of contracting problems for businesses at the same time as they solved problems afflicting partnerships. We then model the tradeoffs involved in the choice of corporations versus partnerships and confirm that the model's assumptions are consistent with U.S. legal rules up through the 1940s. The model implies that partnerships and corporations are complementary organizational forms, and we show that data from the U.S. Census of Manufactures strongly supports that implication. We also verify that the model's assumptions hold for the broader set of organizational choices available under the French Code de Commerce and use data on multi-owner firms registered in Paris in the 1830s and 1840s to demonstrate the complementary character of the basic forms. Despite much literature emphasizing the fundamentally different environments for business associated with the French and U.S. legal regimes, the basic calculus underpinning the choice of organizational form was the same in both countries.
2006	E65 P11	Farmer, Karl. 2006. "Germany's Social Market Economy and the New Systems Competition." <i>Journal of Markets and Morality</i> , 9(2): 317-36. World championship in exporting manufactures notwithstanding, weak gross domestic product (GDP) growth and the largest number of unemployed since the 1930s have tarnished the splendor of Germany's once celebrated social market economy (SME). In search of the reasons for their country's present mediocrity, contemporary (ordo-) liberal German economists point to construction defects in the economic constitution that escaped the attention of the founders of the SME. This article reviews the legacy of the father of the SME as well as the liberal critique of the evolution of the SME in postwar Germany under the old systems competition (OSC) between capitalist West and communist East. The liberal white hope, that is the new systems competition (NSC), ensued by European integration and globalization, is presented as a mechanism for overcoming national policy blockades in reforming (labor) market institutions in accordance with the common socioeconomic preferences of all citizens.
2006	F29	THE SAME AS B14 Connor, John, and C. Gustav Helmers. 2006. <i>STATISTICS ON MODERN PRIVATE INTERNATIONAL CARTELS, 1990-2005</i> . Purdue University, College of Agriculture, Department of Agricultural Economics, Working Papers: 06-11.
2006	H23	Armour, John. 2006. <i>Should we redistribute in insolvency</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. The characterisation of a security interest as 'fixed' or 'floating' has generated much litigation in English courts. This is because a floating charge is subordinated by statute to other claims in the debtor's insolvency, whereas a fixed charge is not. This paper uses the example of the floating charge to argue that such statutory redistribution between claimants in corporate insolvency is generally undesirable.
2006	H32	Enrich, Peter D. 2006. "A Symposium on State Efforts to Assist Competitors: Commerce Clause Constraints on State Business Location Incentives." <i>Competition Policy International</i> , 2(2): 129-50. This article considers whether, and to what extent, the Commerce Clause limits the ability of states and localities to engage in the incentive competition that has proliferated in recent decades. In particular, the author argues that well-established Commerce Clause principles forbid a wide range of the location-based tax incentives that states and localities offer to businesses. This article will also canvass a range of limitations and shortcomings of this constitutional constraint on governmental efforts to intervene in business location decisions.
2006	H32	Demircuc-Kunt, Asli, Inessa Love, and Vojislav Maksimovic. 2006. "Business Environment and the Incorporation Decision." <i>Journal of Banking and Finance</i> , 30(11): 2967-93. Using firm-level data from 52 countries we investigate how a country's institutions and business environment affect firm's organizational choices and what impact the organizational form has on access to finance and growth. We find that businesses are more likely to choose the corporate form in countries with developed financial sectors and efficient legal systems, strong shareholder and creditor rights, low regulatory burdens and corporate taxes and efficient bankruptcy processes. Corporations report fewer financing, legal and regulatory obstacles than unincorporated firms and this advantage is greater in countries with more developed institutions and favourable business environments. We do find some evidence of higher growth of incorporated businesses in countries with good financial and legal institutions.
2006	H54 J42	Dassiou, Xeni, and Dionysios Glycopantis. 2006. "The Economic Theory of Price Discrimination via Transactions Bundling: An Assessment of the Policy Implications." <i>Review of Law and Economics</i> , 2(2): 323-48. This paper discusses specific cases in financial regulation, competition law and legal rules in procurement, in light of the economic concept of the efficiency of mixed bundling as derived in our theoretical models. We assess the appropriateness of the existing rules, and also discuss whether there is a need to reform specific legal or regulatory rules in light of the efficiency discussion. We examine the U.S. legal and regulatory framework in government procurement, the offsets case, and finally we look into financial regulation in the case of bundled brokerage and soft commission arrangements on both sides of the Atlantic. The novelty of our models is that we analyze transactions mixed bundling in the cases of monopoly, monopsony and exchange. Additionally, for the cases of monopsony and exchange we consider goods of varying degrees of quality certainty. The common result is the local optimality of the bundling of transactions in terms of expected profits for the price-setting firm, and an overall increase in the level of trade in the goods bundled. In the real-life cases examined, we found that in most instances the authorities have decided that if the practice of pure bundling is present, to replace it with mixed bundling, rather than ban bundling altogether. This practice is correct, as according to our models mixed bundling is efficiency-enhancing (both in profits and in trade volumes). On the other hand, the policy implications derived from our models based on the presence of quality uncertainty suggest that allowing the bundling of dissimilar tasks is

Year	DE	Title and Abstract
		beneficial rather than damaging to trade, especially if the goods bundled are of diverse degrees of quality certainty. This is at odds with the current legal and regulation approach to bundling practices.

2006	N00 O10 P00 P10 P20	North, Douglass C., John Joseph Wallis, and Barry R. Weingast. 2006. <i>A Conceptual Framework for Interpreting Recorded Human History</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12795. Neither economics nor political science can explain the process of modern social development. The fact that developed societies always have developed economies and developed polities suggests that the connection between economics and politics must be a fundamental part of the development process. This paper develops an integrated theory of economics and politics. We show how, beginning 10,000 years ago, limited access social orders developed that were able to control violence, provide order, and allow greater production through specialization and exchange. Limited access orders provide order by using the political system to limit economic entry to create rents, and then using the rents to stabilize the political system and limit violence. We call this type of political economy arrangement a natural state. It appears to be the natural way that human societies are organized, even in most of the contemporary world. In contrast, a handful of developed societies have developed open access social orders. In these societies, open access and entry into economic and political organizations sustains economic and political competition. Social order is sustained by competition rather than rent-creation. The key to understanding modern social development is understanding the transition from limited to open access social orders, which only a handful of countries have managed since WWII.

In the last few years law and finance scholars have 'discovered' the usefulness of comparative law. Their studies look at the quantifiable effect that legal rules and their enforcement have on financial development in different countries. Moreover, they link their results with the long-standing distinction between Civil Law and Common Law countries. Whether this revival of 'legal families' is a useful way forward is, however, a matter of debate. The following article challenges these studies and looks for characteristic features which are more precise and meaningful than the use of legal families as such.

2007	C53	Chen, Feng, Kenton K. Yee, and Yong Keun Yoo. 2007. "Did Adoption of Forward-Looking Valuation Methods Improve Valuation Accuracy in Shareholder Litigation?" <i>Journal of Accounting, Auditing and Finance</i> , 22(4): 573-98. Before 1984, Delaware judges relied exclusively on the Delaware Block method--an appraisal formula based on trailing earnings and liquidation value--to price shares in shareholder litigation. In 1984, the Delaware Supreme Court changed the law to permit its judges to use any valuation method they deem appropriate. As a result, judges and litigants began switching from the Block method and adopting forward-looking valuation techniques based on cash flow and earnings forecasts. While the use of forward-looking methods potentially improves valuation accuracy by incorporating forecast information, the use of forecasts allows more room for subjective manipulation. Did the adoption of forward-looking methods improve or reduce valuation accuracy in shareholder litigation? We address this question using a comprehensive hand-collected sample of all Delaware corporate "appraisal-remedy" cases published between 1966 and 2002 in Lexis-Nexis. The sample identifies, on a case-by-case basis, the plaintiff's, the defendant's, and the judge's valuation methods and resulting valuation estimates. We show that the adoption of forward-looking valuation methods improves litigants' valuation accuracy on average.
2007	C71 C78	Rosenkranz, Stephanie, and Utz Weitzel. 2007. <i>Bargaining in Mergers and Termination Fees</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6210. We model takeovers as a bargaining process and explain termination fees for, both, the target and the acquirer, subject to parties' bargaining power and outside options. In equilibrium, termination fees are offered by firms with outside options in exchange for a greater share of merger synergies. Termination fees decrease in firms' bargaining power, and increase in firms' outside options. We find that a merger with the second highest bidder, including a termination fee, can lead to equally high premiums as a merger with the highest bidder, without a termination fee. This novel result directly contrasts the agency cost perspective, which argues that termination provisions may be used by managers to lock into acquirers that do not generate the highest shareholder value. Further, even in a merger with the highest bidder and in the absence of bidding related costs, a termination fee is not necessarily a deal protection device, but can be used to improve shareholder value. Our bargaining model offers an alternative to auction related explanations of termination fees, like cost compensation or seller commitment.
2007	D02	Levratto, Nadine. 2007. "Abolition de la contrainte par corps et evolution du capitalisme au 19e siecle. (With English summary)." <i>Economie et Institutions</i> , 0(10-11): 221-49. This text aims at showing how the institutional and judicial innovation that took place in the 19th century France, fed the transition between a patrimonial and a financial capitalism. We focus on the abolishment of the jail for corporate debts voted in 1867. Firstly, this decision allowed discharging the businessmen debtors from the risk of imprisonment. Doing so, it opened the access to commercial and financial debt. Secondly, in connection it perfect complementary legal disposition, the insolvency law that have also been submitted to a process of liberalization, the abolishment of prison for debts make easier the firms' creation and growth. Thirdly, this institutional change became the foreground for the end of the required authorization for the creation of corporate companies on one hand and the separation between personal wealth and equity.

2007	F15	Ialnazov, D. 2007. "The Impact of EU Accession on Corporate Governance Reform in Bulgaria." <i>Acta Oeconomica</i> , 57(2): 157-90. Since the start of its post-socialist transformation in 1989, Bulgaria has imported a large number of formal institutions from advanced market economies, including the EU-15. However, the adoption of EU and other international rules has not been effective due to weak enforcement and application by domestic actors such as the securities regulator, courts, and company owners/managers. The failures of corporate governance in Bulgaria until the early 2000s can be attributed to the broad institutional context (the lack of rule of law) as well as the creation of quasi-public companies as a result of the first wave of mass privatisation (1996-97). Since 2002, information disclosure and protection of shareholder rights have improved significantly. The article examines the proposition that this is partly due to the prospect of EU accession, which has certainly influenced the attitudes and expectations of domestic actors. Based on company surveys and in-depth interviews, the paper analyses how the securities regulator and company owners/managers have been adapting to the imported formal rules.

2007	H56	DosSantos, Joe. 2007. "Compliance and Master Data Management: The New Profit Cocktail?" <i>Journal of Financial Transformation</i> , 0(21): 129-36. Compliance is a complex and reactive function in most financial institutions. Government regulations require legal experts to decode, lobbyists to shape, projects to address, and IT systems to enforce--costing millions of dollars with little or no perceived business value. The most frustrating aspect of regulations is that they tend to take a lowest common denominator approach, making corporate America pay for the sins of a few miscreants with sweeping reforms and new inspection regimes for what is fundamentally not broken. What if there was a way to inoculate your company from the costs of evolving regulation? What if you could build a framework that would control your organization's data in a manner that would not only meet future regulatory demands, but also provide competitive advantage to the business? This article posits an approach for doing just that using master data management (MDM) technology. Specifically, the article will expand upon three key topics: the 'not-so-obvious' master data commonality of regulations in the financial services industry, how master data management solutions help meet current and future compliance demands, and the business impact of implementing master data management solutions.

2007	J80	Kryvoi, Yaraslau. 2007. "Enforcing Labor Rights against Multinational Corporate Groups in Europe." <i>Industrial Relations</i> , 46(2): 366-86. Voluntary corporate codes of conduct for multinational enterprises can have certain quasi-legal effects for national legal systems, but the enforcement of labor standards remains at the national level. Two main obstacles to the enforcement of labor rights against multinationals are limited access to justice in multinationals' home countries and the concept of limited liability. These obstacles are understood differently in common law and civil law jurisdictions and require different approaches to overcome them.

2007	L59	Arrunada, Benito. 2007. Pitfalls to Avoid when Measuring Institutions: Is 'Doing Business' Damaging Business?. Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. Over recent years, both governments and international aid organizations have been devoting large amounts of resources to "simplifying" the procedures for setting up and formalizing firms. Many of these actions have focused on reducing the initial costs of setting up the firm, disregarding the more important role of business registers as a source of reliable information for judges, government departments and, above all, other firms. This reliable information is essential for reducing transaction costs in future dealings with all sorts of economic agents, both public and private. The priorities of reform policies should therefore be thoroughly reviewed, stressing the value of the legal institutions rather than trivializing them as is often the case.

2007	L92 R48	Karsten, Jens. 2007. "Passengers, Consumers, and Travellers: The Rise of Passenger Rights in EC Transport Law and Its Repercussions for Community Consumer Law and Policy." <i>Journal of Consumer Policy</i>, 30(2): 117-36. EC transport law is set to be complemented by a series of regulations giving rights to passengers for almost every mode of transport. These regulations not only give transport law a distinct consumer dimension but also add new elements to European private law. This paper attempts to provide a horizontal, or intermodal, survey of these regulations, adopted and proposed. It is argued that passenger law, although originating separately and remaining a sector distinct from other fields of law, has become part of a wider, three-stranded notion of European consumer policy deserving due attention as the force most dynamically expanding the area of Community law of contracts and of torts. The paper will point to the elements of consumer contract law and the law on travel and tourism related to passenger transport and elaborate on the basics for finding a common notion of the key terms like "passenger" and "damage" for community law. It concludes with some points for further reflection.

This article posits an approach for doing just that using master data management (MDM) technology. Specifically, the article will expand upon three key topics: the 'not-so-obvious' master data commonality of regulations in the financial services industry, how master data management solutions help meet current and future compliance demands, and the business impact of implementing master data management solutions.
2007	M20	Hilt, Eric. 2007. <i>When did Ownership Separate from Control? Corporate Governance in the Early Nineteenth Century.</i> National Bureau of Economic Research, Inc, NBER Working Papers: 13093. This paper analyzes the ownership and governance of the business corporations of New York State in the 1820s. Using a new dataset collected from the manuscript records of New York's 1823 capital tax, and from the charters of the corporations, I analyze the ownership structures of the firms, and investigate the degree to which ownership was separated from control at the time. In contrast to Berle and Means's account of the development of the corporation, the results indicate that many of the firms were dominated by large shareholders, who were represented on the firms' boards, and held sweeping power to utilize the firms' resources for their own benefit. The oppression of minority shareholders was a significant problem in early corporate governance, and many of the firms configured their voting rights in a way that curtailed the power of large investors. A positive relationship between firm value and these voting rights configurations is found among the publicly-traded firms in the sample.
2007	M50	Lonien, Claude. 2007. "What Is the Most Likely Future Trend of the Pillars of Japanese Management?" <i>Japanese Economy</i>, 34(3): 87-113. This chapter addresses the future aspects of the Japanese economic and social system, with a particular focus on the future direction of certain traditional values of the Japanese management system. To this end, we examine the most likely trends for lifetime employment, the seniority wage system, the enterprise union, bottom-up management, and certain secondary characteristics of the Japanese model. We offer proof that changing corporate governance rules at both the worldwide and domestic levels will overthrow the traditional Japanese model. This will also speed up the decartelization of the zaibatsu.

This article challenges the idea that the corporation is a globally superior form of business organization and that the Anglo-American common-law is more conducive to economic development than the code-

Year	DE	Title and Abstract
		based legal systems characteristic of continental Europe. Although the corporation had important advantages over the main alternative form of organization (partnerships), it also had disadvantages that limited its appeal to small- and medium-sized enterprises (SMEs). As a result, when businesses were provided with an intermediate choice, the private limited liability company (PLLC) that combined the advantages of legal personhood and joint stock with a flexible internal organizational structure, most chose not to organize as corporations. This article tracks the changes that occurred in the menu of business organizational forms in two common-law countries (the United Kingdom and the United States) and two countries governed by legal codes (France and Germany) and presents data showing the rapidity with which firms in each country responded to enabling legislation for PLLCs. We show that the PLLC was introduced first and most easily in a code country (Germany) and last and with the most difficulty in a common-law country (the United States). Late introduction was associated with prolonged use of the partnership form, suggesting that the disadvantages of corporations did indeed weigh heavily on SMEs.

2007	O24	Iwanow, Tomasz, and Colin Kirkpatrick. 2007. "Trade Facilitation, Regulatory Quality and Export Performance." <i>Journal of International Development</i> , 19(6): 735-53. The objective of this paper is to quantify the potential gains in trade performance from the implementation of trade facilitation reform. The study applies a gravity model augmented with trade facilitation, regulatory quality and infrastructure indicators to assess the impact of trade facilitation and other trade-related constraints on export performance. Quantitatively, our results suggest that a 10 per cent improvement in trade facilitation would yield an increase in exports of about 5 per cent. Identical percentage improvements in the regulatory environment and in the quality of infrastructure provision would result in increases of 9-11 per cent and 8 per cent, respectively. The results confirm that while trade facilitation can contribute to improved export performance, improvements in the quality of the regulatory environment and the basic transport and communications infrastructure are equally or more important, in facilitating export growth. The conclusion is that trade facilitation alone is unlikely to result in a significant improvement in export performance.

2007	Q51 Q52	Tweedale, Geoffrey, and Laurie Flynn. 2007. "Piercing the Corporate Veil: Cape Industries and Multinational Corporate Liability for a Toxic Hazard, 1950-2004." <i>Enterprise and Society</i> , 8(2): 268-96. The 'corporate veil' refers to the separation of legal identity between parent firms and their subsidiaries, which gives the parent protection against the liabilities of its subsidiaries. Fearing that such liability protection would facilitate illicit activity, early twentieth century courts, especially in America, would sometimes 'pierce' the corporate veil. This article explores <i>Adams v. Cape</i> (1990), in which American plaintiffs attempted to persuade the English courts to lift the corporate veil and impose liability for industrial disease on Cape Industries, a leading U.K. asbestos manufacturer. This landmark case shows how corporate strategy can be closely intertwined with international corporate law and occupational health and safety issues. It also highlights how limited liability law and separate legal personality can result in significant injustice to claimants against multinational enterprises.
2007	Q52	Viscuso, Michael J. 2007. "Scrubbing the Books Green: A Temporal Evaluation of Corporate Environmental Disclosure Requirements." <i>Delaware Journal of Corporate Law</i> , 32(3): 879-92. Through arm-twisting, the federal government has forced corporations to disclose environmental liabilities since the catastrophic mid-twentieth century collision between securities and environmental law. Though their protests were numerous, and the self-proclaimed injustices against them unparalleled, corporations have recently been shoved over a fence onto a side where the grass is certainly greener, though not in the spirit of that adage. The 2002 promulgation of Sarbanes-Oxley has done much to elevate the paranoia of corporate management, and as publicly backed environmental regulation increases its tenacity for environmental betterment, chief executive officers and chief financial officers are starting to sweat green all over their 10-Qs and 10-Ks. This note takes the reader on a brief tour of the past, present, and future of environmental liability disclosures, hoping to provide at least the semblance that our federal government has been employing efficient means to protect both investors' wallets and their world.

This paper compares the effects of joint and several liability on capital and production decisions with the effects of several-only liability in the context of hazardous-waste generation. Our main result shows that increased potential liability causes firms to decrease asset exposure but may also lead firms to create less waste. First, we

Year	DE	Title and Abstract
		find that both several-only and joint and several liability induce firms to go bankrupt more often and create more waste than is socially optimal. Then we find that, for a given level of funds, joint and several liability induces firms to go bankrupt more often and to create more waste than does several-only liability. This implies that society will be responsible for a larger share of cleanup under joint and several liability than under several-only liability. Finally, we show that firms with potentially higher liabilities for cleanup will raise fewer funds, creating "smaller" firms and thus the possibility of less waste generated overall.

2008	C11	Yee, Kenton K. 2008. "A Bayesian Framework for Combining Valuation Estimates." <i>Review of Quantitative Finance and Accounting</i> , 30(3): 339-54. Discounted cash flow, method of comparables, and fundamental analysis typically yield discrepant valuation estimates. Moreover, the valuation estimates typically disagree with market price. Can one form a superior valuation estimate by averaging over the individual estimates, including market price? This article suggests a Bayesian framework for combining two or more estimates into a superior valuation estimate. The framework justifies the common practice of averaging over several estimates to arrive at a final point estimate.

Consumers injured by price overcharges often are awarded coupons that can be used for a limited period of time to purchase the good at a price below that which prevails after the overcharge has been eliminated. Coupon remedies cause a deadweight loss by inducing excessive consumption by consumers with relatively low demand during the remedy period. The magnitude of the loss can be comparable to that caused by the price overcharge. As demand variability goes to zero, the deadweight loss from coupon remedies goes to zero. Eliminating the expiration date for the use of coupons does not eliminate the loss.
2008	D11	Bruno, Clara Elena. 2008. "Concorrenza tra imprese e tutela del consumatore alla luce dell'art. 140 bis del codice del consumo. Un contributo di analisi economica del diritto. (With English summary)." <i>Studi e Note di Economia</i> , 13(3): 575-96. This paper looks at the regulation which defends both the market and the consumer, according to the evolutive interpretation of the most recent jurisprudence, also from a law and economics perspective that considers the economic operators as rational individuals able to react to legislative changes and taking full advantage. In regard to enterprise, we will point out how their compliance to the law increases as in relation to the controls carried out. The focus will be on four monitoring systems: the activity of the various controlling authorities, the role of the individual consumer, that of the associations which protect them and the business related laws. The analysis shows how the recent jurisprudence interpreted the legislation in an evolutive way, consolidating the private enforcement to protect the market and acting incisively to the policy maker's intentions. We will pay particular attention to the recent law which introduced the compensatory collective action, in order to reflect on its aspects.

2008	E43	Dalla Pellegrina, Lucia. 2008. "Illegal Finance, Interest Rates and Bank Lending: The Missing Supply Side of Usury." <i>Global Business and Economics Review</i> , 10(3): 265-83. This paper aims at identifying a causal relationship going from bank interest rates and credit rationing to usury. We manage the endogeneity issues by exploiting the variables that are related to bankruptcy proceedings as exogenous factors that affect bank variables, but not the other nonmeasurable determinants of usury. The estimates carried out in Italian provinces during the period of 1999-2002 provide evidence that a higher bank credit availability reduces illegal lending, while interest rates respond ambiguously. We explain these results with the presence of contrasting forces that drive usury demand and supply. We test the robustness of our estimates using controls that capture economic and financial conditions, social standards, government intervention, the severity of punishments and the presence of organised crime.
2008	F20	Subedi, Surya P. 2008. <i>International Investment Law: Reconciling Policy and Principle</i> , Oxford and Portland, Ore.: Hart Publishing. Presents an overview of the law of foreign investment and an analysis of the main principles and the standards of treatment available to foreign investors in international law. Discusses the evolution of foreign investment law; international efforts to regulate foreign investment; protection of foreign investment in customary international law; protection of foreign investment through bilateral investment treaties; fleshing out the principles through jurisprudence; current issues in the law of foreign investment; and addressing current challenges in foreign investment law.

2008	H79	Qi, Yaxuan, and John Wald. 2008. "State Laws and Debt Covenants." <i>Journal of Law and Economics</i> , 51(1): 179-207. We examine whether state laws impact the use of debt covenants by using a sample of U.S. public bond issues from 1987 to 2004. We consider variation in state laws with respect to the minimum asset-to-debt ratio necessary for a payout and with respect to

Year	DE	Title and Abstract
		antitakeover statutes. We find that firms incorporated in states with stricter restrictions on distributions are less likely to include debt covenants that constrain payouts, limit additional debt, or restrict the sale of assets. Thus, state payout restrictions appear to be a substitute for the use of these debt covenants. On the other hand, firms incorporated in states with stronger antitakeover statutes are somewhat more likely to use debt covenants. This finding is consistent with the notion that firms with antitakeover protection are more likely to suffer from agency problems and, thus, are more likely to use debt covenants to minimize agency costs.
2008	H83	Bayar, Dogan. 2008. "Mali Denetim Nedir. (What Is Financial Auditing? With English summary.)." <i>Maliye Dergisi</i>, 0(155): 1-10. Financial auditing is inquiry of financial decisions and transactions of the public administration in terms of budget executions. First step of the financial auditing is the auditing of accounting practices carried out in the accounting units to which are affiliated with the spending units (local units of spending agencies). In this step, they examine fairly a presentation of the accounting records, accurateness (flawlessness) of the single financial transactions, and their compliance with the law, by-law, and regulations. According to the results of this audit, it is decided whether those who are responsible (assessment officer, accountant, and the others) acquit or misappropriate and a court decision is prepared about them. The second step includes determination of the accurateness, explicitness, and sincerity of the financial statements, financial reports, and declarations. Public administration account (budget final account) is prepared by the strategy development unit of this administration and top manager presents it to the relevant bodies. In this regard, outcome of the audit is whether it is confirmed or not that these financial statements and reports are accurate and consistent. This confirmation is called a "Conformity Statement" in the literature. The abolished General Accounting Law no. 1050 emphasized an explanation of the financial audit in terms of responsible officers and included only a few articles for general account of the administration. On the other hand, Public Fiscal Management and Control Law no. 5018 replacing it emphasizes public administration accounts and does not give detail information on the revenue, audit of the expenditure, and property transactions constituting a basis for them. This approach difference between the two laws causes a misunderstanding that the nature and content of the audit have also changed. However, financial audit is still financial audit and meaningful with its entirety. Unless we audit the revenue, expenditure and property transactions, and accounting practices for keeping records of them, how can we prove or guarantee the accuracy and sincerity of the public administration accounts arranged on the basis of this accounting data? Or can a conformity declaration for the public administration account guarantee that all of the financial transactions are accurate and in compliance with the legislation?
2008	I20	Acemoglu, Daron, Michael Kremer, and Atif Mian. 2008. "Incentives in Markets, Firms, and Governments." <i>Journal of Law, Economics, and Organization</i>, 24(2): 273-306. We construct a simple career concerns model where high-powered incentives can distort the composition of effort by inducing excessive signaling. We show that in the presence of this type of career concerns, markets typically fail to limit competitive pressures and cannot commit to the desirable low-powered incentives. Firms may be able to weaken incentives and improve efficiency by obscuring information about individual workers' contribution to output, and thus reducing their willingness to signal through a moral-hazard-in-teams reasoning. However, firms themselves have a commitment problem, since firm owners would like to provide high-powered incentives to their employees to increase profits. When firms cannot refrain from doing so, government provision may be useful as a credible commitment to low-powered incentives. Governments may be able to achieve this even when operated by a self-interested politician. Among other reasons, this may happen because of the government's ability to limit yardstick competition and reelection uncertainty. We discuss possible applications of our theory to pervasive government involvement in predominantly private goods such as education and management of pension funds.
2008	I30	CV: Ward, Halina. 2008. "Corporate Social Responsibility in Law and Policy." In <i>Perspectives on Corporate Social Responsibility</i>, ed. 2008	J01	Dew-Becker, Ian. 2008. <i>How Much Sunlight Does it Take to Disinfect a Boardroom? A Short History of Executive Compensation Regulation</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2379. This paper reviews the history of executive compensation disclosure and other government policies affecting CEO pay, and as well surveys the literature on the effects of these policies. Disclosure has increased nearly uniformly since 1933. A number of other regulations, including special taxes on CEO pay and rules regarding votes on some pay packages have also been introduced, particularly in the last 20 years. However, there is little solid evidence that any of these policies have had any substantial impact on pay. Policy changes have likely helped drive the move towards more use of stock options, but there is no conclusive evidence on how policy has otherwise affected the level or composition of pay. I also review evidence from overseas on "Say on Pay," recently proposed in the US, which would allow nonbinding shareholder votes on CEO compensation. The experiences of other countries have been positive, with tighter linkages between pay and performance and improved communication with investors. Mandatory say on pay would be beneficial in the US.
2008	L43	Daza Hernandez, Julio Cesar. 2008. "The Services Related to the Electric Industry under the GATS: Is There a Need for New Provisions at the Multilateral Level for These Services?" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(13): 135-64. This document is the result of an investigation about the services related to the electric industry and how these were regulated in the General Agreement on Trade in Services GATS. To write this article, it was necessary to analyze the provision of the GATS, the commitments of the GATS members in energy services and some articles related to the topic. The purpose of this article is to analyze how the energy services were regulated in the GATS, in particular, the distribution and transmission of electric power. Furthermore, the article tries to establish whether the particularities of the transmission and distribution services could lead to the introduction of additional disciplines in the GATS.
2008	L69	Gehring, Thomas, and Michael Kerler. 2008. "Institutional Stimulation of Deliberative Decision-Making: Division of Labour, Deliberative Legitimacy and Technical Regulation in the European Single Market." <i>Journal of Common Market Studies</i>, 46(5): 1001-23. Institutions stimulate deliberative decision-making if they hinder stakeholders from introducing bargaining power into the decision process. This article explores the conditions for, and limits of, the creation of deliberative legitimacy in single market regulation. An assessment of the standardization procedure demonstrates that legitimacy arises only from the combination of political and technical deliberation.
2008	L70	Simpson, John, Lakshman Alles, John Evans, and Jennifer Westaway. 2008. "Identification of Stock Market Manipulation: A Case Study." <i>Investment Management and Financial Innovations</i>, 5(1): 84-94. This paper is based on an actual expert witness report undertaken by university business academics for a corporate regulatory authority in a developed country. The paper describes the methodology used to identify cases of stock market manipulation by insiders of a no liability mining company. An actual data set has been analyzed but the company and the country remain anonymous. It should be added that the real parties originally under suspicion were in fact charged with stock market manipulation based on the actual expert witness report outlined in this paper.

Year	DE	Title and Abstract
2008	L85 R30	Pancak, Katherine A., and C. F. Sirmans. 2008. "Agency Content on Licensing Exams: Assessing Professional Competency." <i>Journal of Real Estate Practice and Education</i> , 11(1): 15-27. Knowledge of real estate agency law and practice is critical for a real estate agent to function as a competent professional. Over the past decade and a half, states have passed numerous agency initiatives, including agency disclosure, buyer representation, dual agency, designated agency, limited agency, and non-agency. The purpose of this study is to investigate whether state real estate licensing exams are sufficiently screening for minimum levels of competency in these relatively new representational environments. Surprisingly, it was found that there is a lack of any significant testing on jurisdiction-specific agency law and relationships in over half of the states. This result indicates a need for many real estate license law authorities to review and update the content of their licensing exams.
2008	N73	Beauchamp, Christopher. 2008. "The Telephone Patents: Intellectual Property, Business, and the Law in the United States and Britain, 1876-1900." <i>Enterprise and Society</i> , 9(4): 591-601. This dissertation summary introduces a new perspective on the legal and economic history of patents in the late nineteenth century. Through a case study of the early telephone industry in Britain and the United States, the dissertation explores interactions between business strategies and national legal regimes, and proposes a revised view of the multi-layered relationship between patents and industrial organization.
2008	N82	CV: Skeel, David A., Jr., and Georg Krause-Vilmar. 2008. "Recharacterization and the Nonhindrance of Creditors." In <i>The Law and Economics of Creditor Protection: A Transatlantic Perspective</i> , ed. Horst Eidenmuller and Wolfgang Schon, 261-87. European Business Organization Law, Vol. 7, no. 1, 2006. 2008	O47	Tang, Meng-Chi, and Yih-Luan Chyi. 2008. "Legal Environments, Venture Capital, and Total Factor Productivity Growth of Taiwanese Industry." <i>Contemporary Economic Policy</i> , 26(3): 468-81. This study provides a new explanation of total factor productivity growth of Taiwanese industry. Besides the channels identified in the literature, this study finds that the venture capital (VC) industry development significantly promotes productivity growth. In addition, an indicator of legal environment has been established to record changes in VC-related legislation during the past two decades in Taiwan. The legal indicator serves as an instrumental variable that can avoid estimation bias resulting from potential endogeneity between VC development and productivity growth.
2008	P52	Schnyder, Gerhard. 2008. <i>Revisiting the Party Paradox of Finance Capitalism: Evidence from Switzerland, Sweden and the Netherlands</i> . ESRC Centre for Business Research. ESRC Centre for Business Research--Working Papers. The 'party paradox' thesis claims that centre-left parties have a genuine interest in pro-shareholder corporate governance reforms, while centre-right parties oppose such reforms. Based on case studies of Switzerland, Sweden, and the Netherlands, I test the accuracy of this thesis and find that it does not apply to either of these cases: in Switzerland pro-shareholder reforms were made possible by centre-right not centre-left support; In Sweden and the Netherlands pro-shareholder reforms were marginal, because a broad coalition uniting centre-right and centre-left opposed them. My findings show therefore that the 'party paradox' is not a universal phenomenon and that most micro-level explanations of this phenomenon are inaccurate. In order to explain in which cases a party paradox will emerge, we need to add the nature of relations between employees and employers (cooperative vs. confrontational) as a determinant of centre-left preferences.

2009	D43 Q41	Wang, Zhongmin. 2009. "(Mixed) Strategy in Oligopoly Pricing: Evidence from Gasoline Price Cycles before and under a Timing Regulation." <i>Journal of Political Economy</i> , 117(6): 987-1030. This paper studies oligopoly firms' dynamic pricing strategies in a gasoline market before and after the introduction of a unique law that constrains firms to set price simultaneously and only once per day. The observed gasoline pricing behavior, both before and under the law, is well captured by the Edgeworth price cycle equilibrium in the Maskin and Tirole dynamic oligopoly model. My results highlight the importance of price commitment in tacit collusion. I also find evidence that the price leadership outcome under the law is better predicted by mixed strategies play than by alternative hypotheses.

		pricing of access to networks; constitutional limits on the pricing of access to networks; the regulation of local telephone networks; antitrust as applied to network industries; the regulation of last-mile broadband networks; the regulation of broadband networks and the Internet--network neutrality versus network diversity; and the regulation of broadband networks and the Internet--network neutrality versus network capacity.
2009	E24	Feldmann, Horst. 2009. "Business Regulation, Labor Force Participation and Employment in Industrial Countries." <i>Journal of Economics and Business</i>, 61(3): 238-60. Using data from 19 industrial countries for 5 years in the period 1990-2002, this paper analyzes to what extent anticompetitive business regulations, like price controls and administrative obstacles to start a new business, affect labor force participation and employment rates. According to the regression results, they appear to lower both. Corruption, which is one result of strict business regulation, is also found to lower labor force participation and employment rates. While most effects on the general population seem to be modest, the effects on the low-skilled are likely to be substantial. The results are robust to variations in specification.

2009	F52	Bhattacharjee, Subrata. 2009. "National Security with a Canadian Twist: The Investment Canada Act and the New National Security Review Test." <i>Transnational Corporations Review</i>, 1(4): 12-19. This year, Canada's federal government passed significant amendments to the Investment Canada Act (ICA), Canada's foreign investment law. This paper argues that, though the amendments generally liberalize important aspects of the country's foreign investment review regime, they also include a broadly worded national security test that allows the responsible Minister to review proposed investments in Canada on national security grounds.
2009	G01	Tuleasca, Luminita. 2009. "Insolvency in the Context of the Present Financial Crises--A Comparative Analysis." <i>Romanian Economic and Business Review</i>, 4(2): 33-44. This paper presents the current trends in the view of various national states and their impact on the application of collective insolvency proceedings, also called bankruptcy procedure in common language, by analysing their main pieces of legal regulation, extremely useful both for specialists as well as for creditors and debtors. The fact is that thanks to this procedure, businesses which are in a state of financial crisis, either actual or upcoming can be placed under court protection from creditors which results in blocking enforcement and increasing interest and penalties, allowing them a new start through a reorganization of their activities. Reorganizing the activities of insolvent debtors activity may also be in the interest of creditors, if they cannot obtain sufficient repayment through the debtor's bankruptcy. Thus, requests to open insolvency proceedings by them will appear as a means to preserve their rights and to avoid irreversible deterioration of the situation of the debtor. On the other hand, an aggressive insolvency procedure may be used by creditors as a means of pressure in order to obtain a quick settlement of their receivables from solvent borrowers acting in a state of panic created by the existence of an application to open a bankruptcy procedure. And not least, the paper presents how the situation has seriously deteriorated regarding the criteria allowing businesses to apply for an insolvency procedure and the proper use of the benefits of this procedure.
2009	G01	Halliday, Terence C., and Bruce G. Carruthers. 2009. <i>Bankrupt: Global Lawmaking and Systemic Financial Crisis</i>, Stanford: Stanford University Press. Explores how, during the Asian Financial Crisis, global actors developed comprehensive norms for corporate bankruptcy laws, and how national policymakers responded in turn. Discusses the legal constitution of markets; managing corporate breakdowns across national frontiers; constructing global norms for national insolvency systems; attaining the global standard; Indonesia--the International Monetary Fund as a reformist ally; South Korea--legal restructuring of the market and state; China--global norms with "Chinese characteristics"; intermediation; foiling; recursivity; and the implementation gap.

Papers discuss engineering culture, innovation, and modern wealth creation; the Swedish paradox revisited; firm location, corporate structure, and innovation; firm size, firm maturity, and product and process research and development in Swedish manufacturing/firms; university-educated labor, research and development, and regional export performance; magnitude and destination diversity of exports--the role of product variety; differences in survivor functions according to different competitive/strategies; a resource-based analysis of bankruptcy law, entrepreneurship, and corporate recovery; agglomeration economies, learning processes, and patterns of firm spatial clustering; assiduous firms in a "learning region"--the case of East Wurtemberg, Germany; cluster dynamics--insights from broadcasting in three U.K. city-regions; technology, innovation, and latecomer strategies--the case of the mobile handset manufacturing sector in China; enterprise development policy--modeling the policy context; and entrepreneurial business support networks--a leader institution perspective.
2009	J50	Belloc, Marianna, and Ugo Pagano. 2009. <i>Politics-Business Interaction Paths</i>. CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2883. Most pre-crisis explanations of the various corporate governance systems have considered the separation between ownership and control to be an advantage of the Anglo-American economies. They have also attributed the failure of other countries to achieve these efficient arrangements to their different legal and/or electoral systems. In this paper we compare this view with the co-evolution approach based on the hypothesis that politics and corporate governance influence each other, generating complex interactions of financial and labour market institutions. Countries cluster along different complementary politics-business interaction paths and there is no reason to expect, or to devise policies for, their convergence to a single model of corporate governance. We argue that this hypothesis provides a more convincing explanation of the past histories of major capitalist economies and can suggest some useful possible scenarios of their future institutional development. Bayesian model comparison suggests that the co-evolution approach turns out at least as influential as the competing theories in explaining shareholder and worker protection determination.

	N51 N60 O13 O20 Q15 Q24 R14	dominant land demarcation systems: metes and bounds (MB) and the rectangular system (RS). Under MB property is demarcated by its perimeter as indicated by natural features and human structures and linked to surveys within local political jurisdictions. Under RS land demarcation is governed by a common grid with uniform square shapes, sizes, alignment, and geographically-based addresses. In the U.S. MB largely is used in the original 13 states, Kentucky, and Tennessee. The RS is found elsewhere under the Land Ordinance of 1785 that divided federal lands into square-mile sections. We develop an economic framework for examining land demarcation systems and draw predictions. Our empirical analysis focuses on a 39-county area of Ohio where both MB and RS were used in adjacent areas as a result of exogenous historical factors. The results indicate that topography influences parcel shape and size under a MB system; that parcel shapes are aligned under the RS; and that the RS is associated with higher land values, more roads, more land transactions, and fewer legal disputes than MB, all else equal. The comparative limitations of MB appear to have had negative long-term effects on land values and economic activity in the sample area.

2009	N33	Deakin, Simon. 2009. "Legal Origin, Juridical Form and Industrialization in Historical Perspective: The Case of the Employment Contract and the Joint-Stock Company." <i>Socio-Economic Review</i> , 7(1): 35-65. The timing and nature of industrialization in Britain and continental Europe had significant consequences for the growth and development of labour market institutions, effects which are still felt today and which are visible in the conceptual structure of labour law and company law in different countries. However, contrary to the claims of the legal origin hypothesis, a liberal model of contract was more influential in the civilian systems of the continent than in the English common law, where the consequences of early industrialization included the lingering influence of master-servant legislation and the weak institutionalization of the juridical form of the contract of employment. Claims for a strong-form legal origin effect, which is time invariant and resistant to pressures for legal convergence, are not borne out by a growing body of historical evidence and time-series data. The idea that legal cultures can influence the long-run path of economic development is worthy of closer empirical investigation, but it is premature to use legal origin theory as a basis for policy initiatives.

2009	R11 R50	Pendras, Mark. 2009. "Urban Politics and the Production of Capital Mobility in the United States." <i>Environment and Planning A</i> , 41(7): 1691-1706. In the quest to explain changing urban political economic conditions over the past thirty years, urban researchers have naturalized capital mobility, to the point where challenging the mobility of capital appears either impossible, undesirable, or both. In this paper, I aim to denaturalize capital mobility and to repoliticize the relationship between capital and place through a critical legal geographic investigation of corporate mobility rights in the United States. The overall goal is to help urban researchers to think critically about the politics of capital mobility and to ensure that the legal principles enabling capital mobility remain open to challenge from alternative political perspectives.

2010		
2010	B12 F54	Goodacre, Hugh. 2010. "Limited Liability and the Wealth of 'Uncivilised Nations': Adam Smith and the Limits to the European Enlightenment." <i>Cambridge Journal of Economics</i>, 34(5): 857-67. This paper questions the adequacy of the categories of analysis deployed by Adam Smith to serve as a basis for a progressive critique of corporate power at the 'open economy' level, arguing that if a critique of the principle of limited liability and other aspects of the undue influence of corporate power today is to acquire a truly global character, then it must avoid becoming confined within the intellectual horizons of the age of the European commercial and colonial empires, and should instead contribute towards constructive interaction between a diversity of intellectual, institutional and cultural traditions.
2010	B21	Medema, Steven G. 2010. "Roll over George Stigler: Berle and Means Meet Chicago Price Theory." <i>Journal of Institutional Economics</i>, 6(1): 99-107. Recent writings by Richard Posner in this Journal and elsewhere appear to mark a departure from the Chicago price theory tradition with which Posner long has been associated. This paper picks up on one facet of this: the similarity of Posner's views of the corporation, and of executive compensation in particular, to the perspective laid out by Adolf Berle and Gardiner Means in <i>The Modern Corporation and Private Property</i> --a perspective that has for decades been harshly rejected by the Chicago school.
2010	B21 B22 B24	Arena, Richard. 2010. "Corporate Limited Liability and Cambridge Economics in the Inter-war Period: Robertson, Keynes and Sraffa." <i>Cambridge Journal of Economics</i>, 34(5): 869-83. This article investigates the contribution of three well-known Cambridge economists--Dennis Robertson, John Maynard Keynes and Piero Sraffa--to the analysis of limited corporate liability in relation to the separation of ownership from control. The paper argues that although, as is to be expected, these economists develop different approaches and overall conclusions on the issue of corporate limited liability and the separation of ownership from control, their interpretations converge, nevertheless, on important points. Put differently, Robertson, Keynes and Sraffa raised the same micro- and macro-economic issues but came up with different answers. Their shared concerns, as well as their varied answers, display an undeniable modernity and thus remain very relevant to contemporary considerations on firm governance, especially in the context of the present global economic crisis.

Papers discuss product market regulation and macroeconomic performance--a review of cross-country evidence (Fabio Schiantarelli); regulation and macroeconomic performance (Norman V. Loayza, Ana Maria Oviedo, and Luis Servén); regulation and macroeconomic dynamics (Loayza, Oviedo, and Servén); informality in Latin America and the Caribbean (Loayza, Servén, and Naotaka Sugawara); slow recoveries (Raphael Bergoing, Loayza, and Andrea Repetto); and market reforms, factor reallocation, and productivity growth in Latin America (Marcela Eslava, John Haltiwanger, Adriana Kugler, and Maurice Kugler). Loayza is Lead Economist in the Research Department of the World Bank. Servén manages the World Bank's research program on macroeconomics and growth. Index.
2010	E26	Krasniqi, Armand. 2010. "Impact of the Legislation in Informal Economy of South-Eastern European Countries--With Particular Focus in Kosovo." <i>Journal of Advanced Research in Law and Economics</i>, 1(2): 130-42. In several South Easter European Countries due to the delayed transition, the legal system of the economy is regulated with certain inappropriate provisions which reflect a weak institutional control system and inefficient implementation of sanctions against entities--operators that are not registered which realistically belong to the business activities. Through informal economy channels, which in some particular countries include a high percentage of the movement of goods and services, there is a specific traffic that takes places which actually scores billions of dollars. From such types of activities the government is not capable to collect tax liabilities and results budget becomes inept. The business operation by unregistered entities and operators, especially in area of retail services and construction may significantly distort the competition. These types of activities may encourage legal entities to undertake illegal actions to generate revenues aiming to achieve a sustainable position in market. The audit services of certain departments for employment and trade unfortunately are oriented in auditing only entities and operators that are legal and registered whereas as far as illegal activities that take place in their eyes it almost doesn't exist at all. It is a duty of governmental bodies to commit themselves seriously in order to prevent this negative social phenomenon as well as to combat by issuing appropriate legal-economical instruments which primarily would encourage the entities and operators through a micro-credit programs aiming to legalize their economic activities, creation of a guarantee fund by undertaking partially the risk during the first period of business aiming to promote the legalization and to facilitate operating costs within the legal market.

2010	H10	Langlois, Richard N. 2010. <i>Business Groups and the Natural State</i>. University of Connecticut, Department of Economics, Working papers: 2010-29. Recent revisionist accounts of corporate governance in both business history and finance are challenging the tradition narrative, associated with Berle and Means (1932) and Alfred Chandler (1977), in which the American model of diffuse ownership and coherent diversification is both an inevitable outcome of economic development and perhaps a normative standard for the world to follow. This essay is an attempt to rethink that narrative in light of the continued significance of the pyramidal business group as a governance structure around the world. Drawing on the North, Wallis, and Weingast (2009) theory of the state, I argue that the evolution of corporate governance can be understood only in institutional terms and that institutional development is driven by the coalitional structure of the polity. This is true as much in open-access orders like the U. S. as in the "natural states" that rule most of the world. In the end, I endorse the view that the much-discussed and oft-

Year	DE	Title and Abstract
		misunderstood exceptionalism of the U. S. in corporate governance has its roots of the differential effect on the U. S. of the collapse of globalization during the middle years of the twentieth century.

2010	N84	Di Martino, Paolo, and Michelangelo Vasta. 2010. "Companies' Insolvency and 'The Nature of the Firm' in Italy, 1920s-70s." <i>Economic History Review</i>, 63(1): 137-64. This article analyses the functioning of Italian insolvency laws and practices, in particular their role in the selection and relaunch of viable firms. The article investigates the period between the 1920s and the 1970s, and focuses on joint-stock companies. Using comparative data on the number of cases, we show that in Italy firms mainly used the procedure called fallimento (bankruptcy), consisting of the collection and subsequent liquidation of assets. Other procedures, such as deals with creditors or forms of receivership, able to give companies a further chance, were rarely used. On the basis of archival documents we maintain that this result was due to the strictness and complication of Italian procedures, as well as to their inability to select viable companies. The article also investigates the relation between the features of insolvency law and the nature of the Italian industrial system, specifically the peculiar small size and rapid turnover of joint-stock companies. We suggest that the pro-liquidation character of the insolvency law might have been one of the causes of the peculiarity of Italian industrial capitalism, even if the opposite direction of causality cannot be excluded.
2010	O43	Foley, C. Fritz, and Robin Greenwood. 2010. "The Evolution of Corporate Ownership after IPO: The Impact of Investor Protection." <i>Review of Financial Studies</i>, 23(3): 1231-60. Panel data on corporate ownership in thirty-four countries between 1995 and 2006 reveal that newly public firms have concentrated ownership regardless of the level of investor protection. After listing, firms in countries with strong investor protection are more likely to experience decreases in ownership concentration; these decreases occur in response to growth opportunities, and they are associated with new share issuance. We conclude that ownership concentration falls after listing in countries with strong investor protection, because firms in these countries continue to raise capital and grow, diluting blockholders as a consequence.
2010	O53	Kuran, Timur, and Anantdeep Singh. 2010. <i>Economic Modernization in Late British India: Hindu-Muslim Differences</i>. Duke University, Department of Economics, Working Papers: 10-93. The Muslims of South Asia made the transition to modern economic life more slowly than the region's Hindus. In the first half of the twentieth century, they were relatively less likely to use large-scale and long-living economic organizations, and less likely to serve on corporate boards. Providing evidence, this paper also explores the institutional roots of the difference in communal trajectories. Whereas Hindu inheritance practices favored capital accumulation within families and the preservation of family fortunes across generations, the Islamic inheritance system, which the British helped to enforce, tended to fragment family wealth. The family trusts (waqfs) that Muslims used to preserve assets across generations hindered capital pooling among families; they were also ill-suited to profit-seeking business. Whereas Hindus generally pooled capital within durable joint family enterprises, Muslims tended to use ephemeral Islamic partnerships. Hindu family businesses facilitated the transition to modern corporate life by imparting skills useful in large and durable organizations.
2010	Q22	Cervera Paz, Angel. 2010. "Percepcion cooperativa de las cofradias de pescadores: Un estudio empirico. (Fishing Guilds and Social Economy: An Empirical Study. With English summary.)" <i>Revista de Estudios Cooperativos</i>, 0(103): 7-32. Spain's legal framework defines Fishing Guilds as Public Law Associations, thus linking and associating them to the authorities, and making them dependent on Spain's Central and Regional governments. Nonetheless, a detailed analysis of Guilds will let us conclude that, apart from being Public Law Associations, Guilds could be classified within the social economy framework due to its many other features. First of all, a revision of the bibliography has been made concerning two thematic modules: Fish Guilds: their historical evolution and issues affecting them and social economy companies regarding Fishing Guilds. Next, an empirical analysis has been carried out with the aim of accounting for the Guilds' specific issues by directly asking the people in charge, so as to go into the Guilds' quantitative and qualitative aspects in detail. This will allow us to show why guilds should belong to the social economy by searching for the values and principles shared by social economy companies within the guilds' area. Ours is an empirical-descriptive work. Descriptive, as it is mainly based on the description of a "group, community, or institution whose main elements and features are being analysed". Empirical, as it involves a piece of research whose aim is the study of a given reality by way of either observing or experiencing what is going on in such a reality (Sierra 2002). Moreover, this work meets Chaves (1999) and Sanchis (2001)'s proposal who point out that "the scientific study of social economy should be carried out within a multidisciplinary environment, contributing an integrated and global perspective".

2011	C73	Deakin, S. 2011. <i>Legal Evolution: Integrating Economic and Systemic Approaches</i>. ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. This paper explores the scope for synthesis between economic and systemic approaches to the understanding of legal evolution. The evolutionary and epistemic branches of game theory predict that stable norms will emerge when agents share common beliefs concerning future states of the world. Systems theory see the legal order as a social system which reproduces itself by recursive acts of legal communication, thereby giving rise to self-reference and operational closure. At the same time, the legal system is cognitively open, that is to say, indirectly influenced by other social systems in its environment. This gives rise to the possibility of coevolution of law and the economy. It will be argued that systems theory, by developing the idea of law as an adaptive system with cognitive properties, provides a missing link in the evolutionary

Year	DE	Title and Abstract
		theory of norms. Recent game theoretical models imply that common knowledge is not entirely endogenous to agents' interactions, but depends to a certain extent on emergent normative structures. These include the public representations of common knowledge which are provided by the legal system. The paper will explore the implications of this idea, argue for an integrated economic and systemic analysis of legal evolution, and consider some of the theoretical and methodological implications of such a step.

2011	D87	Trzaskowski, Jan. 2011. "Behavioural Economics, Neuroscience, and the Unfair Commercial Practices Directive." <i>Journal of Consumer Policy</i> , 34(3): 377-92. This article suggests how and to what extent insights from behavioural economics and neuroscience may be used for the interpretation of the 2005 Unfair Commercial Practices Directive. These disciplines provide useful insight in how the average consumer's decisions are influenced by commercial information and conducts. As the Directive focuses on whether a commercial practise distorts the economic behaviour of consumers, arguments for whether a particular commercial practise should be considered unfair may be found within these disciplines. It is important to bear in mind that the assessment that courts are to make is normative, and that behavioural economics and neuroscience is of a more descriptive nature. Thus these disciplines may not help draw the fine line between the legitimate influence of commercial activities and the illegal distortion of the average consumer's behaviour. However, the average consumer test is at least in principle flexible enough to allow the inclusion of research within human decision-making in order to apply a more realistic average consumer than the "Homo Economicus" applied by the European Court of Justice.
2011	E02	Ugur, Mehmet, and David Sunderland, eds. 2011. <i>Does Economic Governance Matter? Governance Institutions and Outcomes, New Directions in Modern Economics</i> . Cheltenham, U.K. and Northampton, Mass.: Elgar. Nine papers, originally presented at a conference held at the University of Greenwich in June 2010, explore the relationship between governance quality and macroeconomic outcomes such as growth, investment, and income inequality, and consider how the impact of governance quality unfolds at the microeconomic level to affect individual or corporate behavior. Papers discuss governance and asymmetric power; norms, advice networks, and joint economic governance—the case of conflicts among shareholders at the Commercial Court of Paris; legal versus reputational penalties in deterring corporate misconduct; strategies of transnational companies in the context of the governance systems of nation-states; the effects of convergence in governance on capital accumulation in the Black Sea Economic Cooperation countries; taxes, foreign aid, and quality of governance institutions; economic governance and full employment; the political economy of deregulation in the U.S. gas distribution market; and electricity sector reforms and the tariff review process in Brazil. Ugur is Jean Monnet Reader in Political Economy in the Department of International Business and Economics at the University of Greenwich Business School. Sunderland is Reader in Business History at the University of Greenwich. Index.

2011	H63 Q14	Herd, Richard, Vincent Koen, Ila Patnaik, and Ajay Shah. 2011. <i>Financial Sector Reform in India: Time for a Second Wave?</i> . OECD Publishing. OECD Economics Department Working Papers: 879. The Indian financial system has changed considerably since the 1990s. Interest rates have been deregulated and new entrants allowed in the banking and the securities business. The Indian equity market has become world-class. New private banks have emerged that are more customer-oriented than the older state-owned banks. Meanwhile, the scale of saving within the economy has expanded considerably, much as in East Asian economies during their high-growth period. This adds to the need for further financial-sector reform. In particular, banks need much greater freedom in asset allocation. While public-sector banks did appear sounder to the public during the 2007/08 crisis due to implicit government backing, they ought to be privatised to improve their governance and minimise the recurrent need for recapitalisation. The remaining obstacles to new entry have to be reduced. Financial inclusion is an important priority and restrictions on microfinance should be avoided. The regulatory and legal framework also needs to be overhauled, consolidating the diverse legislation. While such reforms would improve financial sector efficiency they would also likely have positive spillover effects on the rest of the economy and help sustain rapid growth. This Working Paper relates to the 2011 OECD Economic Survey of India (www.oecd.org/eco/surveys/india)
2011	I31	Cohen-Zada, Danny, and William Sander. 2011. "Religious Participation versus Shopping: What Makes People Happier?" <i>Journal of Law and Economics</i> , 54(4): 889-906. In this paper, we first explore how an exogenous increase in the opportunity cost of religious participation affects an individual's religious participation and reported happiness, using data from the General Social Survey. The exogenous shift in the cost of religious participation is a result of the repeal of so-called blue laws that restrict retail activity on Sundays. We find that repealing blue laws causes a significant decline in the religious participation of women and in their happiness. For men, we do not observe any effect on happiness, while the estimate of the effect on church attendance is similar in magnitude to that for women but is imprecise. We also use repeal as an instrumental variable for church attendance and provide direct evidence that church attendance has a significant positive effect on happiness.
2011	N53 N54	Guinnane, Timothy W., and Susana Martinez-Rodríguez. 2011. "Cooperatives before Cooperative Law: Business Law and Cooperatives in Spain, 1869-1931." <i>Revista de Historia Económica</i> , 29(1): 67-93. Studies of Spanish cooperatives date their spread from the Law on Agrarian Syndicates of 1906. But the first legislative appearance of cooperatives is an 1869 measure that permitted general incorporation for lending companies. The 1931 general law on cooperatives, the first act permitting the formation of cooperatives in any activity, reflects the gradual disappearance of the cooperative's "business" characteristics. In this paper, we trace the Spanish cooperative's legal roots in business law and its connections to broader questions of the freedom of association, the formation of joint-stock enterprises and the liability of investors in business and cooperative entities. Our account underscores the similarities of the organizational problems approach by cooperatives and business firms, while at the same time respecting the distinctive purposes cooperatives served.

2012	B11	Kumar, Vikas. 2012. "Cartels in the Kautilya Arthashastra." <i>AUCO Czech Economic Review</i> , 6(1): 59-79. This paper examines the legal-economic dimension of collusive manipulation of prices from the perspective of the Kautilya Arthashastra, an ancient Indian treatise on law and statecraft, which is among the oldest sources of information about cartels. It identifies cartels in the treatise, shows that cartels were treated more severely than individuals who manipulated prices, assesses the efficacy of penalties from the perspective of deterrence, and discusses the evolution of relevant laws. The economic analysis presented in the paper throws new light on the controversy surrounding the internal consistency of the Arthashastra. The paper also highlights the need to take note of the moral-legal environment within which pre-modern markets operated before studying them with the help of models developed for modern markets.

2012	D84	Di Maggio, Marco, and Marco Pagano. 2012. <i>Financial Disclosure and Market Transparency with Costly Information Processing. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9207</i> . We study a model where some investors ("hedgers") are bad at information processing, while others ("speculators") have superior information-processing ability and trade purely to exploit it. The disclosure of financial information induces a trade externality: if speculators refrain from trading, hedgers do the same, depressing the asset price. Market transparency reinforces this mechanism, by making speculators' trades more visible to hedgers. As a consequence, asset sellers will oppose both the disclosure of fundamentals and trading transparency. This is socially inefficient if a large fraction of market participants are speculators and hedgers have low processing costs. But in these circumstances, forbidding hedgers' access to the market may dominate mandatory disclosure.

2012	F50	Pistor, Katharina. 2012. <i>Towards a Legal Theory of Finance. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9235</i> . This paper develops the building blocks for a legal theory of finance. LTF holds that financial markets are legally constructed and as such occupy an essentially hybrid place between state and market, public and private. At the same time, financial markets exhibit dynamics that frequently put them in direct tension with commitments enshrined in law or contracts. This is the case especially in times of financial crises when the full enforcement of legal commitments would result in the self-destruction of the financial system. This law-finance paradox tends to be resolved by suspending the full force of law where the survival of the system is at stake; that is, at its core. Here, power becomes salient. This helps explain why finance is concentrated around ultimate lenders of last resort and why regulating finance's core has become so elusive. It also holds lessons for future reforms.

2012	I13	Topgul, Seda. 2012. "Sosyal Sigortalar ve Genel Saglik Sigortasi Kanunu'nda Kadinin Durumu. (Situation of the Women in Social Security and General Health Insurance Law. With English summary)." <i>Yonetim ve Ekonomi</i> , 19(2): 301-19. With recent social security reforms, the social security system in Turkey is subjected to crucial changes. This reform process directly impacts insured women, daughters, spouses, and mothers. The law of 5510 gives opportunities for insured women such that if she does not work and she has a baby, she can draw benefits twice during her motherhood period. Moreover, this law also provides the women who have disabled children with easy retirement and facilitates the insurance process of the women who work with handicrafts by giving them an opportunity to pay a lower insurance premium. There have been several changes in not only in short- and long-term insurance branches but also in the health insurance system. The obligatory general health insurance system has come into force since January 2012. Regarding the insurance system, health insurance covers the people who have no insurance under eighteen and the people who are formally depended on insured people. Otherwise, if the people have no health insurance, one has to do her/his income level test. According to test results, the premium of the people are paid by them or by the state. This study

Year	DE	Title and Abstract
		especially focuses on how this law affects women, with special reference to the short- and long-term insurance branches and general health insurance. In addition, it aims at explaining the situations of the people over the age 18 or 25, who are unemployed and are not a student after this law.
2012	L95 Q48	Littlechild, Stephen. 2012. "The Process of Negotiating Settlements at FERC." <i>Energy Policy</i> , 50(1): 174-91. Interstate gas pipelines and their customers presently settle about 90% of the rate cases set for hearing before the Federal Energy Regulatory Commission (FERC). The conventional regulatory litigation process is now only an occasional means of dispute resolution. This paper explains the settlement process, illustrating with the 12 section 4 rate cases brought by pipelines from 2008 and 2009. The paper also discusses and illustrates why parties prefer settlement to litigation, what difference it makes, which cases tend to settle, what might account for the increasing frequency of settlements over time, the recent phenomenon of pre-filing settlements and the recent settlement of section 5 cases brought by FERC. In contrast to many other regulatory jurisdictions, FERC Trial Staff play an active role in facilitating negotiation and settlement. They make an initial analysis 3 months after a pipeline files for a tariff rate increase. Thereafter, the regulatory aim is to bring the parties into agreement, not to determine an outcome and impose it upon them. This is a different role for the regulatory body than was previously apparent.

2012	P40	Chilosi, Alberto. 2012. "Stakeholder Protection, Varieties of Capitalism, and Long-Term Unemployment." <i>European Journal of Comparative Economics</i> , 9(2): 197-228. In the literature, the issue of the protection of stakeholder interests (of employees in particular) is usually considered in a static context: how should the institutions of corporate governance be shaped having regard to already existing firms, conforming, in particular, to some subjective criteria of fairness and fair play. It is remarkable that no attention is paid to the basic fact that a company in order to exist must first be established, and that the founders-owners are the original shareholders. Moreover, not necessarily the most appropriate protection of stakeholder interests can be provided by the institutions and practice of corporate governance, specific kinds of legal provision may be more suitable. But rather than substitution complementarity prevails between different legal provisions protecting the interests of stakeholders (in particular employees) and the stakeholder protection afforded through the institutions of capital governance, conforming to the logic of the different "varieties of capitalism". An aspect of the latter that is emphasized in the paper, and is usually overlooked, are the much higher rates of long-term unemployment associated with the continental European variety as compared with the Liberal Market variety of the Anglo-Saxon tradition. But the Scandinavian Social-Democratic market model gives the best of both worlds: low long-term unemployment rates and incidence, together with high degrees of employment protection.

2013	C01	Deakin, Simon. 2013. "The Legal Theory of Finance: Implications for Methodology and Empirical Research." <i>Journal of Comparative Economics</i> , 41(2): 338-42. This commentary on the LTF project highlights the importance of the idea that law 'constructs' finance and considers some of its methodological implications. The idea that law shapes finance implies that the legal system can be clearly differentiated in theoretical terms from the economy, and that the independent causal influence of the law

Year	DE	Title and Abstract
		on financial outcomes can be measured empirically. It will be argued that this can best be achieved by placing empirical research on law and finance in an evolutionary-theoretical perspective, which draws on related developments in game theory and systems theory, in the statistical study of law ('leximetrics'), and in time-series econometrics.
2013	C53	Jones, Peter L. 2013. "The Determinants of Aggregate Creditors' Voluntary Liquidations." <i>Applied Economics</i> , 45(10-12): 1321-30. This article investigates the determinants of Creditors' Voluntary Liquidations (CVLs), an area of research that has received comparatively scant attention in the literature despite the fact that, at least in the UK, this form of insolvency has consistently comprised the majority of company failures. It develops an Equilibrium Correction Model (ECM) to explain variations in the aggregate number of CVLs in England and Wales between 1963 and 1995. This is then subjected to out-of-sample testing over the subsequent 10-year period. The results indicate that in both the short-run and the long-run, changes in the level of liquidations can be explained by two main explanatory variables namely: the nominal after-tax cost of borrowing and changes in the overall level of economic activity. In addition, confirmatory evidence is provided for the dampening effect of the 1986 Insolvency Act on the number of liquidations. The model retains its forecasting accuracy in the out-of-sample period although there is possibly some preliminary evidence of a further mitigating effect associated with the Enterprise Act 2002.

2013	63	Blazy, Regis, Bruno Deffains, Gisele Umbhauer, and Laurent Weill. 2013. "Severe or Gentle Bankruptcy Law: Which Impact on Investing and Financing Decisions?" <i>Economic Modelling</i> , 34(0): 129-44. This research investigates how legal sanctions prevailing under bankruptcy may impact on debt contracting and on investing decision. We model firms having the opportunity to engage (or not) faulty management. In case of default, the firms may escape costly bankruptcy by reaching a private agreement with the bank. We show that such renegotiation process may depend on the level of severity of bankruptcy law. Our approach helps in answering the following key questions: can bankruptcy costs always be internalized? Who benefits from accrued severity? Should the creditors accept a certain level of moral hazard from their debtors? Should bankruptcy law be extremely severe in order to ensure ex-ante efficiency? Does such severity depend on the financial environment? The model focuses on three equilibriums. The first equilibrium describes honest firms that choose the best investment project (ex-ante efficiency). Here, we show that bankruptcy costs can be avoided through private renegotiation (ex-post efficiency). Yet, the legislator cannot directly implement this equilibrium as it does not depend on the level of legal sanctions. A second equilibrium describes tricky firms turning to the less profitable and riskiest project. Here, default is still privately resolved: the occurrence of such equilibrium can be avoided owing to a minimal amount of legal sanctions that depend on the level of interest rate. Last, we consider firms that adopt mixed strategies regarding their investment policy. Here, two post-default bargains prevail (pooling or separating) and costly bankruptcy may occur. Simulations illustrate how the bank finally chooses between these equilibriums while the legal environment becomes more severe. For moderate levels of legal sanctions, banks may accept a certain level of faulty management, expecting to take advantage of bankruptcy punishment. An increase in sanctions, however, has a compelling effect on the companies towards honoring their commitments. Once the optimal equilibrium prevails, any additional increase in sanctions is ineffective as the players' strategies no longer depend on the legal environment. As a result, extreme severity is not required to ensure both ex-ante and ex-post efficiencies. Last, we find that a more severe bankruptcy law increases the protection of banks and may result in reduction of the contractual interest rate, which on the other hand benefits the debtors.
2013	C93	Findley, Michael G., Daniel L. Nielson, and J. C. Sharman. 2013. "Using Field Experiments in International Relations: A Randomized Study of Anonymous Incorporation." <i>International Organization</i> , 67(4): 657-93. Efforts to fight international money laundering, corruption, and terrorist financing depend crucially on the prohibition barring the formation of anonymous shell companies. To study the effectiveness of this prohibition, we perform the first international relations (IR) field experiment on a global scale. With university institutional review board (IRB) clearance, we posed as consultants requesting confidential incorporation from 1,264 firms in 182 countries. Testing arguments drawn from IR theory, we probe the treatment effects of specifying (1) the international standards (managerialism), (2) penalties for noncompliance with these standards (rationalism), (3) the desire to follow norms through complying with international standards (constructivism), and (4) status as a U.S. customer. We find that firms prompted about possible legal penalties for violating standards (rationalism) were significantly less likely to respond to inquiries and less likely to comply with international law compared to the placebo condition. Some evidence also suggests that the constructivist condition caused significantly greater rates of noncompliance. The U.S. origin condition and the managerial condition had no significant effects on compliance rates. These results present anomalies for leading theories and underscore the importance of determining causal effects in IR research.
2013	F44	Iuga, Vasile. 2013. "Raportarea financiara, intre bun simt si normare juridica. (Financial Reporting, between Common Sense and Legal Standards. With English summary.)." <i>Oeconomica</i> , 22(1): 37-48. The present essay outlines the defining features of the capitalist system, the evolution of the Western political models during history and the way these have reflected in the business and financial reporting models. The differences between the Anglo-Saxon business model and the continental model are detailed, the advantages and disadvantages of both models being briefly assessed. The article presents the realities that lead to the foundation of financial regulation institutions as well as the founding principles of international financial reporting, in close connection to the cycles of the world economy. My statement is that the solution for overcoming the crisis is more capitalism, not less.

Year	DE	Title and Abstract
2013	L68	Blandin, Annie. 2013. "La television sans frontieres avec Internet: Interactions et ordres juridiques. (Connected TV: Interactions and Legal Orders. With English summary.)." <i>La Revue des Sciences de Gestion</i> , 48(263-264): 117-23. TV connected to the internet brings both new opportunities and mess. The announced converging world is first a collision between two sectors that are regulated differently. Indeed, regulations are stricter for audiovisual media and looser for the Internet. This has a considerable impact upon the new competitive deal, especially since the connected TV lets new players into the audiovisual landscape, which come for the most part from non-EU countries. It raises a question about how to regulate these new services to bring order. In this situation of reform, our contribution focuses on the frame of legal analysis of innovations rather than on positive law.
2013	L74	Metallinos, Pavlos. 2013. "Application of Mathematical Method in Public Works Tendering in Greece." <i>European Journal of Law and Economics</i> , 35(3): 397-407. In Greece, the legal framework for public works has application in each one of them, without exceptions. Historically, the Greek collective capitalist has utilized this framework for the purpose of reinforcing the degree of concentration (oligopolization) of the public works market. In the course of the year 1998, the legislator sought through implementation of Law 2576 to effect a forcible restructuring of the market and redistribution of the sectoral product to the benefit of the construction companies dominating the public works sector. Its aim was to either liquidate weaker contracting capitals or convert them into sub-contractors for construction oligopolies. It nevertheless transpires that the opposite results were produced to what was expected, so that there was a fall in the amount of product appropriated by the hegemonic construction companies. The legislator accordingly introduced Law 2940/2001 within a juridical framework that came into effect at the same time as Law 2576/1998, the objective being to rectify the deficiencies of the older legislation.
2013	L78	Kikkawa, Takeo. 2013. "Why Has Japan Revised the Mining Act? Historical and Contemporary Background." <i>Hitotsubashi Journal of Commerce and Management</i> , 47(1): 33-42.
2013	N31	Peoples, James. 2013. "The Legacy of the Interstate Commerce Act and Labor: Legislation, Unionization, and Labor Earnings in Surface Transportation Services." <i>Review of Industrial Organization</i> , 43(1-2): 63-84. The intended purpose of the 1887 Interstate Commerce Act (ICA) was the establishment of the Interstate Commerce Commission (ICC) as a regulatory agency that initially provided oversight of rate and entry of interstate commerce in the rail industry. The ICC's jurisdiction later included regulation of trucking and bus transportation. An unintended consequence of ICC regulation was the development of labor markets in these sectors that helped promote labor organization and labor rent sharing. Indeed, some of the most influential unions in American labor history represented workers in ICC-regulated industries. This study examines the ICA and its aftermath as it applies to labor in these industries.
2013	N46	Zegarra, Luis Felipe. 2013. "Free Banking and Bank Entry in Latin America." <i>Investigaciones de Historia Economica</i> , 9(3): 131-42. This article analyzes the impact of free-banking on the banking sector in Latin America in the 19th and early 20th centuries. I use data for seven countries to compare the entry of banks and the growth of bank output prior and after the enactment of free-banking laws to determine whether free-banking (by establishing general requirements for granting note-issuance rights) lowered barriers to entry. The results show that in most Latin American countries the adoption of free-banking laws did not cause in the short run an increase in bank entry and in bank output growth.
2013	N70	CV: Shiller, Robert J. 2013. "Inventors in Finance: An Impressionistic History of the People Who Have Made Risk Management Work." In <i>Financial Innovation: Too Much or Too Little?</i> , ed. Michael Haliassos, 3-13. Cambridge and London: MIT Press.
2013	N72	MacDonald, James M. 2013. "Railroads and Price Discrimination: The Roles of Competition, Information, and Regulation." <i>Review of Industrial Organization</i> , 43(1-2): 85-101. I evaluate railroad price discrimination in three periods: 1870-1886, before the passage of the Interstate Commerce Act; 1945-1975, when rates were regulated but railroads faced extensive intermodal competition; and 1980-2010, after the passage of major regulatory reforms. While price discrimination was widespread in each period, the specific practices varied as the nature of competition, regulation, and the information available to decision-makers changed. The Act focused heavily on price discrimination, and limited some practices while encouraging others. One major weakness of the Act was the restrictions that were imposed on pricing practices that could lead to cost reductions and productivity improvements.
2013	N91	Sylla, Richard, and Robert E. Wright. 2013. "Corporation Formation in the Antebellum United States in Comparative Context." <i>Business History</i> , 55(3-4): 653-69. Between 1790 and 1860, US state governments chartered 22,419 businesses, with minimum authorized capital totaling 4.58 billion dollars, by special statute. The US, in both total and per capita terms, had considerably more corporations and authorized corporate capital than the UK, France or Prussia did over that same span. Differences in incorporation and capitalization rates between nations were largely a function of differences in laws and politics, but differences among American states resulted more from differences in the timing and character of economic development.

2006	H54 R58	Newbery, David. 2006. <i>Power sector reform, private investment and regional co-operation</i> . Faculty of Economics (formerly DAE), University of Cambridge, Cambridge Working Papers in Economics. Modern infrastructure, particularly electricity, is critical to economic development. South Asia, with inefficient and bankrupt state-owned vertically integrated electricity supply industries, encouraged private generation investment to address shortages selling power to largely unreformed state electricity boards, exacerbating financial distress. Reforming the SEBs is an essential first step, followed by privatisation to sustain reform. Reducing losses and increasing plant load factors yield far higher returns than generation investment, where India and Pakistan under-price and exceed predicted levels of electric intensity. Private investors will require assurances that the contracts needed for IPPs are honoured, that legal disputes are efficiently and fairly resolved, subject to fall-back international arbitration, and that their purchasers are credit-worthy. This is easier with cheap gas, which is available to Bangladesh, but scarce in India. Regional

Year	DE	Title and Abstract
		energy trade would therefore do much to improve the investment climate, and a South Asia Energy Charter could underwrite increased energy trade.
2006	I28	Begosh, Allan, John Goldsmith, Ed Hass, Randall W. Lutter, Clark Nardinelli, and John A. Vernon. 2006. <i>Black Box Warnings and Drug Safety: Examining the Determinants and Timing of FDA Warning Labels</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12803. Comparing the safety of prescription drugs over time is difficult due to the paucity of reliable quantitative measures of drug safety. Both the academic literature and popular press have focused on drug withdrawals as a proxy for breakdowns in the drug safety system. This metric, however, is problematic because withdrawals are rare events, and they may be influenced by factors beyond a drug's safety profile. In the current paper, we propose a new measure: the incidence and timing of Black Box Warnings (BBWs). BBWs are warnings placed on prescription drug labels when a drug is determined to carry a significant risk of a serious or life-threatening adverse event. Using a unique data set, one that includes all new molecular entities (NMEs) submitted to the FDA between May 1981 and February 2006, and subsequently approved and marketed, we analyze the timing and incidence of BBWs. Our analyses also use data on several drug characteristics likely to affect the probability a new drug will receive a BBW. We draw several conclusions from our analyses. For example, drugs receiving priority FDA review are more likely to have BBWs at the time of approval than NMEs receiving standard review. We also find that early prescription volume and orphan drug status are associated with an increased likelihood of receiving a BBW. We do not, however, find a significant difference in the rate of BBWs across time cohorts. A comparison of NMEs approved before and after the 1992 Prescription Drug User Fee Act (PDUFA), which authorized the payment of user fees from drug manufacturers to the FDA in an effort to expedite new drug application (NDAs) review times, did not reveal a statistically significant difference in the rate of BBWs. Critics of PDUFA maintain that reduced FDA-approval times under PDUFA have compromised drug safety. We do not find empirical support for this contention.
2006	K36	Hansen, Mary, and Daniel Pollack. 2006. <i>Tradeoffs in Formulating a Consistent National Policy on Adoption</i> . American University, Department of Economics, Working Papers: 2006-14. Just as the courts must consider the tradeoff between the best interest of the child and parental rights in involuntary termination of parental rights, policy on international adoption must consider the tradeoffs between the best interest of the child and the long-term interests of the nation. We argue that countries that suspend international adoptions do not maximize social welfare. A consistent national policy to maximize the well-being of the children and society at large would be to devote resources today to the oversight of international adoption in accord with child protections under the Hague Convention, while at the same time developing a domestic system of care that provides for the physical and developmental needs of orphaned children in the context of permanent families.
2006	L53 Q30	Fuentes, Andres, Eckhard Wurzel, and Andreas Reindl. 2006. <i>Raising Economic Performance by Fostering Product Market Competition in Germany</i> . OECD Economics Department, OECD Economics Department Working Papers: 507. Much scope remains to make regulation of product markets more conducive to competition ? notwithstanding progress in recent years ? with substantial benefits for consumer welfare, productivity and employment. While the general competition legislation and enforcement framework is mostly effective, measures need to be taken to reduce administrative burdens on entrepreneurship and reduce the involvement of the government in business sector activities, notably through accelerated privatisation. Policies favouring small enterprises need to be revised, with a view to fully exposing them to competition and avoiding disincentives for small firms to grow. Substantial regulatory challenges exist in specific sectors, notably in the energy and railway industries where non-discriminatory access of market entrants to networks needs to be improved. Environmental objectives in energy market regulation could be achieved at lower cost. In the telecommunications industry, competition in the local loop can be strengthened. Regulation of the liberal professions is among the most restrictive in the OECD. Entry barriers need to be eliminated in crafts, and restrictions on large-scale retailing development could be eased. This paper relates to the 2006 Economic Survey of Germany (www.oecd.org/eco/surveys/germany).
2006	M42	Tadesse, Solomon. 2006. <i>The Economic Value of Regulated Disclosure: Evidence from the Banking Sector</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp875. The study examines the economic consequences of regulated disclosure in the banking sector, focusing on its impacts on the stability of banking systems. In a cross-country study of banking systems across 49 countries in the 90s, I find that banking crises are less likely in countries with greater regulated disclosure and transparency. Specifically, banking systems are less vulnerable to crisis if supported by financial reporting regimes characterized by (i) more comprehensive disclosure (ii) more timely financial reporting (iii) more informative reporting, and (iv) more credible financial disclosure. To the extent that banking crises are costly, the paper documents the positive impact of accounting information to the real sector of the economy.
2006	P20	Berkowitz, Daniel, and Yadviga Semikolenova. 2006. <i>Privatization with Government Control: Evidence from the Russian Oil Sector</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp826. Governments that privatize state industries often retain control over key distribution assets. While there are many examples of this form of partial privatization, to our knowledge there are no substantial quantitative studies of how governments use their control under these circumstances. In this paper we argue that the Russian government privatization of the oil sector during 1994-2003 is a useful case study because the federal government privatized oil production but retained monopoly control rights over the transport of crude onto world markets. Based on a simple analysis of the costs and benefits of control and ownership, we argue that in these circumstances the federal government would use its control over transport capacity to provide privileged access to those companies over which it has influence. We find that in 2003 this is indeed the case and that this system detracted from economic efficiency. In particular, private and regionally owned companies had to be much more productive than companies over which the federal government (the state) had influence to receive comparable access to world markets; state-influence companies had preferential access to routes with more capacity; and, the allocation of route capacity was sensitive to transport costs only in the state-influence sector.
2006	P27 P37 R11	Grigoriadis, Theodoris N., and Benno Torgler. 2006. <i>Energy Regulation, Roll Call Votes and Regional Resources: Evidence from Russia</i> . Fondazione Eni Enrico Mattei, Working Papers: 2006.146. This paper investigates the relative impact of regional energy production on the legislative choices of Russian Duma deputies on energy regulation between 1994 and 2003. We apply Poole's optimal classification method of roll call votes using an ordered probit model to explain energy law reform in the first decade of Russia's democratic transition. Our goal is to analyze the relative importance of home energy on deputies' behavior, controlling for other factors such as party affiliation, electoral mandate, committee membership and socio-demographic parameters. We observe that energy resource factors have a considerable effect on deputies' voting behavior. On the other hand, we concurrently find that regional economic preferences are constrained by the public policy priorities of the federal center that continue to set the tone in energy law reform in post-Soviet Russia.
2006	Q30	THE SAME AS L53 Fuentes, Andres, Eckhard Wurzel, and Andreas Reindl. 2006. <i>Raising Economic Performance by Fostering Product Market Competition in Germany</i> . OECD Economics Department, OECD Economics Department Working Papers: 507.

Year	DE	Title and Abstract
2006	Q43	Guerriero, Carmine. 2006. <i>Dependent Controllers and Regulation Policies: Theory and Evidence</i> . Fondazione Eni Enrico Mattei Working Papers: 2006.109. This paper analyzes the effects of supervisors' (i.e., regulators and judges) selection rules on regulated prices. A checks and balances' regulatory review process strengthens the role of the judicial power and election increases the populism of implicitly motivated supervisors. Election arises when the risk related to expropriation of sunk investments and the inter-party distance are lower. Employing U.S. electric power market's data, the empirical evidence strongly confirms these predictions. Indeed, when treated as endogenous, only the election of administrative law judges and not the one of regulators significantly lowers the level of electricity rates. Moreover a more effective supervision technology shows a marginal negative effect on regulated rates as well.

2007	C35	Kick, Thomas, and Michael Koetter. 2007. <i>Slippery slopes of stress : ordered failure events in German banking</i> . Deutsche Bundesbank, Research Centre, Discussion Paper Series 2: Banking and Financial Studies: 2007.03. Outright bank failures without prior indication of financial instability are very rare. Supervisory authorities monitor banks constantly. Thus, they usually obtain early warning signals that precede ultimate failure and, in fact, banks can be regarded as troubled to varying degrees before outright closure. But to our knowledge virtually all studies that predict bank failures neglect the ordinal nature of bank distress. Exploiting the distress database of the Deutsche Bundesbank we distinguish four different distress events that banks experience. Only the worst entails a bank to exit the market. Weaker orders of distress are, first, compulsory notifications of the authorities about potential problems, second, corrective actions such as warnings and hearings and, third, actions by banking pillar's insurance schemes. Since the four categories of hazard functions are not proportional, we specify a generalized ordered logit model to estimate the respective probabilities of distress simultaneously. Our model estimates each set of probabilities with high accuracy and confirms, first, the necessity to account for different kinds of distress events and, second, the violation of the proportional odds assumption implicit in most limited dependent analyses of bank failure.
2007	F20	Nieto, Maria, and Larry Wall. 2007. <i>Preconditions for a successful implementation of supervisors' Prompt Corrective Action: Is there a case for a banking standard in the EU?</i> . Banco de Espana, Banco de Espana Working Papers: 0702. Over the past years, several countries around the world have adopted a system of prudential prompt corrective action (PCA). The European Union countries are being encouraged to adopt PCA by policy analysts who explicitly call for its adoption. To date, most of the discussion on PCA has focused on its overall merits. This paper focuses on the preconditions needed for the adoption of an effective PCA. These preconditions include conceptual elements such as a prudential supervisory focus on minimizing deposit insurance losses and mandating supervisory action as capital declines. These preconditions also include institutional aspects such as greater supervisory independence and authority, more effective resolution mechanisms and better methods of measuring capital.
2007	I00 L00 L20 L21	Golec, Joseph H., and John A. Vernon. 2007. <i>Financial Risk in the Biotechnology Industry</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13604. The biotechnology industry has been an engine of innovation for the U.S. healthcare system and, more generally, the U.S. economy. It is by far the most research intensive industry in the U.S. In our analyses in the current paper, for example, we find that, over the past 25 years, average R&D intensity (R&D spending to total firm assets) for this industry was 38 percent. Consider that over this same period average R&D intensity for all industries was only about 3 percent. In the current paper we examine this industry along a number of dimensions and estimate its average financial risk. Specifically, we use Compustat and Center for Research in Securities Prices (CRSP) data from 1982 to 2005 for firms defined by the North American Industry Classification System (NAICS) as biotechnology firms to estimate several Fama-French three factor return models. The finance literature has established this model as the gold standard. Single factor models like the Capital Asset Pricing Model (CAPM) do not capture all of the types of systematic risk that influence firm cost of capital. In particular, the CAPM does not reflect the empirical evidence that supports both a size-related and a book-to-market related systematic risk factor. Both of these factors, based on biotech industry characteristics, will exert a greater influence on biotech firms, on average. Another implication is, of course, that cost of capital estimates for the industry will be underestimated when a single factor model, like the CAPM, is used. This also implies that the cost estimates of bringing a new drug and/or biologic to market will be understated if financial risk and cost of capital are measured using a single-factor model. In the current study we find that biotechnology firms are exposed to greater financial risk than other industries and are also more sensitive to policy shocks that affect, or could affect, industry profitability. Average nominal costs of capital over the 1982-2005 time period were 16.25 percent for biotechnology firms. Of course, these average estimates obscure significant variation in financial risk at the firm level, but nonetheless shed light on some interesting aggregate differences in risk. In the current paper we discuss the theoretical links between financial risk, stock prices and returns, and R&D spending. Several caveats are also discussed.
2007	J01 J08 K31 L25 L26	Chen, Martha. 2007. <i>Rethinking the Informal Economy: Linkages with the Formal Economy and the Formal Regulatory Environment</i> . United Nations, Department of Economics and Social Affairs, Working Papers. This paper explores the relationship of the informal economy to the formal economy and the formal regulatory environment. It begins with a discussion of the concept of the informal economy and its size, composition, and segmentation. It then discusses the linkages between the informal economy and the formal economy and the formal regulatory environment. The conclusion suggests why and how more equitable linkages between the informal economy and the formal economy should be promoted through an appropriate inclusive policy and regulatory environment.

2007	L25	Vasconcelos, Silvinha Pinto, and Francisco S. Ramos. 2007. "Implementacao de Contratos pela Autoridade Antitruste: O Caso do Mecanismo de Cessacao de Praticas Anticompetitivas (CCP). (With English summary)." <i>Economia (University of Brazil)</i> , 8(3): 573-95. The cease-and-desist commitment (CCP, a mechanism equivalent to a Consent Decree in the United States) is an agreement between the Administrative Counsel of Concurrence Defense (CADE) and an anticompetitive firm, aiming to cease the investigated practice in a certain period of time. During this agreement, there is a withdrawal of the lawsuit. If the firm hasn't respected the CCP, fines and reputation sanctions can be applied. Considering that the CCP utilization is still new in Brazil as

Year	DE	Title and Abstract
		well as the literature about the theme, the objective of this paper is to analyze the Condigaos for a firm make a CCP, in a game with incomplete information. The results indicate that: the firms should follow the CCP as bigger were the loss of reputation and fines, and smaller the infraction profits against the normal profits; the antitrust authority should offer the CCP when the benefits of this proposal were bigger than the losing of the firm; the antitrust authority should offer the CCP when there is a belief that the firm is low cost type.

2007	L25 L26	Visentini, Gustavo, and Valeria Panzironi. 2007. "Problems with Current Legislation Governing Public Limited Companies: Thematic Discussion and Proposed Changes." <i>Review of Economic Conditions in Italy</i>, 0(2): 169-212. Protection of savings or protection of the entrepreneur's business initiative? In truth, the two interests do not conflict but, rather, converge in fostering capitalist development. If small savers are not protected, they will not invest in enterprises, and this will brake the growth of firms. The difficulty lies in adapting the rules to the objectives. Italy's legal system has not succeeded on this front. A superabundance of regulation does not correspond to efficiency. Thus, we have excessive regulatory costs for protection but not the benefits. And despite strong regulation, the defences available under civil law are weak; this explains why penal law has often taken the lead in bringing out corporate scandals. As regards public limited companies, this deficiency of private law has been aggravated by the recent reform of company law, which has sharply reduced private protections by limiting shareholder challenges to resolutions of the shareholders' meeting, weakening board control over CEOs and eviscerating the conflict-of-interest principle, and has practically entrenched the CEO in his individual power. Restoration of private-law protections within PLCs is the starting point for efforts to rectify this Italian anomaly. Protection of savings or protection of the entrepreneur's business initiative? 2007	L26	THE SAME AS J01 Chen, Martha. 2007. <i>Rethinking the Informal Economy: Linkages with the Formal Economy and the Formal Regulatory Environment</i>. United Nations, Department of Economics and Social Affairs, Working Papers.
2007	L59	Arrunada, Benito. 2007. <i>Pitfalls to Avoid when Measuring Institutions: Is 'Doing Business' Damaging Business?</i>. Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. Over recent years, both governments and international aid organizations have been devoting large amounts of resources to "simplifying" the procedures for setting up and formalizing firms. Many of these actions have focused on reducing the initial costs of setting up the firm, disregarding the more important role of business registers as a source of reliable information for judges, government departments and, above all, other firms. This reliable information is essential for reducing transaction costs in future dealings with all sorts of economic agents, both public and private. The priorities of reform policies should therefore be thoroughly reviewed, stressing the value of the legal institutions rather than trivializing them as is often the case.
2007	P13	Marcuello, Chaime, Ana Bellostas, Carmen Marcuello, and Jose Mariano Moneva. 2007. "Transparencia y rendicion de cuentas en las Empresas de Insercion. (Transparency and Accountability in Work Integration Social Enterprises. With English summary.)" <i>CIRIEC-Espana, Revista de Economia Publica, Social y Cooperativa</i>, 0(59): 91-122. Work integration social enterprises (WISE) are under pressure in two different regards. On the one hand, they have to participate in the market and compete with other firms, ensuring that they are sustainable in terms of prices, costs and quality. On the other hand, they endeavour to offer a means of social integration through employment. WISE must therefore show their efficiency from both an economic and a social perspective, justifying their usefulness and legitimacy to all the social actors. In order to be seen as socially legitimate they must do more than simply abide by the legal regulations; they must resort to accountability tools that provide greater transparency and responsibility than any other market entity. This paper presents an accountability model based on our experience with Aragonese WISE, theories of accountability in NPOs and a review of the Global Reporting Initiative (GRI).
2007	P13	Garcia Maynar, Asuncion. 2007. "El momento actual de las Empresas de Insercion, un momento historico. (The Current Situation of Work Integration Social Enterprises, a Historic Moment. With English summary.)" <i>CIRIEC-Espana, Revista de Economia Publica, Social y Cooperativa</i>, 0(59): 7-32. On 29 June the Council of Ministers approved the Draft Bill on Work Integration Social Enterprises, which was in itself a great step forward, as it was the first time that so much had been done. The presentation of this Bill in Parliament is, in turn, the beginning of another long road to adapt work integration social enterprises to a legal framework that will enable them to work on more and better projects. This parliamentary procedure will help solve many questions that are posed by the Bill by accepting the amendments that are presented. This Law will lead to the regulation and standardization of the sector, although it will not bring with it markets or aid for firms, nor will it resolve many other matters that will have to be settled and defined. But this represents the beginning of another long road.
2007	P13	Garcia Maynar, Asuncion, and Marisa Esteve Arnal. 2007. "Las empresas de insercion en Espana: Normativa y caracteristicas. (Work Integration Social Enterprises in Spain: Legislation and Characteristics. With English summary.)" <i>CIRIEC-Espana, Revista de Economia Publica, Social y Cooperativa</i>, 0(59): 153-78. The current situation of the sector is the result of a long process. It began with the first business initiatives concerning social integration and the different regulations developed by regional governments in support of social enterprises. There have been continual demands in the sector for state-level regulations, with a Draft Bill to regulate work integration social enterprises that will probably be presented before the end of the year. This prospect paves the way for a new era in which different lines of work will be aimed at consolidating the sector, with demands for further measures in addition to the new Law to facilitate this consolidation.
2007	Q53	CV: Hamilton, James T., and Christopher H. Schroeder. 2007. "Strategic Regulators and the Choice of Rulemaking Procedures: The Selection of Formal vs. Informal Rules in Regulating Hazardous Waste." In <i>Economics of Administrative Law</i>, ed. Susan Rose-Ackerman, 267-316. An Elgar Reference Collection. Economic Approaches to Law, vol. 15.. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	R53	Bickenbach, Frank, Rudiger Soltwedel, and Hartmut Wolf. 2007. "Institutionelle Reformen fur eine rationale Flughafeninfrastrukturpolitik. (With English summary.)" <i>Zeitschrift fur Wirtschaftspolitik</i>, 56(1): 108-34. In Germany the legal planning and approval processes for airport expansion projects are heavily politicized, and legal disputes take years to resolve. Thus, doubts arise about the rationality, not only of specific approval decisions but also of the institutional setting within which

		these decisions are made. We analyze the deficiencies of the current institutional framework for planning and approving airport infrastructure projects in Germany and develop guidelines for an institutional reform.
2007	Z13	Gersen, Jacob E., and Adrian Vermeule. 2007. "Chevron as a Voting Rule." <i>Yale Law Journal</i> , 116(4): 676-731. In <i>Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.</i> , the Supreme Court created a new framework for judicial deference to agency interpretations of law: courts should defer to an agency interpretation unless the relevant statute is clear or the agency interpretation is unreasonable. In the past two decades, however, the doctrinal Chevron framework has come under increasing strain. We suggest an alternative, which is to cast Chevron as a judicial voting rule, thereby institutionalizing deference to administrative agencies. Our thesis is that a voting rule of this sort would capture the benefits of the doctrinal version of Chevron while generating fewer costs. The principal advantage of institutionalizing Chevron as a voting rule is that it makes agency deference an aggregate property that arises from a set of votes, rather than an internal component of the decision rules used by individual judges. A voting-rule version of Chevron would also allow more precise calibration of the level of judicial deference over time, and holding the level of deference constant, a voting rule would produce less variance in deference across courts and over time, yielding a lower level of legal uncertainty than does the doctrinal version of Chevron. We consider and respond to various objections.

2008	D24 E23	Arnold, Jens, Giuseppe Nicoletti, and Stefano Scarpetta. 2008. <i>Regulation, Allocative Efficiency and Productivity in OECD Countries: Industry and Firm-Level Evidence</i> . OECD Economics Department, OECD Economics Department Working Papers, 616. This paper relates diverging productivity performances across OECD countries over the past fifteen years to differences in the stringency of regulations in the product market. We first summarize industry-level evidence linking these diverging patterns to delays in service markets reforms in the wake of the ICT shock. The evidence we survey suggests that, especially in continental EU countries, tight regulation of services has slowed down growth in ICT-using sectors, which use intermediate service inputs intensively. Based on harmonised cross-country firm-level data, we then provide new evidence that one of the key channels through which inappropriate service regulations affect productivity growth is by hindering the allocation of resources towards the most dynamic and efficient firms. At the industry level, resources were allocated less efficiently across firms in countries where service regulations are less market-friendly. Firm-level econometric estimates confirm that anti-competitive service regulations hamper productivity growth in ICT-using sectors, with a particularly pronounced effect on firms that are catching up to the technology frontier and that are close to international best practice. In other words, regulations hurt in particular those firms that have the potential to excel in domestic and international markets.
2008	G11	Breeden, Charles H., and Brian C. Brush. 2008. "The Plaintiff as Victim and Investor: Prudent Investing and the Calculation of Economic Damages." <i>Journal of Legal Economics</i> , 14(3): 15-41. In recent years, 45 states have adopted laws regulating the actions of those with fiduciary responsibilities over invested funds of their principals. Under these new laws, trustees are required to behave as would a "prudent investor" in light of modern portfolio theory and are freed from depression-era statutes prohibiting all but low-yielding government securities as investment vehicles. Prudent investing recognizes the risk/return trade-off the role of diversification and financial intermediaries in eliminating default risk, and the importance of aligning investment decisions with specific circumstances of individuals. This paper explores the implications for forensic economists of these legal changes and the changes in background financial institutions and practices that they mirror. In cases of longer-term pecuniary loss where modern investment practices are likely to be followed by the victim with median attitudes toward risk, the discount rate used by forensic economists should reflect the returns that can reasonably be expected from an at least partially diversified investment. If tort damages are calculated based exclusively on risk-free discount rates, a typically diversified investment approach for the lump sum will result in a significant positive balance at the end of the loss period.
2008	H26	Chen, Martha. 2007. <i>Rethinking the Informal Economy: Linkages with the Formal Economy and the Formal Regulatory Environment</i> . United Nations, Department of Economics and Social Affairs, Working Papers. Recent developments in regulation and tax administration in Australia inspired this article on tax compliance and responsive regulation. This article analyzes the economics of crime and compliance as the dominant approach to tax enforcement of the past three and a half decades. It evaluates the key advantages and disadvantages of the economic approach as well as its application to tax. The article then explores responsive regulation as an alternative method that draws on the economic paradigm but also supplements this approach with other theories, particularly those involving identity, conflict escalation, and procedural justice. Building on this analysis and a case study of Australian investors in mass marketed tax schemes, the article suggests that the broader, more balanced, and closely tailored method of regulating responsively may enable regulators to draw on the advantages of the economic model while alleviating some of its drawbacks. Responsive regulation may therefore constitute a superior method for regulating compliance.
2008	I20	Soyler, İlhami. 2008. "Eğitim Hizmetleri Bağlamında Vakıf Üniversitelerinin Finansal ve Vergisel Sorunları. (With English summary)." <i>Maliye Dergisi</i> , 0(154): 52-76. The need for information is as important as biological and physiological needs of the man. Information is a fact that is acquired via education. Among public services, educational services have a significant role. Public services are within the coverage of both administrative law and public finance. In educational services, higher educational services are specifically important. In Turkey, the higher education is provided by state and foundation universities. Foundation universities have various problems, of which resource-expenditure problems are the principal ones. This paper discusses financial and tax-related problems of foundation universities.
2008	I38	Hervey, Tamara K. 2008. "The European Union's Governance of Health Care and the Welfare Modernization Agenda." <i>Regulation and Governance</i> , 2(1): 103-20. In the face of "permanent welfare austerity," the European Union (EU) is increasingly involved in the governance of health care through various "new governance" tools. This development coincides with a growing interest in modernization of welfare, including health care. One of the fundamental critiques of new governance in the EU context concerns the (perceived) inability of new governance to protect the "social" against the "market" in Europe's constitutional settlement. Using multi-level governance and constructivist approaches, this article considers whether the EU's governance of health care via the "Open Method of Coordination" advances a neo-liberal agenda of health care modernization.
2008	J21 J23	Viviano, Eliana. 2008. "Entry Regulations and Labour Market Outcomes: Evidence from the Italian Retail Trade Sector." <i>Labour Economics</i> , 15(6): 1200-1222. The paper analyzes the relationship between entry regulations and employment in the Italian retail trade sector. In Italy the opening of large outlets is regulated at the regional level. First, by using differences-in-differences estimators the paper presents evidence that in regions with less stringent entry regulations, retail trade employment does not decrease. Second, the paper focuses on the effects of the rules implemented in Abruzzo and Marche, two otherwise close and similar Italian regions which adopted very different policies: the first set tight restrictions on the opening of large stores; the second did not impose substantial entry regulations. The results show that in Marche after the inception of the flexible regulations

Year	DE	Title and Abstract
		the share of total retail trade employment in total population increased by 0.8 percentage points more than in Abruzzo. Fiercer competition also led to a recomposition of employment in small retail shops. These findings are robust to a number of checks.

2008	L24	Deakin, Simon, Ana Lourenco, and Stephen Pratten. 2008. <i>No 'Third Way' for Economic Organizations? Networks and Quasi-Markets in Broadcasting</i>. ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. We present two linked, longitudinal case studies of the use of quasi markets in UK broadcasting over the past decade: one looks at the regulated outsourcing of programme making to independent producers, the other at the development of an internal market system within the BBC. New network forms are shown to have arisen from the interaction of legal regulation, contracts, and property rights. However, these organizational forms are also seen to be associated with increased transaction costs and with signs of deterioration in programme quality and innovation. We suggest that for such networks to be a viable 'third way' between markets and hierarchy, closer attention needs to be given to the issue of institutional design.
2008	L73	Niquidet, Kurt, and Glen O'Kelly. 2008. <i>Forest-Mill Integration: A Transaction Costs Perspective</i>. University of Victoria, Department of Economics, Resource Economics and Policy Analysis Research Group, Working Papers: 2008-07. In Canada, where public ownership of forestland is prevalent, a central decision facing policy makers is how to allocate timber resources to private forest companies. Debates tend to focus around what proportion of the annual harvest should be devoted to markets opposed to long-term contracts. To give a guide to policy makers, we surveyed forest firms from New Zealand and Sweden where this decision is based purely on a commercial basis. On average, mills source fifty percent of their fibre from the market. However, using a fractional logit model, we test whether theories from transaction cost economics influence this decision. Results are consistent with transaction cost economics; firms decrease the proportion of fibre sourced from a market with increasing fibre specificity, capital intensity, and uncertainty.
2008	O18 P25	Naito, Jiro. 2008. "Relations between Central and Local Governments from the Administrative and Fiscal Aspect in China. (In Japanese. With English summary.)." <i>Journal of Chinese Economic Studies</i>, 5(2): 32-46. Chinese fiscal reforms have continued in various forms, with the "1994 Tax and Financial System Reform" being a turning point. However, there still remain significant tasks involving the entire state system, including the political balance between the central government and local governments and the desirable government functions. Therefore, in this paper, I will examine the actual state of insufficiency of the functions as well as problems with the systems and structure causing such deficiency, while focusing on the actual state of central-local relation from the fiscal aspect. The administrative and financial reform is being promoted in China. From the aspect of efficiency and decentralization, this movement is considerable, and also really important for the intergovernmental reform in China. The main point of this paper is to clarify the situation regarding promotion of enhancement of financial base, creation of a revenue source allocation system to ensure consistency in policies between central and local governments, and clarification of the division of roles. And how the "autonomous and self-responsibility" system should be created is also the key factor and urgent need. In addition, increasing transparency of public finance (especially in local levels) is indicated as an essential issue for the reform in China. Therefore, I will focus on the period after the "1994 Tax and Financial System Reform", and analyze the current state of central-local fiscal balances and financial transfer, as well as examine the budget system and administrative reform. Some experiences of fiscal and administrative reform in Japan are suggestive for the reform in China.
2008	O43	Bogart, Dan. 2008. <i>Competition and Commitment: the Supply and Enforcement of Rights to Improve Roads and Rivers in England, 1600-1750</i>. University of California-Irvine, Department of Economics, Working Papers: 070817. Prominent theories link political changes in seventeenth century England with greater security of property rights and less regulation. This paper informs these theories by studying the supply and enforcement of monopoly rights to improve roads and rivers between 1600 and 1750. The evidence shows that the King, Commons, and Lords all supplied improvement rights before the Glorious Revolution of 1688. Afterwards the Commons gained a monopoly over the initiation of rights and became increasingly effective. Lastly the evidence shows that Parliament and the King voided or diminished improvement rights, but such instances were less frequent and less arbitrary after 1688.

2008	P43	Djojosingito, Reza. 2008. "Mitigating Legal Risk in Islamic Banking Operations." <i>Humanomics</i>, 24(2): 110-21. The purpose of this paper is to outline the principles of and legal risk faced by Islamic banking and suggest necessary steps to mitigate them. The paper examines ideal concept of Islamic banking and its practice. A range of publication is used, however the bulk of it concerns existing practices to provide practical insight on the subject rather than theoretical discourse. The paper is sorted into sections: Introduction, Islamic banking system, existing practices, legal risk and proposed reform. Islamic banks face risks stemming from legal structure chosen due to the differences between principles of Shariah and law. While compliance to Shariah is paramount for Islamic banks, the law governing Islamic banking transactions may not necessarily give any consideration to Shariah. The paper elaborates legal risk exposed to parties to Islamic banking transactions encompassing the issues of the capacity of the parties to enter into a contract and its enforceability, uncertainty in laws, regulations, and legal actions pertaining to Shariah; as well as the legality of Islamic financial instruments. The paper reviews relevant laws and regulations related to Islamic banking, however no specific reference to any particular jurisdiction. This paper is a source of information for those in the Islamic banking industry without legal background or lawyer new to it. This paper touches upon a new area, the legal risk due to the divergence between the principle of Shariah and law. It offers practical insight into the legal aspect of Islamic banking operations.

2009	D85	Cave, Martin. 2009. "La regolamentazione delle reti di nuova generazione. (Regulating Next Generation Networks. With English summary.)." <i>Mercato Concorrenza Regole</i>, 11(3): 543-58. The introduction of new generation access networks represents an historic shift, which could transform the communications possibilities of millions of households, as well as the operations of every business. At the same time, the introduction of new generation access networks poses significant challenges to regulatory authorities, which have to balance promotion of investments and protection of competition. Where competition between different infrastructures exists, the investment incentives are sharpened, but some form of regulatory intervention may still be necessary. Regulatory authorities can use several tools to govern the transition to new generation access networks, such as regulatory concessions intended to bring forward investment, the implementation of a form of separation of the fixed access network and different types of co-investment. However, a further period of experimentation is needed, before any standard remedies are selected.

Year	DE	Title and Abstract
2009	F14 H56	Irish, Maureen. 2009. "Regulatory Convergence, Security and Global Administrative Law in Canada-United States Trade." <i>Journal of International Economic Law</i> , 12(2): 333-55. The North American Free Trade Agreement (NAFTA) contains provisions that encourage regulatory convergence among member countries. Convergence within regional trade agreements raises several issues, including questions of political accountability and the potential application of most favoured nation (MFN) rights to any mutual recognition agreements (MRAs) that are negotiated. The author suggests an interpretation of MFN obligations that is compatible with closed MRAs. As well, she addresses the contribution of global administrative law to procedures for accountability. This article argues that border security concerns should not over-ride other public policies on levels of convergence and economic integration. Even between contiguous countries, there is no reason to presume that regional trade agreements ought to adopt common security perimeters.

"Nurturing Regulatory Compliance: Is Procedural Justice Effective When People Question the Legitimacy of the Law?" <i>Regulation and Governance</i> , 3(1): 1-26. Procedural justice generally enhances an authority's legitimacy and encourages people to comply with an authority's decisions and rules. We argue, however, that previous research on procedural justice and legitimacy has examined legitimacy in a limited way by focusing solely on the perceived legitimacy of authorities and ignoring how people may perceive the legitimacy of the laws and rules they enforce. In addition, no research to date has examined how such perceptions of legitimacy may moderate the effect of procedural justice on compliance behavior. Using survey data collected across three different regulatory contexts--taxation (Study 1), social security (Study 2), and law enforcement (Study 3)--the findings suggest that one's perceptions of the legitimacy of the law moderates the effect of procedural justice on compliance behaviors; procedural justice is more important for shaping compliance behaviors when people question the legitimacy of the laws than when they accept them as legitimate. An explanation of these findings using a social distancing framework is offered, along with a discussion of the implications the findings have on enforcement.

2009	H81	Admati, Anat R., and Paul Pfleiderer. 2009. <i>Increased-Liability Equity: A Proposal to Improve Capital Regulation of Large Financial Institutions</i> . Stanford University, Graduate School of Business, Research Papers. While it is recognized that the high degree of leverage used by financial institutions creates systemic risks and other negative externalities, many argue that financial institutions must rely on extensive debt financing since equity financing is "expensive." Some of the reasons debt is attractive to financial institutions, such as tax benefits and implicit guarantees, are due to subsidies that exacerbate the negative externalities associated with leverage, and are therefore not legitimate from a public policy perspective. Another argument given for high levels of debt financing is that debt serves as a disciplining device for managers who would otherwise make suboptimal or wasteful investment decisions. We propose a mechanism that allows financial institutions to maintain the contractual obligations of debt while avoiding or reducing many of the costs associated with it, including deadweight bankruptcy costs, agency costs due to risk shifting, and under-investment associated with debt overhang. Essentially, we propose a way to increase the liability of the equity issued by the financial institution without changing the limited-liability nature of publicly-held securities. The increased liability is backed by a proposed "Equity Liability Carrier," which holds the increased-liability equity of the financial institution as well as safe liquid assets. In addition to reducing or eliminating the agency problems associated with leverage, this structure concentrates the incentives to monitor and control managers within equity holders, and reduces the need for inefficient liquidation, implicit guarantees and bailouts. Our proposal can be viewed as a way for regulators to impose effectively higher capital requirements, while allowing financial institutions to undertake significant debt commitments.
2009	J58 J80 L38	Kleiner, Morris M., and Alan B. Krueger. 2009. <i>Analyzing the Extent and Influence of Occupational Licensing on the Labor Market</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14979. This study examines the extent and influence of occupational licensing in the U.S. using a specially designed national labor force survey. Specifically, we provide new ways of measuring occupational licensing and consider what types of regulatory requirements and what level of government oversight contribute to wage gains and variability. Estimates from the survey indicated that 35 percent of employees were either licensed or certified by the government, and that 29 percent were fully licensed. Another 3 percent stated that all who worked in their job would eventually be required to be certified or licensed, bringing the total that are or eventually must be licensed or certified by government to 38 percent. We find that licensing is associated with about 14 percent higher wages, but the effect of governmental certification on pay is much smaller. Licensing by multiple political jurisdictions is associated with the highest wage gains relative to only local licensing. Specific requirements by the government for a worker to enter an occupation, such as education level and long internships, are positively associated with wages. We find little association between licensing and the

Year	DE	Title and Abstract
		variance of wages, in contrast to unions. Overall, our results show that occupational licensing is an important labor market phenomenon that can be measured in labor force surveys.
2009	K00	Harbich, Jurgen. 2009. "State Supervision of Local Government Authorities." <i>Uprava/Administration</i>, 7(4): 53-71. 2009	N21 N22	Caruthers, Bruce G., Timothy W. Guinnane, and Yoonseok Lee. 2009. <i>Bringing "Honest Capital" to Poor Borrowers: The Passage of the Uniform Small Loan Law, 1907-1930</i>. Yale University, Department of Economics, Working Papers. The Uniform Small Loan Law (USLL) was the Russell Sage Foundation's primary device for fighting what it viewed as the scourge of high-rate lending to poor people in the first half of the twentieth century. The USLL created a new class of lenders who could make small loans at interest rates exceeding those allowed for banks under the normal usury laws. About two-thirds of the states had passed the USLL by 1930. This paper describes the USLL and then uses econometric models to investigate the state characteristics that influenced the law's passage. We find that urbanization and state-level economic characteristics played significant roles. So did measures of the state's banking system. We find no evidence that party-political affiliations had any effect, which is consistent with the USLL's "progressive" character. Finally, we find little evidence that the passage of the USLL in one state made passage more likely in neighboring or similar states. If anything, the cross-state influences were negative. Our findings suggest that the Russell Sage Foundation only imperfectly understood the political economy of the USLL, and that a different overall approach might have produced a result closer to their aims.
2009	N73	Bogart, Dan. 2009. <i>Did the Glorious Revolution Contribute to the Transport Revolution? Evidence from Investment in Roads and Rivers</i>. University of California-Irvine, Department of Economics, Working Papers: 080918. Transport infrastructure investment increased substantially in Britain between the seventeenth and eighteenth century. This paper argues that the Glorious Revolution of 1688-89 contributed to transportation investment by reducing uncertainty about the security of improvement rights. It shows that road and river investment was low in the 1600s when several undertakers had their rights violated by major political changes or decrees from the King. It also shows that investment permanently increased after the Glorious Revolution when there was a lower likelihood that undertakers had their rights voided by acts. Together the evidence suggests that the political and institutional changes following Glorious Revolution made rights to improve infrastructure more secure and that promoters and investors responded to greater security by proposing and financing more projects.
2009	Q50	Viscusi, W. Kip, Joel Huber, Jason Bell, and Caroline Cecot. 2009. <i>Discontinuous Behavioral Responses to Recycling Laws and Plastic Water Bottle Deposits</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15585. This article examines the effects of recycling and deposit laws on consumer recycling of plastic water bottles using a nationally representative sample of 2,550 bottled water users. Economic theory predicts individual behavior that gravitates toward extremes--either diligent recycling or no recycling at all. This pattern is borne out in actual recycling behavior. Both water bottle deposits and recycling laws foster recycling behavior through a discontinuous effect that converts reluctant recyclers into diligent recyclers. More stringent recycling laws have a greater effect on recycling rates. The efficacy of these interventions is greatest for those who would not already recycle and especially for those in lower income groups or who do not consider themselves to be environmentalists.

2010	D03 D10 D14 D91 G20 G23 P46	Campbell, John Y., Howell E. Jackson, Brigitte C. Madrian, and Peter Tufano. 2010. <i>The Regulation of Consumer Financial Products: An Introductory Essay with Four Case Studies</i>. Harvard University, John F. Kennedy School of Government, Working Paper Series. The recent financial crisis has led many to question how well businesses deliver consumer financial services and how well regulatory institutions address problems in consumer financial markets. In response, the Obama administration proposed a new agency to oversee consumer financial services, and the recently enacted Dodd-Frank Wall Street Reform and Consumer Protection Act embraced the Administration's proposal by creating the Bureau of Consumer Financial Protection. Other regulatory reforms have been advanced, and in some cases adopted, in recent years, at both the federal and state level. In this paper, we provide an overview of consumer financial markets, detailing the purposes they serve, the extent to which they suffer from market failures or other deficiencies, and the structure of our current system of regulation. To illustrate our analytical framework, we present case studies on retirement savings, residential mortgages, payday lending, and mutual funds. We conclude with a series of observations on the limits of government intervention, suggestions about how to measure whether government intervention is successful, and potentially fruitful lines of future research and data collection.
2010	D61 Q51	Boyle, Kevin J., Nicolai V. Kuminoff, Christopher F. Parmeter, and Jaren C. Pope. 2010. "The Benefit-Transfer Challenges." <i>Annual Review of Resource Economics</i>, 2(1): 161-82. Presidential Executive Order 12,866 requires federal agencies to design "cost-effective" regulations and to assess "costs and benefits" of these regulations on the basis of "the best reasonably obtainable scientific, technical, economic, and other information." Benefit transfers are one economic approach used to estimate these benefits and costs, and the use of existing economic information to predict the effects of new policies is well established. However, advancing the practice of benefit transfers is crucial if economists are to play a role in developing federal policies. We review contributions to the benefit-transfer literature and present a unified conceptual framework to guide the design and evaluation of benefit-transfer guidelines.
2010	D61	DeMuth, Christopher C., and Douglas H. Ginsburg. 2010. "Rationalism in Regulation." <i>Michigan Law Review</i>, 108(6): 877-912. Although legislative efforts were in the forefront during the first year of the Obama Administration, legislation is not the only way an administration leaves its mark. Since the Carter Administration, White House oversight of regulatory programs has been an important tool that every president has used to advance his policy objectives. Key issues raised by White House oversight and the use of cost-benefit analysis as a guide to regulatory decisions are addressed in Retaking Rationality: How Cost-Benefit Analysis Can Better Protect the Environment and Our Health, by Richard L. Revesz and Michael A. Livermore (2008). In this Review, Christopher C. DeMuth and Douglas H. Ginsburg, both administrators of the White House regulatory review program during the Reagan Administration, evaluate and criticize Retaking Rationality's arguments in detail. They find

Year	DE	Title and Abstract
		that Retaking Rationality fails to support its claim that cost-benefit "fallacies" have been used to block worthwhile regulations, and that the book's authors hold an unrealistic conception of the ability of cost-benefit analysis to settle contentious political questions. Messrs. DeMuth and Ginsburg argue that Retaking Rationality's conception of White House oversight as a neutral policy-optimizing mechanism is also unrealistic: active White House involvement in agency rulemaking is a legitimate and necessary means by which a president pursues his policies, whether they be the policies of a President Reagan or those of a President Obama.
2010	D83	Bennett, Matthew, and Philip Collins. 2010. "The Law and Economics of Information Sharing: The Good, the Bad and the Ugly." <i>European Competition Journal</i>, 6(2): 311-37. We have entered the information age, where information is expected to be accessed, transferred, and shared freely. There can be substantial benefits to competition in markets and thus for consumers from the sharing of some types of information. Indeed remedies to increase transparency and share information have been applied in several some consumer and competition cases in order to enhance competition and outcomes for consumers. However sharing of information between competitors, either directly, or indirectly through third parties, generates significant risks of facilitating coordinated behaviour, and thus of restricting competition to the detriment of consumers. How to differentiate between pro-competitive and anti-competitive information sharing remains a difficult conundrum, on which the new draft EU guidelines are providing clarification. This paper seeks to complement the work already done for the draft guidelines. It starts by providing an economic framework in which one may think about the legal constructs of "object" and "effect" infringements. It then provides an overview of the key benefits and harm from information sharing and seeks to explain some of the apparent differences between how economists and lawyers view reductions in uncertainty that result from greater transparency. The final section seeks to delineate clearly the types of information sharing that clearly fall within the object and effect categories, and suggests a possible public/private distinction for the situations on the boundaries.

2010	F19	Hoffmann, Sandra, and William Harder. 2010. <i>Food Safety and Risk Governance in Globalized Markets. Resources For the Future, Discussion Papers</i>. Today a new generation of food safety policy is emerging in OECD countries and international public health forums. The United States has actively contributed to the thinking and scientific research underlying this new generation of policy. A consensus has emerged among nations about the basic components of an effective food safety system based on modern science and management practices. In shorthand, the vision is of a farm-to-fork, risk-based, scientifically supported safety control system. This system is built on several decades of experience with risk management in national governments, particularly in U.S. environmental and occupational and consumer safety policy. This paper describes the elements of a risk-based, farm-to-fork food safety system as it is emerging in OECD countries guided by discussions through Codex Alimentarius and traces its roots in the development of risk management policy in the United States.

2010	H43	Pisu, Mauro. 2010. <i>Tackling the Infrastructure Challenge in Indonesia</i>. OECD, Economics Department, OECD Economics Department Working Papers: 809. Indonesia's infrastructure is in poor shape, having suffered from protracted under-investment since the Asian financial crisis of the late 1990s, and constraints growth potential. This paper focuses on the current state of the regulatory framework and discusses different options for improvement in order to attract needed private investment. It recognises the ambitious reforms undertaken by the government thus far, but suggests that further efforts are needed. The authorities should establish a simple regulatory environment based on effective regulatory agencies resulting in lower regulatory uncertainty and realign prices to cost-recovery levels. This Working Paper relates to the 2010 OECD Economic Review of Indonesia (www.oecd.org/eco/surveys/Indonesia).
2010	H50	Karatoprak, Ertugrul. 2010. "Kamu Hizmetlerinin Sunumunda Benimsenen Yeni Yontemler ve Uygulamaların Kontrolü. (New Methods Adopted in the Public Services Provision and Control of the Implementations. With English summary.)" <i>Maliye Dergisi</i>, 0(159): 365-75. Within the scope of efforts for restructuring in the public management, the "Regulation on the Procedures and Principles to be followed in the Provision of Public Services" was put into implementation in the public sector as of 01/01/2010, which aims to remove regulations for unnecessary information and documents in services rendered by the general government; facilitate bureaucratic procedures and processes; provide services in a duly manner to the citizens in the shortest time by rendering these services over electronic environment first of all; and thereby to increase efficiency and effectiveness in the government by saving time and resources in the public agencies. In this study, the provisions of the abovementioned regulation are touched upon and the topic is linked to the Public Financial Management and Control Law No. 5018 and eventually control of the implementations are evaluated.
2010	H75 M13	Bianco, Magda, and Paolo Sestito. 2010. "Servizi pubblici locali: Concorrenza, regolazione e intervento pubblico. (With English summary.)" <i>Rivista di Politica Economica</i>, 100(1-3): 255-76. Local public services heavily affect the quality of life with an impact upon local development. Since they are often natural monopolies, they have typically been heavily regulated. Starting in the 1990s, a reform process in Italy aimed at liberalizing them. Its concrete steps have not taken adequately into account the potential opposition from relevant stakeholders and have established too weak and too local regulatory bodies. Recent reforms aimed at re-enforcing the competitive orientation of the legal frame. However, they do not appear to tackle the issues of establishing well functioning and independent regulatory bodies and of financing infrastructures.
2010	O13 P28	Zhang, Xuehua, Leonard Ortolano, and Zhongmei Lu. 2010. "Agency Empowerment through the Administrative Litigation Law: Court Enforcement of Pollution Levies in Hubei Province." <i>China Quarterly</i>, 0(202): 307-26. The existing literature on China's 1989 Administrative Litigation Law (ALL) has rarely discussed a minor provision that permits administrative agencies to enlist court assistance in enforcing administrative decisions. Focusing on court enforcement of pollution levies, this study examines how and why ALL has been employed so extensively by administrative agencies, environmental protection bureaus (EPBs) in this context. The study is based on interviews with judges, EPB officials and polluters involved in court actions as well as court statistical data from 1992 to 2005 for Hubei province. EPBs' heavy reliance on court enforcement for collecting pollution levies and fines resulted from incentives that encouraged the formation of mutually beneficial relationships between courts and EPBs in the 1990s. Court involvement has enhanced EPBs' enforcement powers, but the courts' engagement in enforcement has neither curtailed EPBs' arbitrary exercise of discretionary power nor induced polluters to reduce waste discharges.

2010	Q56	Aquilina, Kevin. 2010. "The Environment and Development Planning Bill: Proposals for Improvement." <i>Bank of Valletta Review</i>, 0(41): 23-46. The Environment and Development Planning Bill will codify, with amendments, the Environment Protection Act and the Development Planning Act into one law. This paper studies this Bill from the perspective of development planning legislation. It sets out the contribution this Bill will make to Administrative Law, Human Rights Law and the Law of Procedure. In certain respects, the Bill introduces novel concepts aimed at strengthening transparency and accountability in the workings of the Malta Environment and Planning Authority (MEPA). In places, the Bill does not go far in strengthening democracy in the development planning process. The paper thus suggests how the Bill can provide for a better application of the constitutional doctrine of the separation of powers, and for the human right of a fair hearing before an independent and impartial tribunal, whilst guaranteeing the institutional autonomy of MEPA from governmental interference in policy making and decision making.

2011	D04	Conway, Paul. 2011. <i>How to Move Product Market Regulation in New Zealand Back Towards the Frontier</i>. OECD Publishing. OECD Economics Department Working Papers: 880. From the mid-1980s, New Zealand was widely considered to be a leader in liberalising product market regulation (PMR). However, the reform of PMR has lost momentum over recent years. Many areas of PMR are still consistent with best practice, but New Zealand is no longer assessed to be at the forefront of regulatory policy making. Although economic geography clearly offers a partial explanation for the relative underperformance of the NZ economy, restrictive policies in some areas are also likely to be constraining growth in GDP per capita. Indeed, it is likely that being small and distant exacerbates the negative impact of restrictive product market policies on New Zealand's economic performance. This implies a genuine need to shift the regulatory framework back towards the OECD frontier. Ongoing improvements in regulatory governance, minimising the government's influence in competitive markets and lowering barriers to trade and FDI, including ongoing policy harmonisation and mutual recognition with trading partners where appropriate, would all help in this regard. This Working Paper relates to the 2011 Economic Survey of New Zealand (www.oecd.org/eco/surveys/NewZealand).
2011	D22	Conti, Rena M., Haiden A. Huskamp, and Ernst R. Berndt. 2011. <i>The Effect of FDA Advisories on Branded Pharmaceutical Firms' Valuations and Promotion Efforts</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 17528. The US Food and Drug Administration (FDA) expends considerable efforts in regulating medications approved for use. Yet the impact of medication labeling changes on brand pharmaceutical products, and whether and what firms do to respond to increased information regarding the safety and efficacy of a drug, have not been characterized. We propose a behavioral framework for examining the effects of FDA advisories on branded pharmaceutical firms and their products. We empirically assess the impact of recent FDA advisories on the stock market valuations of a sample of branded pharmaceutical manufacturing firms using event study methods. We examine whether and how branded pharmaceutical manufacturers respond to an advisory by assessing changes in promotion compared to non-affected firms. We find firms targeted by an advisory have average stock price declines of 3% in three days and 11% in five days following the advisory release, and in turn appear to decrease total physician-directed promotion spending, journals ads and detailing visits significantly six months following the advisory release; the provision of free samples is unaffected. We find no changes among therapeutic substitutes unaffected by the advisory. Results of sensitivity analyses suggest firms with market dominant positions experience similar decreases in stock market valuations and physician-directed promotion compared to pooled results. The results are also robust to alternative definitions of the timing of advisory release dates and the severity of advisories' wording. Theory and empirical results suggest the public release of FDA advisories negatively impacts firm's short-term market valuations. The results suggest an additional rationale for previously documented declines in prescribing after FDA advisory releases--significant declines in physician-directed promotion following FDA advisory releases; the combined (and likely correlated) effects of the release of the advisory and declines in physician-directed promotion on prescribing behavior are likely larger than the sum of the independent effects.
2011	E44 E65 N20 Q14	Herd, Richard, Vincent Koen, Ila Patnaik, and Ajay Shah. 2011. <i>Financial Sector Reform in India: Time for a Second Wave?</i> OECD Publishing. OECD Economics Department Working Papers: 879. The Indian financial system has changed considerably since the 1990s. Interest rates have been deregulated and new entrants allowed in the banking and the securities business. The Indian equity market has become world-class. New private banks have emerged that are more customer-oriented than the older state-owned banks. Meanwhile, the scale of saving within the economy has expanded considerably, much as in East Asian economies during their high-growth period. This adds to the need for further financial-sector reform. In particular, banks need much greater freedom in asset allocation. While public-sector banks did appear sounder to the public during the 2007/08 crisis due to implicit government backing, they ought to be privatised to improve their governance and minimise the recurrent need for recapitalisation. The remaining obstacles to new entry have to be reduced. Financial inclusion is an important priority and restrictions on microfinance should be avoided. The regulatory and legal framework also needs to be overhauled, consolidating the diverse legislation. While such reforms would improve financial sector efficiency they would also likely have positive spillover effects on the rest of the economy and help sustain rapid growth. This Working Paper relates to the 2011 OECD Economic Survey of India (www.oecd.org/eco/surveys/india)
2011	H44	Ibarra-Coronado, Rafael. 2011. "La ley de concesiones de obras publicas chilena en el tiempo. (The Chilean Law of Concessions of Public Works. With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(19): 183-222. The concession of public work is one of the modalities in which the public-private association in Chile is demonstrated. By virtue of this, the State entrusts to the private association the execution, conservation or repair of a public fiscal work in exchange for the right to exploit it in the terms stipulated in the respective contract of concession. It is a question of a relatively new system with tremendously successful results for a country such as Chile: 67 projects awarded by an approximate investment of US\$ 11,700 million. A large part of the success of this system is attributed to the existence of a juridical statute that protects and guarantees adequately the interests of all the involved actors, be these reports of the contract or third that relate to her. In the present document, the author does a review to the historical evolution of the Law of Concessions of Public Works up to its more recent modification in 2010. For reasons of development, the principal modifications introduced by each of the promulgated laws are being checked according to the opinion of the author. The aim of the work is to exhibit, in the international concert this evolution, having in consideration that this juridical statute is of habitual diffusion in international forums. No doubt, the main conclusion of this article is that the Law of Concessions of Public Works of Chile is a product of a long and costly learning process.

2011	H82	Martinez-Garcia, Juan Diego, and Antonio Leal-Holguin. 2011. "Arbitrariedad en la determinacion de los requisitos para contratar con el estado. El principio de proporcionalidad como proteccion contra la arbitrariedad. (Arbitrariness of Contractor Selection Criteria in the Bidding Processes: The Proportionality Principle as Protection against Arbitrariness. With English summary.)." <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(19): 223-68. This paper seeks to demonstrate that, when a public entity determines the requirements of a public bidding process, it affects the freedom of bidders and the efficient destination of public funds. Therefore, the determination of such requirements, in order to be legitimate and efficient, must be proportional. As shown in this paper, the proportionality principle, a general notion about the relation between means and ends, applies to the determination of requirements in public bidding process. Furthermore, this paper seeks to explore the way in which this principle can be applied.
2011	I12	Ashenfelter, Orley, Daniel Hosken, Michael Vita, and Matthew Weinberg. 2011. "Retrospective Analysis of Hospital Mergers." <i>International Journal of the Economics of Business</i>, 18(1): 5-16. Retrospective analyses of hospital mergers may be uniquely valuable because they speak directly to two important issues - the methods used for delineating relevant geographic markets in hospital merger analysis, and the implications of not-for-profit status on post-merger hospital pricing - that have been systematically misunderstood by the courts and other policy analysts, and which likely have led to systematically biased judicial decisions. By identifying these systematic analytical errors and their implications for judicial decision making, retrospective studies of consummated hospital mergers have the capacity to greatly improve the quality of future antitrust policy making.
2011	L87	Koenig, Christian, and Christopher Hasenkamp. 2011. "Die Vorgaben des Diskriminierungsverbotes und des Gebotes der Vermeidung von Preis-Kosten-Scheren für die Entgeltgestaltung des Marktbeherrschers im Postsektor. (The Requirements for the Setting of Prices by the Dominant Undertaking in the Postal Sector Derived from the Prohibition of Discriminatory Practices and the Obligation to Avoid Margin Squeezes. With English summary.)." <i>Wirtschaft und Wettbewerb</i>, 61(6): 601-10. The essential requirements for the setting of rates by the dominant undertaking in the postal sector for conveyance services involving a minimum mailing volume of 50 letter post items as well as for access to work sharing services are laid down in section 20 para. 2 of the German Postal Act (PostG). The wording of the rate criteria in section 20 para. 2 sentence 1 of the German Postal Act refers to abusive surcharges, exclusionary abuses and discriminatory abuses within the meaning of general competition law. Furthermore, the legislative purposes of market opening, promotion, and safeguarding of equal-opportunity and workable competition (section 1, section 2 para. 2 no. 2 of the German Postal Act) always have to be taken into account. Insofar, the rate criteria of the German Postal Act have to be interpreted according to this teleological direction. Thus, there are strict regulatory limits for the setting of rates by the dominant undertaking.
2011	M16	Bradac Hojnik, Barbara, and Miroslav Rebernik. 2011. "Analysis of Administrative Burdens for Companies in Selected SEE Countries." <i>Scientific Annals of the "Alexandru Ioan Cuza" University of Iasi</i>, 58(0): 191-201. The institutional framework in which companies have to act establishes the rules of the game. It is limited and controlled by a public administration system, which may be more or less open and contemporary for companies. The aim of this paper is to analyse administrative procedures and costs for companies when dealing with public administration from a theoretical and empirical point of view. The paper's goals are to compare administrative burdens and to find the advantages and weaknesses of administrative systems in selected countries. During a company's operation, from its establishment to its closure, entrepreneurs are constantly exposed to administrative systems and their requirements. They have to carry out different procedures regarding the company's establishment, the hiring and firing of employees, obtaining various licenses, state regulatory statistical and tax reporting, tax burdens, etc. Fulfilling all those administrative procedures may negatively impact the establishment and operation of companies in particular countries.

2011	N50 N70	Federico, Giovanni, and Paul Sharp. 2011. <i>The Cost of Railroad Regulation: The Disintegration of American Agricultural Markets in the Interwar Period</i>. University of Copenhagen. Department of Economics, Discussion Papers: 11-17. We investigate the costs of transportation regulation using the example of agricultural markets in the United States. Using a large database of prices by state of agricultural commodities, we find that the coefficient of variation (as a measure of market integration between states) falls for many commodities until the First World War. We demonstrate that this reflected changes in transportation costs which in turn in the long run depended on productivity growth in railroads. 1920 marked a change in this relationship, however, and between the First and Second World Wars we find considerable disintegration of agricultural markets, ultimately as a consequence of the 1920 Transportation Act. We argue that this benefited railroad companies in the 1920s and workers in the 1930s, and we put forward an estimate of the welfare losses for the consumers of railroad services (i.e. agricultural producers and final consumers).

OECD Publishing, OECD Working Papers on International Investment: 2012/3. Governments are facing an increasing number of arbitration claims by foreign investors relating to important public policies or seeking substantial damages, and many governments are taking a greater joint interest in how such cases are resolved in investor-state dispute settlement (ISDS). This scoping paper has supported inter-governmental dialogue about ISDS at several OECD-hosted investment Roundtable meetings. Part I compares ISDS with other international and domestic processes for resolving disputes including the WTO and European Court of Human Rights, and considers how ISDS may affect domestic policy making processes. Part II examines eight current and emerging issues in ISDS: (i) investors' access to justice; (ii) the costs of ISDS cases; (iii) remedies for foreign investors under investment treaties and their possible impact on a level playing field for domestic and foreign investors;

Year	DE	Title and Abstract
		(iv) the enforcement and execution of ISDS awards; (v) third party financing of ISDS; (vi) the characteristics, selection and regulation of arbitrators in ISDS; (vii) forum shopping and treaty shopping by investors; and (viii) the question of the consistency of decision-making in ISDS. Part III outlines key findings from a statistical survey of ISDS provisions in 1,660 bilateral investment treaties. Public comment on this paper, including 46 investment policy questions (as outlined in the paper), was obtained in May-July 2012 and is available on the OECD website.

Discusses Europeanization in the case of Greece; Europeanization manifested in legislative reforms; Europeanization as political adaptation to the structural programs, 1989-99; political adaptation and center-periphery politics; and a few tentative conclusions. Vamvakas is Assistant Professor in the Department of Political Science at the University of Western Ontario. No index.
2012	F36	Buck, Florian, and Eva Schliephake. 2012. <i>The Regulator's Trade-off: Bank Supervision vs. Minimum Capital</i>. CESifo Group Munich, CESifo Working Paper Series: 3923. We develop a simple model of banking regulation with two policy instruments: minimum capital requirements and supervision of domestic banks. The regulator faces a trade-off: high capital requirements cause a drop in the banks' profitability, while strict supervision reduces the scope of intermediation and is costly for taxpayers. We show that the expected costs of a banking crisis are minimized with a mix of both instruments. Once we allow for cross-border banking, the optimal policy is not feasible. If domestic supervisory effort is not observable, our model predicts a race to the bottom in banking regulation. Therefore, countries are better off by harmonizing regulation on an international standard.
2012	F52	Mayeda, Graham. 2012. "Legal Aspects of the Security-Development Nexus: International Administrative Law as a Check on the Use of Development Assistance in the "War on Terror"." <i>Chicago Journal of International Law</i>, 13(1): 71-121. When delivering international development assistance, states should not be able to place the goal of protecting their citizens from transnational terrorism above that of alleviating poverty in developing countries. And yet this is precisely what they do on a regular basis when they use their policy on international development assistance to achieve security goals, as Canada, the US, and the UK have done in Iraq and Afghanistan. This is bad development policy, it does not increase the safety of those in developed states, and it is objectionable on political and moral grounds. This Article argues that international administrative law can be used to challenge the legitimacy of using development policy to achieve security aims. While many modern advocates of the international administrative law paradigm restrict its application to the promotion of procedural norms, thus making it difficult to review the discretionary decisions of government policymakers, nineteenth-century advocates of international administrative law--for example, Lorenz von Stein and Karl Neumeyer--were bolder. I develop their arguments in this Article, demonstrating that in a globalized world, the impact of governments' decisions on the welfare of those in other states requires us to recognize a cosmopolitan legal order. This legal order recognizes that each individual on the globe has a right to self-actualization, which is a right to have a say in decisions that affect her. The norm of equality inherent in a cosmopolitan conception of international law can have a direct effect on domestic law, limiting the ability of policymakers to make government policies that disregard the negative effects on the poor in developing countries. The domestic courts in donor and recipient countries can be used to ensure that harmful government policies are more consistent with the equality of all and the protection of basic human rights.

2012	J31 J31 J38	Kotval, Zenia, Zeenat Kotval-K, Patricia Macherer, and John Mullin. 2012. "A Living Wage Standard: A Case Study of the US Virgin Islands." <i>Local Economy</i>, 27(5-6): 541-57. While a minimum wage standard refers to the lowest wage allowed by law, a living wage attempts to address issues of well-being and dignity. A minimum wage is not a living wage; a minimum wage may not allow low-wage workers a minimally secure way of life. For many communities, their minimum wage--even those set above the federal level--does not allow low-wage workers to meet their very basic living needs such as food, shelter, and basic medical care. If a community is successful in the passage of a living wage standard, the living wage becomes the legal minimum wage for the regulated businesses and institutions. Thus, living wage initiatives represent an approach to raising the minimum wage for the affected businesses regulated by the law. In 2008, the US Virgin Islands (USVI) Legislature decided to pass Act 7027 which required the USVI Bureau of Economic Research to develop an economic Self-Sufficiency Standard for the USVI. This current study, conducted by the authors, does not address arguments for a living wage based on morality; rather this study addresses the economic logic of a living wage by assessing the economic effects for the USVI.
2012	K35	Mulligan, James G., and Daniel J. Wedziewski. 2012. "Government Intervention to Prevent Bankruptcy: the Effect of Blind Bidding Laws on Movie Theaters". University of Delaware, Department of Economics, Working Papers: 12-03. In the 1970s motion picture studios increased their use of blind bidding and non-refundable guarantees in an attempt to reduce the risks associated with producing a small number of large budget films. However, theater owners claimed that blind bidding and guarantees shifted risk to them and increased the likelihood of bankruptcy, since they were required to bid for the right to exhibit a movie without seeing it first. In response to the lobbying of the theater owners, twenty-four states passed laws between 1978 and 1984 that banned blind bidding, while seven states also banned non-refundable guarantees. This paper provides the first empirical analysis of the conflicting claims made by theater owners and movie studios about the impact of these laws on the survival rates of independent theaters, admission prices, and delays in the release of movies. We find that the laws were not only ineffective in keeping theater owners at risk of bankruptcy from exiting the market; they may have been even detrimental to those theater owners converting theaters to multiplexes at that time.

With English summary.)." <i>Boletin de Estudios Economicos</i> , 68(209): 343-68. The current government reform effort to correct the serious imbalances accumulated by the Spanish economy in the last twenty years, needs to be complemented by other reforms that impulse and ensure a robust and fast solution to the crisis. The article ponders over the objectives that should be pursued reforms, lists those that are still pending, and focuses on three that considers essential: i) the tax position aimed at raising levels of European countries with lower restrictive effects and greater equity in the distribution of the costs of the crisis, ii) to complete labor reform to reverse the temporary employment and active and passive employment policy, and iii) reforming the public administration, especially in areas relating to institutional structure, professionalizing the civil service, and the transparency of its actions.
2013	E43	Di Lorenzo, Emilia, Albina Orlando, and Marilena Sibillo. 2013. "A Stochastic Model for Loan Interest Rates." <i>Banks and Bank Systems</i> , 8(4): 94-99. The topic of interest rate restrictions and their legal implications represents a delicate subject about which a recent inventory of EU authorities was developed. This is aimed to inspection of the so called principle of "good morals" against usury for the Member States. The most recent Italian law regulating legal rates of interest applied in loans, sets a threshold under which loan interest rates have to remain for being nonusurious, in the sense that if the loan rate lies outside the threshold, it becomes a usury rate and has to be prosecuted. The threshold is stated by Bank of Italy precisely each three-month period. In the paper the authors propose a stochastic process modelling the non-usurious interest rates applied in loans, in order to control its quarterly behavior. It is studied in the form of a modification of the Cox, Ingersoll and Ross model moving between two bands and closed expressions for its expected value and variance are given both conditional and unconditional. The model parameters are estimated by the Indirect Inference Method; the behavior of the expected value and variance functions are illustrated with graphs.

2013	E62 H25	von Arnould, Andreas, and Klaus W. Zimmermann. 2013. "Regulating Government's Share): The Fifty-Percent Rule of the Federal Constitutional Court in Germany." <i>European Journal of Law and Economics</i> , 35(1): 1-19. Some numbers in the political sphere seem to be chosen rather arbitrarily. One example might be the rule set out by the Second Senate of the German Federal Constitutional Court in 1995 that the overall tax load on assets must be limited to 50% of the yield on those assets. This rule was understood by many as a general principle for taxation. The article first sketches the socio-political climate under which the rule originated: a rise of neo-liberal thought met with the inability of the political institutions to reform the German welfare state with its ever-growing expenses. The Constitutional Court's intervention is interpreted as a reaction to this stagnation in politics. An analysis from the perspective of Constitutional Law, however, reveals that the 50% rule cannot be convincingly based on the German Basic Law, and instead must be seen as a political move of the Court. But this move did not follow an economic rationality, either; for an optimal government's share can only be determined in relation to the economic performance of a country and not by fixing it generally at a maximum of 50% of GDP. The demise of the 50% rule already began four years later. In 2006, finally, the Senate moved away from the individual rights-based approach of 1995 to a more general assessment, taking also into account an increasingly globalized tax competition. The reason for this clear-cut change in the Court's jurisprudence can be found in a change of the socio-political and institutional parameters, thus witnessing to the effect of the political climate on court decisions. The analysis also shows that the rule was created and abandoned only on the basis of an "introverted" legal discussion, economic arguments hardly playing any role in the process. The new line of the Senate, however, might guarantee for a better integration of economic science into tax policy by exchanging fixed limits for a "discursive" model, demanding from the tax legislator better reasons for higher taxes.
2013	F60	CV: Franca-Filho, Marcilio Toscano. 2013. "Development, Competition and Global Administrative Law." In <i>Citizenship and Solidarity in the European Union: From the Charter of Fundamental Rights to the Crisis, the State of the Art</i> , ed. Alessandra Silveira, Mariana Canotilho and Pedro Madeira Froufe, 151-65. Euroclio series, no. 77. Brussels and Bern: P.I.E. Peter Lang.
2013	G01	THE SAME AS E24 Valle, Victorio, Fernando Pampillon, and Angel Laborda. 2013. "Las reformas pendientes de la economia espanola. (The Remaining Reforms of the Spanish Economy. With English summary.)." <i>Boletin de Estudios Economicos</i> , 68(209): 343-68.
2013	G24 P34	Han, Kwangsuk, Yeonho Lee, and Chanil Park. 2013. "Legal Frameworks and Credit Information Systems in China, Korea, and Singapore." <i>Asian-Pacific Economic Literature</i> , 27(1): 147-55. We analyse the relationship between Public Credit Registries and Credit Bureaus in East Asia by observing credit information markets, in particular, in China, Singapore, and Korea. Singapore's credit information system consists of only a Credit Bureau. China and Korea have gone in different directions. Public Credit Registries play the role of credit information sharing in China, while Public Credit Registries and Credit Bureaus coexist in Korea. The results suggest an important relationship between the development of financial markets and credit information systems. The lower the income level and the heavier the government's hand in financial markets, the greater the need for Public Credit Registries; whereas, financial liberalisation and rising incomes encourage Credit Bureaus.

2013	J88	THE SAME AS E24 Valle, Victorio, Fernando Pampillon, and Angel Laborda. 2013. "Las reformas pendientes de la economia espanola. (The Remaining Reforms of the Spanish Economy. With English summary.)." <i>Boletin de Estudios Economicos</i> , 68(209): 343-68.
2013	L88 P23	Aimin, Qi, and Chen Xing. 2013. "The Chinese Approach to Spam Regulation Legislation." <i>International Journal of Intellectual Property Management</i> , 6(1-2): 79-94. China, as one of the top ten sources of spam, has enacted the law, Measures for the Administration of Internet E-mail Services, which are administrative rules for spam regulation. This paper reviews the course of China's spam legislation, introduces and comments on the basic content of the Measures, and discusses the approach to improve China's anti-spam legislation in the future combined with the basic theory of spam regulation. This paper analyses the conflict between the sender's freedom of speech and the recipient's privacy and personal information rights, and seeks the solution. This paper proposes that the 'implied deny' regime, which is more in line with the Chinese needs of economic and social development, may be adopted in future Chinese anti-spam legislation. Besides enacting a national specialised anti-spam law, China should endeavour to improve the legislation of privacy and information rights, perfect the industry self-discipline norms and promote anti-spam international legislation.
2013	M10	Giovannetti, Giorgia, Giorgio Ricchiuti, and Margherita Velucchi. 2013. "Heterogeneity in Managerial Strategies and Internationalization of Firms: The Case of Italy." <i>Economia e Politica Industriale</i> , 40(2): 51-66. The recent empirical literature on firm performance has highlighted the multidimensional concept of managerial strategies. The paper analyzes the nexus between these strategies and performance based on specific entrepreneurs' characteristics, corporate strategies, organizational capabilities and firms' approaches to internationalization. Using a dataset obtained by matching and merging Capitalia, ICE-Reprint, and AIDA surveys, we investigate the possible non-linear impact of managerial strategies on firm performance in Italy. While the specific entrepreneurs' characteristics do not seem to have a significant impact on firm performance, the mode of internationalization plays an important role. Important non-linearities arise when we singled out the role of skilled workers and managers in determining a firm's success in highly competitive markets.
2013	P23	THE SAME AS L88 Aimin, Qi, and Chen Xing. 2013. "The Chinese Approach to Spam Regulation Legislation." <i>International Journal of Intellectual Property Management</i> , 6(1-2): 79-94.

2013	P36	Wu, Xiaogang, and Jinhua Cheng. 2013. "The Emerging New Middle Class and the Rule of Law in China." <i>China Review</i> , 13(1): 43-70. This article attempts to bring classes back into empirical analyses of access to civil and administrative justice, focusing on the linkage between the emergence of the new middle class and legal developments in China. We define six classes--the elite class, the old middle class, the new middle class, the self-employed getihu, the working class, and farmers--and then examine class differentials in choosing legal resolutions to civil and administrative disputes, both actual and hypothetical ones. Based on the analysis of data from a national representative survey in 2005, we show that the elite and the new middle classes are more likely than the other classes to prefer the law to other forms of resolutions if they were to encounter any disputes; but after controlling for the economic and cultural resources they can have access to, class differentials disappear to a large extent, but the urban-rural divide remains. Among those who are experiencing civil disputes, the elite and the new middle class are also more likely to take legal action. The ruling elites, in alliance with the new middle class, could be the major political agents in promoting the rule of law in China.
2013	Q11	Colaneri, Paola. 2013. "Il regime delle quote latte a fronte della sua imminente fine. (The Restriction on Milk Production in Face of Its Imminent End. With English summary.)." <i>Economia e Diritto Agroalimentare</i> , 18(3): 411-27. The imminent end of restriction on milk production provides an opportunity to check out some critical profiles that have characterized the operation of the quota system in our country. After a summary of the rules governing the procedures for payment by installments, are analyzed some operational issues which could result in criticism of the community institutions with regard to Italy's ability to comply with the European rules.
2013	R38	Seabrook, Nicholas R., Eric M. Wilk, and Charles M. Lamb. 2013. "Administrative Law Judges in Fair Housing Enforcement: Attitudes, Case Facts, and Political Control." <i>Social Science Quarterly</i> , 94(2): 362-78. This study investigates the effect of attitudes, case facts, and political control on the fair housing decisions made by administrative law judges (ALJs) at the Department of Housing and Urban Development (HUD). Based on data obtained from HUD under a Freedom of Information Act request, we use Probit regression to model the outcomes of every housing discrimination case decided by the entire population of ALJs between 1989 and 2003. We discover significant variation in the likelihood of a pro-complainant outcome and the amount of actual damages awarded in fair housing disputes. The attitudinal model of judicial decision making appears to apply to ALJ behavior in housing discrimination cases. At the same time, case facts, bureaucratic oversight, and other legal factors constrain ALJs.
2013	R41	O'Neil, Patrick D., and Kenneth A. Kriz. 2013. "Do High-Reliability Systems Have Lower Error Rates? Evidence from Commercial Aircraft Accidents." <i>Public Administration Review</i> , 73(4): 601-12. High-reliability advocates claim that highly reliable organizations (HROs), such as the Federal Aviation Administration's (FAA) air traffic control system, routinely demonstrate the ability to safely and reliably perform large-scale technical operations. High levels of productivity with low levels of error are achieved even though complex technologies are used to accomplish mission goals. A recent study asserted that the FAA's air traffic control function developed HRO characteristics over a long period of time as part of a larger high-reliability system. In that study, identifiable and measurable attributes and characteristics associated with high reliability were constructed, and their emergence was tracked over time. In this article, time-series analysis was used to measure the relationship between characteristics associated with high reliability and commercial aviation accident reduction. A small but statistically significant effect was identified linking the adoption of HRO characteristics over time with a reduction in commercial aviation accident rates.
2013	R41 R48	Versluis, Esther, and Erika Tarr. 2013. "Improving Compliance with European Union Law via Agencies: The Case of the European Railway Agency." <i>Journal of Common Market Studies</i> , 51(2): 316-33. European Union agencies are increasingly used to stimulate domestic compliance with EU law, without concrete evidence for whether and how these bodies actually realize this. Through in-depth analysis of the European Railway Agency, this article enhances our empirical understanding of the working and functioning of EU agencies, and advances our thinking about compliance in international settings. It leads us to the insight that--in order to be capable of stimulating domestic compliance--agencies should be flexible to resort to a mix of compliance strategies in order to be able to cope with the varying domestic compliance situations.

Year	DE	Title and Abstract
2006		
2006	D82	van der Noll, Rob. 2006. <i>The Welfare Effects of Discrimination in Insurance</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 06-012/1. We study an insurance model characterized by a continuum of risk types, private information and a competitive supply side. We use the model to investigate the welfare effects of discrimination (also known as risk selection). We postulate that a test is available that determines whether an applicant's risk exceeds a threshold. Excluding the highest risks softens adverse selection, but constitutes a welfare loss for the high risks. In contrast to a lemons market intuition, we find that aggregate surplus decreases when risk aversion is high. When risk aversion is low however, discrimination increases aggregate surplus.
2006	H54	CV: Muller, Norman. 2006. "The Law of Public Procurement." In <i>Key Aspects of German Business Law: A Practical Manual</i> , ed. Michael Wendler, Bernd Tremml and Bernard Buecker, 149-63. Third edition. Berlin and New York: Springer.
2006	I18 Q58	Harrington, Winston. 2006. <i>Grading Estimates of the Benefits and Costs of Federal Regulation</i> . Resources For the Future Discussion Papers. I review two recent estimates of the costs and, in one case, benefits of federal regulation. The first is found in the Office of Management and Budget's 2005 report to Congress on the benefits and costs of federal regulations (OMB 2005b). OMB estimates annual benefits in 2004 to be \$70 to \$277 billion and costs to be \$34 to \$39 billion, but these estimates omit a great deal; the cost estimate, in particular, is generally acknowledged to be an underestimate. The other estimate, written by Mark Crain (Crain 2005) and sponsored by the Small Business Administration, uses a different approach and generates an estimate of

Year	DE	Title and Abstract
		\$1 trillion. Crain also finds that the burden on small firms is much greater than the burden on large firms. In the final section of the paper, I also review a recent comparison, presented in the 2005 report to Congress, of ex ante and ex post estimates of the benefits and costs of individual regulations. I find the Crain report to be deeply problematic and the OMB's ex ante/ex post comparison slightly less so.
2006	K19 O40 O53	Yueh, Linda Y. 2006. <i>Patent Laws and Innovation in China</i> . University of Oxford, Department of Economics, Economics Series Working Papers: 271. This paper explores whether the patent law and intellectual property rights (IPR) system have resulted in innovation in China during the reform period. It appears that the patent laws have produced a stock of patents, where the success rates of patent applications are fairly uniform across the country. As the IPR framework does not vary across provinces, we asked which factors would explain innovation in China. We find the main determinants of patents to be R&D expenditure and foreign direct investment, but not the number of researchers, though the level of human capital matters. We conclude that the patent laws in China have been associated with innovation that has accompanied economic growth despite imperfections in the legal system.
2006	Q58	THE SAME AS I18 Harrington, Winston. 2006. <i>Grading Estimates of the Benefits and Costs of Federal Regulation</i> . Resources For the Future, Discussion Papers
2007		
2007	R31 R38	Kleysteuber, Rudy. 2007. "Tenant Screening Thirty Years Later: A Statutory Proposal to Protect Public Records." <i>Yale Law Journal</i> , 116(6): 1344-88. Most consumers learn about tenant-screening reports only when a landlord points to an item on such a report as the reason for rejecting an application and provides the tenant with a copy of that report as required by law. Legal scholars have criticized these reports for more than thirty years, however, observing that they are prone to error, open to abuse, and generally contrary to established public policies. This Note examines existing mechanisms used to regulate these reports and finds them inadequate, endorsing instead one state's approach of "choking" information flows by disclosing eviction records only when the landlord prevails in court. In a digital age in which personal information is easily aggregated, court records should not be a vehicle for automatic damage to an individual's renting prospects and reputation.
2008		
2008	D12 O33	Kosta, Eleni, and Jos Dumortier. 2008. "Searching the Man behind the Tag: Privacy Implications of RFID Technology." <i>International Journal of Intellectual Property Management</i> , 2(3): 276-88. The emergence of radio frequency identification (RFID) technology provides the potential for vast and varied applications, bringing with it both promise and peril. RFID tags used as the medium for the collection and transmission of personal data, as well as tracing devices for the location of natural persons, open a Pandora's box regarding the privacy rights of individuals. The goal of this paper is to present the main privacy threats that arise from the widespread use of RFID technology and to illustrate the issues that have to be taken into consideration at the designing phase of an RFID application. The legislative initiative on RFID in the European Union (EU) will be presented and finally, a brief overview of the situation in the USA will be given.
2008	D12 D72	Sullivan, Clare. 2008. "Privacy or Identity?" <i>International Journal of Intellectual Property Management</i> , 2(3): 289-324. This article asserts that identity as an emergent legal concept is now evident in the UK (Identity Cards Act 2006 UK). The composition and legal function of the concept is examined and a framework for conceptualising identity in a transactional context from a legal perspective is presented. The article then examines the consequential right to database identity and its relationship to the broader right to identity as a fundamental human right. The origins and nature of the right to identity under international law, particularly under European Community law, are explored and distinguished from privacy. The author asserts that identity, rather than privacy, provides a more appropriate lens through which to view the issues, particularly those arising as a result of identity theft.
2008	J63 L31	Thompson, Eric. 2008. "Smoke-Free Laws and Employee Turnover." <i>Contemporary Economic Policy</i> , 26(3): 351-59. This study examines how smoke-free laws influence turnover among restaurant workers. The study uses a unique data set of payroll records of a franchisee of a national full-service restaurant chain operating 23 restaurants in the state of Arizona, a state where several communities have adopted smoke-free laws. Municipal smoke-free laws did not, on average, have a statistically significant effect on the probability of employee separation in the years after implementation. These results suggest that training costs associated with employee turnover would not rise for full-service restaurants in municipalities that adopt smoke-free laws.
2008	N22 N82	Hansen, Bradley, and Mary Hansen. 2008. <i>Religion, Social Capital, and Business Bankruptcy in the United States, 1921-1932</i> . American University, Department of Economics, Working Papers: 2008-15. We consider the value of social capital that derives from membership in a church. American states with larger churchgoing populations had lower business bankruptcy rates from 1921 to 1932, and states in which the churchgoing population was concentrated in few churches had business bankruptcy rates that were lower still. Both voluntary and involuntary bankruptcy were lower in states with higher church membership. The evidence suggests that church membership acted on bankruptcy through a safety net mechanism and not solely through indicating a preference for honoring commitment.
2008	O30 O38	Pouillet, Yves, Antoinette Rouvroy, and Denis Darquennes. 2008. "The Law Encounters Communication and Information Technologies: The Case of RFID." <i>International Journal of Intellectual Property Management</i> , 2(4): 372-95. The goal of this contribution is limited and ambitious at the same time. It involves the analysis of how a particular technology, radio frequency identifiers (RFID), has developed and how it has initially been regulated outside of the law. Then, we shall attempt to show how the law has sought or seeks, with more or less success in certain contexts, to control this technology.
2008	O33	THE SAME AS D12 Kosta, Eleni, and Jos Dumortier. 2008. "Searching the Man behind the Tag: Privacy Implications of RFID Technology." <i>International Journal of Intellectual Property Management</i> , 2(3): 276-88.

2009		
2009	I23 R30	Placid, Raymond, and H. Shelton Weeks. 2009. "Undergraduate Real Estate Law in the U.S." <i>Journal of Real Estate Practice and Education</i> , 12(1): 1-15. A course in real estate law should be a cornerstone of every undergraduate real estate program. However, this course is frequently taught by faculty who may have little experience in course design or in the relevant fields of practice. By examining the syllabi from undergraduate real estate law courses, this research summarizes the current composition of such

Year	DE	Title and Abstract
		courses and utilizes this information to construct a benchmark for this course. This information should be of interest to the faculty who are charged with delivering these courses and administrators who oversee undergraduate real estate programs.
2010		
2010	M20	Eichfelder, Sebastian, and Chantal Kegels. 2010. <i>Working Paper 09-10--Shifting of red tape? The impact of authority behavior on tax compliance costs.</i> Federal Planning Bureau, Belgium, Working Papers. The compliance costs of private taxpayers are not only affected by the tax law itself but also by its implementation through the tax authorities. In the following paper we analyze the effect of administrative actions on the compliance costs of private businesses. We demonstrate in a theoretical model that compliance costs may partially be interpreted as externalities of authority behavior. As a result we expect a "shifting" of administrative cost burdens from the tax administration to private taxpayers, what implies an economically inefficient outcome. Based on Belgian survey data, we find empirical evidence for the elucidated relationship. We give an quantitative estimate for the accordant effects and demonstrate, which activities of the administration are the most important cost drivers. Furthermore, we find empirical support that the effect of administrative issues is independent from the impact of the tax law itself.
2012		
2012	D74 L86	Gongol, Tomas. 2012. "The Analysis of Czech Arbitral Court Verdicts in Cases of .eu Domain Names." <i>Danube: Law and Economics Review</i> , 0(1): 71-93. The concern of this contribution is a problem connected with a limited usage of Internet space, which is based on domain names connecting common users with terminal information for the World Wide Web. The main focus is especially on a legislation of disputes for .eu domain names. After the necessary definition of current legislation sources on the level of European Union Secondary Law, follows the analysis of .eu domain name verdicts issued in an alternative manner of dispute solutions by Arbitral Court of Chamber of Economy of the Czech Republic and Chamber of Agriculture of the Czech Republic in 2007. One part of this analysis is also the creation of a "domain judicature" of issued verdicts.
2012	D83 L15	Zinman, Jonathan, and Eric Zitzewitz. 2012. <i>Wintertime for Deceptive Advertising?</i> National Bureau of Economic Research, Inc. NBER Working Papers: 17829. Casual empiricism suggests that deceptive advertising about product quality is prevalent, and several classes of theories explore its causes and consequences. We provide some unusually sharp empirical evidence on the extent, mechanics, and dynamics of deceptive advertising. Ski resorts self-report substantially more natural snowfall on weekends. Resorts that plausibly reap greater benefits from exaggerating do it more. Data on website visits suggests that consumers are appropriately skeptical of weekend reports. We find little evidence that competition restrains or encourages exaggeration. Near the end of our sample period, a new iPhone application feature makes it easier for skiers share information on ski conditions in real time. Exaggeration falls sharply, especially at resorts with better iPhone reception.
2012	E42 E50 F31 G10 H60 N11 N21 N41	Grubb, Farley. 2012. <i>Is Paper Money Just Paper Money? Experimentation and Local Variation in the Fiat Paper Monies Issued by the Colonial Governments of British North America, 1690-1775: Part I.</i> National Bureau of Economic Research, Inc. NBER Working Papers: 17997. The British North American colonies were the first western economies to rely on legislative-issued fiat paper monies as their principal internal media of exchange. This system arose piecemeal. It was monetary experimentation on a grand scale. In the absence of banks and treasuries that exchanged local fiat monies at fixed rates for specie monies (outside monies) on demand, colonial governments experimented with other ways to anchor their fiat monies to real values in the economy. These mechanisms included tax-redemption, interest-bearing notes, land-backed mortgage loans, sinking funds, and legal tender laws. The structure and performance of these mechanisms are explained. "[The colonies] cannot keep Gold and Silver among them sufficient for the Purposes of their internal Commerce... Paper Bills called Bills of Credit or Paper Money have therefore in the colonies long been substituted for real Money. Various Ways of issuing these and on different Foundations, have at different Times been thought of and practised.... On the whole no Method has been found to give any Degree of fixed, steady, uniform Value to Bills of Credit in America,..." (Benjamin Franklin, 13 Feb. 1767)

Intersections with the micro categories marked in yellow appeared in 2014—2015.

Пересечения с микрокатегориями, помеченными желтым, появились в 2014—2015 гг.

K29: Balance of Links

33	Links in 2005
33	New links in 2006-2013
756	Potential links at the end of 2013
822	Total

The date of final verification: November 28, 2016.

K29 — Contributors — Авторы

Lychagin, Anton M. — Лычагин Антон Михайлович — 0.3 AS²;

Lychagin, Dmitry M. — Лычагин Дмитрий Михайлович — 0.2 AS;

Lychagin, Mikhail V. — Лычагин Михаил Васильевич — 0.3 AS;

Torshenova, Viktoria E. — Торшенова Виктория Евгеньевна — 0.1 AS.

The total volume of derivative works for K29 is equal to 0.9 AS.

Общий объем раздела K29 — 0,9 авторских (уч.-изд.) л.

² AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40,000 characters (including the spaces between words), or 3,000 sq cm of illustrations (maps) like the table K29.E.
