2006	H40 J10 J40	McCrary, Justin. 2006. <i>The Effect of Court-Ordered Hiring Quotas on the Composition and Quality of Police</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12368. Arguably the most aggressive affirmative action program ever implemented in the United States was a series of court-ordered racial hiring quotas imposed on municipal police departments. My best estimate of the effect of court-ordered affirmative action on workforce composition is a 14 percentage point gain in the fraction African American among newly hired officers. Evidence on police performance is mixed. Despite substantial black-white test score differences on police department entrance examinations, city crime rates appear unaffected by litigation. However, litigation lowers slightly both arrests per crime and the fraction black among serious arrestees. 2006	L10	van Zeebroeck, Nicolas, Bruno van Pottelsberghe de la Potterie, and Dominique Guellec. 2006. <i>Claiming more: the increased voluminosity of patent applications and its determinants</i> . Universite Libre de Bruxelles, Solvay Business School, Centre Emile Bernheim (CEB), Working Papers CEB: 06-018.RS. The size of patent applications has doubled over the past two decades, resulting in a dramatic surge in patent offices' workload all over the world. This paper investigates the sources of this inflation in claims and pages for EPO applications. Four hypotheses are quantitatively tested: the diffusion of national drafting practices, the complexification of research activities, the emergence of new sectors, and patenting strategies. The results first reveal major differences across countries in patent drafting styles, especially between Civil and Common Law countries, the latter being characterized by much larger patents. Second, the success of the PCT route is leading to the harmonization of drafting styles worldwide toward the U.S. model, suggesting that the verbosity of patent drafters is not only due to the greediness of patentees but also to changes in patent systems. Finally, filing strategies, emerging sectors, and technological complexity are also important factors affecting the voluminosity of patents.

2008		
2008	I20 J15	Rothstein, Jesse, and Albert H. Yoon. 2008. <i>Affirmative Action in Law School Admissions: What Do Racial Preferences Do?</i> National Bureau of Economic Research, Inc, NBER Working Papers: 14276. The Supreme Court has held repeatedly that race-based preferences in public university admissions are constitutional. But debates over the wisdom of affirmative action continue. Opponents of these policies argue that preferences are detrimental to minority students--that by placing these students in environments that are too competitive, affirmative action hurts their academic and career outcomes. This article examines the so-called "mismatch" hypothesis in the context of law school admissions. We discuss the existing scholarship on mismatch, identifying methodological limitations of earlier attempts to measure the effects of affirmative action. Using a simpler, more robust analytical strategy, we find that the data are inconsistent with large mismatch effects, particularly with respect to employment outcomes. While moderate mismatch effects are possible, they are concentrated among the students with the weakest entering academic credentials. To put our estimates in context, we simulate admissions under race-blind rules. Eliminating affirmative action would dramatically reduce the number of black law students, particularly at the most selective schools. Many potentially successful black law students would be excluded, far more than the number who would be induced to pass the bar exam by the elimination of mismatch effects. Accordingly, we find that eliminating affirmative action would dramatically reduce the production of black lawyers.
2008	I21 J15	Rothstein, Jesse, and Albert Yoon. 2008. <i>Mismatch in Law School</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14275. An important criticism of race-based higher education admission preferences is that they may hurt minority students who attend more selective schools than they would in the absence of such preferences. We categorize the non-experimental research designs available for the study of so-called "mismatch" effects and evaluate the likely biases in each. We select two comparisons and use them to examine mismatch effects in law school. We find no evidence of mismatch effects on any students' employment outcomes or on the graduation or bar passage rates of black students with moderate or strong entering credentials. What evidence there is for mismatch comes from less-qualified black students who typically attend second- or third-tier schools. Many of these students would not have been admitted to any law school without preferences, however, and the resulting sample selection prevents strong conclusions.
2008	J15	THE SAME AS I20 Rothstein, Jesse, and Albert H. Yoon. 2008. <i>Affirmative Action in Law School Admissions: What Do Racial Preferences Do?</i> National Bureau of Economic Research, Inc, NBER Working Papers: 14276.
2008	R33	Kosar, Jure. 2008. "Zastavna pravica na stavbni pravici. (Pledge on the Building Right. With English summary.)." <i>Bančni Vestnik</i> , 57(1-2): 66-69. Building right is quite a new legal term in Slovenian law, brought to our legal order in 2003 by Law of Property Code (SPZ). Building right is well used in modern continental systems mainly because of possibility of solving a problem that limitation of properties brought and with that connected high prices of properties. Term Building right actually means a step away from the principal "superficies solo credit", which means a principal of the connection between property and building, the same way as it is arranged in our SPZ. Term Building right enables at the same time owner's right to a property and separated owner's right to a building on this same property. A principal of the connection between property and building on the other hand considers such building as a part of property on which it is built. As the building right in also possible to pledge, one can gather liquid assets without the existence of a building on the property at the time of the pledge.
2010		
2010	C70 D80 F20	Di Corato, Luca. 2010. <i>Profit Sharing under the Threat of Nationalization</i> . Fondazione Eni Enrico Mattei, Working Papers: 2010.5. A government bargains a mutually convenient agreement with a multinational corporation to extract a natural resource. The corporation bears the initial investment and earns as a return a share on the profits. The host country provides access and guarantee conditions of operation. Being the investment totally sunk, the corporation must account in its plan not only for uncertainty on market conditions but also for the threat of nationalization. In a real options framework where the government holds an American call option on nationalization we show under which conditions a Nash bargaining is feasible and leads to attain a cooperative agreement maximizing the joint venture surplus. We find that the threat of nationalization does not affect the investment time trigger but only the feasible bargaining set. Finally, we show that the optimal sharing rule results from the way the two parties may differently trade off rents with option value.
2010	F21 Q58	Aisbett, Emma, Larry Karp, and Carol McAusland. 2010. <i>Compensation for Indirect Expropriation in International Investment Agreements: Implications of National Treatment and Rights to Invest</i> . Centre for Economic Policy Research, Research School of Economics, Australian National University, CEPR Discussion Papers: 648. International investment agreements in bilateral treaties or free trade agreements allow investors to bring compensation claims when their investments are hurt by new regulations addressing environmental or other social concerns. Compensation rules such as expropriation clauses in international treaties help solve post-investment moral hazard problems such as hold-ups, thereby helping to prevent inefficient over-regulation and encouraging foreign investment. However, when social or environmental harm is uncertain preinvestment, compensation requirements can interact with National Treatment clauses in a manner that reduces host government welfare and makes them less likely to admit investment. A police powers carve-out from the definition of compensable expropriation can be Pareto-improving and can increase the level of foreign investment.
2010	G21 G28 H30	Kearney, Melissa Schettini, Peter Tufano, Jonathan Guryan, and Erik Hurst. 2010. <i>Making Savers Winners: An Overview of Prize-Linked Savings Products</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16433. For over three centuries and throughout the globe, people have enthusiastically bought savings products that incorporate lottery elements. In lieu of paying traditional interest to all investors proportional to their balances, these Prize Linked Savings (PLS) accounts distribute periodic sizeable payments to some investors using a lottery-like drawing where an investor's chances of winning are proportional to one's account balances. This paper describes these products, provides examples of their use, argues for their potential popularity in the United States--especially to low and moderate income non-savers--and discusses the laws and regulations in the United States that largely prohibit their issuance.
2010	I28 J21 J22 J24 J44 K36	Stevenson, Betsey. 2010. <i>Beyond the Classroom: Using Title IX to Measure the Return to High School Sports</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15728. Between 1972 and 1978 U.S. high schools rapidly increased their female athletic participation rates--to approximately the same level as their male athletic participation rates--in order to comply with Title IX, a policy change that provides a unique quasi-experiment in female athletic participation. This paper examines the causal implications of this expansion in female sports participation by using variation in the level of boys' athletic participation across states before Title IX to instrument for the change in girls' athletic participation. Analysis of differences in outcomes across states in changes between pre- and post-cohorts reveals that a 10-percentage point rise in state-level female sports participation generates a 1 percentage point increase in female college attendance and a 1 to 2 percentage point rise in female labor force

Year	DE	Title and Abstract
		participation. Furthermore, greater opportunities to play sports leads to greater female participation in previously male-dominated occupations, particularly in high-skill occupations.
2010	Q58	THE SAME AS F21 Aisbett, Emma, Larry Karp, and Carol McAusland. 2010. <i>Compensation for Indirect Expropriation in International Investment Agreements: Implications of National Treatment and Rights to Invest</i> . 2011		
2011	J58 O12 O41 O52	Braguinsky, Serguey, Lee G. Branstetter, and Andre Regateiro. 2011. <i>The Incredible Shrinking Portuguese Firm</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 17265. Using Portugal's extensive matched employer-employee data set, this paper documents an unusual feature of the Portuguese economy. For decades, the entire Portuguese firm size distribution has been shifting to the left. We argue in this paper that Portugal's shrinking firms are linked to the country's anemic growth and low productivity. We show that the shift in the Portuguese firm size distribution is not reflected in other advanced industrial economies for which we have been able to obtain comparable data. Careful attempts to account for expanding data coverage, a structural shift from manufacturing to services, and aggressive efforts to "demonopolize" the Portuguese economy leave about half of this shift unexplained by these factors. So, what does explain the shift? We argue that Portugal's uniquely strong protections for regular workers have played an important role. Drawing upon an emerging literature that attributes much of the productivity gap between advanced nations and developing nations to the misallocation of resources across firms in developing countries, we develop a theoretical model that shows how Portugal's labor market institutions could prevent more productive firms from reaching their optimal size, thereby constraining GDP per capita. Calibration exercises based on this model quantify the degree of labor market distortion consistent with recent shifts in the Portuguese firm size distribution. These calibration exercises suggest quite substantial growth effects could arise if the distortions were lessened or abolished altogether.
2011	Q40 Q55	Anderson, Robert, Mark A. Cohen, Molly K. Macauley, Nathan Richardson, and Adam Stern. 2011. <i>Organizational Design for Spill Containment in Deepwater Drilling Operations in the Gulf of Mexico: Assessment of the Marine Well Containment Company (MWCC)</i> . Resources For the Future, Discussion Papers. The Deepwater Horizon oil spill in the Gulf of Mexico in April 2010 led to the deaths of 11 workers, a six-month moratorium on deepwater drilling in the Gulf, and nearly three months of massive engineering and logistics efforts to stop the spill. The series of failures before the well was finally capped and the spill contained revealed an inability to deal effectively with a well in deepwater and ultradeepwater. Ensuring that containment capabilities are adequate for drilling operations at these depths is therefore a salient challenge for government and industry. In this paper we assess the Marine Well Containment Company (MWCC), a consortium aimed at designing and building a system capable of containing future deepwater spills in the Gulf. We also consider alternatives for long-term readiness for deepwater spill containment. We focus on the roles of liability and regulation as determinants of readiness and the adequacy of incentives for technological innovation in oil spill containment technology to keep pace with advances in deepwater drilling capability. Liability and regulation can significantly influence the strength of these incentives. In addition, we discuss appropriate governance structure as a major determinant of the effectiveness of MWCC.
2012		
2012	D20 Q50	Greenstone, Michael, John A. List, and Chad Syverson. 2012. <i>The Effects of Environmental Regulation on the Competitiveness of U.S. Manufacturing</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18392. The economic costs of environmental regulations have been widely debated since the U.S. began to restrict pollution emissions more than four decades ago. Using detailed production data from nearly 1.2 million plant observations drawn from the 1972-1993 Annual Survey of Manufactures, we estimate the effects of air quality regulations on manufacturing plants' total factor productivity (TFP) levels. We find that among surviving polluting plants, stricter air quality regulations are associated with a roughly 2.6 percent decline in TFP. The regulations governing ozone have particularly large negative effects on productivity, though effects are also evident among particulates and sulfur dioxide emitters. Carbon monoxide regulations, on the other hand, appear to increase measured TFP, especially among refineries. The application of corrections for the confounding of price increases and output declines and sample selection on survival produce a 4.8 percent estimated decline in TFP for polluting plants in regulated areas. This corresponds to an annual economic cost from the regulation of manufacturing plants of roughly \$21 billion, about 8.8 percent of manufacturing sector profits in this period.
2012	M50	Wozniak, Abigail. 2012. <i>Discrimination and the Effects of Drug Testing on Black Employment</i> . W.E. Upjohn Institute for Employment Research, Upjohn Working Papers and Journal Articles: 13-195. Nearly half of U.S. employers test job applicants and workers for drugs. I use variation in the timing and nature of drug testing regulation to study discrimination against blacks related to perceived drug use. Black employment in the testing sector is suppressed in the absence of testing, consistent with ex ante discrimination on the basis of drug use perceptions. Adoption of pro-testing legislation increases black employment in the testing sector by 7-30 percent and relative wages by 1.4-13.0 percent, with the largest shifts among low skilled black men. Results suggest that employers substitute white women for blacks in the absence of testing.
2012	N32	Lleras-Muney, Adriana, and Allison Shertzer. 2012. <i>Did the Americanization Movement Succeed? An Evaluation of the Effect of English-Only and Compulsory Schools Laws on Immigrants' Education</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18302. In the early twentieth century, education legislation was often passed based on arguments that new laws were needed to force immigrants to learn English and "Americanize." We provide the first estimates of the effect of statutes requiring English as the language of instruction and compulsory schooling laws on the school enrollment, work, literacy and English fluency of immigrant children from 1910 to 1930. English schooling statutes did increase the literacy of foreign-born children, though only modestly. Compulsory schooling and continuation school laws raised immigrants' enrollment and the effects were much larger for children born abroad than for native-born children.

2013	J11 J13 N31	Lahey, Joanna. 2013. <i>Birth of a Nation: The Effect of Fertility Control Access on the 19th Century Demographic Transition</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18717. During the 19th century, the US birthrate fell by half. While previous economic literature has emphasized demand-side explanations for this decline--that rising land prices and literacy caused a decrease in demand for children--historians and others have emphasized changes in the supply of technologies

Year	DE	Title and Abstract
		to control fertility, including abortion and birth control. In this paper I exploit the introduction during the 19th century of state laws governing American women's access to abortion to measure the effect of changes in the supply of fertility technologies on the number of children born. I estimate an increase in the birthrate of 4 to 12% when abortion is restricted, which lies within the ranges of estimates found for the effect of fertility control supply restrictions on birthrates today. The importance of legal abortion in reducing 19th-century birthrates helps to account for a previously unexplained portion of the demographic transition. This paper posits that there has long been a demand, often unmet, for fertility control that should be considered in future demographic research as well as in policy formulation.

2014	D74 D82	Ambrose, Meg Leta. 2014. <i>Speaking of Forgetting: Analysis of Possible Non-EU Responses to the Right to Be Forgotten and Speech Exception. Telecommunications Policy</i> , 38(8-9). The right to be forgotten is contentious partly because it highlights the difference between U.S. and E.U. prioritization of information privacy and freedom of expression. Recently, a moderate amount of research has been undertaken to explore the conceptual issues underlying the right to be forgotten and how the right conflicts with the U.S. first amendment, but little has been written about its impending implementation and interoperability issues. While this is an E.U. Data Protection Regulation proposing to grant rights only to E.U. citizens, the world has a stake in this right for a number of reasons. This article will analyze the options for non-E.U. countries and data controllers, namely the U.S., to react to the establishment of such a right, now called "The Right to Erasure". These options are the following: (1) adopt the same right to erasure for themselves, (2) ignore right to erasure claims, (3) comply with erasure take down requests, or (4) seek to establish a modified version of the right to erasure. In assessing these options, the article will first address the reality of a right to erasure under U.S. law. Second, it will discuss compliance and jurisdictional issues if the right is ignored. Third, the article will look at the impact of full acceptance of the take-down regime, focusing on the potential chilling effects and abuse. Finally, it will propose that non-E.U. countries encourage a right to erasure that is less disruptive: a right to erasure that allows data subjects to directly request removal of data held privately by data controllers and a right to oblivion for publicly available information that is enforced similarly to defamation claims, requiring a court order.
2014	F23	Dorsch, Michael T.; McCann, Fergal; McGuirk, Eoin F. 2014. <i>Democratic Accountability, Regulation and Inward Investment Policy. Economics and Politics</i> , 26(2). We examine the effect of domestic political accountability on leaders' strategies for attracting foreign direct investment to less developed countries. We consider two policy areas: the tax burden imposed on firms and the regulatory environment in which they operate. We find that democratic governments are more likely to offer relatively lower tax rates to foreign investors, whereas autocratic governments are more likely to offer relatively lax regulation. This result is driven by the greater elasticity of the political survival function to environmental and labor regulations in more democratic countries. Analyses of firm-level survey data confirm our main theoretical conclusions.
2014	H59	Asylbekova, Aigul; Saparaliev, Kulshat. 2014. <i>Economic Analysis and Legal Protection of State Language in Kazakhstan. (In Russian. With English summary.) Actual Problems of Economics</i> , 153(3). The article considers the current state of the state language usage and its legal protection in the Republic of Kazakhstan. A socioeconomic analysis of the language's current state is carried out, its strengths and weaknesses are determined and the directions for its further development are outlined, on the state level in particular. State budget expenditures on languages development in Kazakhstan until 2020 would enable the significant increase in the share of those speaking the official state language along with other ethnical languages, thus increasing the share of ethnical Kazakhs and the representatives of ethnic minorities in the public sector.
2014	J61	Vianney, DEQUIEDT; Simone, BERTOLI; Yves, ZENOU. 2014. <i>Can selective immigration policies reduce migrants' quality? CERDI Working Papers: 201419</i> . Destination countries have been resorting to selective immigration policies to improve migrants' quality. We propose a model that analyzes the effects of selective immigration policies on migrants' quality, measured by their wages at destination. Screening potential migrants on the basis of observable characteristics also influences their self-selection on unobservables that influences their wages. We show that the prevailing pattern of selection on unobservables influences the effect of an increase in selectivity, which can reduce migrants' quality when migrants are positively self-selected.
2014	L25 L26 M20	Starr, Evan; Balasubramanian, Natarajan; Sakakibara, Mariko. 2014. <i>ENFORCING COVENANTS NOT TO COMPETE: THE LIFE-CYCLE IMPACT ON NEW FIRMS. Center for Economic Studies, U.S. Census Bureau, Working Papers</i> . We examine the impact of enforcing non-compete covenants (CNC) on the formation and performance of new firms using matched employer-employee data on 30 US states. To identify the impact of CNC, we exploit the inter-state variation in CNC enforcement along with the fact that courts do not enforce such covenants between law firms and departing lawyers in any state. Using a difference-in-difference-in-difference specification with law firms and firms that are not within industry spinouts as the baseline, we find states with stricter CNC enforcement have fewer, but larger within-industry spinouts that are more likely to survive their nascent years, and conditional on survival, grow faster during those years. These results are consistent with CNC enforcement having a selection effect on within-industry spinouts. Particularly, with stricter enforcement, only founders with higher-quality ideas and resources choose to overcome CNC-related barriers, which reduces entry rate but increases observed short-term performance of these spinouts.
2014	R11 R14	Rohlin, Shawn; Ross, Amanda. 2014. <i>State Bankruptcy Law and Entrepreneurship: Evidence from a Border Analysis. Department of Economics, West Virginia University, Working Papers: 14-12</i> . This paper examines how differences in state bankruptcy laws, specifically the amount of the homestead exemption, affect business location decisions within a few miles of the state boundary. By focusing on these border areas, we are able to more effectively control for unobserved local attributes and isolate the effect of more wealth protection. We find that an increase in the homestead exemption attracts new businesses. We also find that a more generous homestead exemption has a positive impact on existing businesses, suggesting that asset protection through bankruptcy law encourages successful entrepreneurs to incur the risks. Our results indicate that the wealth protection provided by personal bankruptcy law is an important policy tool that state governments can use to attract new, successful businesses owners.

2015	I12	Silles, Mary. 2015. <i>The Causal Effect of Schooling on Smoking Behavior. Economics of Education Review, 48(0).</i> This paper, using data for Great Britain and Northern Ireland, examines the hypothesis that there is a causal relationship between schooling and cigarette smoking. Compulsory schooling laws are exploited to isolate for causation. Cohorts who were teenagers before and after the health consequences of smoking were widely known are used to compare the effects of additional schooling in the presence and absence of widespread exposure to health-related information. Although the results for Great Britain indicate no causal role for education either before or after the consequences of smoking for health were widely known, the results for Northern Ireland suggest that, at least among men, schooling affected smoking decisions prior to the public dissemination of knowledge on the dangers of smoking for health.
2015	I12 I18	Mpinga, Emmanuel Kabengele; Kandala, Ngianga-Bakwin; Hasselgard-Rowe, Jennifer; Tshimungu Kandolo, Felicien; Verloo, Henk; Bukonda, Ngoyi K. Zacharie. 2015. <i>Estimating the Costs of Torture: Challenges and Opportunities. Applied Health Economics and Health Policy, 13(6).</i> Due to its nature, extent and consequences, torture is considered a major public health problem and a serious violation of human rights. Our study aims to set the foundation for a theoretical framework of the costs related to torture. It examines existing challenges and proposes some solutions. Our proposed framework targets policy makers, human rights activists, professionals working in programmes, centres and rehabilitation projects, judges and lawyers, survivors of torture and their families and anyone involved in the prevention and fight against this practice and its consequences. We adopted a methodology previously used in studies investigating the challenges in measuring and valuing productivity costs in health disorders. We identify and discuss conceptual, methodological, political and ethical challenges that studies on the economic and social costs of torture pose and propose alternatives in terms of possible solutions to these challenges. The economic dimension of torture is rarely debated and integrated in research, policies and programmes. Several challenges such as epistemological, methodological, ethical or political ones have often been presented as obstacles to cost studies of torture and as an excuse for not investigating this dimension. In identifying, analysing and proposing solutions to these challenges, we intend to stimulate the integration of the economic dimension in research and prevention of torture strategies.

2006	G14	Naiker, Vic, and Farhid Navissi. 2006. "Securities Price Effects of Unionization Legislation." <i>Journal of Financial Research</i>, 29(1): 63-78. Prior studies document that firms experience negative stock price effects in response to unionization. We study the economic effects of a radical change in unionization legislation in New Zealand and hypothesize that the stock price effect of unionization is a function of prior unionization status of firms. We provide evidence that legislative events that increase the likelihood of introducing more stringent legislation do not affect stock prices of high-unionized firms, whereas low-unionized firms are affected negatively and significantly. Legislative events that signal less stringent unionization legislation result in significant stock price increases for all firms.
2006	G14	Wolfers, Justin. 2006. <i>Diagnosing Discrimination: Stock Returns and CEO Gender</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5507. A vast labour literature has found evidence of a 'glass ceiling', whereby women are under-represented among senior management. A key question remains the extent to which this reflects unobserved differences in productivity, preferences, prejudice, or systematically biased beliefs about the ability of female managers. Disentangling these theories would require data on productivity, on the preferences of those who interact with managers, and on perceptions of productivity. Financial markets provide continuous measures of the market's perception of the value of firms, taking account of the beliefs of market participants about the ability of the men and women in senior management. As such, financial data hold the promise of potentially providing insight into the presence of mistake-based discrimination. Specifically if female-headed firms were systematically under-estimated, this would suggest that female-headed firms would outperform expectations, yielding excess returns. Examining data on S&P 1500 firms over the period 1992-2004 I find no systematic differences in returns to holding stock in female-headed firms, although this result reflects the weak statistical power of our test, rather than a strong inference that financial markets either do or do not under-estimate female CEOs.
2006	H21	Berta, Nathalie, and Muriel Pucci. 2006. "La protection de l'emploi comme instrument de regulation: L'internalisation du cout des licenciements. (With English summary)." <i>Economie et Institutions</i>, 0(9): 57-84. O. Blanchard, J. Tirole [2003] and P. Cahuc [2003] propose to replace labour law with a taxation of lay-offs. The main purpose of our paper is to bring to light the implicit theoretical foundations that underpin such a proposal and to discuss the relevance of this approach, whose authors consider lay-offs as a source of negative externalities and therefore view employment security only as an internalisation tool, namely a way to restore Paretian optimality. In order to compare employment protection and layoff taxations within the same framework, we present an alternative modelling that extends P. Cahuc's model and invalidates the author's assertions about the effectiveness of lay-off taxation. We show that when some jobs are destroyed while profitable, the legislation and control of lay-offs are still a better tool than taxation.
2006	I11	CV: Abraham, Steven E., Adrienne E. Eaton, and Paula B. Voos. 2006. "Supreme Court Supervisory Status Decisions: The Impact on the Organizing of Nurses." In <i>Justice on the Job: Perspectives on the Erosion of Collective Bargaining in the United States</i>, ed. Richard N. Block, Sheldon Friedman, Michelle Kaminski and Andy Levin, 163-89. Kalamazoo, Mich.: W. E. Upjohn Institute for Employment Research.
2006	I20	Singh, Parbudyal, Deborah M. Zinni, and Anne F. MacLennan. 2006. "Graduate Student Unions in the United States." <i>Journal of Labor Research</i>, 27(1): 55-73. Graduate student unions have been attracting considerable academic and practitioner attention recently, especially since the New York University decision in 2000. Given the declining fortunes of the union movement, it seems as if the academic sector has the potential of becoming a vital new organizing frontier. However, there is scant research on this issue. We trace the origins and evolution of graduate student unions in the United States, discuss the relevant statutory and case law, analyze pertinent collective bargaining and strike issues, and suggest avenues for future research.
2006	L11	CV: Fabris, Nikola. 2006. "Administrative Barriers to Entry." In <i>Doing Business with Serbia</i>, ed. Marat Terterov, 63-75. Second edition. Global Market Briefings. London and Philadelphia: GMB in association with the Serbia Investment and Export Promotion Agency; distributed by Ingram Publisher Services.
2006	L13 L44	Spagnolo, Giancarlo. 2006. <i>Leniency and Whistleblowers in Antitrust</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5794. The paper reviews the recent evolution of leniency programs for cartels in the US and EU, surveys their theoretical economic analyses, and discusses the empirical and experimental evidence available, also looking briefly at related experiences of rewarding whistleblowers in other fields of law enforcement. It concludes with a list of desiderata for leniency and whistleblower reward programs, simple suggestions how to improve current ones, and an agenda for future research. The issues discussed appear relevant to the fight of other forms of multiagent organized crime-like auditor-manager collusion, financial fraud, or corruption—that share with cartels the crucial features that well designed leniency and whistleblower programs exploit.
2006	L15	CV: Shoult, Anthony. 2006. "Review of Business Regulations." In <i>Doing Business with Saudi Arabia</i>, ed. Anthony Shoult, 175-80. Third edition. Global Market Briefings. London and Philadelphia: GMB.

2006	L26	CV: Frey, Maria. 2006. "Changes in the Legal and Institutional Environment of the Labour Market." In <i>The Hungarian Labour Market: Review and Analysis 2006</i> , ed. KarolyFazekas and JenőKoltay, 197-224. Budapest: Hungarian Academy of Sciences, Institute of Economics; Budapest: National Employment Foundation.
2006	L44	THE SAME AS L13 Spagnolo, Giancarlo. 2006. <i>Leniency and Whistleblowers in Antitrust</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5794.
2006	L69	Iqbal, Muhammad Javaid. 2006. "Bonded Labor in the Brick Kiln Industry of Pakistan." <i>Lahore Journal of Economics</i>, 11(1): 99-119. Bonded labor is a dominant feature of the brick kiln industry of the country. Apparently an outcome of poverty, it is closely linked to the socio-cultural fabric of society. The vicious cycle of bondage subjugates the families physically and economically so that they are unable to break out of the trap despite putting in hard labor. The issue has a number of socio-economic implications and its solution lies in a multi pronged strategy; economic uplift, social involvement and educational breakthrough of the bonded families. The paper explores the nature and extent of bonded labor in the brick kiln sector and analyzes its repercussions on children and women of the bonded families. It also examines the available legal infrastructure tackling bonded labor. Finally the paper proposes a comprehensive scheme to ameliorate the concerns of bonded families and ways to eradicate the menace from the industry.
2006	M16	CV: Legal Advisors in Association with Baker & McKenzie Limited. 2006. "Employment Law." In <i>Doing Business with Saudi Arabia</i> , ed. Anthony Shoult, 135-46. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	M16	CV: Shoult, Anthony. 2006. "Review of Business Regulations." In <i>Doing Business with Saudi Arabia</i> , ed. Anthony Shoult, 175-80. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	M16	CV: Fabris, Nikola. 2006. "Administrative Barriers to Entry." In <i>Doing Business with Serbia</i> , ed. Marat Terterov, 63-75. Second edition. Global Market Briefings. London and Philadelphia: GMB in association with the Serbia Investment and Export Promotion Agency; distributed by Ingram Publisher Services.
2006	O11 O23	Hofstetter, Marc. 2006. "La politicamonetaria y la Corte Constitucional: El caso del salariominimo. (Monetary Policy and Constitutional Court: The Minimum Wage Case. With English summary.)." <i>Revista de EconomiaInstitucional</i>, 8(14): 105-24. In 1999 the Colombian Constitutional Court ruled that annual minimum wage increases should not be lower than inflation of the previous year. This article explores the impact of this decision on the effectiveness of monetary policy, and shows that the obligation to adjust the salary to past inflation leads monetary policy to have more effect on real activity and generates more persistent inflation.
2006	O12	Basu, Arnab K., Nancy H. Chau, and Ravi Kanbur. 2006. <i>A Theory of Employment Guarantees: Contestability, Credibility and Distributional Concerns</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5784. This paper develops a theory of employment guarantees when labor markets are imperfect and when the credibility of government policy announcements could be in doubt. The basic feature of an EGS is that any individual who satisfies a set of specified criteria is guaranteed public employment at a given wage if they want it. Thus, the two factors that define the guarantee are the wage and the ease of access. The problem for the planner is to choose these to maximize a social welfare function. If the labour market is perfectly competitive, then the introduction of an employment guarantee scheme is bound to have efficiency costs, and can only be justified through its positive distributional consequences--this has been the framework for most of the theoretical and empirical analysis of employment guarantee schemes. If the labor market is imperfect, however, the announcement of a credible employment guarantee scheme can improve efficiency through the introduction of contestability in the private labour market. The paper then considers the issue of credibility and solves for an incentive compatible employment guarantee scheme in a rational expectations equilibrium. It is shown that the outcome with a planner who cares only about efficiency can be less efficient than the outcome with a planner whose social welfare function also gives weight to poverty!
2006	O23	THE SAME AS O11 Hofstetter, Marc. 2006. "La politica monetaria y la Corte Constitucional: El caso del salario minimo. (Monetary Policy and Constitutional Court: The Minimum Wage Case. With English summary.)." <i>Revista de Economia Institucional</i>, 8(14): 105-24.
2006	P31	Employers Department of the China Enterprise Confederation. 2006. "How Are Chinese Enterprises Recruiting Employees?" <i>China Economist</i>, 0(5): 120-29. The years following China's adoption of the reform and opening up policy witnessed the marketization of labour recruitment as well as improvements to the laws and rules which regulate it However, obstacles to the development of Chinese enterprises still exist and further protection for the rights of the labour force is a necessity. This article by the Task Group of the Employers Department of the China Enterprise Confederation (CEC), reveals the present situation of China's labour recruitment by means of an investigation into 111 enterprises in five Chinese provinces and municipalities. Issues that need to be addressed by the Chinese government and enterprises, including formation of laws and strategies, labour market development, and administrative management are then summarized.
2006	Z12	CV: Pfeifer, Karen. 2006. "Islam and Labor Law: Some Precepts and Examples." In <i>Islam and the Everyday World: Public Policy Dilemmas</i> , ed. Sohrab Behdad and Farhad Nomani, 113-40. Routledge Political Economy of the Middle East and North Africa Series, vol. 4. London and New York: Routledge, Taylor and Francis.
2007		
2007	B21	Prasch, Robert E. 2007. "Professor Lester and the Neoclassicals: The 'Marginalist Controversy' and the Postwar Academic Debate over Minimum Wage Legislation: 1945-1950." <i>Journal of Economic Issues</i>, 41(3): 809-25. This article revisits what is remembered as the "Marginalist Controversy" in light of its immediate context and object: the substantial late 1940s increase in the federal minimum wage. Richard Lester's critique of "marginalist theory," and its implication that the minimum wage would be detrimental to labor, was founded upon empirical studies and surveys that supported an Institutionalist conception of the business firm, the labor market, and economic policy. His disputants, Fritz Machlup and George Stigler, countered his points on the basis of what they took to be "economic theory." By any measure, including those of their own intellectual allies, Machlup and Stigler fared poorly. Interestingly, they are collectively remembered as having been triumphant in this debate. The essay suggests that what triumphed was not their arguments but rather the Neoclassical school of economics that Stigler represented.
2007	D14	CV: Ferris, Shauna. 2007. "Ansett's Superannuation Fund: A Case Study in Insolvency." In <i>Retirement Provision in Scary Markets</i> , ed. Hazel Bateman, 161-86. Cheltenham, U.K. and Northampton, Mass.: Elgar.

Year	DE	Title and Abstract
2007	D24 L16	CV: .2007. "Sources of Growth in the Indian Economy: General Discussion." In <i>India Policy Forum 2006/07.</i> , ed. Suman Bery, Barry Bosworth and Arvind Panagariya, 58-63. Los Angeles and London: Sage Publications.
2007	D78	Hefeker, Carsten, and Michael Neugart. 2007. <i>Labor Market Regulation and the Legal System</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2041. When enacting labor market regulation governments face courts that interpret and implement the legal code. We show that the incentives for governments for labor market reform increase with the uncertainty that is involved in the implementation of legal codes through courts. Given that judges have more discretion in common as opposed to civil law systems more reform activity as a response to crises should be observed in the former system. This finding is backed by evidence from a panel of OECD countries.
2007	E32	de Graaf-Zijl, Marloes, and Ernest E. Berkhout. 2007. "Temporary Agency Work and the Business Cycle." <i>International Journal of Manpower</i> , 28(7): 539-56. The purpose of this paper is to test the relationship between gross domestic product (GDP) and agency work. The paper develops a theoretical model for the time interdependence of GDP, agency work and regular employment and tested model predictions using a VAR model. Results show that on the macro level temporary agency work leads GDP development. Temporary agency work is an excellent instrument for employers to adjust the size of their workforce to fluctuations in product demand. Temporary work agencies, however, have a tough job finding qualified personnel in tight labour markets because workers generally prefer the security of a permanent contract. It is shown in this paper that, as a result of these two countervailing forces, the number of hours worked through temporary work agencies precedes GDP development. Agency work increases in the last phase of a recession after regular workers have been dismissed. It expands further, in line with GDP, when the trough is passed until agency worker's labour supply stagnates. This leads to a decrease in agency hours even before the business cycle reaches its peak. Then agency work declines further, in line with GDP, until regular workers are dismissed and the cycle start again. Temporary work arrangements have become a key area of interest for firms, academics and policy makers. This paper shows how the use of these work arrangement fluctuates over time. Also, this paper shows that agency work can be used in predicting future GDP development.
2007	F32	2007. "Financial Regulation: 2007 Q2." <i>Banco de Espana Economic Bulletin</i> , 0(0): 111-18.
2007	H73 R58	CV: Holmes, Thomas J. 2007. "The Effect of State Policies on the Location of Manufacturing: Evidence from State Borders." In <i>Economics of Labor and Employment Law. Volume 1.</i> , ed. John J. Donohue III, 243-81. Elgar Reference Collection. Economic Approaches to Law, vol. 12.. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	H76	McCrary, Justin. 2007. "The Effect of Court-Ordered Hiring Quotas on the Composition and Quality of Police." <i>American Economic Review</i> , 97(1): 318-53. Arguably the most aggressive affirmative action program ever implemented in the United States was a series of court-ordered racial hiring quotas imposed on municipal police departments. My best estimate of the effect of court-ordered affirmative action on work-force composition is a 14-percentage-point gain in the fraction African American among newly hired officers. Evidence on police performance is mixed. Despite substantial black-white test score differences on police department entrance examinations, city crime rates appear unaffected by litigation. However, litigation lowers slightly both arrests per crime and the fraction black among serious arrestees.
2007	H79	Fitzpatrick, John J., Jr. 2007. "State Labor Legislation Enacted in 2006." <i>Monthly Labor Review</i> , 130(1): 3-23. Minimum wages, workplace security, prevailing wages, equal employment opportunity, wages paid, time off, drug and alcohol testing, child labor, human trafficking, and immigrant protections were among the most active areas in which legislation was enacted or revised during the year.
2007	H83	Courty, Pascal, and Gerald Marschke. 2007. "Making Government Accountable: Lessons from a Federal Job Training Program." <i>Public Administration Review</i> , 67(5): 904-16. This article describes the evolution of a performance measurement system in a government job training program. In this program, a federal agency establishes performance measures and standards for substate agencies. The performance measurement system's evolution is at least partly explained as a process of trial and error characterized by a feedback loop: the federal agency establishes performance measures, the local managers learn how to game them, the federal agency learns about gaming and reformulates the performance measures, possibly leading to new gaming, and so on. The dynamics suggest that implementing a performance measurement system in government is not a one-time challenge but benefits from careful monitoring and perhaps frequent revision.
2007	J01 K23 L22	Chen, Martha. 2007. <i>Rethinking the Informal Economy: Linkages with the Formal Economy and the Formal Regulatory Environment</i> . United Nations, Department of Economics and Social Affairs, Working Papers. This paper explores the relationship of the informal economy to the formal economy and the formal regulatory environment. It begins with a discussion of the concept of the informal economy and its size, composition, and segmentation. It then discusses the linkages between the informal economy and the formal economy and the formal regulatory environment. The conclusion suggests why and how more equitable linkages between the informal economy and the formal economy should be promoted through an appropriate inclusive policy and regulatory environment.

2007	L22 L38	Kleiner, Morris M., and Richard M. Todd. 2007. <i>Mortgage Broker Regulations That Matter: Analyzing Earnings, Employment and Outcomes for Consumers</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13684. As the role of mortgage brokers in mortgage origination grew from insignificant in the 1980s to dominant in recent years, questions have arisen about whether its services help or harm consumers. In response, states have increasingly regulated the business, largely by creating and tightening occupational licensing requirements for mortgage brokers. The question of whether increased occupational licensing of mortgage brokers improves consumer outcomes is theoretically ambiguous and has been little studied empirically. This study introduces a new database of mortgage broker licensing requirements and assesses the relationships between these requirements and outcomes in both the labor market for brokers and the consumer market for mortgages. We find that most aspects of mortgage broker licensing systems, such as mandatory professional education, do not have a significant and consistent statistical association with market outcomes. However, one component--the requirement in many states that mortgage brokers maintain a surety bond or minimum net worth--does have a significant and fairly consistent statistical relationship with both labor and consumer market outcomes. In particular, we find that tighter bonding/net worth requirements are associated with fewer brokers, fewer subprime mortgages, higher foreclosure rates, and a greater percentage of high-interest-rate mortgages. Although we do not provide a full causal interpretation of these results, we take seriously the possibility that restrictive bonding requirements for mortgage brokers have unintended negative consequences for many consumers. On balance, our results also seem to support

		theories of occupational licensing that stress the importance of pure entry and exit barriers over those that focus more on the human capital effects of licensing.
2007	L62	Chetcuti, Claude, and Nicolas Hatzfeld. 2007. "L'administration du Travail et les conflits collectifs: Citroen et Talbot (1982-1983). (Labour Administration and Collective Conflicts: Citroen and Talbot [1982-1983]. With English summary.)" <i>Travail et Emploi</i> , 0(111): 31-38. This issue analyses the Labour Administration action within collective conflicts among the Citroen and Talbot strikes in 1982, and then the Talbot conflict in 1983. Firstly, these conflicts are analysed within their economic, social and political context: dynamism of the beginning, redundancy and then rigor policy. The second part is the Claude Chetcuti's personal report: he was involved in this action as Labour regional director in Ile-de-France. The third part examines administration strategies during the XXth century to trace back French practices and laws in this subject.
2007	L87	Franz, Wolfgang. 2007. "Der trugerische Charme des Mindestlohns. (The Deceptive Charm of the Minimum Wage. With English summary.)" <i>Zeitschrift fur ArbeitsmarktForschung/Journal for Labour Market Research</i> , 40(4): 431-38. Binding minimum wages of whatever form not only cost jobs, they also frequently fail to achieve their generally socio-politically motivated objectives. The introduction of a minimum wage for some postal services and the decisions made by the coalition committee in June 2007 therefore constitute economic policy failures of a grand scale. The negative employment effects of binding minimum wages are well documented in the literature. Specific exceptions do not alter this. This negative verdict also applies to the implicit minimum wages that already exist in Germany. The law on the posting of workers as the vehicle to introduce a minimum wage constitutes a protectionist measure and gives rise to diverse evasive reactions. The recommendation is: hands off the minimum wage.

2008	B15 B31 B52	Chasse, J. Dennis. 2008. "Trade Agreements and Labor Problems: The Current Bearing of a Commons Proposal." <i>Journal of Economic Issues</i> , 42(4): 1123-44. This paper begins with a tax and a specially organized commission proposed by John R. Commons. Commons made his proposal because high tariffs were not benefiting workers. The paper contends that his proposal also applies to a current problem--the failure of trade agreements to improve working conditions. The paper bases its argument on data, standard economic reasoning, and Commons' approach in "constructive research" to wage transactions, public purpose, limiting factors, and power imbalances. The paper argues that Commons' proposal could improve the evolution of American labor law and that it could ameliorate power imbalances created by laws that give corporations and trade associations a bargaining advantage over nations and organizations such as the International Labor Organization (ILO). It concludes that economic discourse could benefit from consideration of the belief behind Commons' proposal--that costs of production passed on to consumers should include the cost of good working conditions.

(A Game Theoretic Analysis of Informality in the Labor Market and the Role of Institutions. With English summary.)" <i>Economia Aplicada/Brazilian Journal of Applied Economics</i> , 12(3): 341-63. This article presents a game theoretic analysis of informality in the labor market based on an infinite dynamic game between employers and workers in which the Judiciary system enters parametrically. We find two classes of subgame-perfect Nash equilibria. In the first class, the worker first gets an informal contract but he eventually becomes a formal worker. We show that the more effective the Judiciary system, the faster the labor relationship is formalized. In the second class informal labor is maintained, coupled with high work turnover. Again, the more efficient the Judiciary system, the less likely is that equilibrium.
2008	C91	Engelmann, Dirk, and Dorothea Kubler. 2008. <i>Do Legal Standards Affect Ethical Concerns of Consumers?</i> Sonderforschungsbereich 649, Humboldt University, Berlin, Germany, SFB 649 Discussion Papers: SFB649DP2008-008. In order to address the impact of regulation on ethical concerns of consumers, we study the effect of a minimum wage. In our experimental market, consumers have monopsony power, firms engage in Bertrand competition, and workers are passive recipients of a wage payment. Two treatments are employed, one with no minimum wage in the first part but with a minimum wage in the second part, and one treatment with a minimum wage at the outset that is abolished in the second part. In both treatments, wages decrease over time in the first part even though some consumers show an interest in fair wages. If a minimum wage is in place, wages decline even faster. Introducing a minimum wage in a mature market raises average wages, while abolishing it lowers them. We discuss the implications of our results, such as the crowding out of ethical behavior through legal regulation.

2008	F36	Lah, Marko, Tjasa Redek, and Andrej Susjan. 2008. "The Changing Role of the Labour Market within the EMU: The Case of Slovenia." <i>Transition Studies Review</i> , 15(2): 375-87. The paper conceptualizes changes in the labour market and suggests labour market policies/reforms after Slovenia has joined the European Monetary Union. The loss of monetary sovereignty implies that in case of an external shock the labour market is burdened by a large amount of the adjustment process. But to increase flexibility of the labour market requires politically unpopular reforms. At the moment, Slovenia is faced with high inflation and a rigid labour market, which is also a key element of its low competitiveness. The reforms were halted under the pressure of their

Year	DE	Title and Abstract
		unpopularity. The paper, although concentrating on Slovenia, has general implications since the experiences of the newcomer to EMU are significant for other transition economies which are expected to follow the same path.
2008	H75	Fairris, David, and Leon Fernandez Bujanda. 2008. "The Dissipation of Minimum Wage Gains for Workers through Labor-Labor Substitution: Evidence from the Los Angeles Living Wage Ordinance." <i>Southern Economic Journal</i> , 75(2): 473-96. This paper utilizes worker-firm matched data on city contract establishments affected by the Los Angeles Living Wage Ordinance to explore the extent of labor-labor substitution following establishment of a minimum wage. We are able to test for substitution on observable and unobservable skill and demographic features and to measure the extent to which such substitution dissipates the benefits of a wage minimum for workers in affected firms. The results suggest substitution toward male, Latino, and black workers and workers possessing prior formal training. All are characteristics that generate a wage premium in this segment of the low-wage labor market in Los Angeles. Evidence for substitution based on unobservables is presented as well. The latter is revealed by the finding that the "before" wages of workers who are new to city contract work following the ordinance are significantly higher, conditional on observable characteristics, than the "before" wages of city contract workers who were hired preceding the ordinance. We estimate that the initial wage gain for workers is dissipated by roughly 27% through labor-labor substitution.
2008	L52	Soares, Antonio Goucha. 2008. "'National Champions' Rhetoric in European Law: Or the Many Faces of Protectionism." <i>World Competition: Law and Economics Review</i> , 31(3): 353-68. The article aims to debate the issue of national champions regarding merger operations with a community dimension. It starts with a brief overview of the legal framework for merger review in European Union law, as well as a reference to the division of competences between the Union and the Member States in this field. Then, it analyses the scope of Member State action regarding merger operations with a community dimension, namely the clause to protect national legitimate interests. After some illustrations of recent cases concerning Member States' defence of national champions, the article devotes the last part to a reflection of two related issues: the concept of industrial policy and the new challenges raised by sovereign wealth funds.
2008	L67	Weil, David. 2008. "A Strategic Approach to Labour Inspection." <i>International Labour Review</i> , 147(4): 349-75. In a report released in 2006, the ILO highlighted the difficulties of labour inspection in its member States and advocated a number of measures to strengthen its effectiveness. The author argues that inspectorates must go beyond calls for more inspectors by adopting a clear strategic framework for reacting to incoming complaints and targeting programmed investigations in order to maximize effectiveness in the use of their overstretched resources. To do so, he proposes, their work must be guided by the principles of prioritization, deterrence, sustainability and achieving systemic effects. The article concludes with an outline of the requirements of a coherent regulatory strategy.
2008	O13	Sparrow, G. N., G. F. Ortmann, M. C. Lyne, and M. A. G. Darroch. 2008. "Determinants of the Demand for Regular Farm Labour in South Africa, 1960-2002." <i>Agrekon</i> , 47(1): 52-75. This paper estimates long-run price (wage) elasticities of demand for regular farm labour in South Africa using both ordinary least squares (OLS) regression and a two-stage least squares (2SLS) simultaneous-equation model for the period 1960-2002. Both models include a piecewise interactive slope dummy variable with 1991 as the threshold year to reflect South African (SA) commercial farmers' expectations that farm labour costs would increase as new labour legislation was introduced from the early 1990s onwards. The long-run price (wage) elasticity of demand for regular farm labour in South Africa during 1960-1990 was estimated as -0.25 for OLS and -0.23 for 2SLS regression, respectively. For the period 1991-2002, this elasticity estimate rose to -1.32 and -1.34 for OLS and 2SLS regression, respectively. These results suggest that a marked structural decline in the demand for regular labour has occurred since 1991 that raises questions about the appropriateness of labour laws and minimum wage legislation that have increased the cost of regular farm labour in South Africa.

2009	D86	Bac, Mehmet, and Serife Genc. 2009. "The French First Employment Contract: Efficient Screening Device or Kleenex Contract?" <i>Journal of Economics (Zeitschrift für Nationalökonomie)</i> , 98(1): 77-88. The controversial novelty in the French Labor Law reform, withdrawn in April 2006, was a contract form under which employers could dismiss young workers on probation without justification. Proponents argued that the reform would improve screening and boost employment whereas opponents dubbed it the "Kleenex contract." We show that the new contract can produce an incentive to dismiss even suitable workers but that this harmful effect could be mitigated by instituting public ratings of firms according to their propensity to dismiss young workers. Informed workers could then respond to job offers according to firms' layoff records, which in turn would restore promotion incentives and efficient screening.
2009	F30	Acharya, Viral V., Ramin Baghai-Wadji, and Krishnamurthy Subramanian. 2009. <i>Labor Laws and Innovation</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7171. Can stringent labor laws be efficient? Possibly, if they provide firms with a commitment device to not punish short-run failures and thereby incentivize the pursuit of value-maximizing innovative activities. In this paper, we provide empirical evidence that strong labor laws indeed appear to have an ex ante positive incentive effect by encouraging the innovative pursuits of firms and their employees. Using patents and citations as proxies for innovation and a time-varying index of labor laws, we find that innovation is fostered by stringent labor laws, especially by laws governing dismissal of employees. We provide this evidence using levels-on-levels, changes-on-changes, and finally difference-in-difference regressions that exploit staggered country-level law changes. We also find that stringent labor laws disproportionately influence innovation in those sectors of the economy that are more innovation intensive. Finally, we find that while the overall effect of stringent labor laws is to dampen economic growth, laws that govern dismissal of employees are an exception: dismissal laws promote economic growth, consistent with the evidence that they encourage firm-level innovation.

ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. This paper uses a new quantitative methodology ("numerical comparative law", "leximetrics") in order to answer the questions whether there has been convergence, divergence or persistence of legal rules, and how this relates to the Common Law/Civil Law distinction. It is based on indices for shareholder, creditor, and worker protection which code the legal development of France, Germany, India, the UK and the US from 1970 to 2005. The main result is that one has to distinguish between different areas of law: the laws have converged in shareholder protection, they have diverged in worker protection and in creditor protection converging and diverging trends even out. These results do not depend on the the distinction between Civil Law and Common Law countries because there have been a number of instances where countries of different legal families have converged and countries of the same legal family have diverged.

Year	DE	Title and Abstract
2009	O20	Grabowski, Richard. 2009. "An Alternative Indian Model?" <i>Journal of Asian Economics</i> , 20(1): 50-61. This paper utilizes the dualistic model of development to analyze the development of three regions: Northeast Asia, China, and India. There are many similarities between the development processes experienced by the first two regions. They involved rapid agricultural growth as a foundation for the growth of labor-intensive manufacturing. However, India's growth process seems to have skipped over the stage of labor-intensive manufacturing growth. Switching to a more labor-intensive growth process is often seen to be dependent on reform of India's labor laws. This paper argues that such reform will not work. The labor intensity of the growth process is dependent on rapid growth in agriculture. Without this, structural change will slow and inequality worsen. The latter will likely result in a deterioration of state effectiveness.
2009	O43	Almeida, Rita, and Pedro Carneiro. 2009. "Enforcement of Labor Regulation and Firm Size." <i>Journal of Comparative Economics</i> , 37(1): 28-46. This paper investigates how the enforcement of labor regulation affects firm size and other firm characteristics in Brazil. We explore firm level data on employment, capital, and output, city level data on economic characteristics, and new administrative data measuring enforcement of regulation at the city level. Since enforcement may be endogenous, we instrument this variable with the distance between the city where the firm is located and surrounding enforcement offices, while controlling for a rich set of city characteristics (such as past levels of informality in the city). We present suggestive evidence of the validity of this instrument. We find that stricter enforcement of labor regulation constrains firm size, and leads to higher unemployment.

2010	D45 L10 M48	Kleiner, Morris M., and Kyoung Won Park. 2010. <i>Battles Among Licensed Occupations: Analyzing Government Regulations on Labor Market Outcomes for Dentists and Hygienists</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 16560. Occupational licensing is among the fastest-growing labor market institutions in the U.S. economy. One of the key features of occupational licensing is that the law determines who gets to do the work. In those cases where universally licensed occupations are both complements to and substitutes for one another in providing a service, the government determines who can do the tasks that are required for the consumer. In this study, we examine dentists and dental hygienists, who are both universally licensed and provide complementary services to patients, but may also be substitutes as service providers. We focus on the labor market implications of governmental requirements on permissible tasks and the supervision of hygienists' activities by dentists. Since there are elements of monopsony in the market we examine, we use the model as a guide for our analysis. We find that states that allow hygienists to be self-employed have about 10 percent higher earnings, and that dentists in those states have lower earnings and slower employment growth. Several sensitivity and falsification tests using other regulated and partially regulated occupations show that our licensing measures are generally robust to alternative specifications. Our estimates are consistent with the view that winning the policy and legal battle in the legislature and courts on the independence of work rules matters in the labor market for these occupations.
2010	D83	Holm, Jacob R., Edward Lorenz, Bengt-Ake Lundvall, and Antoine Valeyre. 2010. "Organizational Learning and Systems of Labor Market Regulation in Europe." <i>Industrial and Corporate Change</i> , 19(4): 1141-73. This article establishes a link between international differences in the organization of work and modes of regulation of labor markets within Europe. The article operates with four forms of work organization (discretionary learning, lean production, Taylorism, and simple or traditional). Through a factor analysis three dimensions of national labor market systems (flexible security, passive security, and job support) are defined. Using a multi-level logistic regression model that takes into account both characteristics of individuals and of national labor market systems it is shown that there is a significant positive correlation between flexible security and the prevalence of discretionary learning. On this basis we point to an extension of flexible security in Europe's labor markets as an adequate response to the current crisis.

OECD, Economics Department, OECD Economics Department Working Papers: 815. This paper explores the impact of structural policies on saving, investment, and current accounts in OECD and non-OECD economies. Since the current account effects of structural reforms are often complex and ambiguous from a theoretical perspective, new OECD empirical analysis is carried out. Reduced-form equations are estimated for a panel of 30 OECD countries as well as for a panel/cross-section of 117 OECD and non-OECD countries that relate saving, investment and current accounts to policy indicators and a set of macroeconomic control variables. This work suggests that structural reforms may influence saving, investment and current accounts through their impact on macroeconomic conditions such as productivity growth or public revenues and expenditures, but also more directly: i) higher social spending (in particular on health care) is found to lower the saving rate and thereby to weaken the current account, most likely reflecting lower precautionary saving; ii) product market liberalisation temporarily boosts investment and thus also weakens the current account; iii) financial market deregulation may lower the saving rate, though only in less developed countries; iv) stricter employment protection may be associated with lower saving rates if unemployment benefits are low, as well as with higher investment rates possibly due to greater substitution of capital for labour. A scenario analysis indicates that fiscal consolidation and structural reforms in the main world economies could significantly reduce current global imbalances, possibly by about a third.

The main aim is to ascertain the role of flexible

Year	DE	Title and Abstract
		employment contracts and collective labour relationships in explaining the ample differentials recorded in the European economy. We use the EU KLEMS database for growth accounting and a broad set of indicators of labour regulations, covering two distinct 'areas' of labour regulation: employment laws and collective relations laws. This comprehensive approach allows us to consider arrangements that regulate allocation of labour inputs (fixed-term and part-time contracts, hours worked) and the payoff and decision rights of employees. We find that, since 1995, European countries have not followed similar patterns of growth. A large number of variations between European economies are caused by marked differentials in multifactor productivity and part of this heterogeneity is caused by sectoral diversities. We show that, in labour-intensive sectors such as services, fixed-term contracts, which imply shorter-term jobs and lower employment tenures, may discourage investment in skills and have detrimental effects on multifactor productivity increases. Employment protection reforms which slacken the rules of fixed-term contracts cause potential drawbacks in terms of low productivity gains. We also find that more stringent regulation of these practices, as well as a climate of collective relations, sustain long-term relationships and mitigate these negative effects.

Health and Safety of the workers are very important in every organization. It is noted that chapter 4 of the Factories Act 1948 and its amendment 1987 gives several provisions to maintain the health and safety of the workers in industries. The present paper examined the health and safety programmes for the workers in ACC Ltd., Wadi, Gulbarga district. The present survey of the workers was conducted using an interview schedule. The different aspects of health and safety such as insurance, personal protective equipment, pure drinking water, urinals, awareness and training about health and safety, health check-up, etc., were examined. The paper concluded with the remarks that these aspects are satisfactory to a greater extent in ACC Ltd.
2010	G01	Crouch, Colin. 2010. "Flexibility and Security in the Labour Market: An Analysis of the Governance of Inequality." <i>Zeitschrift für ArbeitsmarktForschung/Journal for Labour Market Research</i> , 43(1): 17-38. The financial crisis drew attention to the way in which workers in certain countries had been able to sustain consumption through housing and consumer credit despite insecure labour-market positions. This indicates a need to expand the analysis of the relationship between flexibility and security in labour markets beyond the normal scope of labour and social policy to include many other aspects of not only public policy but also corporate practice that affect that relationship. Individuals are seen as based within a number of collectivities within which life chances are collectively determined (or CLCs). These collectivities are subject to various forms of governance. Finally, attention is given to the dimension of sustainability, the capacity of any combinations of policies and practices to endure self-destructive tendencies. The governance mechanisms of CLCs are then seen as using one or more strategies for achieving a certain balance between uncertainty and security: externalization of risk on to other CLCs; postponement of risk-bearing to future periods of time; externalization of risk on to certain members of the CLC itself; widespread sharing within the CLC. This approach is then used to consider the main policies and practices relevant to the field: employment law; social policies directly delivering services; advancement of skill and employability levels available within the population; public promotion and/or protection of sectors and production locations perceived to be of strategic importance, including public employment; government demand management; insurance and pensions; trading relationships among nation states with different export and import patterns; consumer credit to sustain mass consumption; locally clustered economic sectors; the shadow economy; managerial organization of activities offering varying degrees of security among different countries and regions, including supply chain management; internal labour markets and organization of work and work roles; collective bargaining; inter-generational transfers and support; and the protection of property-owning elites from labour-market uncertainty.

2010	G20 R20	Decreuse, Bruno, and Tanguy van Ypersele. 2010. <i>Housing market regulation and the social demand for job protection</i> . <i>C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7845</i> . Controlling for country fixed effects, there is a positive and statistically significant relationship between the degree of housing market regulation (HMR) and the strictness of employment protection legislation (EPL) in OECD countries. We provide a model in which HMR increases foreclosure costs in case of mortgage default, while EPL raises the administrative cost of dismissal. Owing to banks lending behavior, individuals' demand for job protection increases with the cost of foreclosure. We use the model to discuss social housing and family insurance, the case for mortgage unemployment insurance, regulations on the use of fixed-term contracts, the impact of min down-payment policies, feed-back effects from HMR to EPL, and the failure of a 2006 French reform of the labor contracts.
2010	H23	Basu, Arnab K., Nancy H. Chau, and Ravi Kanbur. 2010. "Turning a Blind Eye: Costly Enforcement, Credible Commitment and Minimum Wage Laws." <i>Economic Journal</i> , 120(543): 244-69. In many countries, non-compliance with minimum wage legislation is widespread and authorities may be seen as having turned a blind eye to legislation they have themselves passed. We show that turning a blind eye can indeed be an equilibrium phenomenon with ex post credibility, in a model of minimum wage policy with imperfect competition, imperfect enforcement and imperfect commitment. Since credible enforcement requires costly ex post transfer of income from employers to workers, a government concerned only with efficiency but not with distribution is shown, paradoxically, to be unable to credibly elicit efficiency improvements via a minimum wage reform.

(A Model for Assessing the Impact of French Overtime Tax Exemptions on Employment. With English summary)." <i>Economie et Prevision</i> , 0(195-196): 53-66. This article studies the impact on employment and production of the overtime tax exemption voted by the French Parliament in summer 2007. We use a general equilibrium model for the assessment. The special feature of our model is that it takes into account the gender division of household labor. The model evaluates the effects of the tax reform on the number of hours worked, labor supply by gender, and GDP growth. The measure leads to a long-term rise in production in the 0.3%-1.9% range, as well as in hours worked. The resulting reallocation of labor supply within households leads to a decrease in the labor force. Female labor force is particularly affected, its decrease being evaluated between 11,000 and 63,000 people.

2010	H51	Early, Steve. 2010. "The Poison Pill in "Obamacare" That Helped Kill Labor Law Reform." <i>WorkingUSA</i> , 13(3): 405-23. Embedded in the Patient Protection and Affordable Care Act of 2010 was a poison pill for labor. It took the form of an excise tax on higher-cost, job-based medical coverage--the so-called "Cadillac health plans" negotiated by unions themselves. This deadly political booby-trap became a major organizational distraction and resource drain during a key phase of labor's health-care campaign. Instead of mounting a broad fight for expanded social insurance, unions were forced to wage a frantic defensive struggle against taxation of worker benefits. The "Cadillac tax" backed by Barack Obama was so redolent of John McCain's own stance on health care during the 2008 presidential campaign that it produced a "working class revolt" in Massachusetts. There, a Republican opposed to the excise tax defeated the Democratic Senatorial candidate running for the late Ted Kennedy's seat in January 2010. When the Democrats' lost their filibuster-proof "super-majority" in the Senate, the already controversial Employee Free Choice Act (EFCA) became the first political casualty of "ObamaCare."

This study investigates the impact of the abolition of mandatory retirement on earnings profiles of faculty in postsecondary institutions. The Age Discrimination in Employment Act (ADEA) excluded faculty from the protection of age discrimination laws until January 1, 1994, due to perceived adverse effects of this legislation on the academic labor market. After 1994, research has found that more faculty are remaining employed beyond the age of 70 and more institutions are offering early retirement plans. This study adds to the literature by finding that the policy change has steepened age-earnings profiles for cohorts entering the labor market, suggesting a stronger job attachment, and, potentially, efficiency gains.

		breach and prosecutions, then exploit exogenous changes in output prices to examine the effects of labor demand shocks on prosecutions. Positive shocks in the textile, iron, and coal industries increased prosecutions. Following the abolition of criminal sanctions, wages differentially rose in counties that had experienced more prosecutions, and wages responded more to labor demand shocks. Coercive contract enforcement was applied in industrial Britain; restricted mobility allowed workers to commit to risk-sharing contracts with lower, but less volatile, wages.
2011	N36 N46	Suarez-Potts, William. 2011. "The Railroad Strike of 1927: Labor and Law after the Mexican Revolution." <i>Labor History</i> , 52(4): 399-416, Mexico's rail workers' struggle of 1926-27 encompassed one of the largest strikes following the 1910-20 revolution, yet contemporary official government statistics omitted any mention of it. The labor struggle involved an independent, militant confederation of transport workers and, opposed to it, the largest rail company in the country (heavily indebted to foreign creditors), the state, and its principal labor ally. While the strike was broken, the confederation leading it obtained an impressive judgment from the nation's supreme court against the authoritarian federal executive power, which, moreover, vindicated the right to strike affirmed in the 1917 Constitution. But the judicial and administrative decisions reached in connection with the strike subsequently served to structure and limit labor's right to strike. This article analyzes the railroad strike of 1927, the judicial and administrative response to it, and its legal significance, which together have contributed to the formation of the nation's post-revolutionary system of regulating industrial conflict.

2012	A33	Estlund, Cynthia L., and Michael L. Wachter, eds. 2012. <i>Research Handbook on the Economics of Labor and Employment Law</i> , Research Handbooks in Law and Economics. Cheltenham, U.K. and Northampton, Mass.: Elgar. Fifteen papers present economic analyses of labor and employment law. Papers discuss neoclassical labor economics--its implications for labor and employment law; an economic analysis of labor markets and labor law--an institutional/industrial relations perspective; unions, dynamism, and economic performance; union organizing and the architecture of employee choice; the demise of the Employee Free Choice Act--and whether the National Labor Relations Act (NLRA) should share its fate; evaluating the effectiveness of NLRA remedies--analysis and comparison with other workplace penalty policies; the union as broker of employment rights; bias and the law of the workplace; from just cause to just notice in reforming employment termination law; the law and economics of employment protection legislation; intellectual property justifications for restricting employee mobility--a critical appraisal in light of the economic evidence; antidiscrimination in employment--the simple, the complex, and the paradoxical; the forum for adjudication of employment disputes; the striking success of the NLRA; and why workers still need a collective voice in the era of norms and mandates.
2012	C14	Bhaumik, Sumon, Ralitzia Dimova, Subal C. Kumbhakar, and Kai Sun. 2012. <i>Does Institutional Quality Affect Firm Performance? Insights from a Semi-Parametric Approach</i> . William Davidson Institute at the University of Michigan, William Davidson Institute Working Papers Series; wp1029. Using a novel modeling approach, and cross-country firm level data for the textiles industry, we examine the impact of institutional quality on firm performance. Our methodology allows us to estimate the marginal impact of institutional quality on productivity of each firm. Our results bring into question conventional wisdom about the desirable characteristics of market institutions, which is based on empirical evidence about the impact of institutional quality on the average firm. We demonstrate, for example, that once both the direct impact of a change in institutional quality on total factor productivity and the indirect impact through changes in efficiency of use of factor inputs are taken into account, an increase in labor market rigidity may have a positive impact on firm output, at least for some firms. We also demonstrate that there are significant intra-country variations in the marginal impact of institutional quality, such that the characteristics of "winners" and "losers" will have to be taken into account before policy is introduced to change institutional quality in any direction
2012	D01	Warnecke, Tonia, and Alex De Ruyter. 2012. "The Enforcement of Decent Work in India and Indonesia: Developing Sustainable Institutions." <i>Journal of Economic Issues</i> , 46(2): 393-401. Although informal labor has proliferated in many developing countries, the desire to attract foreign direct investment has often led to a disassociation of the national government from labor regulation at the federal level. Enforcement capacity (and commitment) at the state/provincial level is crucial. We analyze two key newly industrialized countries in Asia, Indonesia and India, comparing their enforcement capacity in the realm of decent work. We highlight the variation in the degree of labor law enforcement found within each country, noting how the different degrees of centralization in each country translate into labor relations and enforcement outcomes. We conclude with some recommendations for policy and practice.
2012	D22	Sabatini, Giovanni. 2012. "Nuovi modelli di governance e quote rosa. (New Models of Governance and Quotas for Women. With English summary.)." <i>Risparmio</i> , 60(3): 67-81. The Board of Directors of a corporation is an organ of maximum importance and responsibility, in which decisions for the operation, control and management are taken collegially. It is essential that decisions come from broad discussions in which all stakeholders are adequately represented, on the basis of a constructive dialogue. The presence of women in this context represents a significant opportunity to promote greater comparison and qualitative improvement of the decision-making process. The under-representation of women in places of responsibility is still a strong limit to the adequacy and completeness of the development process, not allowing to exploit efficiently the level of human capital potentially available in the system. For these reasons, the national and supranational institutions encourage, including through appropriate legislation, the active involvement of women in all areas and especially in management positions. In Italy the situation is changing in recent years, regardless of the legal requirements, as in the banking sector and in larger firms, where, being particularly required skills and experience, exist women able to provide a commitment to that level.
2012	E62	Ramaux, Christophe. 2012. "Persistence de l'Etat social et centralite de la politique economique. (The Persistence of the Welfare State and the Centrality of Economic Policy. With English summary.)." <i>European Journal of Economic and Social Systems</i> , 25(1-2): 113-26. The paper proposes to adopt a broad definition of the social state (welfare state) which includes four components: social protection, regulation of labor relations (labor law, etc.), public services and economic policy supporting activity and employment (fiscal, tax, monetary, industrial, income, etc.). The paper shows the permanence of the social state in the major developed countries despite the neoliberal turn over the last thirty years. Social protection has become rather developed since the 1980s. The regulation of labor relations, which applies to public services, has not disappeared. However, the conclusion is more nuanced for the component of economic policies. This fact confirms the importance of considering this component in order to understand the social state.

2012	H26 J46	Williams, Colin C. 2012. "Cross-National Variations in the Under-Reporting of Wages in South-East Europe: A Result of Over-Regulation or Under-Regulation?" <i>South East European Journal of Economics and Business</i> , 7(1): 53-61. This paper seeks to explain the cross-national variations in the tendency of employers in Southeast Europe to under-report the wages of their employees by paying them two wages, an official declared salary and an additional undeclared envelope wage. Reporting the results of a 2007 Eurobarometer survey of this practice undertaken in five Southeast European countries, the finding is that the commonality of this illicit wage practice markedly varies cross-nationally, with 23 percent of formal employees in Romania but just 3 percent in Cyprus receiving an under-reported salary. Finding that the under-reporting of wages is more prevalent in neo-liberal economies with lower levels of state intervention and less common in more 'welfare capitalist' economies in which there is greater state intervention in work and welfare, the resultant conclusion is that the under-reporting of employees wages by employers is correlated with the under- rather than over-regulation of work and welfare.
2012	L21	Seker, Murat. 2012. "Rigidities in Employment Protection and Exporting." <i>World Development</i> , 40(2): 238-50. There have been significant improvements in traditional trade policies in the past few decades. However, these improvements can only be fully effective when they are complemented with a favorable investment climate. This study focuses on a particular aspect of investment climate, namely labor regulations, and shows how these regulations can be discouraging from exporting. Using firm level data from 26 countries in Eastern Europe and Central Asia region, the paper empirically shows that firms that cannot create new jobs due to stringent labor regulations are less likely to export. Firms that plan to export expand their sizes before they start to export. However, the rigidities in labor markets make this adjustment process costly. Higher costs of employment decrease operating profits and lead to a higher productivity threshold level required for entering export markets. As a result, a smaller fraction of firms can afford to export.
2012	O21	Campos, Nauro, and Jeffrey Nugent. 2012. <i>The Dynamics of the Regulation of Labor in Developing and Developed Countries since 1960</i> . William Davidson Institute at the University of Michigan, William Davidson Institute Working Papers Series: wp1037. This paper examines both the determinants and the effects of changes in the rigidity of labor market legislation across countries over time. Recent research identifies the origin of the legal system as being a major determinant of the cross-country variation in the rigidity of employment protection legislation. However, the supporting evidence is largely confined to levels of regulation and is almost exclusively based on international cross-section data for the post-1995 period. This paper introduces a new index capturing the rigidity of employment protection legislation (LAMRIG) for an unbalanced panel of more than 140 countries over time starting in 1960. Although the importance of legal origins in explaining the level of rigidity of labor regulations across countries is replicated using LAMRIG, their explanatory power is much weakened for changes over time (1960-2004.) More important as determinants of such changes are the level of development and other reforms such as trade liberalization. With respect to the effects of changes in the rigidity of labor regulations on growth and inequality, which have been very controversial in the literature, results with LAMRIG support Freeman's conjecture that changes in rigidity do not systematically affect economic growth but do lower income inequality.
2012	O40	Coricelli, Fabrizio, and Andreas Worgotter. 2012. <i>Structural Change and the Current Account: The Case of Germany</i> . OECD Publishing, OECD Economics Department Working Papers: 940. Using empirical evidence from panel analysis of current account dynamics and of bilateral trade balances, the paper argues that the large German current account surplus during the 2000s can be explained by an increasing gap between productivity growth in manufacturing vis-a-vis services. Such a gap is due not only to improvements in the manufacturing sector but also to a significant slowdown of productivity growth in services. Therefore, despite the success in export markets, the German surplus may signal long-run weaknesses associated with constraints on service sector productivity growth and the inability of productivity growth in manufacturing to create positive spill-over effects on services. Persistence of barriers to liberalisation in services as well as the dominant type of technological progress in manufacturing, based on improving the efficiency of existing products, may partly explain these phenomena. A key factor behind these sectoral differences is the education system, which relies on highly specialised vocational schools, generating high returns for on the job training and creating incentives for efficiency gains in existing products and sectors. The paper concludes that there is room for comprehensive structural policies consistent with an equilibrium reduction in the current account surplus, accompanied by higher and more balanced growth.
2012	P10 P40	Chilosi, Alberto. 2012. "Stakeholder Protection, Varieties of Capitalism, and Long-Term Unemployment." <i>European Journal of Comparative Economics</i> , 9(2): 197-228. In the literature, the issue of the protection of stakeholder interests (of employees in particular) is usually considered in a static context: how should the institutions of corporate governance be shaped having regard to already existing firms, conforming, in particular, to some subjective criteria of fairness and fair play. It is remarkable that no attention is paid to the basic fact that a company in order to exist must first be established, and that the founders-owners are the original shareholders. Moreover, not necessarily the most appropriate protection of stakeholder interests can be provided by the institutions and practice of corporate governance, specific kinds of legal provision may be more suitable. But rather than substitution complementarity prevails between different legal provisions protecting the interests of stakeholders (in particular employees) and the stakeholder protection afforded through the institutions of capital governance, conforming to the logic of the different "varieties of capitalism". An aspect of the latter that is emphasized in the paper, and is usually overlooked, are the much higher rates of long-term unemployment associated with the continental European variety as compared with the Liberal Market variety of the Anglo-Saxon tradition. But the Scandinavian Social-Democratic market model gives the best of both worlds: low long-term unemployment rates and incidence, together with high degrees of employment protection.

2012	R40	Carre, Stephane. 2012. "Reconnaissance de représentativité et quête de reconnaissance. Le cas de l'Organisation des transporteurs routiers européens. (Recognition of Representativeness and Quest for Representativeness: The Case of the European Road

Year	DE	Title and Abstract
		Transport Organisation [OTRE]. With English summary. <i>Travail et Emploi</i> , 0(131): 65-74. One of the main concerns of the OTRE--an employers' organization of the road sector set up in 2000 after an internal conflict within the National Federation of Road Transport (FNTR)--has been for ten years its quest for the official recognition of its representativeness. As a matter of fact, achieving recognition would empower it to take part in collective bargaining in sectoral joint commissions. During the same period, the OTRE focused its claims on the French state road policy, a line of conduct which didn't seem to have any close connection with a possible recognition of its representativeness by the state. Yet, it appears that such recognition enables it to fully take part in institutional or informal consultations the French administration initiates about road policies.

2013	D43	Dewit, Gerda, Dermot Leahy, and Catia Montagna. 2013. "Employment Protection, Flexibility and Firms' Strategic Location Decisions under Uncertainty." <i>Economica</i>, 80(319): 441-74. We construct a model in which oligopolistic firms decide between locating in a country where employment protection implies costly output adjustments and in one without employment protection. Using a two-period three-stage game with uncertainty, we demonstrate that location is influenced by both flexibility and strategic concerns. The strategic effects under Cournot work towards domestic anchorage in the country with employment protection, while those under Bertrand do not. Strategic agglomeration can occur in the inflexible country under Cournot and even under Bertrand, provided that uncertainty and foreign direct investment costs are low.
2013	D60	Stevenson, Betsey, and Justin Wolfers. 2013. <i>Subjective and Objective Indicators of Racial Progress</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 18916. Progress in closing differences in many objective outcomes for blacks relative to whites has slowed, and even worsened, over the past three decades. However, over this period the racial gap in well-being has shrunk. In the early 1970s data revealed much lower levels of subjective well-being among blacks relative to whites. Investigating various measures of well-being, we find that the well-being of blacks has increased both absolutely and relative to that of whites. While a racial gap in well-being remains, two-fifths of the gap has closed and these gains have occurred despite little progress in closing other racial gaps such as those in income, employment, and education. Much of the current racial gap in well-being can be explained by differences in the objective conditions of the lives of black and white Americans. Thus making further progress will likely require progress in closing racial gaps in objective circumstances.
2013	E25	Pini, Paolo. 2013. "Minori tutele del lavoro e contenimento salariale favoriscono la crescita della produttività? Una critica alle ricette della Bce. 2013	F54	Croucher, Richard, and John McIlroy. 2013. "Mauritius 1938: The Origins of a Milestone in Colonial Trade Union Legislation." <i>Labor History</i>, 54(3): 223-39. This article analyses the sociopolitical interactions that shaped an early colonial union statute that constituted a milestone because of its early passage, draconian nature and wider influence in the British Empire. We analyse the interactions between the Governor on the one hand and local and international actors on the other, to create the first trade union law in Mauritius. Colonial Office officials pressured the Governor to overcome local resistance to legislation, but this opposition and his attitudes shaped the law's content.
2013	F61	Mogab, John, Ruby Kishan, and Diego E. Vacaflares. 2013. "Labor Market Rigidity and Foreign Direct Investment: The Case of Europe." <i>Applied Econometrics and International Development</i>, 13(1): 35-54. This paper examines the relationship between labor market rigidity and FDI decisions by European's multi-nationals firms during 2004-2008. We use firm-level data for European multinational enterprises investment in forty-one European countries during these four years. Using conditional fixed effect logit and Tobit estimations, we show that European MNEs generally respond to regulatory, gravity, and firm specific indicators in the expected ways, but their responses to changes in labor market institutions are less consistent. We also find that the relationship between MNEs location decision and host country's labor market institutional factors is sensitive to host country's development stage and market integration with the EU countries.
2013	H32	Sanchez Vela, Claudia, and Jorge N. Valero Gil. 2013. "Incidencia economica de las politicas fiscal y laboral mexicanas. (With English summary.)" <i>Estudios Economicos</i>, 28(1): 109-63. This paper analyzes the impact on the Mexican economy of burdens on firms, in particular those imposed by the Federal Labor Law and the Income Tax Law, whose burdens depend on the size of the firm. It is used a general equilibrium model; it starts from an equilibrium without distortions and then, burdens specified in Mexican laws are introduced. It is concluded that these taxes and evasion explain differences in firm size between Mexico and the U.S., and they do not explain the large differences in macroeconomic variables.
2013	H50	Balakrishnan, Ravi, Chad Steinberg, and Murtaza Syed. 2013. "An Achilles' Heel: Inequality Threatens Asia's Growth Miracle." <i>Finance and Development</i>, 50(4): 28-31.
2013	I13	Schmitt, John, and Janelle Jones. 2013. "Making Jobs Good." <i>Challenge</i>, 56(4): 6-21. Although economists typically look for a silver bullet to solve a problem, the authors find that creating good jobs will require a full-court press. Raising educational attainment is by no means enough. Other policies are also needed.
2013	I24	Schrack, Andrew. 2013. "From Disguised Protectionism to Rewarding Regulation: The Impact of Trade-Related Labor Standards in the Dominican Republic." <i>Regulation and Governance</i>, 7(3): 299-320. Policymakers in the Dominican Republic have responded to foreign pressure by rewriting their labor laws and revitalizing their labor ministry. What are the likely consequences? Is aggressive labor law enforcement more likely to protect vulnerable workers from abuse and exploitation or to undermine their ability to compete for labor-intensive employment in an unforgiving world economy? And what are the broader implications of the answer? I address these questions by analyzing qualitative as well as quantitative data on workplace regulators empowered by the Dominican Republic in response to trade-related labor standards imposed by the United States and find that they reconcile social protection with economic adjustment by simultaneously discouraging "low road" employment practices like informality, union-busting, and the exploitation of child labor, and encouraging "high road" alternatives that link firms, farms, and families, on the one hand, to public educational, training, and financial institutions, on the other. The result is a potentially inclusive alternative to the repressive industrial relations regime that fueled export-led development--and the East Asian "miracle" in particular--in the late twentieth century.
2013	J47	Frantz, Elizabeth. 2013. "Jordan's Unfree Workforce: State-Sponsored Bonded Labour in the Arab Region." <i>Journal of Development Studies</i>, 49(8): 1072-87. This article contributes to understandings of contemporary forms of unfree labour by offering an ethnographic perspective on a region which so far has been overlooked in the scholarly literature on the subject--the Arab world. It describes the sponsorship system through which tens of millions of foreign workers are employed in Jordan, Lebanon and the Arabian Gulf states and argues that it constitutes a form of bonded labour. One of the main features of this form of unfree labour is the role played by states in facilitating and enforcing it. This example complicates the commonly held

Year	DE	Title and Abstract
		assumption that since slavery and bonded labour have been legally abolished in most countries, contemporary forms of unfree labour exist primarily in extra-legal zones outside the boundaries of government oversight. On the contrary, in the context described here the state is not merely turning a blind eye but actively enabling bonded labour. Drawing on ethnographic fieldwork in Jordan and Sri Lanka, the article focuses on the position of Sri Lankan women employed in domestic service to illuminate workers' experiences of the sponsorship system and the institutional apparatuses that buttress it.
2013	L43	Gittleman, Maury, and Morris M. Kleiner. 2013. "Wage Effects of Unionization and Occupational Licensing Coverage in the United States." National Bureau of Economic Research, Inc. NBER Working Papers: 19061. Recent estimates in standard models of wage determination for both unionization and occupational licensing have shown wage effects that are similar across the two institutions. These cross-sectional estimates use specialized data sets, with small sample sizes, for the period 2006 through 2008. Our analysis examines the impact of unions and licensing coverage on wage determination using new data collected on licensing statutes that are then linked to longitudinal data from the National Longitudinal Survey of Youth (NLSY79) from 1979 to 2010. We develop several approaches, using both cross-sectional and longitudinal analyses, to measure the impact of these two labor market institutions on wage determination. Our estimates of the economic returns to union coverage are greater than those for licensing requirements.
2013	L94 Q53	Kahn, Matthew E., and Erin T. Mansur. 2013. "Do Local Energy Prices and Regulation Affect the Geographic Concentration of Employment?" <i>Journal of Public Economics</i> , 101(0): 105-14. Manufacturing industries differ with respect to their energy intensity, labor-to-capital ratio and their pollution intensity. Across the United States, there is significant variation in electricity prices and labor and environmental regulation. This paper examines whether the basic logic of comparative advantage can explain the geographical clustering of U.S. manufacturing. We document that energy-intensive industries concentrate in low electricity price counties and labor-intensive industries avoid pro-union counties. We find mixed evidence that pollution-intensive industries locate in counties featuring relatively lax Clean Air Act regulation.
2013	M42	Mikol, Alain. 2013. "L'absence d'information financières données par le commissaire aux comptes aux salariés: Un mustisme organisé par la loi. (The Absence of Financial Information Provided by the French Statutory Auditor to the Employees: A Silence Organized by the Law. With English summary.)" <i>Economies et Sociétés</i> , 47(8): 1315-43. The object of this research is to examine the nature of the financial information given by the statutory auditor to the employees and to the Work Council. It inevitably leads to wonder about the role of the public accountant of the Work Council. This research shows that neither employees nor works councils benefit from a specific service on the part of the statutory auditor, because the French law established a mission of general interest that prohibits any service for the benefit of a particular group. On the other hand, the Work Council enjoys financial and economic information as complete as it can be reasonably desired and, to understand it better, has the right to be assisted by a public accountant, paid for by the employer.
2013	N17	Hancock, Keith. 2013. "The Australian Basic Wage Case of 1930-1931: Judge-Made Economic Policy." <i>Economic and Labour Relations Review</i> , 24(2): 181-204. This essay examines a significant event in Australia's economic and labour relations history in which an industrial relations court acted against government policy but in line with the advice of professional economists to impose a general wage reduction. This determination, unique during the period of central wage fixation, was made as the country fell into deep depression in 1930-1931. Arguments that a reduction in purchasing power would exacerbate the depression did not prevail over expert economic advice that wage reduction would lessen the structural consequences of reduced rural export income. The Court determined that the loss of real national income had to be accommodated without a wider package of measures such as exchange rate depreciation or expansionary monetary and fiscal policies. The impressive endeavours of the Court to understand and respond to a difficult economic reality represented a significant elevation of the status of wages policy in macroeconomic management—one that was to last for 60 years.
2013	N91	Dis: Macdonald, Daniel Patrick. 2013. Contract as Contested Terrain: An Economic History of Law and the Rise of American Capitalism. PhD diss. University of Massachusetts. This dissertation analyzes the relationship between law and the rise of capitalism in the U.S. First, I analyze the changing relationship between labor productivity and pay at the Lawrence #2 textile mill in Massachusetts between 1834 and 1855. I estimate a model of productivity under a piece rate contract. Results show that the relationship between changes in the wage and changes in productivity was negative in the 1830s, slightly positive in the 1840s, and strongly positive in the late-1840s to 1850s. I argue that changes in relative worker bargaining power, the intensification of work flow, and the importance of liquidity constraints due to the decline of agriculture in the Northeast are the main factors underlying this shift. Second, I study the impact of contract law on state-level economic performance. Using the contrasting cases of Connecticut and Vermont I find that the development of legal thought on contracts was not composed of a single path toward "modernity", as the legal historiography suggests. The Vermont legal system developed outside of the mainstream framework. Using census statistics and histories of labor and manufacturing in the two states, I then argue that this difference had an impact on the nature of state-level economic growth. Finally, I provide the first economic history of the antebellum ten hour movement. I study the historical background as well as the quantitative effects of the movement via the ten hour statutes that were passed in select states between 1847 and 1855. Using historical accounts, I first give an overview of each state's ten hour movement. Using the historical analysis as a light to shed on each state, I then use a difference-in-differences identification strategy to consider whether states that passed more stringent laws (which did not allow workers and employers to "contract out" of the ten hour law) saw a greater reduction in hours worked. I do find that the ten hour laws had an impact, but I suggest that the movement's effects were either amplified or tempered according to the strength and tactics of a state's labor movement.
2013	O22	Singh, S. P., Harminder Singh, Nafees Ahmed, Huma Sehar, Nimit Kumar, and Chandan Kumar. 2013. "Socio-economic Impacts of MGNREGA on Rural Population in India." <i>International Journal of Commerce and Business Management</i> , 6(1): 124-28. The NREGA addresses itself chiefly to working people and their fundamental right to live with dignity. The success of the NREGA, however, will depend on people's realization of the Act as a right. The issues involved in empowering workers are in the range of enhancement of knowledge levels, development of literacy skills and organizing workers. Enhancing social security levels of workers also needs to be considered. Another important task is to link NREGA with other developmental programmes. Empowerment of workers and creation of durable assets depend, in terms of their strategies, to a great extent on the linkages between NREGA and other development programmes. Linkages with human development programmes such as the National Rural Health Mission and the National Literacy Mission are needed to ensure basic human entitlements to workers that in turn will enhance their capacity to negotiate their rights under the Act. Linkages with other livelihood and infrastructure initiatives need to be considered for sustainable employment. The thrust of NREGA is on strengthening the natural resource base of livelihood. Initiatives for natural resource management also need to be dovetailed with income generation projects to enable workers to move from wage employment to self-sustaining employment. In addition to this, there is a need to improve the technological options for performances and monitoring.
2013	O25	Felipe, Jesus, Utsav Kumar, and Arnelyn Abdon. 2013. "Exports, Capabilities, and Industrial Policy in India." <i>Journal of Comparative Economics</i> , 41(3): 939-56. An extensive literature argues that India's manufacturing sector has underperformed, and

Year	DE	Title and Abstract
		that the country has failed to industrialize; in particular, it has failed to take advantage of its labor-abundant comparative advantage. India's manufacturing sector is smaller as a share of GDP than that of East Asian countries, even after controlling for GDP per capita. Hence, its contribution to overall GDP growth is modest. Without greater participation of the secondary sector, the argument goes, the country will not be able to develop and become a modern economy. Standard arguments blame the "license-permit raj", the small-scale industrial policy, and the labor laws. All these were part of the industrial policy regime instituted after independence. This regime favored the heavy-machinery subsector. We argue that despite its shortcomings and misallocations, the bias towards machinery, metals, chemicals, and other capital- and skilled labor-intensive products allowed Indian manufacturing to accumulate a wide range of capabilities. We show that India's manufacturing sector is more diversified and sophisticated than one would expect given the country's income per capita. This positions India well to continue expanding its exports of other sophisticated products. India's failure, however, lies in not being able to diversify into labor-intensive sectors and generate the type of structural transformation seen in China.
2013	O31	Acharya, Viral V., Ramin P. Baghai, and Krishnamurthy V. Subramanian. 2013. "Labor Laws and Innovation." <i>Journal of Law and Economics</i>, 56(4): 997-1037. When contracts are incomplete, dismissal laws prevent employers from arbitrarily discharging employees and thereby limit employers' ability to hold up innovating employees after an innovation is successful. Therefore, dismissal laws can enhance employees' innovative efforts and encourage firms to invest in risky but potentially groundbreaking projects. Other forms of labor laws that do not affect dismissal of employees do not have this bright side. We find support for these predictions in empirical tests that exploit country-level changes in dismissal laws in the United States, the United Kingdom, France, and Germany: more stringent dismissal laws foster innovation, particularly in innovation-intensive industries, but other labor laws do not.
2013	P26	Kroncke, Jedidiah J. 2013. "Property Rights, Labor Rights and Democratization: Lessons from China and Experimental Authoritarians." <i>New York University Journal of International Law and Politics</i>, 46(1): 115-205. This article argues that a fundamental paradox exists in efforts to promote democratization abroad that emphasize property rights to the exclusion of labor rights. Such a paradox emerges from the still-tenuous connection between property rights and foreign legal development alongside the renewed emphasis on independent unionization in democratization theory. The article explores the paradox in action through the willingness of modern authoritarian regimes to experiment with rule of law reforms, and creatively so in the realm of property rights, while being uniformly repressive of associative labor rights. In this vein, the article further details this paradox through the example of today's most successful experimental authoritarian, China's Chinese Communist Party. The CCP's approach to property rights reform is but one area where it has used formal legal regulation to improve its governance capacity and legitimacy. At the same time, the CCP has developed an expansive state-dominated corporatist labor regime while engaging in the unyielding repression of private labor organizing. The article then outlines the implications of this promotion paradox and the authoritarian experience for U.S. influence on labor rights abroad, emphasizing the troubling parallels between the emphasis on employment law and employer self-regulation favored in authoritarian regimes and current trends in U.S. labor law. Beyond questioning dominant assumptions about the role of law in democracy promotion abroad, these parallels provocatively provide a new vantage point from which to consider the classic tension between property rights and labor rights in U.S. labor law doctrine.

Table K32.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	D10	CV: Taylor, James. 2006. "Marketing and Consumption: Legal Overview." In <i>The Sustainable Enterprise: Profiting from Best Practice</i> , ed. Jonathan Reuvid, 117-18. Second edition. London and Philadelphia: Kogan Page.
2006	D31 D99	Kaplow, Louis. 2006. <i>Discounting Dollars, Discounting Lives: Intergenerational Distributive Justice and Efficiency</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12239. The view that intergenerational distributive justice and efficiency should be treated separately is familiar, yet controversial. This article elaborates the often-implicit justifications for separate treatment and provides a more express statement of how and when such treatment is appropriate. Substantial attention is devoted to an approach that holds constant the intra- and intergenerational distribution of well-being, which proves to be a valuable analytical device even for intergenerational policies that are not distribution neutral. Also explored are possible interrelationships between intergenerational distributive justice and efficiency, the choice of interest rate for discounting dollars, and how the present approach relates to those that would employ direct social weights to dollars at different points in time.
2006	H76	CV: Kunreuther, Howard, Shelley H. Metzenbaum, and Peter Schmeidler. 2006. "Mandating Insurance and Using Private Inspections to Improve Environmental Management." In <i>Leveraging the Private Sector: Management-Based Strategies for Improving Environmental Performance</i> , ed. Cary Coglianese and Jennifer Nash, 137-63. Washington, D.C.: Resources for the Future.
2006	I28	Begosh, Allan, John Goldsmith, Ed Hass, Randall W. Lutter, Clark Nardinelli, and John A. Vernon. 2006. <i>Black Box Warnings and Drug Safety: Examining the Determinants and Timing of FDA Warning Labels</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12803. Comparing the safety of prescription drugs over time is difficult due to the paucity of reliable quantitative measures of drug safety. Both the academic literature and popular press have focused on drug withdrawals as a proxy for breakdowns in the drug safety system. This metric, however, is problematic because withdrawals are rare events, and they may be influenced by factors beyond a drug's safety profile. In the current paper, we propose a new measure: the incidence and timing of Black Box Warnings (BBWs). BBWs are warnings placed on prescription drug labels when a drug is determined to carry a significant risk of a serious or life-threatening adverse event. Using a unique data set, one that includes all new molecular entities (NMEs) submitted to the FDA between May 1981 and February 2006, and subsequently approved and marketed, we analyze the timing and incidence of BBWs. Our analyses also use data on several drug characteristics likely to affect the probability a new drug will receive a BBW. We draw several conclusions from our analyses. For example, drugs receiving priority FDA review are more likely to have BBWs at the time of approval than NMEs receiving standard review. We also find that early prescription volume and orphan drug status are associated with an increased likelihood of receiving a BBW. We do not, however, find a significant difference in the rate of BBWs across time cohorts. A comparison of NMEs approved before and after the 1992 Prescription Drug User Fee Act (PDUFA), which authorized the payment of user fees from drug manufacturers to the FDA in an effort to expedite new drug application (NDAs) review times, did not reveal a statistically significant difference in the rate of BBWs. Critics of PDUFA maintain that reduced FDA-approval times under PDUFA have compromised drug safety. We do not find empirical support for this contention.
2006	J08	CV: Shoult, Anthony. 2006. "Review of Business Regulations." In <i>Doing Business with Saudi Arabia</i> , ed. Anthony Shoult, 175-80. Third edition. Global Market Briefings. London and Philadelphia: G

Critics of PDUFA maintain that reduced FDA-approval times under PDUFA have compromised drug safety. We do not find empirical support for this contention.
2006	L11	CV: Johnston, Jason Scott. 2006. "The Promise and Limits of Voluntary Management-Based Regulatory Reform: An Analysis of EPA's Strategic Goals Program." In <i>Leveraging the Private Sector: Management-Based Strategies for Improving Environmental Performance</i> , ed. Cary Coglianese and Jennifer Nash, 167-200. Washington, D.C.: Resources for the Future.
2006	L11	van 't Veld, Klaas. 2006. "Hazardous-Industry Restructuring to Avoid Liability for Accidents." <i>International Review of Law and Economics</i>, 26(3): 297-322. Motivated by statistical and anecdotal evidence of hazardous-industry restructuring to avoid liability for accidents, this paper investigates how allowing for such restructuring affects the standard analysis of the judgment proof problem. It is shown that restructuring may either enhance or diminish the initial effect of imposing liability on accident rates and welfare. If the restructuring is towards smaller firms, the overall welfare effect of imposing liability may be negative. If it is towards larger firms, the overall welfare effect is unambiguously positive, but may paradoxically be enhanced if the restructuring can be prevented.
2006	L11	Swinbank, Alan. 2006. "Like Products, Animal Welfare and the World Trade Organization." <i>Journal of World Trade</i>, 40(4): 687-711. Some production processes, such as organic or animal welfare friendly systems, can become embedded as credence characteristics in consumer goods. Market mechanisms, involving voluntary labelling schemes and accreditation systems might be developed to ensure the delivery of many of the credence characteristics sought out by consumers. However, when credence characteristics capture ethical concerns then voluntary labelling may be insufficient, as it is the production as well as the consumption of the product that causes offence. Thus a ban on unacceptable production methods may emerge as the political response. Any attempt to extend the ban to imported products, in the form of mandatory labelling, or a ban on imports not produced in the manner laid down in the home jurisdiction, will potentially fall foul of WTO rules. GATT's Article XX does provide for some general public policy exceptions, but animal welfare is not one, and there is a strong presumption against the recognition of process methods for differentiating between goods. It is argued that there are circumstances in which mandatory labelling of imports could be justified, and these are spelt out. Both producers, and lawmakers, need to respect consumer requirements. A producer-focused unwillingness to disentangle "like products", because of undue deference to the theory of comparative advantage, will not enhance the WTO's authority.

Discussion Papers, CEPR Discussion Papers: 6011. The objective of this paper is to develop an analytical framework for estimation of the parameters of a structural model of an incentive contract under moral hazard, taking into account agents heterogeneity in preferences. We show that allowing the principal to strategically distribute the production inputs across heterogenous agents as part of the contract design, the principal is able to change what appears to be a uniform contract into individualized contracts tailored to fit agents' preferences or characteristics. Using micro level data on swine production contract settlements, we find that contracting farmers are heterogenous with respect to their risk aversion and that this heterogeneity affects the principal's allocation of production inputs across farmers. Relying on the identifying assumption that contracts are optimal, we obtain the estimates of a lower and an upper bound of agents' reservation utilities. We show that farmers with higher risk aversion have lower outside opportunities because of lower reservation utilities.

2006	P36	Abadie, Alberto, and Sebastien Gay. 2006. "The Impact of Presumed Consent Legislation on Cadaveric Organ Donation: A Cross-Country Study." <i>Journal of Health Economics</i>, 25(4): 599-620. In the U.S., Great Britain and in many other countries, the gap between the demand and the supply of human organs for transplantation is on the rise, despite the efforts of governments and health agencies to promote donor registration. In some countries of continental Europe, however, cadaveric organ procurement is based on the principle of presumed consent. Under presumed consent legislation, a deceased individual is classified as a potential donor in absence of explicit opposition to donation before death. This article analyzes the impact of presumed consent laws on donation rates. For this purpose, we construct a dataset on organ donation rates and potential factors affecting organ donation for 22 countries over a 10-year period. We find that while differences in other determinants of organ donation explain much of the variation in donation rates, after controlling for those determinants presumed consent legislation has a positive and sizeable effect on organ donation rates. We use the panel structure of our dataset to test and reject the hypothesis that unmeasured determinants of organ donation rates confound our empirical results.
2006	Q13	Halbrook, Steve A., Walter J. Armbruster, and Mary M. Thompson. 2006. "The Future of Animal Agriculture in North America." <i>Choices</i>, 21(3): 155-57. Animal agriculture in North America constantly adapts to changes in markets in order to remain competitive for the future. New products are developed to meet changing consumer preferences. New production systems reduce costs. Private contract arrangements replace open market bids in public arenas and redefine the relationships among the stakeholders in the system. Technological developments increase farm-level productivity, processing efficiency, distribution systems, and marketing. Every facet of the animal food chain-from genetics to retail and food service outlets-is facing rapid change, accompanied by controversy and challenges.

2006	R21	Truesdell, Marie K., John C. Bergstrom, and Jeffrey H. Dorfman. 2006. "Regulatory Takings and the Diminution of Value: An Empirical Analysis of Takings and Givings." <i>Journal of Agricultural and Applied Economics</i>, 38(3): 585-95. A hedonic model is used to measure the change in value of residential lots in Rockport, Texas, resulting from Section 404 of the U.S. Clean Water Act. Results show that average lot values initially decreased, went through a six-year adjustment period, and then stabilized on a higher price path resulting in a positive net effect on average lot values throughout the Rockport area (with the exception of a particular subdivision). The results indicate that Section 404 generated both regulatory "takings" and "givings," suggesting that both effects should be considered when assessing the benefits and costs of regulatory events and compensation claims.

2007	C21 C23 H75	Abadie, Alberto, Alexis Diamond, and Jens Hainmueller. 2007. <i>Synthetic Control Methods for Comparative Case Studies: Estimating the Effect of California's Tobacco Control Program</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12831. Building on an idea in Abadie and Gardeazabal (2003), this article investigates the application of synthetic control methods to comparative case studies. We discuss the advantages of these methods and apply them to study the effects of Proposition 99, a large-scale tobacco control program that California implemented in 1988. We demonstrate that following Proposition 99 tobacco consumption fell markedly in California relative to a comparable synthetic control region. We estimate that by the year 2000 annual per-capita cigarette sales in California were about 26 packs lower than what they would have been in the absence of Proposition 99. Given that many policy interventions and events of interest in social sciences take place at an aggregate level (countries, regions, cities, etc.) and affect a small number of aggregate units, the potential applicability of synthetic control methods to comparative case studies is very large, especially in situations where traditional regression methods are not appropriate. The methods proposed in this article produce informative inference regardless of the number of available comparison units, the number of available time periods, and whether the data are individual (micro) or aggregate (macro). Software to compute the estimators proposed in this article is available at the authors' web-pages.
2007	F35	Gostin, Lawrence O. 2007. "A Proposal for a Framework Convention on Global Health." <i>Journal of International Economic Law</i>, 10(4): 989-1008. This article searches for solutions to the most perplexing problems in global health-problems so important that they affect the fate of millions of people, with economic, political, and security ramifications for the world's population. No State, acting alone, can insulate itself from major health hazards. It is for this reason that safeguarding the world's population requires cooperation and global governance. What is truly needed, and what richer countries instinctively do for their own citizens, is to meet what I call 'basic survival needs.' By focusing on the major determinants of health, the international community could dramatically improve prospects for good health. A vehicle such as a Framework Convention on Global Health (FCGH) could powerfully improve global health governance. Such a Framework Convention would commit States to a set of targets, both economic and logistic, and dismantle barriers to constructive engagement by the private and charitable sectors. It would stimulate creative public/private partnerships and actively engage civil society stakeholders. A FCGH could set achievable goals for global health spending; define areas of cost effective investment to meet basic survival needs; build sustainable health systems; and create incentives for scientific innovation for affordable vaccines and essential medicines.

2007	F50 F55	<p>Groenleer, Martijn L. P., and Louise G. van Schaik. 2007. "United We Stand? The European Union's International Actorness in the Cases of the International Criminal Court and the Kyoto Protocol." <i>Journal of Common Market Studies</i>, 45(5): 969-98. In this article we examine the relationship between the institutional set-up of the EU foreign policy-making process and the international actorness of the EU in two particular cases: the International Criminal Court and the Kyoto Protocol. Whereas in both cases policy-making is organized along intergovernmental lines, the EU has shown a relatively high degree of international actorness. We argue that this is the combined result of the considerable congruence of EU Member States' initial preferences and the social interactions between EU Member States, third countries and non-state actors, through which preferences converged even further over time.</p>

2007	H32	<p>Curry, Philip, and Steeve Mongrain. 2007. <i>What You Don't See Can't Hurt You: An Economic Analysis of Morality Laws</i>. Department of Economics, Simon Fraser University, Discussion Papers. This paper provides an efficiency explanation for regulation of sex, drugs and gambling (the so-called "morality laws"). The argument is motivated by the observation that the design an enforcement of these laws often promotes discretion by the people engaging in such activities. We propose that morality laws can be best explained by considering the proscribed activities to impose a negative externality on others when the activity is observed. In such a case, efficiency requires discretion by the individual who engages in such activities. When discretion is difficult to regulate directly, the activities can instead be proscribed thereby giving individuals incentive to hide their actions from others. We find conditions for the first-best levels of consumption and hiding to be implementable. In addition, since some level of activity is efficient, this paper provides another environment in which the optimal sanctions are not maximal.</p>
2007	H75	<p>Kunreuther, Howard C., and Erwann O. Michel-Kerjan. 2007. <i>Climate Change, Insurability of Large-scale Disasters and the Emerging Liability Challenge</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12821. This paper focuses on the interaction between uncertainty and insurability in the context of some of the risks associated with climate change. It discusses the evolution of insured losses due to weather-related disasters over the past decade, and the key drivers of the sharp increases in both economic and insured catastrophe losses over the past 20 years. In particular we examine the impact of development in hazard-prone areas and of global warming on the potential for catastrophic losses in the future. In this context we discuss the implications for insurance risk capital and the capacity of the insurance industry to handle large-scale events. A key question that needs to be addressed is the factors that determine the insurability of a risk and the extent of coverage offered by the private sector to provide protection against extreme events where there is significant uncertainty surrounding the probability and consequences of a catastrophic loss. We discuss the concepts of insurability by focusing on coverage for natural hazards, such as earthquakes, hurricanes and floods. The paper also focuses on the liability issues associated with global climate change, and possible implications for insurers (including D&O), given the difficulty in identifying potential defendants, tracing harm to their actions and apportioning damages among them. The paper concludes by suggesting ways that insurers can help mitigate future damages from global climate change by providing premium reductions and rate credits to companies investing in risk-reducing measures.</p>

2007	H75	<p>Klick, Jonathan, and Thomas Stratmann. 2007. "Diabetes Treatments and Moral Hazard." <i>Journal of Law and Economics</i>, 50(3): 519-38. In the face of rising rates of diabetes, many states have passed laws requiring health insurance plans to cover medical treatments for the disease. Although supporters of the mandates expect them to improve the health of diabetics, the mandates have the potential to generate a moral hazard to the extent that medical treatments might displace individual behavioral improvements. Another possibility is that the mandates do little to improve insurance coverage for most individuals, as previous research on benefit mandates has suggested that mandates often duplicate what plans already cover. To examine the effects of these mandates, we employ a triple-differences methodology comparing the change in the gap in body mass index (BMI) between diabetics and nondiabetics in mandate and nonmandate states. We find that mandates do generate a moral hazard problem, with diabetics exhibiting higher BMIs after the adoption of these mandates.</p>

2007	K00	<p>Jolls, Christine. 2007. <i>Employment Law and the Labor Market</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13230. Legal rules governing the employer-employee relationship are many and varied. Economic analysis has illuminated both the efficiency and the effects on employee welfare of such rules, as described in this paper. Topics addressed include workplace safety mandates, compensation systems for workplace injuries, privacy protection in the workplace, employee fringe benefits mandates, targeted mandates such as medical and family leave, wrongful discharge laws, unemployment insurance systems, minimum wage rules, and rules requiring that employees receive overtime pay. Both economic theory and empirical evidence are considered.</p>
2007	L67	<p>Ozertan, Gokhan, and Philipp Aerni. 2007. "GM Cotton and Its Possible Contributions to Environmental Sustainability and Rural Development in Turkey." <i>International Journal of Agricultural Resources, Governance and Ecology</i>, 6(4-5): 552-75. Cotton farming in Turkey faces economic, environmental and socioeconomic challenges. Organic cotton has been a successful response that greatly benefited low-input farmers; but, worldwide, it will eventually become a mature niche market with limited growth potential. Since no Genetically Modified (GM) varieties have been approved so far in Turkey, we want to find out how the potential adoption of GM cotton by input-intensive producers could contribute to economic, social and environmental improvements. When experiences with GM cotton in other countries are applied to the Turkish context, GM cotton is likely to encounter the highest adoption rates in regions that already face significant pest infestation rates. It may eventually improve the economic and environmental situation in these regions and in the rapidly expanding and increasingly input-intensive cotton growing area of Southeastern Anatolia. To ensure its long-term sustainability Turkey needs to pass an enforceable biosafety law and invest in homegrown agricultural biotechnology research.</p>

2007	M54	Grau Pineda, Carmen. 2007. "Le harcèlement moral au travail dans la législation espagnole: Du risque psychosocial à l'obligation de sécurité de l'employeur. (Moral Harassing at Work in the Spanish Law of Prevention of Occupational Hazards and the Obligation of Safety for Employers. With English summary.)." <i>Travail et Emploi</i>, 0(112): 49-61. Moral harassing is an emergent psychosocial risk, supplied with the new strategies of organization of work like by interpersonal relations always less interdependent and more dehumanized. It produces a series of pathologies with which the requirement of protection of workers was confronted. These pathologies are regarded as industrial accident because of the bond of cause for purpose which can be established in tally of the provision of services itself. Vis-a-vis these new occupational hazards the head of undertaking, principal debtor of the obligation of safety in comparison with the Spanish Law of Prevention of Occupational Hazards, must answer by adopting preventive measures, as if it were about any other occupational hazard. Under the empire of this new analysis of safety and health at the work introduced by the LPRL, it results in the need for integration of the prevention in all the decisions and employers' activities which are led in the company, the various frameworks and to all the hierarchical levels.
2007	N50	Lautze, Jonathan, and Mark Giordano. 2007. "Demanding Supply Management and Supplying Demand Management: Transboundary Waters in Sub-Saharan Africa." <i>Journal of Environment and Development</i>, 16(3): 290-306. The emphasis of the world's transboundary water law has gradually shifted in the past half century from water resources development to water resources management and environmental protection. This change in institutional focus is a natural outcome of changing resource conditions, in particular the high levels of water resources development achieved in many regions as well as rising economic prosperity and associated changes in environmental perception. Surprisingly, this analysis reveals that transboundary water law in sub-Saharan Africa (SSA) follows these global trends even though SSA's levels of water resources development, economic prosperity, and food security are significantly lower than any other region in the world. These findings suggest that the nature of SSA's transboundary water law may be largely "handed down" from other parts of the world with different realities than those present in SSA. Recognizing this relationship can provide important lessons for improving transboundary water governance in the region.
2007	N52	Sellars, Richard West. 2007. "A Very Large Array: Early Federal Historic Preservation--The Antiquities Act, Mesa Verde, and the National Park Service Act." <i>Natural Resources Journal</i>, 47(2): 267-328. Vandalism to archeological areas in the American Southwest provided the chief motivation for passage of the Antiquities Act of 1906. One of the Progressive Era's foremost preservation laws, this Act firmly established research and education in science and the humanities as valid goals of public land management in the United States. In addition, the Act authorized the use of presidential proclamations to create "national monuments" on public lands that are especially significant to science or history. The Act's leading congressional advocate, U.S. Congressman John F. Lacey of Iowa, also supported the creation of Civil War battlefield parks in the East and national parks in the West, as well as early wildlife refuges and national forest reserves. The Antiquities Act thus came into being within the context of an array of new conservation and preservation legislation, which included the 1906 Mesa Verde Act and the 1916 National Park Service Act. All together, the legislative histories and the wording of these three statutes--plus management activities ongoing in the early battlefield parks, national monuments, and national parks--formed the philosophical and policy foundations for national park service historic preservation practices throughout much of the twentieth century.

2007	N53	Rosenthal, Leslie. 2007. "Economic Efficiency, Nuisance, and Sewage: New Lessons from Attorney-General v. Council of the Borough of Birmingham, 1858-95." <i>Journal of Legal Studies</i>, 36(1): 27-62 This paper examines the postlitigation history of an English nuisance case of 1858 concerning pollution of the river Tame caused by sewage from the city of Birmingham. This case is a classic citation that purports to illustrate the absence in English nuisance law of a social benefit defense for nuisance. As the court's judgment in law found in favor of an individual landowner against Birmingham, population 250,000, property rights were manifestly awarded where benefits were lower. Coase's theorem arguments would expect that postlitigation negotiations would ensue, and in this case such negotiations did occur but broke down. The legal conflict stretched on over nearly 40 years, while the pollution was, in practice, allowed to continue. The argument is made that the English court, in effect, by failing to enforce its decisions robustly, did take note of the calamitous social effects that would have followed a rigorous enforcement of the court's orders.
2007	N61	Rosen, Christine Meisner. 2007. "The Role of Pollution Regulation and Litigation in the Development of the U.S. Meatpacking Industry, 1865-1880." <i>Enterprise and Society</i>, 8(2): 297-347. Business historians have treated the emergence of large, modern, vertically integrated meatpacking firms in the second half of the nineteenth century as the economically rational and inevitable product of the industry's search for ways to maximize profits through technological innovation, vertical integration, and the achievement of economies of scale and scope. This is only part of the story, however. Society's efforts to force the industry to abate its environmental pollution through government regulation and private lawsuits also stimulated and shaped these processes of modernization.

Year	DE	Title and Abstract
2007	Q00	Henson, Spencer, Julie Caswell, John Cranfield, Aamir Frazil, Valerie Davidson, Sven Anders, and Claudia Schmidt. 2007. <i>A Multi-Factorial Risk Prioritization Framework for Food-Borne Pathogens</i>. University of Massachusetts Amherst, Department of Resource Economics, Working Papers: 2007-8. To lower the incidence of human food-borne disease, experts and stakeholders have urged the development of a science- and risk-based management system in which food-borne hazards are analyzed and prioritized. A literature review shows that most approaches to risk prioritization developed to date are based on measures of health outcomes and do not systematically account for other factors that may be important to decision making. The Multi-Factorial Risk Prioritization Framework developed here considers four factors that may be important to risk managers: public health, consumer risk perceptions and acceptance, market-level impacts, and social sensitivity. The framework is based on the systematic organization and analysis of data on these multiple factors. The basic building block of the information structure is a three-dimensional cube based on pathogen-food-factor relationships. Each cell of the cube has an information card associated with it and data from the cube can be aggregated along different dimensions. The framework is operationalized in three stages, with each stage adding another dimension to decision-making capacity. The first stage is the information cards themselves that provide systematic information that is not pre-processed or aggregated across factors. The second stage maps the information on the various information cards into cobweb diagrams that create a graphical profile of, for example, a food-pathogen combination with respect to each of the four risk prioritization factors. The third stage is formal multi-criteria decision analysis in which decision makers place explicit values on different criteria in order to develop risk priorities. The process outlined above produces a 'List A' of priority food-pathogen combinations according to some aggregate of the four risk prioritization factors. This list is further vetted to produce 'List B', which brings in feasibility analysis by ranking those combinations where practical actions that have a significant impact are feasible. Food-pathogen combinations where not enough is known to identify any or few feasible interventions are included in 'List C'. 'List C' highlights areas with significant uncertainty where further research may be needed to enhance the precision of the risk prioritization process. The separation of feasibility and uncertainty issues through the use of 'Lists A, B, and C' allows risk managers to focus separately on distinct dimensions of the overall prioritization. The Multi-Factorial Risk Prioritization Framework provides a flexible instrument that compares and contrasts risks along four dimensions. Use of the framework is an iterative process. It can be used to establish priorities across pathogens for a particular food, across foods for a particular pathogen and/or across specific food-pathogen combinations. This report provides a comprehensive conceptual paper that forms the basis for a wider process of consultation and for case studies applying the framework.

2008	A22 A23	Ashford, Nicholas A., and Charles C. Caldart. 2008. <i>Environmental Law, Policy, and Economics: Reclaiming the Environmental Agenda</i>. Cambridge and London: MIT Press. Fourteen papers examine current issues in environmental law, policy, and economics for both general readers and undergraduate and graduate students. Papers discuss the nature and origins of environmental contamination; nature and assessment of the harm; economics and the environment; addressing pollution through the tort system; administrative law--the roles of Congress, the president, the agencies, and the courts in shaping environmental policy; the Clean Air Act and the regulation of stationary sources; the regulation of mobile sources under the Clean Air Act; protection of surface waters, wetlands, and drinking water--the Clean Water Act and Safe Drinking Water Act; regulation of hazardous wastes--the Resource Conservation and Recovery Act, the Comprehensive Environmental Response, Compensation, and Liability Act, and hazardous waste facility siting; the right to know--mandatory disclosure of information regarding chemical risks; enforcement--encouraging compliance with environmental statutes; alternative forms of government intervention to promote pollution reduction; policies to promote pollution prevention and inherent safety; and beyond pollution control and prevention--sustainable development. Ashford is Professor of Technology and Policy and Director of the Technology and Law Program at the Massachusetts Institute of Technology. Caldart is Director of Litigation for the National Environmental Law Center and Lecturer in the Department of Civil and Environmental Engineering in the Engineering Systems Division at the Massachusetts Institute of Technology. Case and subject indexes.
2008	C61	Krikke, H. R., and R. Zuidwijk. 2008. <i>Disposition Choices Based on Energy Footprints instead of Recovery Quota</i>. Tilburg University, Center for Economic Research, Discussion Paper: 2008-74. This paper addresses the impact of disposition choices on the energy use of closed-loop supply chains. In a life cycle perspective, energy used in the forward chain which is locked up in the product is recaptured in recovery. High quality recovery replaces virgin production and thereby saves energy. This so called substitution effect is often ignored. Governments worldwide implement Extended Producer Responsibility (EPR). Policies are based on recovery quota and not effective from an energy point of view. This in turn leads to unnecessary emissions of amongst others CO ₂ . This research evaluates current EPR policies and presents six policy alternatives from an energy standpoint. The Pareto-frontier model used is generic and can be applied to other closed loops supply chains under EPR, exploiting the substitution effect. The measures modeled are applied to five WEEE cases. We discuss results, pros and cons of various alternatives and complementary measures that might be taken.

2008	D44	Woerdman, Edwin, Alessandra Arcuri, and Stefano Clo. 2008. "Emissions Trading and the Polluter-Pays Principle: Do Polluters Pay under Grandfathering?" <i>Review of Law and Economics</i>, 4(2): . Emissions trading is becoming increasingly popular in environmental law. Allowances to trade emissions can either be auctioned off or handed out free of charge by means of grandfathering. Although grandfathering is frequently used in emissions trading schemes, it is a popular view in the economic and legal literature that grandfathering is inconsistent with the polluter-pays principle. We come to a different, more nuanced view. The question of whether polluters pay under grandfathering depends on how the polluter-pays principle is interpreted. We present a taxonomy of interpretations. Based on an efficiency interpretation of the principle, consistency is demonstrated by emphasizing the economic impact of the opportunity costs of gratis allowances and the lump sum nature of the subsidy that is inherent to grandfathering. Inconsistency can only be claimed based on an equity interpretation of the polluter-pays principle. Allocating allowances free of charge means that polluting firms receive a capital gift making their shareholders richer, which may be perceived as unfair. We draw two conclusions. First, contrary to what some have claimed, grandfathering is compatible with

Year	DE	Title and Abstract
		an efficiency interpretation of the polluter-pays principle. Second, only auctioning is consistent with an extended form of this principle. Auctioning ensures not only that pollution costs are internalized (efficiency), but also that producers buy their allowances before they pass on those costs to consumers (equity).
2008	D64	Bhaduri, Anik, and Edward B. Barbier. 2008. "Political Altruism of Transboundary Water Sharing." <i>B.E. Journal of Economic Analysis and Policy: Topics in Economic Analysis and Policy</i>, 8(1): . In the paper, using a political altruism model, we make an attempt to explain why an upstream country might agree to a treaty that recognizes and enforces the water claims of a downstream country. In a natural extension of the standard economic model, it is possible to explain the above phenomena, by allowing for altruism between countries. The altruistic concerns of the countries are dependent on other country's willingness to have a good political relationship. If both the countries maintain favorable political relations with one another, then the upstream country will care about the impacts of its water diversion on the downstream country's welfare. The paper also illustrates the case of water sharing of the Ganges River between India and Bangladesh. The Ganges River, like many other rivers in the world, ignores political boundaries. In Bangladesh, the final downstream country along the Ganges, freshwater availability depends on the share of water diverted by the upstream country, India. For decades, India and Bangladesh failed to resolve the water-sharing issues of the Ganges River. However, in 1996, both India and Bangladesh signed a major new agreement on water sharing (Ganges River Treaty) in an effort to resolve the dispute. Using the political altruism model developed in the paper, we examine why despite needing more water than is available under the treaty, India has adapted to shortages instead of resorting to conflict with Bangladesh.
2008	G24	Aerts, Walter, Denis Cormier, and Michel Magnan. 2008. "Corporate Environmental Disclosure, Financial Markets and the Media: An International Perspective." <i>Ecological Economics</i>, 64(3): 643-59. In this study, we analyze the information dynamics between corporate environmental disclosure, financial markets (as proxied by financial analysts' earnings forecasts) and public pressures (as proxied by a firm's media exposure). We adopt a comprehensive view of disclosure that encompasses environmental information that is both print-based as well as web-based. The sample comprises firms from both continental Europe (Belgium, France, Germany, and Netherlands) as well as North America (Canada and the United States). Relying on a system of equations that controls for endogeneity between environmental disclosure determination and financial analysts' work, we show that enhanced environmental disclosure translates into more precise earnings forecasts by analysts. Such effect is reduced for firms with extensive analyst following and in environmentally sensitive industries. However, these relationships are shown to be starker in Europe than in North America, i.e., environmental disclosure has a greater impact on analysts' forecasts but is also more greatly attenuated by analyst following and membership in an environmentally sensitive industry. Most observed relationships hold for either print- or web-based disclosure, except for North America in which web-based disclosure seems to have no impact on analysts' forecasting work.
2008	H26	Shiota, Naoki. 2008. "Tax Compliance and Workability of the Pricing and Standards Approach." <i>Environmental Economics and Policy Studies</i>, 9(3): 193-211. It is demonstrated that the effectiveness of the pricing and standards approach (PSA) to emission control is seriously impaired by imperfect tax compliance of regulated firms, contrary to literature reports. If there exists a firm that attempts to commit 100% tax evasion, PSA fails to minimize the social abatement cost, and when all firms take the risk of total tax evasion, PSA no longer reduces emissions. Heavy taxes give firms incentive to cheat, so the government is only able to adopt PSA when target levels of total emission reductions are relatively small.
2008	H31	CV: Wasserman, Jeffrey, Willard G. Manning, Joseph P. Newhouse, and John D. Winkler. 2008. "The Effects of Excise Taxes and Regulations on Cigarette Smoking." With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(13): 215-53. Even though the subject of socio-labour integration has not ceased being important within The Andean Community of Nations in its 4 decades of existence, the progress achieved in labour migration and social security has been minimal. Nevertheless, the 584 Ruling on Security and Health in the Workplace is currently in force, and this "work in progress" will attempt an initial approach on the aforementioned ruling, comparing it with our General System of Professional Risks Regulation and shedding insight into its fourteen year long development.
2008	L26	Colaneri, Paola. 2008. "Dall'impresacoltivatriceall'impresaagricoloprofessionale: Metamorfosi o continuita? (With English summary.)" <i>Economia e DirittoAgroalimentare</i>, 13(1): 87-100. Our study aims to point out the main passages in developing of agriculture enterprise in modern society. Its evolution can be outlined in three stages: 1. safeguarding of property statical position with consequential identity between the farmer and the owner; 2. safeguarding of grower's economical action: the grower becomes an agricultural entrepreneur, his activity it's direct and fit in the market; 3. safeguarding of entrepreneurial action according to procedures concerning not only individual agricultural entrepreneur but also associations, draw-plates, enterprises' networks, farmers' unions, "cooperations"--broadly speaking--born to increase the production in its specificity, quality and alimentary safety with consequential consumer's confidence. The passage from "property" safeguarding to "enterprise and work" safeguarding in the civil code had its influence on agrarian law as well. Traditional agrarian agreements changed their model from exchange pattern to associative pattern till personal right pattern with a new contractual objectivity coming out. Regarding to activity, agricultural enterprise, according to art. 2135 c.c., becomes the point where production with market finality and production with services' finality are gathered together. Regarding to "subjects given over to agriculture", national definitions of farmer and grower are meaningful only in circles concerning civil law, revenue and social security, because of (the) community right influence. The presence of a plurality of agricultures and subjective typologies in a framework of overcoming statical concept of agriculture, it's, actually, remarkable: more than in words of metamorphosis or continuity, we properly talk about a vital evolution of the agricultural entrepreneur's rule.
2008	L74	Weil, David. 2008. "A Strategic Approach to Labour Inspection." <i>International Labour Review</i>, 147(4): 349-75. In a report released in 2006, the ILO highlighted the difficulties of labour inspection in its member States and advocated a number of measures to strengthen its effectiveness. The author argues that inspectorates must go beyond calls for more inspectors by adopting a clear strategic framework for reacting to incoming complaints and targeting programmed investigations in order to maximize effectiveness in the use of their overstretched resources. To do so, he proposes, their work must be guided by the principles of

2009	L21	CV: Gurtoo, Anjula, and S. J. Antony. 2009. "Deliberating Indirect Consequences of Environmental Legislations on Economy and Business." <i>International Journal of Environment and Sustainable Development</i> , 8(2): 113-31. Comprehensive review of literature conducted on the indirect or secondary impacts of environmental regulation reveals several impacts on business and economic activity. Using an analytical and discourse oriented framework, this paper deliberates on which impacts are likely to have significant influence in their ability to encourage changes in the existing economic and industrial setups. It draws from the theoretical debate on environmental regulation, the technological context that governs the environment and the economic dynamics that govern the globe. It is contended that, despite their not-so-obvious and unplanned nature, these impacts will act as important drivers of change and alter the global, national, and industrial structures and systems in the long run. This discourse facilitates understanding on the nature and magnitude of secondary impacts and their capacity to produce significant change in industry and business structures in the long run, through indirect and not-so-obvious routes.
2009	L63	CV: Nicita, Antonio, and Matteo M. Winkler. 2009. "The Cost of Transnational Accidents: Lessons from Bhopal and Amoco." <i>Journal of World Trade</i> , 43(4): 683-705. This article deals with the economic effects generated by different conflict rules on incentives of economic agents. In particular, we ascertain the rules currently in force at the domestic level, and subsequently analyze each of them from an economic standpoint. Namely, we focus our analysis on the following rules: the so-called lex loci delicti, the lex loci laesionis, the forum shopping and the forum non conveniens, the optio legis principle, and the rule of victim's freedom of choice. We exploit these rules to explain some famous cases, that is, the accident that occurred at the Bhopal plant in 1984 and the oil spill involving the supertanker Amoco Cadiz.
2009	L84	CV: Muller, Severin. 2009. "Un ordre sanitaire non negociable? Les habiletés relationnelles des techniciens vétérinaires. (A Non-negotiable Health Order? The Relational Skill of the Veterinary Technicians. With English summary)." <i>Revue d'Etudes en Agriculture et Environnement/Review of Agricultural and Environmental Studies</i> , 90(4): 423-46. The model of inspection of veterinary services in slaughterhouse is based on a continuous presence of the agents of the State in working areas. Institutional lessons drawn by the crisis of the mad cow led to orientate the system of health surveillance to self-control and responsibility of the industrialists. The veterinary teams accompanied the installation of this system in firms but their presence is nowadays disqualified because it leads to a more complex determination of juridical responsibility between the public and private actors. The observation of the concrete activity of the veterinary technicians and an inspector in a slaughterhouse shows the diversity of the registers of control and collaboration with the personnel, to adapt the health rules to productive realities. Despite the problems of this mode of inspection, its advantages have to be compared to alternatives envisaged as part of the "food law". CV: Park, Patricia. 2009. 2009	M12 M52	CV: Ruser, John, and Richard Butler. 2009. "The Economics of Occupational Safety and Health." <i>Foundations and Trends in Microeconomics</i> , 5(5): 301-54. This paper examines occupational risk-related costs that influence the following safety decisions of a firm: wage premiums paid to attract workers to risky jobs, insurance payments to injured workers including sick leave and workers' compensation benefits, premiums for workers' compensation insurance, government fines for safety violations and injury-related costs such as workplace disruptions and loss of worker-specific job skills. The small literature on workplace committees and employee financial involvement with the firm's profitability on accident outcomes is also reviewed. This paper also discusses the influence of government, focusing on the regulation of occupational risk through the enactment and enforcement of safety and health standards and the safety mandates of workers' compensation insurance systems. We find broad consensus in the empirical literature that workers and firms respond to economic incentives in making safety decisions. Economic incentives

Year	DE	Title and Abstract
		play an important role in occupational risk prevention. Sometimes these incentives improve safety; but, in other cases they have an adverse effect on safety.
2009	N70	CV: Gordon, Richard L. 2009. "The Prospects for Coal in the Twenty-First Century." In <i>International Handbook on the Economics of Energy</i> , ed. Joanne Evans and Leter C. Hunt, 441-55. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2009	N90	Vernon, John A., Joseph H. Golec, Randall Lutter, and Clark Nardinelli. 2009. "An Exploratory Study of FDA New Drug Review Times, Prescription Drug User Fee Acts, and R&D Spending." <i>Quarterly Review of Economics and Finance</i>, 49(4): 1260-74. FDA approval times have declined significantly since the enactment of the Prescription Drug User Fee Act (PDUFA) in 1992. As a result, present value expected returns to pharmaceutical R&D have likely increased. In the current paper, we employ a unique survey dataset, one which includes data from 1990 to 1999 on firm-level pharmaceutical R&D expenditures for 7 large, U.S.-based drug companies. We estimate the effect FDA approval times have on firm R&D spending. Controlling for other factors such as pharmaceutical profitability and cash flows, we estimate that a 10% decrease (increase) in FDA approval times leads to an increase (decrease) in R&D spending from between 1.4% and 2.0%. Combining this estimate with recent research on the link between PDUFA and FDA approval times, we calculate that for the firms in our sample, R&D spending in the 1990s increased by an additional 5.0-7.2% as a result of this legislation. This amounted to an additional \$3.2 billion to \$4.6 billion in pharmaceutical R&D expenditures (2005 \$US), and possibly several new drugs. Because PDUFA continued to provide incentives for R&D after 1999, and because it is probable that firms not in our sample were similarly affected by PDUFA, our estimates may be conservative. Considering more industry-wide measures of R&D expenditures over a similar time period (1992-2001) we calculate PDUFA may have incentivized an additional \$10.8 billion to \$15.4 billion in pharmaceutical R&D. Recent economic research has shown that the social rate of return on pharmaceutical R&D is very high; therefore, the social benefits of PDUFA (over and above the benefits of more rapid consumer access) are likely to be substantial.
2009	O47	Aiken, Deborah Vaughn, Rolf Fare, Shawna Grosskopf, and Carl A. Pasurka Jr. 2009. "Pollution Abatement and Productivity Growth: Evidence from Germany, Japan, the Netherlands, and the United States." <i>Environmental and Resource Economics</i>, 44(1): 11-28. 2009	P35	Wong, Christine. 2009. "Rebuilding Government for the Twenty-First Century: Can China Incrementally Reform the Public Sector?" <i>China Quarterly</i>, 0(200): 929-52. After three decades of spectacular economic successes, China is facing a significant challenge. The string of recent scandals—environmental degradation, melamine-tainted milk powder, fake drugs and chemicals—have all pointed to government weakness in protecting public safety, exposing an enormous gap between China's growing economic prowess and its capacity to govern. With the leadership now focused on improving the regulatory regime, will China "catch up" and build the public institutions needed? This article argues that the reactive, incremental retrenchment of government in the 1980s and 1990s, combined with inadequate finance, had broken the intergovernmental fiscal system and created large distortions in the incentive structure facing government agencies and public institutions (shiyi danwei). Until the intergovernmental fiscal system is repaired and incentives are fundamentally reformed for the public sector, the top-down programme to redirect China's development and build a service-oriented government will have limited effect.
2009	R40	Iwata, Kazuyuki, and Toshi H. Arimura. 2009. "Economic Analysis of Japanese Air Pollution Regulation: An Optimal Retirement Problem under the Vehicle Type Regulation in the NOx-Particulate Matter Law." <i>Transportation Research: Part D: Transport and Environment</i>, 14(3): 157-67. This paper examines the vehicle type regulation that was introduced under the Automobile Nitrogen Oxides-Particulate Matter Law to mitigate air pollution in Japanese metropolitan areas. The vehicle type regulation effectively sets the timing for vehicle retirement by initial registration year and type. However, there was no consideration of cost or efficiency in choosing the timing of retirement. We solve an optimal problem to maximize the social net benefit under the current framework of the vehicle type regulation. The analysis finds that the net benefit can more than double if the optimal retirement timing is chosen. Further, we find that even a simple alteration of the retirement timing can increase the social net benefit by 13%.

2010	A33	Howells, Geraint, Iain Ramsay, and Thomas Wilhelmsson, eds. 2010. <i>Handbook of Research on International Consumer Law</i>, With David Kraft. Research Handbooks in International Law series. Cheltenham, U.K. and Northampton, Mass.: Elgar. Seventeen papers provide an international and comparative analysis of central issues in consumer law and policy in developed and developing economies. Papers discuss consumer law in its international dimension; consumer protection and human rights; development and consumer law; the consumer and competition law; misleading and unfair advertising; protecting rational choice—information and the right of withdrawal; unfair terms and standard form contracts; sales and guarantees; products liability law in the United States and Europe; product safety regulation; consumers and services of general interest; consumer protection and the internet; regulation of consumer credit; personal insolvency; financial services regulation and the investor as consumer; individual consumer redress; using class actions to enforce consumer protection law; and enforcing consumer protection laws.
2010	D11	Grant, Darren. 2010. "Dead on Arrival: Zero Tolerance Laws Don't Work." <i>Economic Inquiry</i>, 48(3): 756-70. By 1998, all states had passed laws lowering the legal blood alcohol content for drivers under 21 to effectively zero. Theory shows these laws have ambiguous effects on overall fatalities and economic efficiency, and the data show they have little effect on driver behavior. A panel analysis of the 1988-2000 Fatality Analysis Reporting System indicates that zero tolerance laws have no material influence on the level of fatalities, while quantile regression reveals virtually no change in the distribution of blood alcohol content among drivers involved in fatal accidents.
2010	D86	Kambia-Chopin, Bidean. 2010. "Environmental Risks, the Judgment-Proof Problem and Financial Responsibility." <i>European Journal of Law and Economics</i>, 30(2): 77-87. This paper examines a setting in which a firm is liable to pay environmental damages caused by its activity but may not have sufficient wealth for repair of damages. In order to induce the full internalization of the environmental cost, the firm is required to demonstrate a financial guarantee from a solvent party that covers this cost. Since the firm and the guarantor are joint liable for the harm caused by the firm, it is in the interest of the guarantor to design the guarantee contract in order to induce the firm to take an adequate level of prevention. First, I show that financial responsibility regime may achieve the social optimum. Secondly, I identify a particular form of contract in the set of contracts which induce the socially optimal level of prevention. This contract is closed to an alternative risk transfer product referred to as the spread loss treaty.

2010	F66	S. M., Atik-ur-rahaman. 2010. "Health and Safety of the Workers: A Case Study of ACC Ltd., Wadi." <i>Indian Journal of Social Development</i>, 10(1): 233-46. Health and Safety of the workers are very important in every organization. It is noted that chapter 4 of the Factories Act 1948 and its amendment 1987 gives several provisions to maintain the health and safety of the workers in industries. The present paper examined the health and safety programmes for the workers in ACC Ltd., Wadi, Gulbarga district. The present survey of the workers was conducted using an interview schedule. The different aspects of health and safety such as insurance, personal protective equipment, pure drinking water, urinals, awareness and training about health and safety, health check-up, etc., were examined. The paper concluded with the remarks that these aspects are satisfactory to a greater extent in ACC Ltd.

2010	H10	Goulder, Lawrence H., and Robert N. Stavins. 2010. <i>Interactions between State and Federal Climate Change Policies</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16123. Federal action addressing climate change is likely to emerge either through new legislation or via the U.S. EPA's authority under the Clean Air Act. The prospect of federal action raises important questions regarding the interconnections between federal efforts and state-level climate policy developments. In the presence of federal policies, to what extent will state efforts be cost-effective? How does the co-existence of state- and federal-level policies affect the ability of state efforts to achieve emissions reductions? This paper addresses these questions. We find that state-level policy in the presence of a federal policy can be beneficial or problematic, depending on the nature of the overlap between the two systems, the relative stringency of the efforts, and the types of policy instruments engaged. When the federal policy sets limits on aggregate emissions quantities, or allows manufacturers or facilities to average performance across states, the emission reductions accomplished by a subset of U.S. states may reduce pressure on the constraints posed by the federal policy, thereby freeing facilities or manufacturers to increase emissions in other states. This leads to serious "emissions leakage" and a loss of cost-effectiveness at the national level. In contrast, when the federal policy sets prices for emissions or does not allow manufactures to average performance across states, these difficulties are usually avoided. Even in circumstances involving problematic interactions, there may be other attractions of state-level climate policy. We evaluate a number of arguments that have been made to support state-level climate policy in the presence of federal policies, even when problematic interactions arise.
2010	H20	Shavell, Steven. 2010. <i>Corrective Taxation versus Liability</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16234. Taxation and liability are compared here as means of controlling harmful externalities. It is emphasized that liability has an advantage over taxation: inefficiency of incentives arises under taxation when, as would be typical, it would be impractical for a tax to reflect all variables that significantly affect expected harm, whereas efficiency of incentives under liability does not require the state to determine expected harm--it requires only that injurers pay for harm that occurs. However, taxation enjoys an advantage over liability: incentives under liability are diluted to the degree that injurers might escape suit. The optimal joint use of taxation and liability is also examined, and it is shown in the model that is analyzed that liability should be employed fully because liability creates more efficient incentives than taxation; a tax should be used only to take up the slack due to the possibility that suit for harm would not be brought.
2010	H20	Shavell, Steven. 2010. <i>The Corrective Tax versus Liability As Solutions to the Problem of Harmful Externalities</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16235. Although the corrective tax has long been viewed by economists as a theoretically desirable remedy for the problem of harmful externalities, its actual use has been limited, mainly to the domain of pollution. Liability, in contrast, has great importance in controlling harmful externalities. I compare the tax and liability here in theory and suggest that the conclusions help to explain the observed predominance of liability over taxation, except in the area of pollution. The following factors are emphasized in the analysis: inefficiency of incentives under taxes when, as would be typical, it would be impractical for the state to incorporate into taxes all of the variables that significantly affect expected harm; efficiency of incentives under strict liability, which requires only that actual harms be measured; efficiency of incentives to exercise precautions under the negligence rule; administrative cost advantages of liability deriving from its being applied only when harm occurs; and dilution of incentives under liability when suit would be unlikely or injurers would not be able to pay fully for harms caused.
2010	M38	CV: Nottage, Luke. 2010. "Product Safety Regulation." In <i>Handbook of Research on International Consumer Law</i>, ed. Geraint Howells, Iain Ramsay and Thomas Wilhelmsson, 256-94. 2010	O44 P11	Aquilina, Kevin. 2010. "The Environment and Development Planning Bill: Proposals for Improvement." <i>Bank of Valletta Review</i>, 0(41): 23-46. The Environment and Development Planning Bill will codify, with amendments, the Environment Protection Act and the Development Planning Act into one law. This paper studies this Bill from the perspective of development planning legislation. It sets out the contribution this Bill will make to Administrative Law, Human Rights Law and the Law of Procedure. In certain respects, the Bill introduces novel concepts aimed at strengthening transparency and accountability in the workings of the Malta Environment and Planning Authority (MEPA). In places, the Bill does not go far in strengthening democracy in the development planning process. The paper thus suggests how the Bill can provide for a better application of the constitutional doctrine of the separation of powers, and for the human right of a fair hearing before an independent and impartial tribunal, whilst guaranteeing the institutional autonomy of MEPA from governmental interference in policy making and decision making.
2010	P32	Broughton, Edward I., and Damian G. Walker. 2010. "Policies and Practices for Aquaculture Food Safety in China." <i>Food Policy</i>, 35(5): 471-78. There are growing concerns over the safety of aquaculture food products from China, which supplies 70% of the world's farmed fish food. We present a comprehensive literature review, supplemented with qualitative data obtained from interviews with experts in the field, to examine the policies and practices designed to ensure the safety of food produced by the Chinese aquaculture industry. The food safety system has many parts that are administered by different governmental organizations with poor coordination among them. The system apparently operates as two entities: one for products destined for the export market and based largely on the requirements of importing countries, and the other with lower standards and levels of enforcement for domestic market products. The top-down approach focuses more on the end product rather than the production practices. There are several indications that regulations pertaining to antibiotic use are not being followed. Recent events have brought the issue of overall food safety to the attention of the Chinese public and the Government is acting positively towards addressing deficiencies of the system. Chief among these is the Food Safety Law which comes into effect in June, 2009. But the central government must work in concert with provincial and local authorities to improve the infrastructure for inspecting and tracking food from farms to the end consumers to ensure a greater degree of safety of aquatic food for the Chinese population.
2010	Q40	Buzzacchi, Camilla. 2010. "Energia e ambiti materiali connessi: La lettura della Corte costituzionale. (Energy and Other Areas of Interest: The Case Law of the Constitutional Court. With English summary.)." <i>Economia delle Fonti di Energia e</i>

Year	DE	Title and Abstract
		dell'Ambiente/Economics and Policy of Energy and the Environment, 53(3): 115-40 . The case law of the Constitutional Court about energy has been giving evidence since 2004 to a mix of areas of interest affected by decisions concerning energy. These interests sometimes prevail, other times it happens that the needs of energy supply are judged of greater value. The further interests involved in decisions about energy are environment protection, landscape protection, health, competition, essential levels of rights, safety: the essay analyses each single field of interest affected by regional and national provisions, focusing on the balance made by the Court.
2010	R28	Slutzky, David, and A. J. Frey. 2010. "Brownfields Uncertainty: A Proposal to Reform Superfund." <i>Citiescape: A Journal of Policy Development and Research</i>, 12(3): 85-100 . For decades Americans have been trying to reverse the momentum of urban decline. In an effort to ensure that abandoned, contaminated properties were cleaned up, Congress enacted the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, or CERCLA, also known as the Superfund Act. With the creation of the Superfund program, a liability scheme was put in place to make sure that brownfields would be cleaned up so they could be put into productive reuse. Unfortunately, the uncertainties associated with this liability framework have been declared by some to be the primary impediment to brownfield redevelopment. Private developers, who might otherwise provide the resources needed for redeveloping brownfields into vital community assets, are driven away from purchasing or investing in brownfield sites by the potential for catastrophic federal and state regulatory and tort liability. As a result, many brownfields continue to sit vacant or underutilized. This article offers a solution to the risk and uncertainty resulting from federal and state cleanup and third-party tort liability often associated with brownfield sites, while preserving the current liability scheme as it pertains to parties actually responsible for the contamination. To mitigate the liability and tort concerns of potential brownfield redevelopers, this article proposes the creation of an absolute waiver of federal and state cleanup and third-party tort liability for truly innocent private parties that undertake to redevelop brownfield sites. Our proposed federal legislative reforms, coupled with incentives for states' participation, should serve as a catalyst for private-party brownfield redevelopment while strengthening the fiscal vitality of the Superfund program without reliance on taxpayer dollars.

2011	H00	Viscusi, W. Kip, and Richard J. Zeckhauser. 2011. <i>Addressing Catastrophic Risks: Disparate Anatomies Require Tailored Therapies</i>. Harvard University, John F. Kennedy School of Government, Working Paper Series . Catastrophic risks differ in terms of their natural or human origins, their possible amplification by human behaviors, and the relationships between those who create the risks and those who suffer the losses. Given their disparate anatomies, catastrophic risks generally require tailored therapies, with each prescribed therapy employing a specific portfolio of policy strategies. Given that catastrophic risks occur rarely, and impose extreme losses, traditional mechanisms for controlling risks--bargaining, regulation, liability--often function poorly. Commons catastrophes arise when a group of actors collectively impose such risks on themselves. When the commons is balanced, that is, when the parties are roughly symmetrically situated, a range of regulatory mechanisms can perform well. However, unbalanced commons--such as exist with climate change--will challenge any control mechanism with the disparate parties putting forth proposals to limit their own burdens. When humans impose catastrophic risks predominantly on others--as with deepwater oil spills--the risks are external. For those risks, the analysis shows, a single responsible party should be identified. Primary emphasis should then be placed on a two-tier liability system. Parties engaged in activities posing such catastrophic risks would be subject to substantial minimum financial requirements, strict liability for all damages, and a risk-based tax for expected losses that would exceed the responsible party's ability to pay. Utilizing the financial incentives of this two-tier liability system would decrease the current reliance on regulatory policy, and would alter the role of regulators with a tilt toward financial oversight efforts and away from direct control. Catastrophic risks will always be with us. But as rare, extreme events, society has little experience with them, and current mechanisms are poorly designed to control them. Only a tailored therapy approach offers promise of significant improvement.

2011	I13	Lindo, Jason M., Isaac D. Swensen, and Glen R. Waddell. 2011. <i>Alcohol and Student Performance: Estimating the Effect of Legal Access</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 17637 . We consider the effect of legal access to alcohol on student achievement. We first estimate the effect using an RD design but argue that this approach is not well suited to the research question in our setting. Our preferred approach instead exploits the longitudinal nature of the data, identifying the effect by measuring the extent to which a student's performance changes after he gains legal access to alcohol, controlling flexibly for the expected evolution of grades as students make progress towards their degrees. We find that students' grades fall below their expected levels upon being able to drink legally, but by less than previously documented. We also show that there are effects on women and that the effects are persistent.
2011	I21 I23	Grindsted, Thomas S. 2011. "Sustainable Universities--From Declarations on Sustainability in Higher Education to National Law." <i>Environmental Economics</i>, 2(2): 29-36 . Declarations on Sustainability in Higher Education (SHE) can be viewed as a piece of international regulation. Over the past 30 years research at universities has produced convincing data to warn about deterioration of the environment, resource scarcity and the need for sustainability. This in turn, has put a counter pressure on the university, forcing it to review its role as a driver for sustainable development. Today, universities and intergovernmental institutions have developed more than 31 SHE declarations, and more than 1400 universities have signed a SHE declaration globally. However, it is well known that signing a declaration does not necessarily lead to implementation. This is due to the lack of incentive structures. The article examines the discursive interaction between university and intergovernmental declarations that

Year	DE	Title and Abstract
		form the basis for the design of sustainable universities. Declarations tend to have impact on three trends. Firstly, there is emerging international consensus on the university's role and function in relation to sustainable development; secondly, the emergence of national legislation, and thirdly, an emerging international competition to be leader in sustainable campus performance.

2011	J24	Diss: Ghosh, Kaushik. 2011. OSHA Regulation: Worker Participation, Plant Compliance and Productivity. PhD diss. Clark University. The first part of the thesis examines the factors that affect worker participation in OSHA enforcement activities. There are two types of participation: (a) initiating a complaint inspection and (b) accompanying the OSHA inspector during the walk around phase of an inspection. Empirical results indicate that participation decisions depend positively and significantly on plant characteristics such as union status, big plant size, big firm size and industry injury rates. Previous programmed inspections in the local areas (county) and also at the plant substantially reduces worker complaint and walk around. Finally, worker participation is negatively influenced by unfavorable economic factors like the unemployment rate and demographic factors like the percentage of minority population in the county where the plant is located. The second part estimates the impact of OSHA's health and safety inspections on plant compliance for all US private manufacturing plants that were inspected by OSHA between 1972 and 2003. It empirically tests whether compliance rates or improvements in compliance following inspections differ on basis of plant unionization or worker participation rate. There are two types of worker participation: (a) initiating a complaint inspection and (b) accompanying the OSHA inspector during the walk around phase of an inspection. Two major findings from this study are: (1) workplaces with high complaint and high walk around are most hazardous and have lowest cumulative reduction in violations from repeated inspections and (2) unionized plants in general are doing slightly better in terms of compliance than non-unionized plants. This study is important from the perspective of OSHA policy implementation. This study tests if workers are expressing valid concerns about hazardous working conditions when they participate more in enforcement activities. OSHA can use this information to target workplaces which have a high incidence of complaints and walk around because these workplaces are not only hazardous to start with; they also have a long span of continuing noncompliance. Finally, we also analyze the impact of Occupational Safety and Health (OSHA) regulation on investment, labor productivity and total factor productivity. We combine productivity and investment data from the Census Longitudinal Research database (LRD) with Occupational Safety and Health Administration (OSHA) inspection data from OSHA IMIS data base. Our results show that plants that have more enforcement activities have lower labor productivity and total factor productivity. On the other we found significantly positive impact of regulation on investment. Inspections with penalty tend to have more positive impact on investment as compared to inspections without penalties. Similarly, inspections with penalties tend to have more negative impact on output, labor productivity and total factor productivity. We also compared the impact of OSHA regulation on productivity and investment by categorizing plants, based on their degree of worker participation and union status. Results show that plants that have higher complaints or higher walk around and plants that are unionized, in general have lower productivity, but the effect of OSHA inspection on productivity in case of a high complaint or high walk around or unionized plant is less than the impact on productivity of a low complaint low walk around and a non-unionized plant. The main reason for this differential impact is that, for high complaint/high walk around/union plants the displacement effect (the number of hours diverted from production to handling other regulatory activities, like training) is already low and hence the impact of additional OSHA inspection is lower.
2011	L38	Aldy, Joseph E., and Robert Stavins. 2011. <i>The Promise and Problems of Pricing Carbon: Theory and Experience</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17569. Because of the global commons nature of climate change, international cooperation among nations will likely be necessary for meaningful action at the global level. At the same time, it will inevitably be up to the actions of sovereign nations to put in place policies that bring about meaningful reductions in the emissions of greenhouse gases. Due to the ubiquity and diversity of emissions of greenhouse gases in most economies, as well as the variation in abatement costs among individual sources, conventional environmental policy approaches, such as uniform technology and performance standards, are unlikely to be sufficient to the task. Therefore, attention has increasingly turned to market-based instruments in the form of carbon-pricing mechanisms. We examine the opportunities and challenges associated with the major options for carbon pricing: carbon taxes, cap-and-trade, emission reduction credits, clean energy standards, and fossil fuel subsidy reductions.

A Law and Economics Answer." <i>Journal of Advanced Research in Law and Economics</i>, 2(1): 78-81. Since its origin , ecotourism development has been at the centre of controversial and heated debates within the environmental and scientific society. On one hand, it has been considered as a model of responsible and sustainable tourism with the capacity to guarantee the conservation of the current biodiversity level and cultural identity, to educate the tourists about preservation and to improve the economic activity and the standard of living of the populations affected. On the other hand, it has been criticized for actually being a mere instrument in the hands of capitalist and western firms to commercially exploit the natural resources available in the less developed countries. Thus, are the ecotourism projects more likely to be profitable and successful in territories where the common resources are controlled by the state or managed by private firms? Considered the most frequent and spontaneous solution noticed in the ordinary daily life of the emerging countries, meaning natural resources owned communally by local institutions, does ecotourism impede or reinforce this management function of coordinating and controlling? The empirical researches conducted in literature tried to answer to some of the above-mentioned questions and offered the opportunity for a law and economics assessment of the problem related to the common-pool resources.

National Bureau of Economic Research, Inc, NBER Working Papers: 16756. Understanding and minimizing the transaction costs of policy implementation are critical for reducing tropical forest losses. As the international community prepares to launch REDD+, a global initiative to reduce greenhouse gas emissions from tropical deforestation, policymakers need to pay attention to the transactions costs associated with negotiating, monitoring and enforcing contracts between governments and donors. The existing institutional design for REDD+ relies heavily on central government interventions in program countries. Analyzing new data on forest conservation outcomes, we identify several problems with this centralized approach to forest protection. We describe options for a more diversified policy approach that could reduce the full set of transaction costs and thereby improve the efficiency of the market-based approach for conservation.

2012	F64	Rudolph, Sven, and Achim Lerch. 2012. "Treibhausgas-Emissionshandel in den USA: Eine Bewertung der Regional Greenhouse Gas Initiative (RGGI) aus umweltökonomischer, gerechtigkeits-theoretischer und polit-ökonomischer Perspektive. (With English summary.)" <i>Zeitschrift für Umweltpolitik und Umweltrecht/Journal of Environmental Law and Policy</i> , 35(4): 421-49. Even though the U.S. is reluctant to commit to an internationally binding climate treaty and has even lost the national battle for a climate protection law in 2010, regional initiatives are gaining in importance. While California is just about to start its own emissions trading scheme, the Regional Greenhouse Gas Initiative (RGGI) has had experience with carbon markets since 2009 and is currently revising its program. Regional carbon markets in the U.S. are not only capable of fostering the national discussion especially after a re-election of Barack Obama, they can also provide an opportunity for a bottom-up approach to global climate policy by linking domestic schemes. They may have a central role in helping states fulfill obligations for greenhouse gas reductions under regulations that are expected to be developed under the Clean Air Act. Against this background, questions about the success and failures as well as the political feasibility of RGGI arise. In order to answer these questions, this paper uses a sustainability economics' approach in order to evaluate the program on grounds of efficiency, effectiveness, and social justice, and applies traditional public choice thinking supplemented by exogenous conditions in order to explain the political feasibility. By doing so, the paper shows that RGGI represents a crucial first step towards sustainable climate policies in the U.S. The program exhibits some design features--such as full auctioning and the use of revenues--which have positive economic, ecological and social effects, but also others--such as the slack cap and the limited coverage--which induce negative effects. From the political economy perspective, RGGI survived, because an advantageous political stakeholder structure including a split industry community and pro-active environmental bureaucrats faced favorable exogenous conditions such as a liberalized power market and a tradition of ambitious environmental regulation. Also, the program's price floor prevented a collapse of the program when the cap became slack.
2012	G12	Diss: Mallory, Julie. 2012. Financial Markets as a Mechanism for Environmental over Compliance. PhD diss. University of Toronto. Climate change legislation is financially and politically costly. Encouraging companies to over comply with current regulations (i.e. do more than what is required by law) could lead to socially optimal outcomes without the costs. Financial markets have the capacity to provide such motivation. In this paper I examine the financial market reaction to actions relating to climate change risk with the purpose of better understanding how investors interpret these actions and how these markets can be used to encourage environmental over compliance. First, I examine how the responses of Canadian companies to a voluntary survey regarding carbon emission levels affect those companies' valuations. I employ a signaling framework where companies choose between two discrete signals--disclosure and nondisclosure--and where there is uncertainty about the likelihood of legislation in addition to company type. I test the prediction of the model that disclosure increases company value only when investors believe legislation is likely. I find that withholding carbon emissions information resulted in average daily abnormal returns of 3 basis points, and that disclosure resulted in average daily abnormal returns of -11 basis points in the days surrounding the submission of the survey responses. The level of emissions disclosed is found to be irrelevant. My results suggest that most investors considered future climate change legislation in Canada to be distant, unlikely, or not costly, and possibly that pursuing emissions reduction was not profit-maximizing--or at the least that the collection of emissions information was costly. Second, I examine the credibility of green legislative threat. The economic climate impacts the government's ability to credibly threaten new environmental law, and so I model a company's pollution decision as a function of the economic climate. In times of recession, companies may choose to pollute heavily since they believe the likelihood of legislation is low. As a first step in evaluating the model empirically, I use differences-in-differences regressions to estimate the effect of legislative threat during recession on company value. Although the value of carbon-intensive companies decreased initially in reaction to legislative threat, the relative value of these companies increased after a few quarters as the depth of the recession becomes more apparent. I find that on average

Year	DE	Title and Abstract
		the legislative threat of an emission trading scheme reduced Tobin's Q by 18% in the initial stages of the recession, but as the recession deepened the legislative threat effect was eliminated. My results suggest that financial markets combined with a credible threat of legislation could provide encouragement to companies to over comply with current regulations, possibly to the extent that is socially optimal. More research on factors affecting company carbon emissions levels and intensity is required.

"Illegal Waste Disposal in the Time of the Mafia: A Tale of Enforcement and Social Well Being." <i>Journal of Environmental Planning and Management</i> , 55(5): 637-55. The current waste crisis in Italy is the most recent evidence that criminal organisations can impact waste management heavily. Nonetheless, this aspect has been neglected by current literature. We take the first step in filling this gap by developing a model which allows for the presence of a criminal organisation which extorts (socially costly) rent from agents willing to perform illegal disposal. In a setting where the public authority acts as a Stackelberg leader with respect to the mafia, we assume, coherently through real life observation, that enforcement efforts can only hit the criminal organisation: agents are therefore subject to indirect enforcement via the mafia extortion. Our main conclusion suggests that the presence of the mafia can lead to an increase in the level of economic activity and to less enforcement; under certain conditions, the related benefits can offset the damages from increases in illegal disposal and the social costs of the mafia's rent. These results provide a possible theoretical rationale for authorities' tolerance of the mafia in the waste cycle, and contribute to the explanation of some surprising stylised facts in the Italian case.

2012	P21 Y80	Heffron, Raphael J. 2012. <i>Nuclear New Build in the United States 1990-2010: A Three State Analysis</i>. Faculty of Economics University of Cambridge, Cambridge Working Papers in Economics. This research examines nuclear energy policy across three states in the United States (US)--Georgia, Pennsylvania, and Texas--from 1990-2010. The main research question seeks to ascertain what the prerequisites are for successful nuclear new build to occur in the US. Interviews are at the core of the research methodology employed, as with other in-depth studies on nuclear new build. The aim of this research is to identify and clarify those aspects of the legal, economic, and political requirements of the US that effect prospects for nuclear new build but which, so far, have not been well understood by experts. The research provides these new insights through a unique comparison of US states which have deregulated, regulated and 'hybrid' electricity markets. From the research it is evident the central role that law can have in the nuclear energy sector, and that policy in the nuclear energy sector can become state driven. Further, the methodology identifies key assumptions within the nuclear sector in the US that are contested, and delivers lessons on how these contested issues may be resolved. The paper adds to the literature in public administration, legal development and nuclear energy policy, and in particular nuclear new build.

2013	A13 D40 F40 Q33 Q43	Farah, Paolo D., and Riccardo Tremolada. 2013. <i>A Comparison Between Shale Gas in China and Unconventional Fuel Development in the United States: Health, Water and Environmental Risks</i>. Fondazione Eni Enrico Mattei, Working Papers: 2013.95. China is appraised to have the world's largest exploitable reserves of shale gas, although several legal, regulatory, environmental and investment-related issues will likely restrain its scope. China's capacity to successfully face these hurdles and produce commercial shale gas will have a crucial impact on the regional gas market and on China's energy mix, as Beijing strives to decrease reliance on imported oil and coal, while attempting to meet growing energy demand and maintain a certain level of resource autonomy. The development of the unconventional natural gas extractive industry will also endow China with further negotiating power to obtain more advantageous prices from Russia and future liquefied natural gas (LNG) suppliers. This paper, adopting a comparative perspective, underlines the trends learned from unconventional fuel development in the United States, emphasizing their potential application to the Chinese context in light of recently signed production-sharing contracts between qualified foreign investors and China. The wide range of regulatory and enforcement problems in this matter are accrued by an extremely limited liberalization of gas prices, lack of technological development, and political hurdles curbing the opening of resource extraction to private investors. These issues are exacerbated by concerns related to the risk of water pollution deriving from mismanaged drilling and fracturing, absence of adequate regulation framework and industry standards, entailing consequences on social stability and environmental degradation.
2013	D22	Blair, Roger D., and Thomas Knight. 2013. "Compliance with Corporate Policy: An Economic Approach." <i>Managerial and Decision Economics</i>, 34(7-8): 529-37. We consider how corporations respond to public policy mandates with internal compliance policies and enforcement. We suppose that corporate compliance is determined by employees of the firm, whose incentives do not align perfectly with those of the corporation. In response, corporations expend resources to make compliance more likely. They adopt internal compliance policies and enforce these policies by sanctioning employees that violate them. Perfect compliance is unlikely, given imperfect observability of employee behavior. We present a number of laws and regulations with which firms may choose to comply, construct a model of internal compliance, and close with a discussion of different internal compliance policies and their feasibility.

2013	F40	THE SAME AS A13 Farah, Paolo D., and Riccardo Tremolada. 2013. <i>A Comparison Between Shale Gas in China and Unconventional Fuel Development in the United States: Health, Water and Environmental Risks</i> . Fondazione Eni Enrico Mattei Working Papers: 2013.95.
2013	F59	Condon, Madison, and Ada Ignaciuk. 2013. <i>Border Carbon Adjustment and International Trade: A Literature Review</i> . OECD Publishing, OECD Trade and Environment Working Papers: 2013/6. An important source of political opposition to measures aimed at reducing emissions of greenhouse gases (GHGs) arises from concerns over their negative effects on the competitiveness of domestic firms, especially those that are energy-intensive and exposed to competition from foreign producers. Politicians and industry representatives alike fear that imports from countries without similar regulations can gain cost-of-production advantages over domestic goods. With many of the major economies of the world contemplating unilateral action to restrict their carbon emissions (while continuing to pursue co-ordinated multilateral action), the parallel concern of carbon leakage--whereby domestic reductions in emissions are partially or wholly counterbalanced by increased emissions elsewhere in the world--has also arisen. Various adjustments have been proposed, both in the academic literature and in draft climate legislation, including levying a border tax or requiring importers to surrender a quantity of carbon permits. Collectively, these kinds of adjustments are often referred to as border carbon adjustments, or BCAs. This note reviews the existing literature on BCAs and alternatives to BCAs and discusses what various researchers have concluded about the efficacy of BCAs from both a trade and an environmental perspective.
2013	H53	CV: Tsobanoglou, Georgios, and Ioanna Giannopoulou. 2013. "Organizational Framework of the Public Care System in Greece--Does It Promote Child Protection?." 2013	H54	Meyerstein, Ariel. 2013. "Transnational Private Financial Regulation and Sustainable Development: An Empirical Assessment of the Implementation of the Equator Principles." <i>New York University Journal of International Law and Politics</i> , 45(2): 487-594. Large-scale infrastructure projects often impose a variety of environmental and social harms on marginalized (often indigenous) populations, many of whom, particularly in countries with weak regulatory capacity, have very little political voice in the project approval process. Responding to pressure from transnational activists and the changing norms and practices of development finance institutions such as the World Bank, some of the largest commercial banks in the world created a global private regulatory regime--the Equator Principles ("EPs")--to standardize their review of the environmental and social risks flowing from their investments in these projects. This article contextualizes the emergence of the Equator Principles among the broader shift to new forms of global governance and explores how the impact of such governance regimes can be measured. Drawing inspiration from recent scholarship by regulatory scholars of domestic voluntary regimes, the article explores how "process" focused metrics can be an important measurement of regime effectiveness. Implementing an empirical approach, the article presents the first global survey of the implementation by the participating banks--Equator Principle Financial Institutions ("EPFIs")--measured along two dimensions: (1) how individual institutions have changed their organizational structures, policies, and procedures following their decisions to adopt the EPs and (2) how they have contributed to the growth and evolution of the regime. While institutional change is not a perfect proxy for measuring impacts "on the ground," I argue that it is a particularly useful measurement for the study of global private regulation related to corporate human rights accountability, which both the United Nation's Guiding Principles on Business and Human Rights and the OECD's Guidelines for Multinational Enterprises suggest should be carried out primarily by the development of robust due diligence mechanisms not unlike those required by the Equator Principles.
2013	H54	Ferreiro, Maria de Fatima, Maria Eduarda Goncalves, and Ana Costa. 2013. "Conflicting Values and Public Decision: The Foz Coa Case." <i>Ecological Economics</i> , 86(0): 129-35. This article considers public decision involving conflicting values and interests by presenting a case (Portugal, 1990s) where the construction of a dam already under way following an Environmental Impact Assessment procedure (EIA) was abandoned in order to preserve prehistoric rock engravings. The Foz Coa case illustrates the methodologies currently adopted under European Union law in the support of public decision concerning large infrastructures with significant impact on the environment and/or the cultural heritage, highlighting their limitations when confronted with the complexity and the plurality of values commonly at stake in such circumstances. We assume that the reasonableness of a public decision is meant to emerge from a process through which the various and conflicting reasons for acting are brought together, implying the opening of ends, and not only of means, to discussion and inquiry, a deliberative perspective which is put in contrast with the monistic methodologies supporting public decision-making under the EIA procedure. Some broader lessons may be drawn from the analysis of this case, we argue, regarding the conditions under which a regulatory system should tackle the diverse and conflicting values involved in public decision that affects today's highly-prized values like the environment or the cultural heritage.

2013	K37	Da Silva, Cesar Augusto Silva. 2013. "Brazil: Human Rights and Environmental Refugees." <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(22): 211-41. These notes seek to establish a discussion regarding the evolution of the refugee definition, particularly the so-called environmental refugees in the context of human rights and environmental law in order to establish possible proposals for the modification or extension of the concept, in the international treatise and in the Brazilian law, with regard to the issue of forced displacement in the contemporary world. The text aims to analyze the trajectory and the advancement of human rights in view of the category of refugees in Brazilian and international legislation in the context of new phenomena that challenges the current definition, like desertification, soil degradation, biodiversity loss and insecurity

Year	DE	Title and Abstract
		food, which can also cause displacement. These environmental phenomena have gained the centrality of the political debate of the world's political agenda since the end of the Cold War until nowadays, since few times in history, there have been so many people moving from one country to another, from one continent to another, or even one region to another, fleeing from persecution or natural phenomena or lack of food.
2013	L64	Kahane, Leo H. 2013. "Understanding the Interstate Export of Crime Guns: A Gravity Model Approach." <i>Contemporary Economic Policy</i>, 31(3): 618-34. In 2009, the Bureau of Alcohol, Tobacco, Firearms and Explosives successfully traced over 145,000 guns recovered at crime scenes in the United States. Of these guns, more than 43,000 were originally sold in a different state from which they were recovered. What factors may explain the interstate movement of these crime guns? This article uses the well-known gravity model of international trade to estimate interstate flow of crime guns. Empirical results show that, like trade of goods and services between nations, the traced movement of crime guns between states is proportionate to the economic sizes of trading partners and is inversely proportionate to the distance between them. In addition, the presence of gangs in one or both states tends to increase the flow of crime guns. Finally, differences in state gun laws tend to affect trade flows with crime guns flowing from states with "weak" gun laws to states with "strict" gun laws.
2013	L68	Dietrich, Sascha. 2013. "Produktbezogenes Okodesign. Rechtsgrundlagen-Praxis-Perspektiven. (With English summary)." <i>Zeitschrift für Umweltpolitik und Umweltrecht/Journal of Environmental Law and Policy</i>, 36(1): 24-57. Based on the Ecodesign-Directive, since 2005 the EU Commission has been preparing minimum requirements for the ecological design (ecodesign) of certain products. In its original version (2005/32/EC), the directive comprised energy-using products. Directive 2009/125/EC enlarged the scope to include energy-related products (ErP), so that items are also included that do not use energy themselves but whose use influences energy consumption. The aim of the directive enacted under Article 95 of Treaty Establishing the European Community, TEC (Article 114 of the Treaty of the Functioning of the European Union, TFEU) is to ensure the effective functioning of the single market for these products and to reduce their environmental impacts by harmonising ecological product requirements. The intent is to lower energy consumption, reduce materials costs and lessen pollution from hazardous substances while making a contribution to securing energy supply. The new Ecodesign-Directive 2009/125/EC was transposed in Germany with the Energy-Related Products Act (Energieverbrauchsrelevante-Produkte-Gesetz, EVPG) of 16 Nov. 2011, which creates the legal framework for the application and enforcement of European ecodesign requirements in Germany. In particular, the EVPG regulates the conditions for the market introduction of energy-related products and the organisation of supervisory powers for the surveillance authorities. Till now, ecodesign requirements in the form of directly applicable EU regulations have been adopted for 16 product groups. The focus so far has been on minimum energy efficiency requirements; the implementing regulations provide for a gradual increase in efficiency thresholds. Through the first 13 measures alone, the EU Commission, on the basis of the relevant impact assessments, expects EU-wide (relative) energy savings of up to 366 terawatt hours per year (TWh) by 2020 as compared with a situation without ecodesign requirements. The article explains the political and legal background as well as the structure of the Ecodesign-Directive and describes how product group specific ecodesign implementing measures are elaborated under the authority of the EU Commission. It furthermore outlines the German legal framework that was imposed by the EVPG. The article's main focus is on evaluation of 5 years of implementation of the Ecodesign-Directive and an outlook for future challenges with respect to further implementation of the directive. In principle, the directive has proved to provide a useful framework for establishing product related environmental requirements. Concrete requirements always have to take into account the often conflicting interests of consumers, producers and the environment. In particular, so called trade-offs between different environmental impacts have to be considered. In sum, concrete ecodesign requirements are always a compromise between different interests. Particular challenges exist with regard to market surveillance, which is essential for the success of the directive. Furthermore, the article highlights and discusses aspects to be discussed in the context of the Ecodesign-Directive in the coming years: the level of ambition of minimum efficiency requirements; possible requirements for complex products and systems; interactions and possible conflicts between ecodesign and building related requirements; the complexity of product related requirements concerning material and resource efficiency; the adaptation of the directive to the Treaty of Lisbon; a possible extension of the scope of the directive to non-energy related products.
2013	L70	Elvan, Osman Devrim. 2013. "The Legal Environmental Risk Analysis (LERA) Sample of Mining and the Environment in Turkish Legislation." <i>Resources Policy</i>, 38(3): 252-57. As advancing technology and increasing demands for natural resources continue to mount pressure on the environment, environmental conservation and sustainable management have become ever more important. Individual countries have been increasingly taking action to reduce environmental destruction caused by human activities in an attempt to find a balance in between the necessary exploitation of resources and environmental conservation. In Turkey, the struggle between environmental conservation and mining activities is set within the legal context, with the requisite legal regulations (which describe various procedures) in the midst of being updated or renewed. The legal environmental risk analysis (LERA), beginning by discussing the main legal regulations of environmental conservation in relation to mining activities, defines basic environmental components which form the basis of environmental conservation in relation to mining, and analyzes the impact of mining on each component. The analysis (LERA) finishes with an evaluation of the components as they currently stand and makes some suggestions for the improvement of insufficient regulations.

2013	N37	McCulloch, Jock. 2013. "Mine Medicine: Knowledge and Power on South Africa's Gold Mines." <i>Labor History</i>, 54(4): 421-35. South Africa's gold mines were the first to compensate for silicosis and tuberculosis as occupational diseases. They were also the first mines to introduce medical surveillance of a workforce. Despite those innovations, both employers and state authorities failed to identify the risk faced by underground workers, and the Rand mines remained among the most dangerous in the world. The reasons for that failure are found in the system of mine medicine, which hid rather than revealed the actual disease rates.
2013	N74 O12	Chakrabarti, Anindita. 2013. "Attitude and Practices towards Food Safety in Domestic Consumption: A Case Study from India." <i>Journal of International Development</i>, 25(5): 696-713. Ability to ensure 'safe food' for its populace is a key issue for developing countries from the public health perspectives. In recent years, there has seen some efforts towards generation of 'consumer awareness' through actions by non-governmental organizations and other research institutions. Using a primary survey data from India, this paper examines the link between consumer awareness and household and village level characteristics. We show that number of years of education of the household members, wealth status of the household along with village level infrastructural facility play a role in raising consumer awareness about food adulteration in the domestic market.

2013	Q33	de la Vega, Candela. 2013. "Racionalidades del territorio: Leyes mineras en dos provincias argentinas. (Territorial Rationalities: Mining Laws in Two Argentinean Provinces. With English summary.)." <i>Sociedad y Economía</i> , 0(25): 107-33, Public policies about territory contain and prescribe specific rationalities, that is to say, generating principles of social practices, codes of vision, decision and action, which in turn constitute themselves in allowed, expected or legitimized criteria. This article shows a comparative analysis of the existing convergences between current State mining decisions in two Argentinean provinces: Cordoba and La Rioja. The particularity of these two cases is that while in Codoba applies a prohibiting open-pit mining law; in La Rioja, there is a law that enabled this activity. This analysis was carried through a study of the content of legal texts and depth interviews conducted to civil servants.

Year	DE	Title and Abstract
2006		
2006	D43	Garcia-Gallego, Aurora, Nikolaos Georgantzis, Maria Jose Gil-Molto, and Vicente Orts. 2006. "Game-Theoretic Aspects of International Mergers: Theory and Case Studies." <i>International Review of Law and Economics</i>, 26(3): 395-409. This paper studies the exclusion of potential competition as a motivating factor for international mergers. We propose a simple game-theoretic framework in order to discuss the conditions under which mergers that prevent reciprocal domestic competition will occur. Our analysis highlights the shortcomings of antitrust policies based on pre-merger/post-merger concentration comparisons. A review of several recent European cases suggests that actual merger policy often fails to consider potential competition.
2006	D44	CV: Bagwell, Kyle, Petros C. Mavroidis, and Robert W. Staiger. 2006. "The Case for Tradable Remedies in WTO Dispute Settlement." In <i>Economic Development and Multilateral Trade Cooperation</i>, ed. Simon J. Evenett and Bernard M. Hoekman, 395-413. Washington, D.C.: World Bank; Houndmills, U.K. and New York: Palgrave Macmillan.
2006	E26	CV: Christensen, Robert K. 2006. "The Global Path: Soft Law and Non-sovereigns Formalizing the Potency of the Informal Sector." In <i>Linking the Formal and Informal Economy: Concepts and Policies</i>, ed. Basudeb Guha-Khasnobis, Ravi Kanbur and Elinor Ostrom, 36-57. UNU-WIDER Studies in Development Economics series. Oxford and New York: Oxford University Press.
2006	G30	Chua, Eu Jin. 2006. "The Laws of the People's Republic of China: An Introduction for International Investors." <i>Chicago Journal of International Law</i>, 7(1): 133-68.
2006	G38	Crocioni, Pietro. 2006. "Can State Aid Policy Become More Economic Friendly?" <i>World Competition: Law and Economics Review</i>, 29(1): 89-108. With the recent and ongoing reform of most areas of European competition law (mergers, Art. 81, and now Art. 82 of the EC Treaty) State aid rules appear more and more as an anomaly. This is both from the institutional point of view, where State aid remain the exclusive domain of the European Commission, and in being one of the few last areas of competition law where decisions are based on presumptions rather than competitive effects. This article argues that the two aspects are strictly linked. Because the European Commission has to review a large number of State aid cases every year it lacks the resources to go beyond an analysis based on presumptions. This suggests that a different system could improve the application of State aid rules. It is claimed here that a strong case for a supranational control of State aid is only warranted when the measure is likely to result in significant negative spillovers. It follows that the European Commission could focus only on cases where significant effects on trade are likely and delegate the analysis of cases where the effects are purely national to independent national authorities in each Member State.
2006	H40	Adlung, Rudolf. 2006. "Public Services and the GATS." <i>Journal of International Economic Law</i>, 9(2): 455-85. The status of public services is one of the most hotly debated issues surrounding the General Agreement on Trade in Services (GATS). In principle, there are two approaches to define such services: an institutional approach focusing on the conditions governing supply (e.g. ownership status and market organization) and a functional approach based on the policy objectives that may be involved (e.g. quality-related objectives and concepts of universal access). Given the diversity of existing arrangements among WTO Members, with significant variations over time, the former approach does not appear appropriate. The services provided by government-owned facilities, whose costs are covered directly by the State, may well be indistinguishable, for all practical purposes, from the services provided by private commercial operators under appropriate regulations or incentive mechanisms. This article discusses the relevance of the GATS for different arrangements that governments may use to meet typical public service objectives. All conceivable arrangements, whether based on public monopolies, or regulated or subsidized private supplies, or combinations thereof, are compatible per se with the Agreement. Recent regulatory and technical developments have broadened the scope for—possibly more efficient—market-based solutions, whose credibility may be enhanced by the assumption of commitments under the GATS. There is no common template, however. It is at the end for each WTO Member to decide, sector-by-sector, on the appropriate policy approach and the pros and cons of binding access conditions under the Agreement.
2006	J08	Kovats, Laszlo J. 2006. "How Flag States Lost the Plot over Shipping's Governance: Does a Ship Need a Sovereign?" <i>Maritime Policy and Management</i>, 33(1): 75-81.

Year	DE	Title and Abstract
2006	K30	Melish, Tara J. 2006. "Rethinking the 'Less as More' Thesis: Supranational Litigation of Economic, Social, and Cultural Rights in the Americas." <i>New York University Journal of International Law and Politics</i> , 39(2): 171-343.
2006	K30	Cavallaro, James L., and Emily Schaffer. 2006. "Rejoinder: Justice before Justiciability: Inter-American Litigation and Social Change." <i>New York University Journal of International Law and Politics</i> , 39(2): 345-83.
2006	K30	Melish, Tara J. 2006. "Counter-Rejoinder: Justice vs. Justiciability?: Normative Neutrality and Technical Precision, the Role of the Lawyer in Supranational Social Rights Litigation." <i>New York University Journal of International Law and Politics</i> , 39(2): 385-415.
2006	K39	Hallwood, Paul, and Thomas J. Miceli. 2006. "Murky Waters: The Law and Economics of Salvaging Historic Shipwrecks." <i>Journal of Legal Studies</i> , 35(2): 285-3. The salvage of historic shipwrecks involves a debate between salvors, who wish to maximize profit, and archaeologists, who wish to preserve historical value. Traditionally, salvage of shipwrecks has been governed by admiralty law, but the Abandoned Shipwreck Act of 1987 transferred title of historically important wrecks in U.S. waters to the state in whose waters the wreck is found, thereby abrogating admiralty law. This paper examines incentives to locate and salvage historic wrecks under traditional admiralty law and proposes an efficient reward scheme. It then reconsiders current U.S. and international law in light of the results.
2006	L81	Wunsch-Vincent, Sacha. 2006. "The Internet, Cross-Border Trade in Services, and the GATS: Lessons from US-Gambling." <i>World Trade Review</i> , 5(3): 319-55. The rapid development of the Internet has led to a growing electronic cross-border delivery of services. While the WTO negotiations have not caught up to the reality of such service trade, the first GATS case dealing with the Internet, namely 'United States--Measures Affecting the Cross-Border Supply of Gambling and Betting Services', has advanced matters. This paper distills the substantive conclusions of the case and remaining questions in relation to Internet-supplied services and certain core concepts of the GATS. Moreover, it sheds light on the case's implications for the services negotiations under the ongoing Doha Development Agenda. It concludes that the second ever GATS case has provided an encouraging set of answers to the unresolved questions of the WTO's Work Programme on E-Commerce, mainly confirming the applicability of GATS commitments to electronically supplied services and shaping the concept of technological neutrality. While more work or dispute settlement cases are necessary to clarify the remaining questions, the rulings have paved the way for the GATS to be a more effective discipline for cross-border (electronic) trade. The paper also explains that a 'chilling effect' of the rulings on the Doha services negotiations is not warranted.
2006	M37	CV: Vivas Eugui, David, and Christoph Spennemann. 2006. "The Treatment of Geographical Indications in Recent Regional and Bilateral Free Trade Agreements." In <i>The Intellectual Property Debate: Perspectives from Law, Economics and Political Economy</i> , ed. Meir Perez Pugatch, 305-44. New Horizons in Intellectual Property. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	M37	CV: Evans, Phil. 2006. "Geographic Indications, Trade and the Functioning of Markets." 2006	M37	CV: Blakeney, Michael. 2006. "Geographical Indications and TRIPS." In <i>The Intellectual Property Debate: Perspectives from Law, Economics and Political Economy</i> , ed. Meir Perez Pugatch, 293-304. New Horizons in Intellectual Property. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	M55	Lapid, Karen. 2006. "Outsourcing and Offshoring under the General Agreement on Trade in Services." <i>Journal of World Trade</i> , 40(2): 341-64
2006	P40	Marossi, Ali Z. 2006. "Iran Is Knocking at the World Trade Organization Door: Iran's Economy and the World Economy--Challenges and Opportunities." <i>Journal of World Trade</i> , 40(1): 167-85.
2006	Q13	Di Gianni, Fabrizio, and Renato Antonini. 2006. "DSB Decisions and Direct Effect of WTO Law: Should the EC Courts Be More Flexible When the Flexibility of the WTO System Has Come to an End?" <i>Journal of World Trade</i> , 40(4): 777-93.
2006	Q13	Swinbank, Alan. 2006. "Like Products, Animal Welfare and the World Trade Organization." <i>Journal of World Trade</i> , 40(4): 687-711. Some production processes, such as organic or animal welfare friendly systems, can become embedded as credence characteristics in consumer goods. Market mechanisms, involving voluntary labelling schemes and accreditation systems might be developed to ensure the delivery of many of the credence characteristics sought out by consumers. However, when credence characteristics capture ethical concerns then voluntary labelling may be insufficient, as it is the production as well as the consumption of the product that causes offence. Thus a ban on unacceptable production methods may emerge as the political response. Any attempt to extend the ban to imported products, in the form of mandatory labelling, or a ban on imports not produced in the manner laid down in the home jurisdiction, will potentially fall foul of WTO rules. GATT's Article XX does provide for some general public policy exceptions, but animal welfare is not one, and there is a strong presumption against the recognition of process methods for differentiating between goods. It is argued that there are circumstances in which mandatory labelling of imports could be justified, and these are spelt out. Both producers, and lawmakers, need to respect consumer requirements. A producer-focused unwillingness to disentangle "like products", because of undue deference to the theory of comparative advantage, will not enhance the WTO's authority.
2006	Q51	Loomis, John, Lindsey Ellingson, Armando Gonzalez-Caban, and Andy Seidl. 2006. "The Role of Ethnicity and Language in Contingent Valuation Analysis: A Fire Prevention Policy Application." <i>American Journal of Economics and Sociology</i> , 65(3): 559-86. In order to satisfy legal requirements, many federal agencies must assess the potential effects of their policies on the public. This is often done through surveys, but frequently those surveys are only administered in English. This paper tests whether there are differences in survey response rates, refusals to pay, and willingness to pay (WTP) across different ethnicities and language for forest fire reduction in the State of California. The ethnicities studied were Caucasian, African American, and Hispanic (half in Spanish, half in English). There was a statistical difference in survey response rates across all ethnicities, and no statistical difference among ethnicities for reasons of refusing to pay. The influence of ethnicity and language was tested using a logit model with ethnicity intercepts and bid slope interaction terms. The Hispanic-Spanish intercept shifter and the Hispanic-English dollar bid amount interaction terms were statistically significant and positive. There was a significant difference in the logit willingness to pay coefficients between Hispanics surveyed in Spanish with each of the other ethnicities. The annual willingness to pay of Hispanics taking the survey in Spanish was twice that of Caucasians, but no statistical difference in mean and median WTP between these two groups was found, due to large confidence intervals around each estimate. Nonetheless, the WTP of both Hispanics and Caucasians for the forest thinning program is substantial, and statistically different from zero, suggesting there may be broad support for this program in California.
2006	Q51	D'Sa, Antonette, and K. V. Narasimha Murthy. 2006. "Environmental Reform in the Electricity Sector: China and India." <i>Journal of Environment and Development</i> , 15(2): 158-83. This article analyzes the challenges to effective environmental protection in the

Year	DE	Title and Abstract
		power sectors of China and India. Its analytical framework consists of identification of environmental policies and regulations affecting electricity generation, assessment of problems faced when implementing these policies and regulations, and finally recommendations for surmounting the barriers encountered. Environmental issues in the electricity sector have been addressed directly, through laws and governmental orders, and indirectly, through policies on alternative technologies and efficiency improvement. However, successful environmental regulation has been hampered in these large developing countries by the compelling need for energy and the consequent rapid increase in electricity generation. Solutions to these problems lie in combinations of cleaner and more-efficient generation, appropriate control equipment, and more-efficient end-use devices. Among factors that facilitate effective adoption of these solutions are state prioritization, fiscal and financial incentives, appropriate technological choices, institutional involvement, integrated planning, public participation, and international commitments.
2006	Q52	CV: Langrock, Thomas. 2006. "The Role of Stakeholder Driven Corporate Governance--The Example of BP's Climate Change Strategy." In <i>Emissions Trading and Business</i> , ed. Ralf Antes, Bernd Hansjurgens and Peter Letmathe, 241-55. Heidelberg and New York: Springer, Physica-Verlag.
2006	R23	Anderson, William L., and Daniel A. Mizak. 2006. "Politics of Environmental Law: Political Ideology, Elitism or Urban-Rural Interests?" <i>Public Choice</i> , 129(1-2): 131-57. This paper examines a number of demographic aspects in congressional districts and states that played important roles in a series of Congressional votes on environmental issues in 2000. These characteristics include urbanization or population density, education, income, race, and employment. Our findings are mixed. While we find some evidence (at least in Senate votes) that population density is a positive predictor of "pro-environment" votes, we also find that things commensurate with the Environmental Kuznets Curve such as income, education, and lifestyle also play an important role in environmental voting.
2007		
2007	A23 J24	Kerr, William A. 2007. "International Trade Education: Do We Need a New Model for the Global Market?" <i>Estey Centre Journal of International Law and Trade Policy</i> , 8(1): 1-11. Professionals in the field of international trade policy tend to receive their knowledge on-the-job, often with a considerable component of mentoring. While this was a reasonable knowledge transfer mechanism in a period when interest in trade policy was confined to narrow constituencies and a limited range of trade policies, it may no longer be appropriate in the era of globalization. In recent years both those with an interest in trade policy and the range of issues that come under the purview of trade policy have increased substantially, yet there is little formal education provided on trade policy. As a result, there is a shortage of trained professionals in the field of trade policy. While the shortage is widespread in developed countries, it is endemic in developing countries--leading to a major training effort by the World Trade Organization, regional trade organizations and through bilateral aid. These efforts are stopgap measures and solving the problem will require the incorporation of trade policy in academic curricula. The reasons for trade policy training retaining its traditional form are explored and suggestions regarding alternatives provided.
2007	D21	CV: Barichello, Richard. 2007. "Administrative Procedures, the Distribution of Costs and Benefits, and Incentives in Anti-dumping Cases." In <i>Handbook on International Trade Policy</i> , ed. William A. Kerr and James D. Gaisford, 360-67. In association with the Estey Centre for Law and Economics in International Trade. Elgar Original Reference series. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	D21	Lindeque, Johan Paul. 2007. "A Firm Perspective of Anti-dumping and Countervailing Duty Cases in the United States." <i>Journal of World Trade</i> , 41(3): 559-79. The role played by firms in the prosecution of anti-dumping and countervailing duty cases in the United States is understudied. This article provides greater understanding of the challenges faced by firms during the process of prosecuting anti-dumping and countervailing duty cases in the United States. This is achieved by applying a theoretical model of corporate political activity to data collected through interviews with 24 trade attorneys in Washington, D.C., practising in the area of anti-dumping and countervailing duty law. Anti-dumping and countervailing duty cases are found to require significant resource commitments from firms in the participating industries, as well as requiring individual firms to make a number of strategic decisions. The value of an affirmative decision and imposition of duties to the domestic and foreign industry is found to be more nuanced than previous studies have suggested. Non-duty effects of AD and CVD cases are also confirmed. Finally a clearer understanding of the role of individual firms in anti-dumping and countervailing duty cases is shown to have the potential to improve how industry influence is taken account in future research.
2007	D60 O55	Randolph, Susan, Ibrahima Gaye, Ibrahima Hathie, and Rafael Perez-Escamilla. 2007. <i>Monitoring the Realization of the Right to Food: Adaptation and Validation of the U.S. Department of Agriculture Food Insecurity Module to Rural Senegal</i> . University of Connecticut, Human Rights Institute, Economic Rights Working Papers: 6. The Universal Declaration of Human Rights first formally recognized food security as a human right. This right was subsequently codified into international law in 1976 when the International Covenant of Economic, Social and Cultural Rights, ICESCR, entered into the force of law. The ICESCR obligates states to respect, protect, and fulfill the right to food, but in the absence of reliable measures of food security, simply monitoring progress towards the realization of the right to food is problematic. Moreover, if duty bearers are to design effective policies and programs to fulfill the right to food, it is essential to have reliable information on who is food insecure. This paper assesses the validity of an adaptation of the United States Department of Agriculture's (USDA) Food Insecurity Survey Instrument to the rural Senegalese context. The advantage of this instrument is that it is simple and inexpensive to administer, identifies the food security status of individual adults as well as children, and assesses the certainty, quality, and quantity aspects of food access. The USDA Food Insecurity Instrument has been successfully adapted to other developed countries and several developing countries as well. Adaptation to the Sub-Saharan context poses particular challenges given the complex household structure, the more limited reach of markets, the myriad of languages spoken within a limited geographic area, and the influence of seasonality on food access. Despite these challenges, this study demonstrates the validity of a reasonably straightforward adaptation of the USDA food insecurity instrument for rural Kaolack, Senegal, attesting to the promise of this approach for measuring food insecurity in developing countries in general and Sub-Saharan African countries in particular.

In this paper, the author analyses the subject of the changes in territorial sovereignty and indicates the consequences they cause in the citizenship law. After observing the succession itself, she indicates the problems which appear in the relation succession--citizenship and also analyses the solutions to these problems in national legislations by the application of the relevant provisions of European Convention of Citizenship from 1997 and other relevant international documents which deal with this matter.
2007	F55	Groenleer, Martijn L. P., and Louise G. van Schaik. 2007. "United We Stand? The European Union's International Actorness in the Cases of the International Criminal Court and the Kyoto Protocol." <i>Journal of Common Market Studies</i> , 45(5): 969-98. In this article we examine the relationship between the institutional set-up of the EU foreign policy-making process and the international actorness of the EU in two particular cases: the International Criminal Court and the Kyoto Protocol. Whereas in both cases policy-making is organized along intergovernmental lines, the EU has shown a relatively high degree of international actorness. We argue that this is the combined result of the considerable congruence of EU Member States' initial preferences and the social interactions between EU Member States, third countries and non-state actors, through which preferences converged even further over time.

2007	G14	Jensen, Nathan M. 2007. "International Institutions and Market Expectations: Stock Price Responses to the WTO Ruling on the 2002 U.S. Steel Tariffs." <i>Review of International Organizations</i> , 2(3): 261-80. Many scholars assert that international institutions have little power to enforce laws, punish offenders, or force compliance. Others stress that international institutions are important actors, specifically in the regulation of international trade. In this paper, I show that the recent trade dispute over U.S. steel protection provides us with a critical case to evaluate the role of the World Trade Organization in settling trade disputes and specifically stabilizing expectations of market actors over future steel policy. I argue that stock prices can serve as an important tool in answering these questions. In an empirical analysis using daily steel stock prices, I find that during the 2002 WTO steel case, the WTO dispute mechanism helped market actors stabilize expectations of future trade policy.
2007	G14 G24 L25	Basyah, Mohammad, and James C. Hartigan. 2007. "Analyst Earnings Forecast Revisions and the Persistence of Antidumping Relief." <i>International Review of Economics and Finance</i> , 16(3): 383-99. Panel corrected standard errors with instrumental variables and effects are invoked to assess the significance of earnings forecast revisions around critical dates in non-steel AD petitions filed in 1985-1987. These petitions were filed between two important US trade law revisions (1984 and 1988), and the period encompasses significant stock market advances and declines. Event studies have been invoked to assess the value of AD petitions. However, they do not estimate the temporal distribution of any abnormal returns. Because analysts make quarterly earnings forecast revisions over several horizons, we can assess the short and long run value of petitions. We find that AD petitions tend to depress earnings forecasts in the year of the petition. However, second year earnings forecasts tend to be revised upwards. There is no effect on five year (long term) earnings growth forecasts. Hence any benefits of protection do not persist. There is evidence that analysts anticipate the filing by revising forecasts in the three months in advance of the filing. We also find that AD petitions do not affect the accuracy of forecasts.
2007	H70	Treutlein, Daniela. 2007. <i>What actually Happens to EU Directives in the Member States? - A Cross-Country Cross-Sector View on National Transposition Instruments</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2098. This study empirically investigates the transposition patterns of EU directives in all 15 member states and in six major sectors of the economy with a view on analysing the political-economic reasons behind sector and national differences in the legal transposition instruments used. In particular, we model the influence of both national sector importance and governmental constellations on the ratio of primary to totally transposed EU directives. We find that government strength and net EU receipts negatively affect the ratio of primary to total transpositions. Economic sector size plays a positive significant role for primary transposition ratios. However, the direction of the effect changes if we control for other sector characteristics, i.e. sector lobbying potential and technicality.

2007	J83	Burda, Julien. 2007. "Chinese Women after the Accession to the World Trade Organization: A Legal Perspective on Women's Labor Rights." <i>Feminist Economics</i> , 13(3-4): 259-85. The World Trade Organization's law is a potentially powerful instrument for improving the labor rights of Chinese working women, if it is complemented by a broad global and multilateral approach. In contrast to much of the writing on core labor standards, this contribution is based on legal analyses, exploring what is possible, practical, and desirable in terms of WTO law. This paper seeks to assess whether the WTO could be used to pressure the Chinese government to improve women's labor rights. Trade sanctions, even if they fulfill the stringent conditions to be justified under WTO law, do not appear to be the best strategy. The incentive approach, based on both the Generalized System of Preferences (GSP) unilateral scheme and bilateral agreements, appears to be the best solution for improving women's labor rights. Any use of this tool must complement a global and multilateral approach, including better vertical and horizontal cooperation, among other international organizations and civil society.

2007	L15	Raballand, Gael, and Enrique Aldaz-Carroll. 2007. "How Do Differing Standards Increase Trade Costs? The Case of Pallets." <i>World Economy</i> , 30(4): 685-702. The pallet is a platform used for storing, handling and transporting products. There are hundreds of different pallet sizes around the world. The case of pallets is examined to illustrate the impact of multiplicity of standards on trade costs. We select this case because pallets are used all over the world, pallet standards are not too sophisticated, and data on pallet standards and costs are to some extent available. The paper examines why there are so many different pallet standards, the associated trade costs and the reasons why countries have not harmonised pallet sizes to eliminate such costs. It then presents options for exporters to mitigate the adverse effects of standards multiplicity while complying with destination markets' standard requirements. The range of options is limited for exporters from less developed countries because of the lack of rental and exchange pallet markets. To mitigate the costs of this multiplicity of standards, the international community's strategy should focus on developing awareness of the cost of multiplicity of standards and actively supporting standardisation.

2007	N50	Lautze, Jonathan, and Mark Giordano. 2007. "Demanding Supply Management and Supplying Demand Management: Transboundary Waters in Sub-Saharan Africa." <i>Journal of Environment and Development</i> , 16(3): 290-306. The emphasis of the world's transboundary water law has gradually shifted in the past half century from water resources development to water resources management and environmental protection. This change in institutional focus is a natural outcome of changing resource conditions, in particular the high levels of water resources development achieved in many regions as well as rising economic prosperity and associated changes in environmental perception. Surprisingly, this analysis reveals that transboundary water law in sub-Saharan Africa (SSA) follows these global trends even though SSA's levels of water resources development, economic prosperity, and food security are significantly lower than any other region in the world. These findings suggest that the nature of SSA's transboundary water law may be largely "handed down" from other parts of the world with different realities than those present in SSA. Recognizing this relationship can provide important lessons for improving transboundary water governance in the region.
2007	O23	Cockfield, Arthur. 2007. "Purism and Contextualism within International Tax Law Analysis: How Traditional Analysis Fails Developing Countries." <i>eJournal of Tax Research</i> , 5(2): 199-224. There are two broad approaches to the study of international tax law. Purists adopt a traditional approach, emphasizing conceptually pure tax solutions based on efficiency interests. Contextualists combine economic analysis with political, historical, social, institutional and other perspectives. It is argued that the Purist approach is overly-reliant on international tax economics which, in turn, is challenged by significant theoretical, empirical, and behavioral uncertainty. The Purist analysis nevertheless can be effective in respect of situations in which there are relatively balanced capital flows between countries with developed economies. Developing countries, however, are generally capital importing nations and their interests tend to be downplayed under the Purist approach. In an increasingly integrated global economy, the Contextualist perspective is more effective at taking account of the interests and needs of developing countries and, in so doing, promotes the long-term economic and security interests of developed countries.

University of Connecticut, Department of Economics, Working papers: 2007-35. A model is developed explaining many common historical sequences: inter alia, the rise and fall of empires, expansion or contraction in the geographic size of nations, wars of secession, non-contested secessions, and growth of supra-national unions. The basic unit of analysis is a transaction in international (or national) law that verifies and legitimizes transformations from one organizational entity to another. Decision-makers for national, or super-national entities as well as those at sub-levels are assumed to be welfare maximizers under cost constraints. Potential secessionists face dispute costs, and decision-makers for the higher-level entity incur persuasion costs. Both costs may include military expenses. These transaction costs are shown to play a crucial role in determining the optimal number of independent countries in the world.

The Amicus Curiae Interventions in the Transatlantic Biotech Dispute." <i>European Journal of International Relations</i> , 13(3): 329-56. e WTO's decision-making model of executive multilateralism has been widely criticized for its lack of accountability to civil society. However, through the mechanism of the amicus curiae brief, nongovernment organizations and other civil society actors have found a way of directly 'inserting' the public interest concerns of civil society into the dispute resolution arm of the WTO, which has proved to be more amenable to 'critical public reason' than the trade negotiation arm. This article critically explores both the text and context of the amicus briefs submitted in the transatlantic biotech dispute and highlights their role in generating a green cosmopolitan public sphere that seeks more reflexive modernization and facilitates horizontal forms of regime accountability. Cosmopolitan public spheres are conceptualized as specialized, intermediary structures, with multiple strategic and communicative functions, that mediate between supra-national governance structures and regional and domestic civil societies.

2008	B52	Herrmann-Pillath, Carsten. 2008. "International Market Access Rights and the Evolution of the International Trade System." <i>Journal of Institutional and Theoretical Economics</i> , 164(2): 302-26. In international trade policy, the concept of market access is pivotal. Yet, it remains a neglected category in institutional-economics approaches to international trade. The paper introduces a new analytical category, which relates explicitly to the exchange of market access among governments: market access rights (MARs). Tariffs, quotas, standards, border controls, etc., are all treated as specific institutional forms of MARs. Major aspects of the international trade system can be explained as evolving institutional solutions to problems in transacting MARs, such as the most favored nation (MFN) clause as a mechanism to internalize externalities, and the rules governing safeguards and retaliation as procedures of continuous renegotiation of MARs with changing value.

2008	D12	Bonsi, Richard, A. L. Hammett, and Bob Smith. 2008. "Eco-labels and International Trade: Problems and Solutions at the WTO." <i>Journal of World Trade</i> , 42(3): 407-32. Eco-labeling is one way to assure consumers of the environmental suitability of products they purchase. However, several arguments have evolved to show that the use of eco-labels poses barriers to international trade. This exploratory study seeks to determine whether or not the use of eco-labels is a barrier to international trade in reference to the World Trade Organization (WTO) and International Standards Organization (ISO) principles. Product related production processes and methods (PPMs) and non-product related production processes and methods (NPR-PPMs) have been a major source of disagreement among researchers. Our study examined the ISO criteria for eco-labeling that demand that life-cycle assessment (LCA) including both PPMs and NPR-PPMs be satisfied. One of the major problems uncovered is the difficulty in identifying corresponding environmental variables for LCA requirements since environmental conditions vary among countries. We provide some recommendations and conclude that eco-labeling is not intended to be a barrier to international trade provided that it is not advocated under the pretext of protectionism.
2008	D58	Guerrieri, Paolo, and Luca Salvatici, eds. 2008. <i>Il Doha Round e il WTO. Una valutazione quantitativa degli scenari di liberalizzazione commerciale. (In Italian.)</i> , Bologna: Societa editrice il Mulino. Ten Italian papers evaluate the evolution and causes of the World Trade Organization negotiation problems, taking into consideration the implications upon the trade and economic prospects of the European and Italian economy. Assesses the future of the multilateral trading system, the European and Italian interests in the present round, the principal players in the negotiations, and the market access implications of different scenarios. Papers discuss the Doha Development Agenda's negotiation developments and issues concerning agriculture, manufactures, and services; a quantitative study of the economic effects of possible liberalization scenarios using a computable general equilibrium (CGE) model with an emphasis on Italy; the impact on agricultural and manufacturing trade flows; simulation results showing that multilateral trade liberalization does not seem to lend support to the widespread fears that it might cause serious disruptions to Italian and European labor markets; and a theoretically-based political economy model to analyze the role of special interest groups in the determination of EU trade policy. "Suspension of the Doha Round of Multilateral Negotiations and the Need for Its Resuscitation." <i>Estey Centre Journal of International Law and Trade Policy</i> , 9(1): 51-73. The Doha Round of multilateral trade negotiations (MTNs) has proved to be egregiously problem-prone. Due to deep dissension among WTO members it had to be suspended, and efforts to revive it have so far not succeeded. Although the mercantilist mindset of the participants has been frequently blamed for the consistently tardy progress of negotiations, there is more to the situation than just a mindset. This article methodically analyzes the various steps taken since the launch of the Doha Round and dwells on the challenges faced during the MTNs. Time and again negotiating

Year	DE	Title and Abstract
		members and country groups publicized their constructive intentions, and a series of official pronouncements provided a surfeit of evidence of commitment to the objectives of the Doha Development Agenda. Ironically, with the passage of time it became obvious that those expressions of positive and virtuous intentions were completely misleading. There was a large distance between what was being said and what was being achieved in terms of tangible agreements and core modalities. It is imperative that the Doha Round be resuscitated and that the key players show flexibility and take decisive steps forward. The round is vital; the community of trading economies must not be allowed to collapse. Virtually the entire global community of traders will share in and gain from the successful outcome of the Doha Round. A failure will force them to share the shortfalls. Revival is a possible and credible objective. This article proposes a two-stage revival process.
2008	L31	Conca, Ken. 2008. "The United States and International Water Policy." <i>Journal of Environment and Development</i>, 17(3): 215-37. This article examines the role of the United States in international institutions and practices for governing water. Water is a critical global challenge of environmental protection and human security. Water is also characteristic of a set of "translocal" environmental issues for which international institution building has emerged along several different fronts: development assistance initiatives, efforts to manage ongoing controversies over water privatization and large dams, the campaign to recognize water as a human right, and a framework convention on cooperation in internationally shared river basins. U.S. engagement across these initiatives reveals several patterns: the fragmented nature of U.S. policies on water, a systematic tilt toward framing water as a market commodity rather than as a human right, the late arrival of U.S. nongovernmental organizations to several important domains of global water politics, and some notable gaps between U.S. policies, at home and abroad, and evolving international concepts of best practice.
2008	L31	Amaya-Villarreal, Alvaro Francisco. 2008. "El protagonismo de las organizaciones no gubernamentales en las relaciones internacionales: Ejemplo de la apertura de espacios de participacion a nuevos sujetos internacionales en el siglo XX. (The Protagonism of the Non Government Organizations in International Relations: An Example of the Opening Participation Scenarios for New Subjects in International Arena at the XX Century. With English summary.)." <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(12): 117-43. This paper explores a significance phenomenon, but little studied by the academy in Colombia: the rise of non-governmental organizations (NGOs) as subjects of international law. These clusters, which some authors had called "third sector", in the twentieth century managed to gain such prominence, that in present days it is necessary take into account them in both the international legal system and international political analysis. For this reason, since an historical perspective, and based on the theory of interdependence, the author explain how NGOs were able to open spaces within the international legal circuit.
2008	L31	CV: Vierucci, Luisa. 2008. "NGOs before International Courts and Tribunals." In <i>NGOs in International Law: Efficiency in Flexibility?</i> , ed. Pierre-Marie Dupuy and Luisa Vierucci, 155-80. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	L31	Dupuy, Pierre-Marie, and Luisa Vierucci, eds. 2008. <i>NGOs in International Law: Efficiency in Flexibility?</i>, Cheltenham, U.K. and Northampton, Mass.: Elgar. Six papers examine the increasing role that nongovernmental organizations (NGOs) play at different levels of legal relevance, and analyze the need for reconsideration of the international legal status of those organizations. Papers discuss the move beyond consultative status--which legal framework for an enhanced interaction between NGOs and intergovernmental organizations (Emanuele Rebasti); domesticating civil society at the United Nations (Olivier de Frouville); NGOs and the development policy of the European Union (Valentina Bettin); controversial developments in the field of public participation in the international environmental law process (Attila Tanzi); NGOs before international courts and tribunals (Luisa Vierucci); and the legal status of NGOs in environmental noncompliance procedures--an assessment of law and practice (Cesare Pitea).

2008	N47	Sylvest, Casper. 2008. "'Our Passion for Legality': International Law and Imperialism in Late Nineteenth-Century Britain." <i>Review of International Studies</i>, 34(3): 403-23. This article deploys a historical analysis of the relationship between law and imperialism to highlight questions about the character and role of international law in global politics. The involvement of two British international lawyers in practices of imperialism in Africa during the late nineteenth century is critically examined: the role of Travers Twiss (1809-1897) in the creation of the Congo Free State and John Westlake's (1828-1913) support for the South African War. The analysis demonstrates the inescapably political character of international law and the dangers that follow from fusing a particular form of liberal moralism with notions of legal hierarchy. The historical cases raise ethico-political questions, the importance of which is only heightened by the character of contemporary world politics and the attention accorded to international law in recent years.
2008	O31	Coriat, Benjamin, and Fabienne Orsi. 2008. "IPR, Innovation and Public Interest: Is the New IPR Regime Enforced Worldwide by the TRIPS Sustainable?" <i>Economica (Fluminense Federal University)</i>, 10(2): 28-54. This paper discusses about the implications of the emergence of a new IPR regime in three dimensions: (1) the basic an upstream research; (2) the North-South trade-related inequalities and conflicts; and, (3) the social usefulness of patent grants. The article pays major attention on IPR over healthcare and alive organisms and its treatment in TRIPS agreement.
2008	O31	Correa, Carlos. 2008. "Designing Patent Policies Suited to Developing Countries Needs." <i>Economica (Fluminense Federal University)</i>, 10(2): 82-105. Despite the internationalization of the patent system that started more than one century ago and, particularly, the establishment of minimum standards of protection under the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), States still enjoy a certain degree of discretion to determine key substantive aspects relating to the grant of patents. Initiatives for further harmonization of the system have not materialized yet. Recent trends in some developed countries point to a drastic relaxation of the standards of patentability, particularly in connection with the inventive step. Developing countries need not follow the same approach; they may apply strict standards of patentability compatible with their innovation systems and reward incremental innovations by means of utility models rather than patents. They may also develop rules to deal with the specificities of traditional knowledge.
2008	P25	Kruszka, Michal. 2008. "Trade in Tourism Services: Commitments of New EU Member States under GATT." <i>Journal of International Studies</i>, 1(1): 103-16. One of the core treaties signed by members of the World Trade Organization is General Agreement on Trade in Services (GATS). This is the first multilateral and legally enforceable liberalisation agreement covering trade in services, including tourism, that aims to eliminate discriminatory barriers to service trade and increase markets for investment. The subject of considerable controversy, the GATS has been criticised by human rights, environmental, and developing world activist groups, many of whom see it as nothing more than a front for corporate domination of global markets. Supporters, on the other hand, see the GATS potential in overcoming trade disputes and hold out the promise of regional development and employment through increased foreign investment. This paper aims to outline the GATS, examine its legal principles, and explain the enthusiasm of its supporters and the concerns of the critics, especially in the context of the situation of new EU members states.

Year	DE	Title and Abstract
		Furthermore, it considers the potential impact of the GATS on the sustainability of tourism. Ukraine applied for WTO membership in 1993, and the Working Party concluded the negotiations on 25 January 2008 under the chairmanship of Chile's Ambassador Mario Matus. The General Council approved the Working Party report, the market access schedules on goods and services, the General Council Decision, and the Protocol of Accession. After several years of economic reforms and multilateral negotiations, Ukraine became the WTO's 152nd member on 16 May 2008. It is very important for Ukraine's future economic and trade policy to gather information about past experiences of prior WTO's members concerning the impact of liberalization on tourism.

2008	P34	Heymann, Monika C. E. 2008. "International Law and the Settlement of Investment Disputes Relating to China." <i>Journal of International Economic Law</i> , 11(3): 507-26. This article examines how international investment law can be used to resolve investment disputes in China. After a general overview over the basic structure of international investment law, it explores the international legal rules applicable to foreign investors in China and Chinese investors in third countries. It focuses on China's obligations under the Convention on the Settlement of Investment Disputes between States and Nationals of other States; the Convention establishing the Multilateral Investment Guarantee Agency, the WTO/GATT-regime and bilateral investment treaties. It thereby illustrates China's cautious approach to international arbitration and other international standards relating to the protection of foreign investors and the current trend in Chinese politics to turn to international law to protect its investors in third countries. The article concludes that--also caused by increasing Chinese outward investment--the international investment regime relating to China has left its infant stage and provides remedies for foreign investors in China and Chinese investors abroad.
2008	P34	Crosby, Daniel C. 2008. "Banking on China's WTO Commitments: 'Same Bed, Different Dreams' in China's Financial Services Sector." <i>Journal of International Economic Law</i> , 11(1): 75-105. Foreign banks and the Chinese Government have different dreams about the business opportunities and obligations that arise under China's World Trade Organization (WTO) commitments on financial services. This article provides an overview of China's banking sector reforms and its gradual opening to foreign participation in the context of General Agreement on Trade in Services (GATS) rules governing international trade in financial services and the obligations that apply since China's WTO accession in December 2001. The article highlights the contradictory interpretations that China and other Members have issued regarding China's GATS commitments and provides a framework for assessing the WTO consistency of China's banking measures. An analysis is conducted under this framework to evaluate whether China has fully implemented its GATS commitments on (i) the acquisition of Chinese banks by foreign financial institutions, (ii) legitimate 'prudential regulation' in the banking sector, and (iii) full market access for credit card and electronic payment services. Notwithstanding the apparent complexity of GATS rules, the article concludes that the WTO legal framework supports the case for increased access to China's financial services market consistent with its GATS commitments, and fully consistent with China's plans for continuing domestic growth and its medium-term financial services export interests.
2008	Q11	Meilke, Karl. 2008. "Does the WTO Have a Role in Food Crises?" <i>Estey Centre Journal of International Law and Trade Policy</i> , 9(2): 146-55. For a variety of reasons the nominal prices of oil, grains and oilseeds have skyrocketed in the past two years. The rapid increases in staple grain and oilseed prices have led to considerable distress among the poor in many developing countries and to political instability in a few. The focus of this article is on the WTO rules that govern agrifood trade during periods of shortage. The conclusion is that the WTO rules primarily involve reporting requirements and the rules do little to help alleviate food shortages. Time still remains to make some progress on these key issues during the Doha Development Agenda.
2008	Q11	CV: Schmitz, Andrew, Frederick Rossi, and Troy G. Schmitz. 2008. "Agricultural Subsidies under Decoupling." In <i>Applied Benefit-Cost Analysis</i> , ed. Andrew Schmitz and Richard O. Zerbe Jr., 34-51. Elgar Reference Collection. International Library of Critical Writings in Economics, vol. 231. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	Q11 Q42	Bruhwieler, Claudia Franziska, and Heinz Hauser. 2008. "Biofuels and WTO Disciplines." <i>Aussenwirtschaft</i> , 63(1): 7-40. Given the sharp rise in crude oil prices and growing awareness of climate change, the potential of biofuels, particularly of bioethanol, has become an ubiquitous topic of public debate and has inspired ambitious policy initiatives. The latter are mostly paired with protectionist measures as the examples of the European Union and the United States show, where domestic producers of energy crops are put at an advantage thanks to subsidisation, direct payments and/or favourable tax schemes. Moreover, the EU is working out a mandatory certification scheme for ethanol imports, imposing social and environmental standards which constitute another hurdle for more efficiently produced ethanol originating in the Southern hemisphere. A similar path is taken by Switzerland's revised mineral oil tax law which imposes social and environmental criteria that result in a ban of biofuels produced from palm oil, soy and grain, but will also set obstacles for sugarcane-based ethanol which is currently said to be the most eco-efficient biofuel. This paper explores where these policy initiatives are at odds with or at least in a grey area of WTO regulations, and where they disrupt markets without necessarily generating environmental benefits. The findings of our study lead to the conclusion that markets should play a stronger role in expanding the use of biofuels, since many risks affiliated with biofuel production are caused rather than alleviated by interventionist practices.

2009	C51	Fetzer, James J. 2009. "Inference for Econometric Modeling in Antidumping, Countervailing Duty and Safeguard Investigations." <i>World Trade Review</i> , 8(4): 545-57. This paper examines how to make inferences from econometric models prepared for antidumping, countervailing duty, and safeguard investigations. Analysis of these models has typically entailed drawing inferences from point estimates that are significantly different from zero at a fixed level of confidence. This paper suggests

Year	DE	Title and Abstract
		a more flexible approach of drawing inferences using confidence intervals at various significance levels and reporting p-values for the relevant test of injury. Use of confidence intervals and p-values to identify insights and data patterns would have more impact on USITC trade remedy determinations than definitive conclusions about injury based on whether estimates are statistically significant.
2009	C73	Chisik, Richard. 2009. <i>Trade Disputes, Quality Choice, and Economic Integration</i>. Florida International University, Department of Economics, Working Papers: 0901. Recent work demonstrates the importance of developing high quality output in order to compete in export markets and other recent studies verify the prevalence of fixed and ongoing trade costs while participating in those markets. I consider the joint choice of quality and export promotion costs when trade relationships are subject to temporary disputes. When transparency is low and macroeconomic instability is high, disputes arrive more frequently and, therefore, firms may inefficiently choose lower levels of quality and export promotion. These, in turn, build shallower trading relationships with less trade volumes and higher tariffs, and generate greater trade reductions during the more common trade disputes. Several institutional features of the WTO that are generally lacking in preferential trade agreements such as improved transparency, dispute investigation, and the provision to recommend asymmetric continuation payoffs can ameliorate these inefficient quality choice outcomes. Hence, lower quality output and lower quality trading relationships may be more endemic to countries that depend on preferential trading areas as opposed to the WTO.
2009	C73	Chisik, Richard. 2009. <i>Limited Incremental Linking and Unlinked Trade Agreements</i>. Florida International University, Department of Economics, Working Papers: 0902. The broadened scope of the GATT/WTO through successive rounds of trade liberalization is explained as a result of trade partner specificity and cross retaliation or linked punishments. In more recent years, however, countries have pursued trade liberalization through sector specific zero-for-zero agreements and preferential trade agreements, both of which have a reduced chance of suffering cross retaliation. This increase in unlinked agreements can be explained by the inclusion of imperfect observability into our model. If the dispute generating noise is perfectly correlated across sectors, however, then it provides no reason not to link agreements in a static sense and in many cases incremental (or successive round) linking can still generate more liberalization than static linking. It is only when the noise is imperfectly correlated that linking becomes problematic so that some sectors can enforce more liberalization in an unlinked agreement. As the correlation drops and/or the noise increases, static and incremental linking become increasingly burdensome. A further detriment to linking agreements is the number of sectors already covered. There is a natural limit to the number of linked agreements (that depends on the correlation between the noise terms) so that when facing a mature agreement that links many sectors, further liberalization will eventually be pursued through unlinked agreements.

2009	E00 L26 P10 P20	Shachmurove, Yochanan. 2009. <i>Entrepreneurship in Qatar</i>. Penn Institute for Economic Research, Department of Economics, University of Pennsylvania, PIER Working Paper Archive. The State of Qatar is driven mainly by hydrocarbon revenues, which are estimated to support this tiny country for hundreds of years. The Qatari economy is becoming diversified with industries such as manufacturing, banking, social services, and tourism. Additionally, government financed health and educational services have increased rapidly. However, the Qatari government is not able to establish necessary laws and procedures which business requires. Despite recent changes, Qatari laws and regulations are not always friendly towards business ventures or foreign investment, hindering economic growth. Furthermore, enforcement of existing business regulations and rules are occasionally lacking.
2009	E00 L26 P10 P20	Shachmurove, Yochanan. 2009. <i>Entrepreneurship in Oman</i>. Penn Institute for Economic Research, Department of Economics, University of Pennsylvania, PIER Working Paper Archive. The Sultanate of Oman has a diversified economy, unlike many of its neighboring nations that rely almost entirely on oil revenues. Natural gas and several non-energy business sectors, such as tourism, fishing, light manufacturing, and agriculture are expanding rapidly. The Omani economy is one of the freest in its region. A relatively stable government and low taxes make Oman a desirable location for entrepreneurial ventures. Furthermore, foreign direct investment is welcomed. Tourism is the most attractive area for international entrepreneurs. Oil revenues, coupled with increasing foreign investment are likely to both diversify the Omani economic base and strengthen it.
2009	E32	van Aaken, Anne, and Jurgen Kurtz. 2009. "Prudence or Discrimination? Emergency Measures, the Global Financial Crisis and International Economic Law." <i>Journal of International Economic Law</i>, 12(4): 859-94. Economists and political scientists have begun to isolate the causes and implications of the spread of the global financial crisis in late 2008. Critical attention--often accompanied by strident disagreement--has also focused on the efficacy of various domestic plans implemented in response to the crisis. International economic lawyers have started to explore the legal implications of these developments. Our analysis offers a contribution by examining whether and how certain aspects of international economic law might act as a credible constraint on state tendencies toward domestic preference when formalizing emergency responses to the crisis. We begin by offering a typology of emergency measures implemented to date. We then assess whether particular international economic law rules can target the nuanced forms of protectionism embedded in those responses. We survey both treaty commitments on trading relations (especially under the World Trade Organization) and the treatment of foreign investors. We argue that international investment law is, in the short term due to legal and extra-legal factors, more likely than any other area of international economic law to give rise to initiation of legal action and examine the most probable substantive norms likely to be violated.
2009	E52	Herrera-Bernal, Ximena. 2009. "Impuestos sobre ganancias extraordinarias (windfall taxes) y medidas provisionales: Cuatro casos recientes. (Windfall Taxes and Provisional Measures: Four Recent Decisions. With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(15): 125-54. The article looks at four recent decisions granting provisional measures requested by the Claimants in four investment arbitrations, namely the decisions of the ICSID tribunals in the City Oriente v. Ecuador and Petroecuador case, the Perenco vs. Ecuador and Petroecuador, Burlington v. Ecuador and Petroecuador case, and the decisions in the SC case of Sergei Paushok v. Mongolia. In describing these decisions the article looks at the tension between the State's right to implement its monetary policy and the powers of an arbitral tribunal to impose restrictions to its enforcement via provisional measures pending the resolution of the dispute on its merits.

2009	G01	Blustein, Paul. 2009. <i>Misadventures of the Most Favored Nations: Clashing Egos, Inflated Ambitions, and the Great Shambles of the World Trade System</i>. New York: Perseus Books, Public Affairs. Explores whether the global trading system, specifically the World Trade Organization (WTO), is at risk of joining the financial system in crisis, and chronicles the major events in the system over the last decade. Discusses the 2001 WTO meeting in Doha, Qatar; the story of the global trading system, including the creation of the WTO and the events leading up to it; the WTO and its discontents; the 1999 WTO meeting in Seattle, focusing on the role of protesters on the outcome; preparing for the 2001 Doha meeting and the effects of September 11th; the 2001 WTO meeting and the launch of the Doha Development Agenda; the Montreal meeting of 2003 and trouble for the Doha Development Agenda; a WTO dispute between Brazil and the United States over cotton subsidies and the organization's dispute settlement system; Bob Zoellick's impact on trade negotiations; Peter Mandelson and preparations for the 2005 WTO meeting in Hong Kong; Mandelson and U.S. Trade Representative Susan Schwab; the Doha Round in 2008 and the global financial crisis; the failure of the WTO's July 2008 meeting; and whether there is a better way.
2009	G01	Evenett, Simon J. 2009. "What Can Be Learned from Crisis-Era Protectionism? An Initial Assessment." <i>Business and Politics</i>, 11(3): Drawing upon a comprehensive database of contemporary protectionism, this paper offers an initial assessment of the extent to which our understanding of protectionism may have to evolve. While some long-standing features of protectionism appear to have endured (such as the distribution of discriminatory measures across economic sectors), specific corporate needs arising from the global financial crisis and particular national attributes are more likely to have influenced the choice of beggar-thy-neighbor policy instruments than binding trade rules and other international accords.
2009	G01	Lamy, Pascal. 2009. "Los retos que afronta el sistema multilateral de comercio. (Challenges Facing the Multilateral Trade System. With English summary)." <i>Informacion Comercial Espanola Revista de Economia</i>, 0(851): 9-15. World trade has been shown to be yet another victim of the world-wide economic crisis. The multilateral trade system is now faced with the task of mitigating the effects of the crisis and contributing to the revitalization of the world economy. And this is to be done within a complex web of long-standing and increasingly pressing challenges, further entangled by new and even more complex issues that are arising on the international arena. The World Trade Organization (WTO) will have to play a dual role: it must fortify the application of existing agreements, enabling member countries to capitalize on existing trade opportunities, while confronting the new challenges without delay. All the foregoing entails conclusion of the Doha Round negotiations, which aim to institute an improved, more inclusive and sustainable multilateral trade system able to generate new trade opportunities for both the developed and the developing worlds.
2009	G01	van Aaken, Anne, and Jurgen Kurtz. 2009. "Prudence or Discrimination? Emergency Measures, the Global Financial Crisis and International Economic Law." <i>Journal of International Economic Law</i>, 12(4): 859-94. 2009	G01	Van Aaken, Anne, and Jurgen Kurtz. 2009. "Will State Emergency Measures Trigger International Investment Disputes?" <i>Transnational Corporations Review</i>, 1(3): 12-16. The emergency measures for international investment passed to date can generally be grouped into three broad categories: measures designed to bolster the stability of the financial services industry, measures directed at the financial services industry but structured to increase the availability of credit to other sectors of the economy, and general fiscal measures designed to boost public spending and targeting select and strategic industries (including the automotive industry). This paper focuses on the first and second categories, as these are presently regarded as the most likely to engage international investment law.
2009	H75	Randolph, Susan, Michelle Prairie, and John Stewart. 2009. <i>Economic Rights in the Land of Plenty: Monitoring State Fulfillment of Economic and Social Rights Obligations in the United States</i>. University of Connecticut, Human Rights Institute, Economic Rights Working Papers: 12. This paper adapts the economic and social rights index (ESRF) developed by Fukuda-Parr et. al. (2009) to assess the extent to which each of the 50 U.S. states fulfills the economic and social rights obligations set forth in the International Covenant on Economic Social and Cultural Rights. It then extends the index to incorporate discrimination, and examines differences in economic and social rights fulfillment by race and sex within each of the states. The overall ESRF score varies between states from below 70% to almost 85% with wider variation on some of the six component substantive right (food, education, health, decent work, decent housing, and social security) indices that comprise the overall ESRF Index. More diverse states tend to achieve lower scores overall as well as on specific rights. Although there were only minor differences by sex in the overall ESRF scores, there remain substantial differences with regard to several of the specific component right indices. In particular, women fare better on the right to education, but men fare better on the right to decent work. Race and ethnic discrimination is more pronounced. Upon taking it into account, the overall ESRF score falls by between 3 and 18 percentage points, depending on the state. In most states, blacks endure the greatest marginalization, however, in a number of states with large Hispanic populations, Hispanics suffer the greatest marginalization. Although beyond the scope of the current analysis, the results hold promise in identifying state policies that best promote economic and social rights. In this regard, our analysis reveals that no state holds a monopoly on the policies that best promote all economic and social rights, rather some states do better in promoting certain rights and others excel at promoting others.

2009	O18	Lopez-Murcia, Julian Daniel, and Gabriela Maldonado-Colmenares. 2009. "La proteccion de la propiedad de la tierra en la jurisprudencia de la Corte Interamericana de Derechos Humanos y su aplicacion al caso de las comunidades campesinas en Colombia. (The Protection of Land Property in the Inter-American Court of Human Rights Jurisprudence and Its Application to the Case of Colombian Rural Communities. With English summary.)." <i>Internacional Law: Revista Colombiana de Derecho Internacional</i>, 0(14): 71-105. The American Convention on Human Rights embodied in an extensive way, the protection of the use and enjoyment of property, including land property. The Inter-American Court of Human Rights has interpreted this right in an evolutionary way, according with the particular necessities of the people under the jurisdiction of the State Parties of the Convention. This has permitted the Court to properly protect the collective ownership of indigenous and tribal communities. In this article, the authors analyze why and how it should be extended another special protection to the Colombian communities of peasants that have possessed, without a property title, during many years, lands with which their survival as a community is intimately tied, and also regarding the development of the life plans of each one of its members. And based on the existence of the right mentioned above, they consider the "conventionality" of the Colombian legal system, concluding that is precise to modify said legislation.

2010	A33	Joseph, Sarah, and Adam McBeth, eds. 2010. <i>Research Handbook on International Human Rights Law</i>, Research Handbooks in International Law. Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty-one papers explore topics in the field of international human rights law. Papers discuss the United Nations and human rights; economic, social, and cultural rights--an examination of state obligations; extraterritoriality--universal human rights without universal obligations; nonstate actors and international human rights law; nongovernmental organizations and human rights--channels of power; human rights in economic globalization; human rights and development; gender and international human rights law--the intersectionality agenda; refugees and displaced persons--the refugee definition and "humanitarian" protection; international criminal law; the four pillars of transitional justice--a gender-sensitive analysis; the International Court of Justice and human rights; the Council of Europe and the protection of human rights--a system in need of reform; the Inter-American human rights system--selected examples of its supervisory work; African human rights law in theory and practice; the political economy and culture of human rights in East Asia; Islam and the realization of human rights in the Muslim world; religion, belief, and international human rights in the twenty-first century; the Declaration on the Rights of Indigenous Peoples--the slow reconstruction of self-determination for indigenous peoples; counterterrorism and human rights; and human rights education--a slogan in search of a definition. Joseph is Professor of Law and Director of the Castan Centre for Human Rights Law at Monash University. McBeth is Senior Lecturer and Deputy Director of the Castan Centre for Human Rights Law at Monash University. Index.
2010	C35	Magesan, Arvind. 2010. <i>Human Rights Treaty Ratification of Aid Receiving Countries</i>. Department of Economics, University of Calgary, Working Papers: 2010-17. This paper studies the decision to ratify United Nations Human Rights Treaties (HRT). We present new empirical evidence that sheds light on who ratifies when and why. For a foreign aid receiving country, high levels of predetermined treaty participation relative to other aid recipients has a significant positive effect on foreign aid receipts. We further find that countries with good human rights practices are more likely to participate in HRTs than countries with bad practices, but that the converse is not true. Countries that participate frequently have worse human rights practices than countries who participate less frequently. Furthermore, previous ratifications have a strong negative effect on the country's current ratification decision. This evidence is consistent with the hypothesis that aid donors use HRT ratification as a criterion to allocate foreign aid, and that recipient countries are strategic and forward-looking. Based on these empirical findings, we propose a structural dynamic game of HRT ratification. The model is analogous to a dynamic game of quality competition in an oligopoly industry (eg., Pakes and McGuire, 1994) in which countries compete for foreign aid by ratifying costly HRTs in the same way firms compete for demand by investing in costly product quality improvement. We estimate the model using data from a variety of sources, including the United Nations Treaty Collection. Our estimates show that economic factors play an important role in HRT ratification, and that HRTs have significant influence on the distribution of foreign aid among recipient countries. We also find that the ratification costs countries incur vary significantly across treaties and country regime types. We use the estimated model to evaluate the effects of counterfactual policies on HRT ratification decisions, human rights behavior, and on the distribution of foreign aid.

This article examines the current state of disease surveillance and reporting in the United States and seeks to answer two central questions: first, whether the increasing emphasis on the global importance of public health policies compels a fundamental reexamination of the long-standing deferential approach

Year	DE	Title and Abstract
		to state power where matters of population health surveillance are concerned and, second, how the nation's long-standing deferential legal customs might be modified to address the growing emphasis on global public health policy that is undergirded by technological advances. We examine the International Health Regulations, or IHR (2005), and suggest that these regulations offer a powerful impetus for reevaluating U.S. legal custom concerning the policy and practice of population health surveillance, not only as a matter of U.S. law but also as a core dimension of U.S. legal obligations to other nations, as embodied in international agreements and treaties. We find that if the political will exists to change the domestic disease surveillance and reporting system, the federal government has the power to act.
2010	H82	Gaukrodger, David. 2010. <i>Foreign State Immunity and Foreign Government Controlled Investors</i>. OECD, Directorate for Financial and Enterprise Affairs. OECD Working Papers on International Investment: 2010/2 Discussions at the "Freedom of Investment" Roundtables, hosted by the OECD Investment Committee, have stressed that increased investments by foreign State-controlled investors can bring significant benefits to home and host societies, but have also noted that they can raise concerns. This paper examines two principal issues concerning foreign State-controlled investors: whether the doctrine of foreign state immunity may make it difficult for private parties to pursue legitimate claims against them and whether that doctrine creates regulatory enforcement gaps for host countries. Although the restrictive approach to immunity is now widely recognised, important issues, such as whether the financial investment activities of a sovereign wealth fund are commercial or sovereign acts, remain uncertain. In the area of regulation, the paper analyses state policies in the area of tax, competition law and criminal law, and notes key factors that may influence immunity in such cases.
2010	J12	Calvo-Caravaca, Alfonso Luis, and Javier Carrascosa-Gonzalez. 2010. "Derecho aplicable a la constitucion de la adopcion internacional en la Ley espanola 54/2007 de 28 de diciembre (primera parte). (Applicable Law to International Adoption in the Spanish Act 54/2007 [First Part]. With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(16): 415-54. The new Spanish Act 54/2007, dated December 28th 2007, on international adoption has introduced a completely new set of Conflict of Laws rules regarding the constitution of international adoptions by Spanish Courts. Those Conflict of Laws rules rely on the application of the Law of the State whose society is affected by the adoption. This is also the State in which society the person who is adopted is going to live permanently. That way, transaction costs connected with the determination of the applicable Law to international adoptions decrease. Therefore, individuals are favoured and "favor minoris" is protected by enhancing the constitution of adoptions in an international context.
2010	J12	Freeman, Michael D. A. 2010. "Upholding the Dignity and Best Interests of Children: International Law and the Corporal Punishment of Children." <i>Law and Contemporary Problems</i>, 73(2): 211-51. This article focuses away from parents' rights and toward children's rights. The author describes the international human-rights law that applies to discussions of corporal punishment and argues from that law that children have the right to be free from the use of this disciplinary tool.
2010	J14	Parra-Dussan, Carlos. 2010. "Convencion sobre los Derechos de las Personas con Discapacidad: Antecedentes y sus nuevos enfoques. (Convention of the Rights of Persons with Disabilities: Background and Its New Approaches. With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(16): 347-80. This article is the result of the research project Convention on the Rights of Persons with Disabilities a new paradigm for protection, which makes a discussion of this Convention from four perspectives, we consider the most relevant as a starting point of this international instrument in the field of United Nations. The first is the study of the legal background of the Convention, the second is the comparison of the Convention with other instruments of Soft Law on disability, the third section is on a major route for comparison between the Convention and other treaties of universal human rights system, the latter perspective and perhaps most important, the new emphasis on the Convention, addressed obliquely or less considered by other international instruments.
2010	J47	CV: Law, Robin. 2010. "Abolition and Imperialism: International Law and the British Suppression of the Atlantic Slave Trade." In <i>Abolitionism and Imperialism in Britain, Africa, and the Atlantic</i>, ed. Derek R. Peterson, 150-74. Cambridge Centre of African Studies Series. Athens: Ohio University Press.
2010	J53	Hall, Mark. 2010. "EU Regulation and the UK Employee Consultation Framework." <i>Economic and Industrial Democracy</i>, 31(0): 55-69. The growth in statutory provisions in the UK requiring employers to inform and consult employee representatives has been driven primarily by EU law rather than domestic policy. The 2002 EU information and consultation Directive was widely seen as having far-reaching implications for UK law and employment relations practice, but the 'reflexive' design of the UK regulations transposing the Directive has limited its impact to date. An assessment of the available evidence suggests that the regulations have prompted considerable voluntary activity in terms of reviewing, modifying, and introducing information and consultation arrangements but that this has been largely employer-led. The article argues that the reform of key aspects of the UK regulations is necessary to overcome trade union ambivalence towards the legislation and the low uptake of its provisions by employees.
2010	K35	CV: Niemi, Johanna. 2010. "Personal Insolvency." In <i>Handbook of Research on International Consumer Law</i>, ed. Geraint Howells, Iain Ramsay and Thomas Wilhelmsson, 409-30. With David Kraft. Research Handbooks in International Law series. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2010	L21	Holden, Chris, Kelley Lee, Gary Jonas Fooks, and Nathaniel Wander. 2010. "The Impact of Regional Trade Integration on Firm Organization and Strategy: British American Tobacco in the Andean Pact." <i>Business and Politics</i>, 12(4): Processes of regional trade integration may have an important impact on firms' strategies and forms of organization. This article provides an empirical case study of the impact of regional trade integration in the Andean Pact in the 1990s on the strategies and organization of British American Tobacco (BAT), using internal tobacco industry documents. BAT conducted an integrated strategy by lobbying on tax and tariff rates and intellectual property regulations, whilst simultaneously adapting its market strategies and attempting to modify its internal organization. The company incorporated substantial sales in illicit markets into its strategy, and launched new legal export operations within the region, in part to assert ownership over contested trademarks. It attempted to significantly modify its internal organization by better integrating its national operating companies on a regional basis, but was only partially successful in this due to resistance from its powerful Brazilian subsidiary. Changes in intellectual property rules also intensified competition between BAT and its main competitor, Philip Morris, culminating in a legal dispute between the two firms and leading BAT to develop a more coherent strategy on trademark ownership. These findings raise implications for understanding, and regulating, tobacco industry activities worldwide.

2010	P30	Orchard, Phil. 2010. "Protection of Internally Displaced Persons: Soft Law as a Norm-Generating Mechanism." <i>Review of International Studies</i> , 36(2): 281-303. Internal displacement is increasingly perceived as an international problem. This has led to suggestions that international norms have begun to govern state behaviour towards their own displaced populations. I argue that this change occurred through the innovative use of soft law, in particular the guiding principles on internal displacement, by a consortia of norm entrepreneurs including NGOs and a UN Office, that of the Representative of the Secretary-General for Internally Displaced Persons. As soft law, these principles lack the usual markers which suggest an emerging norm. Instead, the article argues that alternative method--including the international recognition of the principles and their adoption in domestic legislation--has triggered a change in state behaviour. This is demonstrated by examining two cases of forcible return of IDPs--the closure of the Kibeho Camp in Rwanda in 1995, before the principles were created, and the closure of the Znamenskoye camp in Ingushetia, Russia in 2002, after their creation. Both situations are similar in that the norm appears to have been rejected--forced repatriation did occur. In the Russian case, however, government statements, along with widespread international condemnation of the closures, suggest rhetorical instantiation of a norm of non forcible return for IDPs.
2010	Q33	Taser, Atil, and B. Zafer Erdogan. 2010. "Avrupa Birliği ve Türkiye'de Tehlikeli Atık Yönetiminin Yasal Gelişimi. (Development of Hazardous Waste Management Law in EU and Turkey. With English summary.)" <i>Eskisehir Osmangazi Üniversitesi İktisadi ve İdari Bilimler Fakültesi Dergisi</i> , 5(2): 67-84. With the growth of industrialization, all sustainable resources are becoming exhausted and spoiled. Most of the countries noticed that to solve this problem international laws must be in charge. European Union member countries and candidate countries signed BASEL Agreement to develop such a legitimate environment. The purpose of this study is to understand how BASEL agreement has been legally developed at European Union and explore the differences between Turkish legal statements about the subject.
2010	Q35	Affolder, Natasha. 2010. "The Market for Treaties." <i>Chicago Journal of International Law</i> , 11(1): 159-96. Corporations are consumers of treaty law. In this article, I empirically examine three biodiversity treaty regimes--the Convention on Biological Diversity, Ramsar Convention, and World Heritage Convention--to demonstrate that corporations implement or internalize treaty norms in a variety of ways that are not captured by the dominant model of treaty implementation--national implementation. As an exegetical model, I explore how corporations use biodiversity treaties as a source of private environmental standards. I focus on the interactions between mining and oil and gas companies and biodiversity treaties, as revealed through transactional documents, corporate reports, security law filings, and treaty secretariat reports. My central claim is that treaties provide a vital, but overlooked, point of interaction between intergovernmental environmental law and transnational law as developed by private actors. This article reveals that the gravitational pull of treaties on private actors is differentially experienced. The shadow of law (both national and international) works variably across different companies, different industries and different geographies. And the same companies that are 'dumbing down' treaty meanings in one context may be advancing tools that promote stronger and deeper implementation of these same treaty norms in another. While the empirical record is thus littered with inconsistencies and seeming contradictions, one thing is clear: the implications of corporate channelling of treaty meanings and obligations are significant for international law far beyond the context of biodiversity conventions. Growing pressure to define acceptable standards of environmental and social behavior for companies is creating a robust market for 'international standards'--a market for treaties.
2011		
2011	E02	Gonzalez-Salzburg, Damian A. 2011. "Economic and Social Rights within the Inter-American Human Rights System: Thinking New Strategies for Obtaining Judicial Protection." <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(18): 117-54. After more than half a century of existence of international human rights regimes, a differential degree of protection is still received by the so-called economic and social rights, when compared to the ones named civil and political. However, this article aims to show that certain strategies used within the Inter-American Human Rights System, IAHRs, have proved to be relatively successful for granting judicable character to economic and social rights. Moreover, the paper discusses alternative paths that could be tried in order to obtain an improved judicial protection for these rights within the Americas
2011	E40	Vlcek, William. 2011. "Global Anti-money Laundering Standards and Developing Economies: The Regulation of Mobile Money." <i>Development Policy Review</i> , 29(4): 415-31. This article discusses the confluence of international initiatives to counter money laundering and terrorist finance with migrant remittances and the growing use of mobile telephone technology for more than making a call. The experiences of Kenya and the Philippines with mobile telephone-based financial services are outlined as potential models consistent with the 'risk-based' approach now promoted by the Financial Action Task Force (FATF), one objective being to encourage the implementation of regulation of m-money services by recognising the development and social-welfare opportunities offered by the technology in the context of a developing economy
2011	F40	Oatley, Thomas. 2011. "The Reductionist Gamble: Open Economy Politics in the Global Economy." <i>International Organization</i> , 65(2): 311-41. International political economy (IPE) should transition to "third-wave" scholarship because Open Economy Politics (OEP), which dominates current American IPE scholarship, can generate inaccurate knowledge. OEP can produce inaccurate knowledge because it studies domestic politics in isolation from international or macro processes. This methodological reductionism is often inappropriate for the phenomena IPE studies because governments inhabit a complex social system. As a result, the political choices that OEP strives to explain are typically a product of the interplay between domestic politics and macro

Year	DE	Title and Abstract
		processes. When OEP omits causally significant macro processes from empirical models, the models yield biased inferences about the domestic political relationships under investigation. Although scholars tolerated such errors when the gains from OEP were large, these errors are less tolerable now that OEP has matured. Consequently, the field should transition toward research that is nonreductionist, problem-driven, and pluralistic.
2011	F59	Caliari, Aldo. 2011. <i>Adapting the international monetary system to face 21st century challenges</i>. United Nations, Department of Economics and Social Affairs, Working Papers. Recent calls for more intense debate on and reforms to the international monetary system imply that the current system is unable to respond appropriately and adequately to challenges that have appeared, or become more acute, in recent years. This paper focuses on four such challenges: ensuring an orderly exit from global imbalances, facilitating more complementary adjustments between surplus and deficit countries without recessionary impacts, better supporting international trade by reducing currency volatility and better providing development and climate finance. After describing them, it proposes reforms to enable the international monetary system to better respond to these challenges.
2011	H54	Wills-Valderrama, Santiago. 2011. "Proteccion a la inversion extranjera en infraestructura por medio de acuerdos internacionales de inversion: Un nuevo reto para Colombia. (Protecting Foreign Investment in Infrastructure through International Investment Agreements: A New Challenge for Colombia. With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(19): 17-38. The construction and maintenance of infrastructure has been identified as one of the main tools for economic development in Colombia. This requires huge amounts of investment. Recent economic studies in developing countries, such as Colombia, have shown that great part of infrastructure projects are financed through investment coming from the private sector. Of this, more than half constitutes foreign direct investment. Colombia has recently adopted a policy of openness towards foreign investment. Through International Investment Agreements, Colombia has committed to protect foreign investment following certain international obligations and standards. A great part of the foreign investment needed for the development of infrastructure in Colombia will fall under such investment agreements, and will thus be protected by the obligations agreed upon under said agreements. This paper seeks to describe how the actual obligations committed by Colombia are not always clear, and sometimes they introduce new concepts that are not well known in Colombian Law. This is the case, respectively, of the "fair and equitable treatment" and "indirect expropriation". Colombia should have caution in its governance of foreign investment, with a view of reducing the risk of being challenged under international arbitration that may result in multimillion disputes; even more in this era of financing projects through foreign direct investment.

2011	I31 I32	Salomon, Margot E. 2011. "Why Should It Matter That Others Have More? Poverty, Inequality, and the Potential of International Human Rights Law." <i>Review of International Studies</i>, 37(5): 2137-55. A concern with ensuring minimum standards of dignity for all and a doctrine based on the need to secure for everyone basic levels of rights have traditionally shaped the way in which international human rights law addresses poverty. Whether this minimalist, non-relational approach befits international law objectives in the area of world poverty begs consideration. This article offers three justifications as to why global material inequality--and not just poverty--should matter to international human rights law. The article then situates requirements regarding the improvement of living conditions, a system of equitable distribution in the case of hunger, and in particular obligations of international cooperation, within the post-1945 international effort at people-centred development. The contextual consideration of relevant tenets serves to demonstrate that positive international human rights law can be applied beyond efforts at poverty alleviation to accommodate a doctrine of fair global distribution.
2011	O25	CV: Van Harten, Gus. 2011. "Investment Treaties as a Constraining Framework." In <i>Towards New Developmentalism: Market as Means Rather Than Master</i>, ed. 2011	O43 Q49 R10 R13	Alston, Lee J., and Krister Andersson. 2011. <i>Reducing Greenhouse Gas Emissions by Forest Protection: The Transaction Costs of REDD</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16756. Understanding and minimizing the transaction costs of policy implementation are critical for reducing tropical forest losses. As the international community prepares to launch REDD+, a global initiative to reduce greenhouse gas emissions from tropical deforestation, policymakers need to pay attention to the transactions costs associated with negotiating, monitoring and enforcing contracts between governments and donors. The existing institutional design for REDD+ relies heavily on central government interventions in program countries. Analyzing new data on forest conservation outcomes, we identify several problems with this centralized approach to forest protection. We describe options for a more diversified policy approach that could reduce the full set of transaction costs and thereby improve the efficiency of the market-based approach for conservation.
2011	P24	Xu, Lilai, ed. 2011. <i>China's Economy in the Post-WTO Environment: Stock Markets, FDI and Challenges of Sustainability</i>. Advances in Chinese Economic Studies. Cheltenham, U.K. and Northampton, Mass.: Elgar. Twelve papers, originally presented at a conference held by the Association for Chinese Economic Studies Australia in Melbourne in July 2009, explore the implications of both the extension of the markets mechanism into key parts of the Chinese economy and also the partial integration of China into the global economy. Papers discuss who is more important--a leading power or a close neighbor; condition constraints and player behavior in China's stock market; China's changing demographics and their influence on financial markets; going global--China's outward foreign direct investment; determinants of investment intensity of source economies in China; foreign strategic investment and banking efficiency in China; the role of geographical proximity in foreign direct investment productivity spillovers in China; fluctuations of prices in the world grain market--policy responses by the Chinese government; renminbi appreciation or fiscal stimulus, and their policy implications; the move from policy-driven opening to institutional opening--a discussion on policy-imposed distortion in China's economic development; urban sustainability--the case of the transportation system in big cities; and whether capital has been utilized efficiently in China.

(The Legal Consequences of a Possible Split of Belgium according to International Law. With English summary.)" <i>Economies et Societes</i>, 45(11): 1985-2007. If Flanders and Wallonia should separate to form new States or to be linked to an existing State (a

Year	DE	Title and Abstract
		small portion of Walloon public opinion is in favour of union with France), international law codifies several consequences of such a split. These consequences concern the succession of the new entities to external borders, internal territorial boundaries, treaties, debts, property and State archives, nationality of the inhabitants of the new entities, and the new juridical order. However, these customary and conventional rules do not settle all the problems that would have to be negotiated, should such a split occur.
2011	R13	THE SAME AS O43 Alston, Lee J., and Krister Andersson. 2011. <i>Reducing Greenhouse Gas Emissions by Forest Protection: The Transaction Costs of REDD</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 16756.
2011	R14	Audet, Rene. 2011. "Le Sud global et les nouvelles figures de l'équité à l'OMC. (With English summary)." <i>Ethics and Economics/Ethique Economique</i>, 8(2): 30-47. In parallel to the fair trade movement activities, the notion of fairness is at the heart of a conflict of interpretation between developed and developing countries in multilateral trade negotiations. Recently, this conflict has mutated along with the rise of numerous Global South inter-state coalitions at the World Trade Organization. This paper, proposes an analysis of these Doha Development Round coalitions by comparing their discourse to the Third World ideology. It describes how the semantic fields of the "policy space" and "proportionality" indicate a higher level of implementation of the new faces of fairness at the WTO and, maybe, a deeper institutionalisation.
2011	R40	Guner-Ozbek, Meltem Deniz, ed. 2011. <i>The United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea: An Appraisal of the "Rotterdam Rules"</i>, New York and Heidelberg: Springer. Eleven papers, most previously presented at a conference held by the Koc University Law School's Dr. Nusret-Semahat Arsel International Business Law Implementation and Research Center in May 2010, examine the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea, also known as the Rotterdam Rules. Papers discuss the history of the Rotterdam Rules (Francesco Berlingieri); general principles of transport law and the Rotterdam Rules (Michael F. Sturley); the scope of application of the Rotterdam Rules and freedom of contract (Samim Unan); the extended scope of the Rotterdam Rules--maritime plus and conflict of the extension with the extensions of other transport law conventions (Meltem Deniz Guner-Ozbek); obligations and liabilities of the carrier (M. Fehmi Ulgener); construction problems in the Rotterdam Rules regarding the identity of the carrier (Kerim Atamer and Cuneyt Suzel); compensation for damage (Anders Mollmann); obligations and liabilities of the shipper (Tomotaka Fujita); transport documents in the light of the Rotterdam Rules (Hakan Karan); rights of the controlling party (Gertjan van der Ziel); and jurisdiction and arbitration under the Rotterdam Rules (Zeynep Derya Tarman).

2012	B41	Petersmann, Ernst-Ulrich. 2012. "JIEL Debate: Methodological Pluralism and Its Critics in International Economic Law Research." <i>Journal of International Economic Law</i>, 15(4): 921-70. Section II discusses six different conceptions of justifying international economic law (IEL). Section III argues that the 'dual nature' of modern IEL requires limiting 'Westphalian conceptions' of 'international law among states' through protection of 'cosmopolitan rights' and judicial remedies of citizens in IEL. Section IV explains why past doctrinal disputes among legal positivists, natural law advocates, and social conceptions of law have lost much of their relevance for interpreting IEL. Section V suggests that protecting transnational 'aggregate public goods' requires constitutional approaches to IEL. Section VI explains the need for comparative institutional research so as to improve the functioning of horizontally and vertically interdependent public goods regimes. Section VII discusses why 'cosmopolitan public goods regimes' have protected rights and transnational rule of law more effectively for the benefit of citizens than the prevailing 'Westphalian conceptions'. Section VIII argues that the inadequate parliamentary and civil society control of multilevel economic regulation must be compensated by multilevel judicial protection of cosmopolitan rights protecting 'participatory' and 'deliberative democracy', 'access to justice', 'active liberty', and human rights in IEL. Section IX concludes that the permanent fact of 'reasonable disagreement' requires respect for 'constitutional pluralism' in IEL in accordance with the 'subsidiarity principle'. The legitimate diversity and competing conceptions of 'principles of justice' justify judicial deference vis-a-vis diverse conceptions of human rights, economic cosmopolitan rights, corresponding 'duties to protect', and 'corporate responsibilities' as relevant context for interpreting IEL.
2012	C70	Dietz, Simon, Carmen Marchiori, and Alessandro Tavoni. 2012. <i>Domestic Politics and the Formation of International Environmental Agreements</i>. Fondazione Eni Enrico Mattei, Working Papers: 2012.76. The theory of international environmental agreements overwhelmingly assumes that governments engage as unitary agents. Each government makes choices based on benefits and costs that are simple national aggregates, and similarly on a single set of national-level motivations, together drawing a strong analogy with the behaviour of an individual or firm in other strategic contexts. In reality, however, various domestic special interests shape environmental policy, including how national governments cooperate on cross-border issues. Therefore in this paper we introduce to a classic model of international environmental cooperation the phenomenon of domestic political competition, whereby lobby groups seek to influence policy by offering to fund political campaigning. We use the model to establish some general conditions for the effects of lobbying on the stringency of policy and the size of coalitions cooperating to provide an environmental good. Using specific functional forms, we obtain a range of further results, including circumstances in which the omission of lobbying results in environmental protection being underestimated.

Year	DE	Title and Abstract
2012	F63	Gaukrodger, David, and Kathryn Gordon. 2012. <i>Investor-State Dispute Settlement: A Scoping Paper for the Investment Policy Community</i>. OECD Publishing, OECD Working Papers on International Investment: 2012/3. Governments are facing an increasing number of arbitration claims by foreign investors relating to important public policies or seeking substantial damages, and many governments are taking a greater joint interest in how such cases are resolved in investor-state dispute settlement (ISDS). This scoping paper has supported inter-governmental dialogue about ISDS at several OECD-hosted investment Roundtable meetings. Part I compares ISDS with other international and domestic processes for resolving disputes including the WTO and European Court of Human Rights, and considers how ISDS may affect domestic policy making processes. Part II examines eight current and emerging issues in ISDS: (i) investors' access to justice; (ii) the costs of ISDS cases; (iii) remedies for foreign investors under investment treaties and their possible impact on a level playing field for domestic and foreign investors; (iv) the enforcement and execution of ISDS awards; (v) third party financing of ISDS; (vi) the characteristics, selection and regulation of arbitrators in ISDS; (vii) forum shopping and treaty shopping by investors; and (viii) the question of the consistency of decision-making in ISDS. Part III outlines key findings from a statistical survey of ISDS provisions in 1,660 bilateral investment treaties. Public comment on this paper, including 46 investment policy questions (as outlined in the paper), was obtained in May-July 2012 and is available on the OECD website.
2012	F64	Mak, Winston Ka-Ming. 2012. "Sustainability of International Trade Law: The Legality of Unilateral Trade Measures for Environmental Protection in the GATT/WTO Framework." <i>International Journal of Green Economics</i>, 6(2): 117-28. Notwithstanding the intensified trade liberalisation that catalyses economic globalisation, the materialistic foundation of free trade is being changed by issues such as environmental degradation and global climate change. While many believe it is agreeable to seek a balance between trade and the environment, the GATT/WTO as an international law regime governing the multilateral trading system should further ensure the smooth execution of the law to facilitate environmental protection efforts by governments worldwide. In the context of promoting free trade, justifying the unilateral trade measures relating to environmental purposes, including import restrictions/prohibitions, licensing systems, and environmental levies, it is one of the instruments which the WTO could employ to achieve the objective of sustainable development as stated in its preamble. Focusing on the evolving constructions of relevant provisions, this paper is to study the recent dispute cases of the legality of these trade-related measures aimed at protecting the environment in GATT/WTO jurisprudence and hence, arriving at the conclusion that the concept of sustainable development is only to some extent implemented by international trade law.
2012	F66	CV: Bonvin, Jean-Michel, Nicola Cianferoni, and Frederic Widmer. 2012. "Promoting Quality of Employment in the European Union and beyond: The Necessary Contribution of Law." 2012	H61	Sanchez Mora, Francisco Javier. 2012. "Accion de la UE ante la crisis economica y el Fondo para la Adquisicion de Activos Financieros: Ruptura del principio democratico en la aprobacion de los Presupuestos Generales del Estado. (Community Action against the Economic Crisis and the Fund for the Acquisition of Financial Asset: Rupture of the Democratic Principle in Approving the State Budget. With English summary.)" <i>Revista Universitaria Europea</i>, 0(16): 97-118. Community authorities and the Heads of State and Government of the EU countries have chosen on the one hand a more coordinated European response to the current economic crisis, and on the other several policies to help financial institutions to ensure the flow of credit. Thus, the Royal Decree Law 6/2008, establishing the Fund for the Acquisition of Financial Assets, was justified in the conclusions of the ECOFIN meeting in Luxembourg (6 and 7 October 2008). This decree approves an extraordinary credit and, therefore, an amendment to the State Budget without a sufficient quantity and quality intervention by Parliament, as required by the Spanish Constitution.
2012	H63	Norton, Ellie. 2012. "International Investment Arbitration and the European Debt Crisis." <i>Chicago Journal of International Law</i>, 13(1): 291-316. Argentina's 2001 default led to a unique development in the realm of sovereign debt restructuring. During the lengthy process of negotiations, exchange offers, and haircuts, some of the country's creditors began to allege violations of their bilateral investment treaties (BITs) with Argentina and filed suit in the International Centre for the Settlement of Investment Disputes (ICSID). Before this unprecedented action, it had been uncertain whether sovereign debt could be considered an "investment" covered by BITs at all. In August 2011, however, the ICSID determined that it may be and that its tribunals have jurisdiction over these claims. This decision has created a path to increased ICSID involvement in future sovereign debt restructurings and has raised the question of the consequences for the current European debt crisis. This Comment evaluates the ramifications of the introduction of international investment arbitration into the realm of sovereign debt restructuring, particularly in light of the situation in Europe. Despite some legitimate concerns, the Comment suggests that this development may prove positive, increasing creditor protections and balancing negotiations, strengthening the market for sovereign debt, and potentially lessening the gravity of the crisis itself.

2012	J51	da Costa, Isabel, Valeria Pulignano, Udo Rehfeldt, and Volker Telljohann. 2012. "Transnational Negotiations and the Europeanization of Industrial Relations: Potential and Obstacles." <i>European Journal of Industrial Relations</i>, 18(2): 123-37. The increasing number of transnational agreements signed in recent years at the EU-company level suggests a form of Europeanization of industrial relations, as these agreements constitute a formal recognition of social dialogue across national borders. However, empirical results based on a multi-level research about the experiences with these agreements in the metal sector offer a more complex picture. The strategies of the actors at European, national and local levels, and more importantly the degree and type of their coordination, are crucial to understanding the processes and mechanisms which encourage or prevent the emergence of cross-national negotiations at company level.
2012	J51	Dufresne, Anne. 2012. "Trade Union Support and Political Blockage: The Actors' Viewpoint." <i>European Journal of Industrial Relations</i>, 18(2): 107-21. This article focuses on the perspectives of unions and employers towards the new areas of opportunity provided by transnational collective bargaining. It examines how the emergence of European framework agreements prompted the European Trade Union Federations, and in particular the European Metalworkers' Federation, to formalize their procedures to regulate the negotiation of such agreements. They also encouraged the European Trade Union Confederation to elaborate key conditions for a possible legal framework for transnational company agreement. Finally, the article highlights the political developments and blockages which affect transnational collective bargaining, and possible solutions.

2012	J51 J58	Lo Faro, Antonio. 2012. "Bargaining in the Shadow of 'Optional Frameworks'? The Rise of Transnational Collective Agreements and EU Law." <i>European Journal of Industrial Relations</i> , 18(2): 153-65. Roughly 10 million European employees are potentially affected by some 200 transnational texts concluded within multinational companies. Unlike other forms of social dialogue with legal effects determined by the Treaty, transnational collective agreements enjoy no legal certainty as to their enforcement. This is often considered a virtue, since autonomous arrangements entered into by the parties could be seen as an expression of a voluntary system of European industrial relations. This article discusses the plausibility of such a view, also taking into account Commission proposal to draft an 'optional legal framework' aimed at conferring a more definite binding character on transnational agreements.
2012	J71	Sheppard, Colleen. 2012. "Mapping Anti-discrimination Law onto Inequality at Work: Expanding the Meaning of Equality in International Labour Law." <i>International Labour Review</i> , 151(1-2): 1-19. This article explores the evolving relationship between the concept of discrimination in international labour law and the socio-economic phenomenon of inequality at work. While non-discrimination was initially understood as a fairly limited legal principle mandating equal treatment for similarly situated individuals, it subsequently expanded to address indirect discrimination resulting from apparently neutral rules, standards and practices at work. It has expanded further to take on group-based patterns of inequality at work related to the structural constraints of the market, the family and community life, ultimately resulting in convergence between anti-discrimination law and legal initiatives to reduce class-based socio-economic inequality and poverty.

2012	N64	Poelmans, Eline. 2012. "Changes in the Structure of Coal and Steel Industries under the ECSC (1952-1967): Was West Germany Kept 'Small'?" <i>Essays in Economic and Business History</i> , 30(0): 5-29. In 1951, six European countries founded the European Coal and Steel Community (ECSC), which they hoped would be a first step towards more European integration and which they hoped would provide a common legal framework for their coal and steel industries. The main aim of the ECSC was to make sure that the German coal and steel industries would never again reach their prewar capacities, which according to many had played a part in the coming of World War II. Another important aim was to forestall any attempt of the USSR to conquer West Germany. This article constitutes a case study of the regional concentration of the coal and steel industries in the six ECSC countries, and it investigates whether the importance of certain coal and steel producing regions within the ECSC changed between 1952 and 1967. Furthermore, an analysis is conducted of how the concentration ratios of the ECSC's industries differed among the six countries, whether these differences changed over time, how this influenced the size and number of coal and steel firms and whether the ECSC succeeded in its initial aim of keeping West Germany small.
2012	O12	Martyniszyn, Marek. 2012. "Export Cartels: Is It Legal to Target Your Neighbour? Analysis in Light of Recent Case Law." <i>Journal of International Economic Law</i> , 15(1): 181-222. Despite the growing sophistication of antitrust regimes around the world, export cartels benefit from special treatment: they are almost universally tolerated, if not encouraged in the countries of origin. Economists do not offer an unambiguous policy recommendation on how to deal with them in part due to the lack of empirical data. This article discusses arguments for and against export cartels and it identifies the existing gaps in the present regulatory framework. The theoretical part is followed by an analysis of the recent case law: a US cartel challenged with different outcomes in India and South Africa, as well as Chinese export cartels pursued in the USA. The Chinese cases are particularly topical as the conduct at stake, apart from being subject to private antitrust actions before US courts, was also challenged within the WTO dispute settlement framework, pointing out to the existing interface between trade and competition. While the recent developments prove that unaddressed issues tend not to vanish, the new South-North dimension has the potential of placing export cartels again on the international agenda. Pragmatic thinking suggests looking for the solution within the WTO framework.
2012	P13	THE SAME AS D40 Marshall, Alex. 2012. <i>The Surprising Design of Market Economies</i> , Constructs series. Austin: University of Texas Press.
2012	Q37	Qin, Julia Ya. 2012. "Reforming WTO Discipline on Export Duties: Sovereignty over Natural Resources, Economic Development and Environmental Protection." <i>Journal of World Trade</i> , 46(5): 1147-90. The current World Trade Organization (WTO) regime on export restraints comprises two extremes: at one end is the near-complete freedom to levy export duties enjoyed by most Members, which renders the WTO discipline on export restrictions largely ineffective; at the other end, the rigid obligations imposed on several acceding Members prohibiting the use of export duties for any purpose. The recent WTO ruling in China-Raw Materials has only solidified the latter extreme. This article seeks to expose the irrationality of the current regime, especially the problems created by the rigid obligations of the several acceding Members. It contends that such obligations deprive these Members of their ownership right to claim a larger share of their natural resources for domestic use and of an effective tool for managing environmental externalities associated with the resource products exported. The virtual immutability of such obligations is at odds with the principle of permanent sovereignty over natural resources. To rectify these problems, this article proposes integrating all stand-alone export concessions into General Agreement on Tariffs and Trade (GATT) schedules, which would provide the acceding Members with the policy space and flexibility available under the GATT. It is also submitted that the key to gaining support from developing countries for the establishment of a system-wide discipline lies in the recognition of legitimate functions of export duties. Rather than pushing for their elimination, the WTO should aim to regulate export duties in the same manner as its regulation of import duties.
2012	Q37	Liu, Han-Wei, and John Maughan. 2012. "China's Rare Earths Export Quotas: Out of the China-Raw Materials Gate, but Past the WTO's Finish Line?" <i>Journal of International Economic Law</i> , 15(4): 971-1005. Several recent studies have discussed the ramifications of the China--Raw Materials case for China's rare earths. However, none of these studies has conducted a thorough investigation of China's current export quota regime for rare earths or how it might stand up under WTO rules, assuming that it would be treated the same. This article makes no such assumption, investigating China's export quota regime for rare earths as it stands in early June 2012. The regime is somewhat improved over that applied during the raw materials case and could allow a more favourable WTO ruling. However, if General Agreement on Tariffs and Trade (GATT) disciplines are interpreted narrowly, as in China--Raw Materials, this article finds that the current regime still falls short of certain GATT exceptions. This article informs future analyses of China's export quota regime for rare earths. Beyond the case of China, it also invites discussion on the appropriate amount of 'policy space' WTO Members should enjoy for imposing export quotas under the relevant GATT disciplines for resource conservation and environmental protection.
2012	Q37	Gu, Bin. 2012. "Applicability of GATT Article XX in China-Raw Materials: A Clash within the WTO Agreement." <i>Journal of International Economic Law</i> , 15(4): 1007-31. The Appellate Body's interpretation in China--Raw Materials regarding the applicability of General Agreement on Tariffs and Trade (GATT) Article XX to China's Accession Protocol is highly controversial and stimulates wide debates in academia. The controversy is rooted in the absence of an explicit mention of 'consistency with the GATT 1994' in Paragraph 11.3 of China's Accession Protocol. That absence constrains China's defense in instances when it must

Year	DE	Title and Abstract
		violate its export duty elimination commitments under the Accession Protocol by resorting to GATT Article XX. This article disagrees with the Appellate Body's legal interpretation in China--Raw Materials and provides a critical review of the Appellate Body's logical principle that 'absence equates to waiver'. The Appellate Body's interpretation on the relationship between GATT Article XX and China's Accession Protocol contradicted former Dispute Settlement Body (DSB) practices, demonstrated a failure to interpret the WTO Agreement in a systemic manner, and unfortunately resulted in inappropriateness in treaty interpretation.
2012	R38	Lopez Murcia, Nestor Fernando. 2012. "El derecho a una vivienda adecuada I: Una propuesta sobre como medir el cumplimiento de aspecto "lugar". (The Right to an Adequate Housing I: A Proposal on How to Measure the Compliance with the Aspect "Location". With English summary.)" <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(21): 393-431. Even though there is no legal debate regarding the existence of the international obligation of respect and guarantee of economic, social and cultural rights, there are still many difficulties on the measuring of the compliance of said obligation. As a consequence of the later, guarantees such as progressivity, in its basic and minimum expression, as well as in its appreciation in the future, become ineffective. Therefore, the development of interdisciplinary analysis, which allow the construction of methodologies for the measuring of the compliance with the guarantee of said rights, is imperative. In this case, the "right to an adequate housing" which, as has been indicated by the Committee on Economic, Social and Cultural Rights of the UN, CESCR, has diverse aspects, among others, habitability, legal security of tenure, availability of services, materials, facilities and infrastructure, and location. This article has the purpose of presenting a methodology that will allow to adequately measure the aspect of "location". Nonetheless, because of the space limits, I will only refer to survey figures and their application. This methodology was developed by the author as a consultant of the Defensoria del Pueblo (Colombian Ombudsman), which is a state entity dedicated to the promotion of human rights, and which, through its program ProSeDHer, is looking to create and divulge the measures for improving their respect and guarantee. The city of Bogota is used as a reference, given that the object of evaluation of the Defensoria del Pueblo are the projects of "vivienda de interes social y de vivienda de interes prioritario" as a development of the expansion areas in said city.

2013	D62 Q43	Farah, Paolo D., and Riccardo Tremolada. 2013. "A Comparison Between Shale Gas in China and Unconventional Fuel Development in the United States: Health, Water and Environmental Risks." <i>Fondazione Eni Enrico Mattei, Working Papers: 2013.95</i> China is appraised to have the world's largest exploitable reserves of shale gas, although several legal, regulatory, environmental and investment-related issues will likely restrain its scope. China's capacity to successfully face these hurdles and produce commercial shale gas will have a crucial impact on the regional gas market and on China's energy mix, as Beijing strives to decrease reliance on imported oil and coal, while attempting to meet growing energy demand and maintain a certain level of resource autonomy. The development of the unconventional natural gas extractive industry will also endow China with further negotiating power to obtain more advantageous prices from Russia and future liquefied natural gas (LNG) suppliers. This paper, adopting a comparative perspective, underlines the trends learned from unconventional fuel development in the United States, emphasizing their potential application to the Chinese context in light of recently signed production-sharing contracts between qualified foreign investors and China. The wide range of regulatory and enforcement problems in this matter are accrued by an extremely limited liberalization of gas prices, lack of technological development, and political hurdles curbing the opening of resource extraction to private investors. These issues are exacerbated by concerns related to the risk of water pollution deriving from mismanaged drilling and fracturing, absence of adequate regulation framework and industry standards, entailing consequences on social stability and environmental degradation.
2013	E44	Siskova, Nadezda. 2013. "The Impact of the Eurozone's Crisis on the Institutional Framework and National Law of Member States--Some Considerations." <i>Danube: Law and Economics Review</i> , 0(4): 293-300. This article focuses on the Treaty on Stability, Coordination and Governance in Economic and Monetary union (the so-called Fiscal Compact Treaty). It especially analyses the selected provisions of this international contract instrument and considers its impact on European primary law and the national law of Member States. In this respect, issues relating to reverse majority voting are examined, de facto the new kind of judicial control, the new obligations for Member States concerning the modification of their legal orders, which were not envisaged by the Foundation Treaties, etc. Other key problems addressed in the article are connected with the future "destiny" of the Fiscal Compact Treaty, including two different scenarios: a) the incorporation of its material scope into primary law or b) termination of the legal force of this act after the expiration of a certain period of time.
2013	E58	Herrmann, Christoph, Markus Krajewski, and Jorg Philipp Terhechte, eds. 2013. <i>European Yearbook of International Economic Law 2014, New York and Heidelberg: Springer.</i> Eighteen papers consider the seventieth anniversary of the Bretton Woods Conference (and hence the establishment of the International Monetary Fund and the World Bank) and the twentieth anniversary of the establishment of the World Trade Organization (WTO) in order to reflect on the legacy and current status of these establishments. Papers discuss reflections on the intellectual history of the international regulation of monetary affairs; multiregionalism in the context of the EU sovereign debt crisis--current legal challenges and the way forward; interaction for monetary and financial stability--central banks as main actors in the global financial system; greater coherence in global economic policy making--progress and prospect; reflections on the global trading order twenty years after Marrakesh--a development perspective; moving ahead while standing still--dynamics of institutional evolution in a gridlocked WTO; the multilateral trading system and nontrade issues--how the WTO managed to integrate environmental concerns without integrating international environmental law; twenty years after Marrakesh--reconsidering the effects of preferential rules of origin and anticircumvention rules on trade in inputs and global production networks; the WTO legal framework for telecommunications services and challenges of the information age; settling NAFTA and WTO disputes and whether it is a net of parallel and contradictory commitments; whether the European Union's deep trade agenda is a stumbling block or a stepping stone toward multilateral liberalization; current approaches to the international investment regime in South America; the multilayered system of regional economic integration in West Africa; the tripartite free trade area--what it will be and how it will come about; what lies beneath India and her trade agreements; the World Customs Organization's Framework of Standards and the internationalization of supply chain security; the World Intellectual Property Organization's policy priorities in a world of global legal pluralism--alternative dispute resolution for generic top-level domains and the protection of audiovisual performances; and developments in international investment law. Includes four book reviews that discuss Reinmar Wolff (ed.)'s <i>New York Convention. Convention on the Recognition and Enforcement of Foreign Arbitral Awards of 10 June 1958</i> . Commentary; Ingeborg Schwenzer, Christiana Fountoulakis, and Mariel Dimsey's <i>International Sales Law: A Guide to the CISG</i> ; Ernst-Ulrich Petersmann's <i>International Economic Law in the Twenty-First Century: Constitutional Pluralism and Multilevel Governance of Interdependent Public Goods</i> ; and Ariel Ezrachi (ed.)'s <i>Research Handbook on International Competition Law</i> .

2013	H32	Bradley, Ian. 2013. "Living with the Foreign Affiliate Dumping Rules." <i>Canadian Tax Journal</i> , 61(4): 1147-66. The foreign affiliate dumping rules place significant restrictions on investments by foreign-controlled Canadian corporations in foreign affiliates. Such investments may be effectively treated as distributions out of Canada, with corresponding tax consequences. The scope of the foreign affiliate dumping rules is broad, while exceptions are narrow and technically complex. As a result, the rules can apply in unexpected ways to a wide variety of bona fide business arrangements. Foreign-controlled Canadian corporations must consider carefully the effect of these rules on all of their business activities. This article provides a general overview of the foreign affiliate dumping rules and reviews their application to the different stages of a foreign affiliate investment. It highlights the significant practical issues that can result from unexpected applications of the rules, and discusses how investments may be structured to address these concerns.
2013	I13	Greer, Scott L. 2013. "Avoiding Another Directive: The Unstable Politics of European Union Cross-Border Health Care Law: Guest Editorial." <i>Health Economics, Policy and Law</i> , 8(4): 415-21. The European Union's (EU) 2011 Directive on cross-border patient mobility codifies the right of any EU citizen to travel abroad for treatment and be reimbursed on the same terms as they would be at home. Governments hoped it would end the string of court cases that had reshaped EU health law but this article argues that it is likely to produce yet more judicial challenges. Patient mobility is an attractive idea with unclear definitions and divergent implementation. In many cases, providers, insurers, and governments will not communicate and leave the patient with a bill--almost daring the patient to sue, and the courts to make more policy. Governments should try to prevent this by investing in coordination and alternative redress for patients who might otherwise sue.
2013	J44	Le, Toan. 2013. "Vietnam's Experience in Developing International Trade Lawyers Following Five Years of World Trade Organization Accession." <i>Journal of World Trade</i> , 47(3): 675-705. Research shows the development of institutional and legal capacity is important in managing World Trade Organization (WTO) participation. Vietnam, an emerging economic power in Asia, is expected to face increasing legal challenges in the WTO dispute settlement forum. This article examines Vietnam's experience in developing its legal capacity and critically assesses Vietnam's capacity to develop indigenous legal capacity in WTO law. A conclusion is formed that building capacity is technically and politically difficult for small nations like Vietnam. On the basis of the research conducted, this article is able to recommend three measures and strategies the government could employ to strengthen its legal capacity.
2013	K37	Allveri, Robynn L. 2013. "Protocol No. 24: Fact or Fiction for EU Roma?" <i>Marmara Avrupa Arastirmalari Dergisi/Marmara Journal of European Studies</i> , 21(1): 1-18. The legal systems of the European Union (EU) and the United States (U.S.) are premised upon common norms, resulting in very similar bodies of jurisprudence. Due to these shared legal principles, one would expect the EU and the U.S. to use similar standards in the adjudication of asylum claims. For the most part, this expectation holds true. However, a glaring difference exists when an applicant's country of origin is an EU member state. Asylum adjudicators in the U.S. examine the individual merits of a claim, regardless of the applicant's country of origin. On the other hand, EU adjudicators are required to presume that asylum claims filed by EU nationals are without merit. This presumption comes primarily from the Protocol on Asylum for Nationals of Member States of the European Union (Protocol No. 24), the main subject of this paper. Protocol No. 24 eviscerates the asylum claims of Roma who are persecuted in the EU. It creates an almost irrefutable presumption against EU asylum applicants, stating that EU member states are "safe countries of origin" and EU origin asylum claims are deemed "manifestly unfounded." Protocol No. 24 is discriminatory and conflicts with the reality faced by many EU Roma. The multi-faceted approach of the U.S. asylum regime provides a more thorough and meaningful review of Roma asylum claims. Cases are assessed on an individual basis, with little (if any) legal presumptions against the applicant. The EU should adopt a similar asylum regime and reject the exclusionary mandate of Protocol No. 24.
2013	K37	CV: Friebe, Guido, and Sergei Guriev. 2013. "Human Smuggling." In <i>International Handbook on the Economics of Migration</i> , ed. Amelie F. Constant and Klaus F. Zimmermann, 121-33. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2013	K37	Ermumcu, Senem. 2013. "Siginmacilarin ve Multecilerin Sosyal Guvenlik Hakki. (Right to Social Security of Refugees and Asylum Seekers. With English summary)." <i>Calisma Iliskileri Dergisi/Journal of Labour Relations</i> , 4(2): 58-76. Despite the existence of a contract relating to refugees under international law, this agreement is much more than a refuge for asylum seekers that need social security rights. It also seems to have a holistic legislation for a long time when we look at the legislation that regulates the right of asylum in Turkey. The law on foreigners that came into force in 2014 is a step taken to remedy this lack. However, even in that law, Turkey maintains the geographical limitations reservation that it put on the 1951 Convention on Refugees. Turkey's geographical limitation continue to impede the solution of problems in this regard. In particular, social security rights in the context of Act 5510 has not been given to refugees while the refugee definition reinforces the concept of discrimination in this regard. Circulars issued on the subject try to eliminate this distinction, but issued circulars do not meet the full social security rights of asylum seekers. Circulars issued cover more Syrian and Iraqi asylum seekers. Therefore, in terms of the distinction between refugees and asylum seekers would be appropriate to reveal the social security law with legal regulations.
2013	L00	Ramseyer, J. Mark, and Eric Rasmusen. 2013. <i>Lowering the Bar to Raise the Bar: Licensing Difficulty and Attorney Quality in Japan</i> . Indiana University, Kelley School of Business, Department of Business Economics and Public Policy, Working Papers, 2013-12 Under certain circumstance, a relaxation in occupational licensing standards can increase the quality of those who enter the industry. The effect turns on the opportunity costs of preparing for the licensing examination: making the test easier can increase the quality of those passing if it lowers the opportunity costs enough to increase the number of those willing to go to the trouble of taking the test. We explore the theoretical circumstances under which this can occur and the actual effect of the relaxation of the difficulty of the bar exam in Japan from 1992 to 2011.
2013	L42	Hallwood, Paul, and Thomas J. Miceli. 2013. "An Examination of Some Problems with International Law Governing Maritime Piracy." <i>Maritime Policy and Management</i> , 40(1): 65-79. We describe the capture-to-ransom pirate business model, which is proving very successful against merchant shipping, even though the latter enjoys the protection of naval warships. We argue that failure to adequately enforce international law is symptomatic of inherent weaknesses in that law: namely that as "cooperation" between States Parties (Article 100 of the Law of the Sea) is undefined, investment in enforcement by multiple-enforcement agents is left open to free riding problems. We end with an investigation of some suggestions for reforming international law against maritime piracy, but we are skeptical of meaningful progress for several years.

Year	DE	Title and Abstract
2013	N35 P36	Zarulli, Virginia. 2013. "The Effect of Mortality Shocks on the Age-Pattern of Adult Mortality." <i>Population</i> , 68(2): 265-92. This article aims to investigate the effect of sudden changes in external conditions on human mortality levels and age-patterns. Although several studies have analysed shocking events such as famines or deportations, a systematic assessment of the effect of the shock on the rate of mortality increase by age is missing. In the case of a shock, three scenarios may occur: mortality may be raised proportionally at all ages, more at older ages, or more at younger ages. Two cases of natural mortality experiments were analysed: Australian civilian prisoners in a Japanese camp during the Second World War and the Ukrainian Famine of 1933. The death rates of the prisoners of war were higher during imprisonment but the slope of the curve appeared to resemble that of the normal mortality regime. During the Ukrainian Famine, by contrast, the mortality curves in the different famine years were raised but the increase was smaller at old ages, resulting in different slopes. When mortality increases less at older ages, the evidence that selection could be the underlying mechanism appears to be weak and inconclusive. However, as other mechanisms could lead to similar patterns, more cases of natural mortality experiments need to be analysed and more evidence collected.
2013	N46 N76	Carbajal Arenas, Lilia. 2013. "Los artesanos de Puebla y el arancel de 1821. (Artisans of Puebla and the 1821 Tariff. With English summary.)." <i>Analisis Economico</i> , 28(68): 135-54. One of the first expressions of economic liberalism during the Empire of Iturbide was the promotion of free trade with other countries through Tariff 1821. England could establish a legal trade with Mexico as of this date and introduced in the country textiles of various types of better quality and lower prices than those offered by Mexican artisans prices. In order to curb the expansion of foreign trade, spinners artisans and weavers Puebla organized to demand before the Constituent Congress Tariff was repealed and a trade law that would allow them to protect their market was applied, it was a long struggle as they clashed with the economic needs of the federal government and the establishment of textile factories that soon gave better yarn and fabric quality.
2013	N74	Weder, Rolf, and Simone Wyss. 2013. "Do Vertical Linkages Limit Protectionism? Switzerland in the Multifibre Arrangement." <i>World Economy</i> , 36(10): 1261-77. The multifibre arrangement (MFA) heavily restricted the world trade in textiles and clothing (T&C) from 1974 to 1994. Switzerland joined the MFA as one of forty-four signatory economies in 1974, but never applied its discriminatory instruments. To explain this peculiar behaviour, we apply international trade theory as well as files gathered from the Swiss Federal Archives. Our analysis suggests that Switzerland used the MFA, first, as an instrument to seek better market access, and second, as an option to protect its T&C industry if required. Switzerland refrained, however, from exercising the option mainly because of the existence of an important vertically related export industry, that is the Swiss textile machinery industry.

2013	R41 R48	Versluis, Esther, and Erika Tarr. 2013. "Improving Compliance with European Union Law via Agencies: The Case of the European Railway Agency." <i>Journal of Common Market Studies</i> , 51(2): 316-33. European Union agencies are increasingly used to stimulate domestic compliance with EU law, without concrete evidence for whether and how these bodies actually realize this. Through in-depth analysis of the European Railway Agency, this article enhances our empirical understanding of the working and functioning of EU agencies, and advances our thinking about compliance in international settings. It leads us to the insight that--in order to be capable of stimulating domestic compliance--agencies should be flexible to resort to a mix of compliance strategies in order to be able to cope with the varying domestic compliance situations.
2013	R58	Krasniqi, Armand. 2013. "Legislative Changes for Economic Development on Regional Basis, the Possibilities or Conditions for the Integration of the West Balkan Countries in the European Union--Kosovo Case." <i>Journal of Advanced Research in Law and Economics</i> , 4(2): 121-27. Most of the countries of the territory of Western Balkan covered by the Constitution regarding the territory and governmental policies regulate and systemise these policies on the local and central level. These public regulations, even in the political and governmental plan, can be functional, but this is not argued in the development plan of Kosovo. The economic indicators of these countries, especially in Kosovo as a long transition economical-social country, are not encouraging and continually are under the influence of global crisis effects. The improvement of this situation is not expected to be encouraging. On the contrary, the chances to deepen the crisis are real. Under the influence of these circumstances, these countries must redesign their own strategic development plans. The country development must be realized based totally on integration policies of the European Union and by looking at the possibilities for a real economic development for all countries in the region. Naturally, all this must be based on available resources and by making their revalorization. There is no possibility to implement these policies and strategies if they are not accompanied with the changes of legislation which will create local governments possibilities to construct institutions and agencies of this character. Above all, the philosophy and practices of the European Union on development are based on regional economy development.

2006		
2006	D61	Kaplow, Louis. 2006. <i>Taxation</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12061. This Handbook entry presents a conceptual, normative overview of the subject of taxation. It emphasizes the relationships among the main functions of taxation - notably, raising revenue, redistributing income, and correcting externalities - and the mapping between these functions and various forms of taxation. Different types of taxation as well as expenditures on transfers and public goods are each integrated into a common optimal tax framework with the income tax and commodity taxes at the core. Additional topics addressed include a range of dynamic issues, the unit of taxation, tax administration and enforcement, and tax equity.
2006	K11	Wendler, Michael, Bernd Tremml, and Bernard Buecker, eds. 2006. <i>Key Aspects of German Business Law: A Practical Manual</i>, Third edition. Berlin and New York: Springer. Thirty papers present an overview of the key aspects of German business law. Papers focus on how to establish or acquire a business in Germany; commercial law; labor law; computer law; procedural law; European law; tax law; and patents and trademarks.
2006	L16	CV: Petska, Thomas, Michael Parisi, Kelly Luttrell, Lucy Altounian, and Matt Scoffice. 2006. "An Analysis of Business Organizational Structure and Activity from Tax Data." In <i>Proceedings: Ninety-eighth Annual Conference on Taxation, Miami, Florida, November 17-19, 2005, and Minutes of the Annual Meeting of the National Tax Association, Thursday, November 17, 2005</i>, ed. John Diamond, 40-61. Washington, D.C.: National Tax Association.
2006	L38	CV: Brody, Evelyn. 2006. "The Legal Framework for Nonprofit Organizations." In <i>The Nonprofit Sector: A Research Handbook</i>, ed. Walter W. Powell and Richard Steinberg, 243-66. Second edition. New Haven and London: Yale University Press.
2007		
2007	D11 H00 J00	Chetty, Raj, Adam Looney, and Kory Kroft. 2007. <i>Saliency and Taxation: Theory and Evidence</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 13330. A central assumption in public finance is that individuals optimize fully with respect to the incentives created by tax policies. In this paper, we test this assumption using two empirical strategies. First, we conducted an experiment at a grocery store where we posted tax-inclusive prices for 750 products subject to sales tax for a three

Year	DE	Title and Abstract
		week period. Using scanner data, we find that posting tax-inclusive prices reduced demand by roughly 8 percent among the treated products relative to control products and nearby control stores. Second, we find that state-level increases in excise taxes (which are included in posted prices) reduce aggregate alcohol consumption significantly more than increases in sales taxes (which are added at the register and hence less salient). Both sets of results indicate that tax salience affects behavioral responses. We propose a bounded rationality model to explain why salience matters, and show that it matches our evidence as well as several additional stylized facts. In the model, agents incur second-order (small) utility losses from ignoring some taxes, even though these taxes have first-order (large) effects on social welfare and government revenue. Using this theoretical framework, we develop elasticity-based formulas for the efficiency cost and incidence of commodity taxes when agents do not optimize fully.
2007	D73	Howard, Robert M. 2007. "Controlling Forum Choice and Controlling Policy: Congress, Courts and the IRS." <i>Policy Studies Journal</i>, 35(1): 109-23. Considerable scholarly attention has been paid to litigation and its influence on social and bureaucratic policy. One area of research has focused on interest group litigation. Another area of scholarship has shown that Congress encourages individual use of the courts to monitor and control bureaucratic behavior. In several areas of law, litigants have a choice of forum by deliberate legislative design, which is sometimes derided as "forum shopping." Little attention has been paid to the dominant national political coalition's ability to encourage forum shopping through legislation and the appointment process. One area of law that the coalition can encourage forum shopping is in challenging tax audits. It can do so through implicit legislative signals and the appointment process to influence litigants to sue the Internal Revenue Service in the forum that offers the litigant the greatest chance of success. Given the prominent role of courts in setting and determining policy and given the particular prominence of taxes and tax policy over the past three decades, whether and where tax litigants choose to sue is critically important to understanding the dynamics of both tax policy and tax enforcement, as well as public policy creation and change. To demonstrate the influence of political forces on tax forum choice, I compare tax and district court filings from 1994 through to 2000. I find that as the Tax Court and national political coalition become more conservative, more taxpayers sue in the Tax Court and this "forum shopping" choice is supported by the national political coalition.
2007	F53	Carnahan, Michael. 2007. <i>Options for Revenue Generation in Post-Conflict Environments (revision)</i>. Political Economy Research Institute, University of Massachusetts at Amherst, Working Papers. In the wake of violent conflict, a key element of building a durable peace is building a state with the ability to collect and manage public resources. To implement peace accords and to provide public services, the government must be able to collect revenue, allocate resources, and manage expenditure in a manner that is regarded by its citizens as effective and equitable. In this new PERI Working Paper, Michael Carnahan of the Australian National University grapples with the impact of conflict on policy, administrative systems, and overall activity, as well as the impact of pressures from the international community. The author makes five specific recommendations, including a link between revenue collections and donor aid, a reassessment of U.N. policies, changes in tax policies for foreign workers and donors' contractors, and establishing urban land taxation systems. This study is part of a series on Public Finance in Post-Conflict Environments, published jointly by PERI and New York University's Center on International Cooperation. (Revised December 2007)
2007	H00	THE SAMR AS D11 Chetty, Raj, Adam Looney, and Kory Kroft. 2007. <i>Salience and Taxation: Theory and Evidence</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13330.
2007	H81 L53	CV ; Sutter, Franz Philipp. 2007. "The Influence of the European State Aid Rules on National Tax Policy." In <i>National Tax Policy in Europe: To Be or Not to Be?</i>, ed. Krister Andersson, Eva Eberhartinger and Lars Oxelheim, 121-64. Berlin and New York: Springer.
2007	H83	Adam, Stuart, and Glen Loutzenhiser. 2007. <i>Integrating Income Tax and National Insurance: an interim report</i>. Institute for Fiscal Studies, IFS Working Papers: W07/21. Income Tax and National Insurance are now sufficiently similar that merging them appears to be a plausible option, yet still sufficiently different that integration raises significant difficulties. This paper surveys the potential benefits of integration - increased transparency and reduced administrative and compliance costs - and the potential obstacles, assessing the extent to which each of the differences between Income Tax and NICs - in particular the contributory principle, the levying of an employer charge and the differences in tax base - constitute serious barriers to integration. The paper concludes that few of the difficulties look individually prohibitive, but that trying too hard to avoid significant reform of the current policy framework could produce a merged tax so complicated as to nullify much or all of the benefits of integration.
2007	J00	THE SAMR AS D11 Chetty, Raj, Adam Looney, and Kory Kroft. 2007. <i>Salience and Taxation: Theory and Evidence</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13330.
2007	J51	McBean, Melissa. 2007. "Current Cases: To Deduct or Not to Deduct: That's the (Absolute) Question." <i>Canadian Tax Journal</i>, 55(2): 346-51.
2007	L22	Taylor, Willard B., Virginia L. Davies, and Janice McCart. 2007. "Policy Forum: A Subsidiary as a Permanent Establishment of Its Parent." <i>Canadian Tax Journal</i>, 55(2): 333-45. This article considers the implications of the current international debate on when a subsidiary, or its activities, may be a permanent establishment of its parent. The issue has become a pressing one, particularly in Europe, because of the extent to which multinationals locate significant personnel and functions in countries other than the parent's country of incorporation. The authors analyze this issue in the context of both a Canadian subsidiary and a US subsidiary with reference to relevant domestic law and jurisprudence as well as treaty considerations. They then discuss how profits might be attributed to such an establishment. They conclude by asking whether the "subsidiary as permanent establishment" analysis may, in future, displace more classic transfer-pricing challenges, a question presently being considered in the broader international debate.
2007	L26	Cullen, Julie Berry, and Roger H. Gordon. 2007. "Taxes and Entrepreneurial Risk-Taking: Theory and Evidence for the U.S." <i>Journal of Public Economics</i>, 91(7-8): 1479-1505. How does the tax law affect individual incentives to engage in entrepreneurial risk taking? We first show theoretically that taxes can affect incentives due to differences in tax rates on business vs. wage income, due to differences in the marginal tax rates faced on losses vs. profits through a progressive rate structure and through the option to incorporate, and due to risk sharing with the government. We then provide empirical evidence using U.S. individual tax return data that each of these aspects of the tax law have clear effects on individual behavior, and together have had large effects on the amount of entrepreneurial risk taking.

Year	DE	Title and Abstract
2007	M52	Narayanan, M. P., Cindy A. Schipani, and H. Nejat Seyhun. 2007. "The Economic Impact of Backdating of Executive Stock Options." <i>Michigan Law Review</i>, 105(8): 1597-1641. This article discusses the economic impact of legal, tax, disclosure, and incentive issues arising from the revelation of dating games with regard to executive option grant dates. It provides an estimate of the value loss incurred by shareholders of firms implicated in backdating and compares it to the potential gain that executives might have obtained through backdating. Using a sample of firms that have already been implicated in backdating, we find that the revelation of backdating results in an average loss to shareholders of about 7%. This translates to about \$400 million per firm. By contrast, we estimate that the average potential gain from backdating to all executives in these firms is about \$500,000 per firm annually. We suggest some remedies not only for backdating, but also for other dubious practices such as springloading.
2007	N40	Cockfield, Arthur. 2007. "Purism and Contextualism within International Tax Law Analysis: How Traditional Analysis Fails Developing Countries." <i>eJournal of Tax Research</i>, 5(2): 199-224. There are two broad approaches to the study of international tax law. Purists adopt a traditional approach, emphasizing conceptually pure tax solutions based on efficiency interests. Contextualists combine economic analysis with political, historical, social, institutional and other perspectives. It is argued that the Purist approach is overly-reliant on international tax economics which, in turn, is challenged by significant theoretical, empirical, and behavioral uncertainty. The Purist analysis nevertheless can be effective in respect of situations in which there are relatively balanced capital flows between countries with developed economies. Developing countries, however, are generally capital importing nations and their interests tend to be downplayed under the Purist approach. In an increasingly integrated global economy, the Contextualist perspective is more effective at taking account of the interests and needs of developing countries and, in so doing, promotes the long-term economic and security interests of developed countries.
2007	N40	Chan, Kathryn. 2007. "Taxing Charities/Imposer les Organismes de Bienfaisance: Harmonization and Dissonance in Canadian Charity Law." <i>Canadian Tax Journal</i>, 55(3): 481-556. For many years, the determination of which organizations should qualify for the significant tax benefits accorded to registered charities (organismes de bienfaisance enregistres) under the Canadian income Tax Act (iTA) has been based, in all provinces, on the concept of charity developed by the English common law of charitable trusts. However, there are other sources of meaning for the concept of charity (bienfaisance) in Canada, including ancient civil-law sources that continue to form part of the basic law of Quebec. These diverse "charity-law" sources present a challenge for the registered charity scheme, and for the ongoing project of ensuring that federal laws are accessible to each of Canada's multiple legal and linguistic audiences. This article challenges the prevailing view that there is only one source of meaning for the registered charity provisions. The author makes a number of assertions that contradict the longstanding unijural approach. First, the current interpretive approach to the registered charity provisions, and particularly the position that the iTA concept of charity is "uniform federal law," is at odds with statutory and constitutional principles, as well as Canada's policies on legislative bilingualism and bijuralism, and the explicit terms of sections 8.1 and 8.2 of the interpretation Act. Second, there are at least four legal sources of meaning for the terms "charity" and "bienfaisance" in Canada: the common law of charitable trusts, the civil-law rules regarding legs pieux, the roman laws on foundations and gifts, and the various provincial statutes governing the administration of charities. Third, although the iTA term "charitable" ("de bienfaisance") should likely continue to be given a common-law meaning in the common-law provinces, "de bienfaisance" is a problematic translation of the common-law term "charitable" because it is more consistent with another English term, "benevolent," which has consistently been held to fall outside the legal concept of charity. Fourth, where valid provincial legislation establishes a meaning for the term "charitable" or "de bienfaisance," that statutory meaning should generally be referred to in applying the iTA within that province. Finally, the author asserts that in Quebec, there is no basis for interpreting the term "charitable" ("de bienfaisance") in accordance with the common law of charitable trusts, a body of private law (though admittedly one with public aspects) that has no application in that province. While Quebec's civil-law tradition has never developed a stringent or detailed conception of charity, the reception of the ancien droit from France did ensure that a wide variety of customary law sources on transfers for charitable purposes came to form part of Quebec law. Although these sources will require further study, they form part of the law of property and civil rights in Quebec, and therefore part of the default legislative dictionary applicable to federal legislation such as the iTA. The article concludes with some thoughts on various options for reform of the registered charity scheme.
2007	P16	Andersson, Krister, Eva Eberhartinger, and Lars Oxelheim, eds. 2007. <i>National Tax Policy in Europe: To Be or Not to Be?</i>, Berlin and New York: Springer. Ten papers, examine how much room for national tax policy Member States of the European Union will find necessary and possible to maintain in the future. Papers discuss the role of national tax policies in the European Union (Krister Andersson, Eva Eberhartinger, and Lars Oxelheim); corporate income tax competition and the scope for national tax policy in the enlarged Europe (Christian Bellak and Markus Leibrecht); free factor mobility and fiscal competition - whether the national welfare state can survive in a "united Europe" (Asa Hansson); fiscal competition and activist social policy (Ulrike Schneider and August Osterle); an optional common consolidated corporate tax base in the European Union (Andersson); the influence of the European State aid rules on national tax policy (Franz Philipp Sutter); the European Court of Justice and Direct Taxation - a recent change of direction (Mattias Dahlberg); tax treaty policy (Michael Lang); national tax policy, the directives, and hybrid finance (Eberhartinger and Martin Six); and the room for national tax policy in the future Europe (Andersson, Eberhartinger, and Oxelheim).
2008		
2008	B54 D13	Philippis, Lisa. 2008. "Silent Partners: The Role of Unpaid Market Labor in Families." <i>Feminist Economics</i>, 14(2): 37-57. The term "unpaid market labor" refers to the direct contributions of unpaid family members to market work that officially belongs to another member of the household. Thus one individual may be construed legally as an owner or entrepreneur, but relatives may help out informally with business operations. Likewise, in corporate or public-service settings, certain employees rely on the unpaid help of an executive spouse or political wife. This paper argues that unpaid market labor is conceptually distinct from both paid work and unpaid domestic labor. Legal cases from Canada are used to illustrate the policy implications of this insight and how dichotomous thinking about the market and the family obscures this kind of work. The article discusses insights and challenges for feminist political economy in theorizing unpaid market labor.
2008	D62 H43	Kaplow, Louis. 2008. <i>Optimal Policy with Heterogeneous Preferences</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14170. Optimal policy rules - including those regarding income taxation, commodity taxation, public goods, and externalities - are typically derived in models with homogeneous preferences. This article reconsiders many central results for the case in which preferences for commodities, public goods, and externalities are heterogeneous. When preference differences are observable, standard second-best results in basic settings are unaffected, except those for the optimal income tax. Optimal levels of income taxation may be higher, the same, or lower on types who derive more utility from various goods, depending on the nature of preference differences and the concavity of the social welfare function. When preference differences are

Year	DE	Title and Abstract
		unobservable, all policy rules may change. The determinants of even the direction of optimal rule adjustments are many and subtle.
2008	E32	D'Amuri, Francesco, and Maria Rosaria Marino. 2008. "La detassazione del lavoro straordinario in Italia: Prime Valutazioni. (The Reduction of Overtime Income Taxation in Italy: A Preliminary Assessment. (With English summary)." <i> Politica Economica</i> , 24(2): 159-79. This article provides a preliminary assessment of the Law n. 126/2008, lowering taxes on overtime income in Italy. The tax reduction will positively affect workers with high labour market attachment and with relatively high marginal income tax rates, providing an incentive to work extra hours. Employment effects of the reform are expected to be limited, in particular in the long run. The tax reduction will have negligible redistributive effects, while it will lower the horizontal equity of the Italian Personal Income Tax. Given the procyclicality of overtime worked hours, the impact of business cycle on workers' disposable income will increase. Tax administration costs are expected to rise in order to limit the possibility to avoid taxes reducing the standard worked hours and increasing the overtime ones.
2008	H43	THE SAME AS D62 Kaplow, Louis. 2008. <i>Optimal Policy with Heterogeneous Preferences</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 14170
2008	J28	Crain, Terry L., and Frances L. Ayres. 2008. "Disability Income Insurance Premiums: An Investigation of the Decision to Pre-tax or Post-tax the Premiums." <i>Financial Services Review</i> , 17(4): 273-88. Individuals who pre-tax their disability insurance premiums must pay tax on any disability benefits they receive. However, individuals who pay for the insurance with after tax dollars may exclude the benefits from their taxable income. In this paper, we investigate whether the expected tax savings are greater for individuals who pre-tax or post-tax disability income insurance premiums. Using disability statistics from the Commissioners Income Disability Table, expected values of tax savings are computed for various income levels and age groups. Generally, younger individuals with lower incomes achieve a reduction in expected taxes if they pre-tax the disability income insurance premiums. Older individuals with higher incomes often achieve a reduction in expected taxes when they pay for disability insurance premiums with post-tax dollars. Individuals who have just entered a higher tax bracket in the year of the insurance payments often achieve a tax savings by pre-taxing the premiums. Finally, individuals with substantial other income besides his or her salary, generally are better off to post-tax the premiums.
2008	J31 O15	Sivadasan, Jagadeesh, and Joel Slemrod. 2008. "Tax Law Changes, Income-Shifting and Measured Wage Inequality: Evidence from India." <i>Journal of Public Economics</i> , 92(10-11): 2199-2224. We examine the effects of a 1992 income tax law change in India that eliminated the tax penalty on wages paid to partners in partnership firms using a large dataset covering all registered plants in the manufacturing sector over the period 1986 to 1995. This tax law change provides a unique opportunity to identify the effects of tax policy changes on firm behavior in a developing country context. We find an immediate and pervasive response by partnership firms to the tax law change, reflected in a significant shifting of income from profits to managerial wages. Because about 50% of registered manufacturing plants operate in the form of partnerships (including most family-run businesses), income-shifting by these firms could have a significant impact on measured wage inequality. We find a sizeable jump in the mean and median relative wage of skilled workers (which includes managers and partners) following the tax law change in 1992. Although this sudden increase in measured wage inequality follows major trade liberalization and deregulation reforms announced earlier (in July 1991), we find that the income-shifting induced by the tax law change explains almost all of the observed increase in measured wage inequality following these reforms. This finding is robust to inclusion of controls for a number of other potential sources of post-liberalization increases in wage inequality. Our results show that firms respond strongly to tax incentives for income-shifting, and highlight the need to control for the potential effects of tax incentives in studies of wage inequality. Because wages received by partners were reported as business income on tax returns, the finding of an increasing share of top wage earners in total wages in India in the 1990s, documented by Banerjee and Piketty [Banerjee, Abhijit, and Thomas Piketty. 2005. "Top Indian Incomes, 1922-2000." <i>The World Bank Economic Review</i> 19 (1): 1-20.] using tax return data, is unlikely to be much affected by the tax reform we analyze here.
2008	J44	CV: Job, Jenny. 2008. "Barristers beyond the Law: State and Non-state Actors Work in Partnership to Enforce Legal and Moral Norms." In <i>International Governance and Law: State Regulation and Non-state Law</i> , ed. Hanneke van Schooten and Jonathan Verschuuren, 151-67. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	K36	De Lisser, Maureen. 2008. "Update on the Taxation of Jointly Owned Property." <i>Canadian Tax Journal</i> , 56(2): 511-33. Joint ownership of family assets, such as the family home, cottage, bank accounts, and investments, is very common in Canada. Next to having a will and life insurance, it is one of the most popular forms of estate planning undertaken by Canadians. This is partly because placing an asset in joint ownership is a relatively easy way to reduce probate fees and other costs of estate administration. Despite its popularity, the joint ownership of property remains a complex area of property law, with implications crossing over into the areas of tax law, estate law, probate law, and family law. It is therefore not surprising that the decision to hold property in joint ownership is often made without a full understanding of the tax and non-tax implications. This article examines the concept of joint ownership from an income tax perspective, alerts practitioners to possible disadvantages or potential traps related to joint ownership, and considers the impact of two recent decisions of the Supreme Court of Canada dealing with joint accounts.
2008	K36	De Lisser, Maureen. 2008. "Le point sur l'imposition des biens detenus en propriete. (Update on the Taxation of Jointly Owned Property. With English summary.) conjointe." <i>Canadian Tax Journal</i> , 56(2): 534-58. Joint ownership of family assets, such as the family home, cottage, bank accounts, and investments, is very common in Canada. Next to having a will and life insurance, it is one of the most popular forms of estate planning undertaken by Canadians. This is partly because placing an asset in joint ownership is a relatively easy way to reduce probate fees and other costs of estate administration. Despite its popularity, the joint ownership of property remains a complex area of property law, with implications crossing over into the areas of tax law, estate law, probate law, and family law. It is therefore not surprising that the decision to hold property in joint ownership is often made without a full understanding of the tax and non-tax implications. This article examines the concept of joint ownership from an income tax perspective, alerts practitioners to possible disadvantages or potential traps related to joint ownership, and considers the impact of two recent decisions of the Supreme Court of Canada dealing with joint accounts.
2008	K40	Jacyk, David. 2008. "The Dividing Line between the Jurisdictions of the Tax Court of Canada and Other Superior Courts." <i>Canadian Tax Journal</i> , 56(3): 661-707. Tax law is arguably one of the most challenging and complicated areas of the law in Canada. One might expect that one of the simplest and most straightforward questions in the area of tax law would be that of jurisdiction: Which court can adjudicate issues relating to the administration of tax legislation? Surprisingly, this very question has been the subject matter of much litigation for decades, in trial and appellate courts across Canada, illustrating the complexity of the issue of court jurisdiction in the context of a federal state, even in a well-defined area of the law such as taxation. The volume of jurisprudence on the issue of jurisdiction has been high in the last few years, and includes several decisions from appellate courts that have brought greater clarity to this issue. The clarity brought to bear is a welcome development. This article provides a comprehensive review and analysis of the law on jurisdiction by reviewing the structure of the Tax Court and the

Year	DE	Title and Abstract
		Federal Court; tracing the development of the case law prior to and following the reorganization of the federal tax appeal system in 1991; considering the decisions of provincial courts that have tackled the issue independently of the federal court system; considering the body of rectification cases, an area that, I argue, has created anomalous but nevertheless manageable and predictable results; considering the developments in recent abuse-of-process and judicial review cases, which, I suggest, have definitively and emphatically clarified the fine parameters of the jurisdictions of the Tax Court and of the other Canadian superior courts; and providing a summary of principles extracted from the jurisprudence regarding the demarcation of jurisdiction between the Tax Court and the other Canadian superior courts.
2008	L82 Z11	Jadd, Mark, Norman Bacal, and Kay Leung. 2008. "Performing in Canada: Taxation of Non-resident Artists, Athletes, and Other Service Providers." <i>Canadian Tax Journal</i> , 56(3): 589-638. This article reviews the current state of Canadian tax law and administrative practice applicable to non-residents who provide services in Canada and to the businesses that engage them. Particular emphasis has been placed on the rules pertaining to foreign athletes and service providers within the entertainment industry, including an overview of the special provisions governing taxation of non-resident actors. The article examines the substantive tax liability for foreign service providers under Canadian domestic law and the effect that tax treaties may have on such liability. In particular, the impact of the fifth protocol to the Canada-US income tax convention is considered. In commenting on the tax implications for foreign workers, the authors examine the distinction between employees and independent contractors. They also review the withholding obligations of persons who make payments to non-resident service providers and the administrative relief available in respect of excessive withholding.

"Symposium: The Sociology and Geography of Mortgage Markets: Reflections on the Financial Crisis: The Globalization and Europeanization of Mortgage Markets." <i>International Journal of Urban and Regional Research</i> , 33(2): 389-410. Do globalization and Europeanization lead to the deterritorialization of European mortgage markets? Neither economic globalization nor EU policies have resulted in one European mortgage market. The various European mortgage markets are still quite different from one another in many respects. In most countries, national lenders continue to dominate the market even though regulation itself has been internationalized to some extent. Deterritorialization has been slow for various reasons: tax, law, cultural, and structural differences play a part, but the limited market share of mortgage intermediaries and the unequal treatment of foreign mortgage lenders in some countries also form a barrier. Path-dependent trajectories are highly important, but can sometimes be bypassed by global processes or downplayed by the entry of foreign firms. The secondary mortgage market is increasingly becoming globalized, while most primary mortgage markets remain largely national. The financial crisis may temporarily slow down securitization, while simultaneously both decreasing and increasing the globalization of mortgage regulation, firms and markets.

2010	D12	Hecht, Carolin, and Katja Hanewald. 2010. <i>Sociodemographic, Economic, and Psychological Drivers of the Demand for Life Insurance: Evidence from the German Retirement Income Act</i> . Sonderforschungsbereich 649. Humboldt University, Berlin, Germany, SFB 649 Discussion Papers: SFB649DP2010-034. We exploit the natural experiment of the 2005 income tax reform in Germany to study the effects of tax incentives on consumer behavior in life insurance markets. Our empirical analysis of sociodemographic, economic, and psychological household characteristics elicited in the German SAVE study shows that two very different consumer groups buy (endowment) life insurance before and after the tax reform. We find that education plays a central role in reactions to the modified tax environment. Our stylized characterization of "arbitrageur" and "straggler" buyers will assist both life insurance firms and regulatory authorities design effective policies.
2010	D24	Lissot, Pierre. 2010. "Une maquette pour évaluer les conséquences de la mesure de défiscalisation des heures supplémentaires sur l'emploi et la production. (A Model for Assessing the Impact of French Overtime Tax Exemptions on Employment. With English summary)." <i>Economie et Prévision</i> , 0(195-196): 53-66. This article studies the impact on employment and production of the overtime tax exemption voted by the French Parliament in summer 2007. We use a general equilibrium model for the assessment. The special feature of our model is that it takes into account the gender division of household labor. The model evaluates the effects of the tax reform on the number of hours worked, labor supply by gender, and GDP growth. The measure leads to a long-term rise in production in the 0.3%-1.9% range, as well as in hours worked. The resulting reallocation of labor supply within households leads to a decrease in the labor force. Female labor force is particularly affected, its decrease being evaluated between 11,000 and 63,000 people.

2010	H82 K21	Gaukrodger, David. 2010. <i>Foreign State Immunity and Foreign Government Controlled Investors</i> . OECD, Directorate for Financial and Enterprise Affairs. OECD Working Papers on International Investment: 2010/2. Discussions at the "Freedom of Investment" Roundtables, hosted by the OECD Investment Committee, have stressed that increased investments by foreign State-controlled investors can bring significant benefits to home and host societies, but have also noted that they can raise concerns. This paper examines two principal issues concerning foreign State-controlled investors: whether the doctrine of foreign state immunity may make it difficult for private parties to pursue legitimate claims against them and whether that doctrine creates regulatory enforcement gaps for host countries. Although the restrictive approach to immunity is now widely recognised, important issues, such as whether the financial investment activities of a sovereign wealth fund are commercial or sovereign acts, remain uncertain. In the area of regulation, the paper analyses state policies in the area of tax, competition law and criminal law, and notes key factors that may influence immunity in such cases.
2010	I32	Alstott, Anne L. 2010. "Why the EITC Doesn't Make Work Pay." <i>Law and Contemporary Problems</i> , 73(1): 285-313. In her article, the author critically examines the near-consensus claim that the earned income tax credit (EITC) has succeeded in "making work pay" for low-wage parents. She begins by arguing that the official poverty levels are unrealistically low and proposes higher levels based on prevailing social judgments as to what constitutes a decent minimum standard of living. Using her definition of poverty, she concludes that the EITC makes only a small reduction in poverty, does not enable a minimum-wage worker to support herself and even one child at or above the poverty level, and does nothing for the involuntarily unemployed and others willing but unable to work. The author's analysis suggests some intriguing (if ultimately unanswerable) historically based questions. If Congress had not enacted the EITC in 1975, would low-wage families in the United States be better off or worse off today? Is the EITC, despite its inadequacies, the best that Congress is likely ever to do for the working poor? Or has the EITC taken the edge off of poverty just enough to prevent the enactment of a more effective program?
2010	K21	THE SAME AS H82 Gaukrodger, David. 2010. <i>Foreign State Immunity and Foreign Government Controlled Investors</i> . OECD, Directorate for Financial and Enterprise Affairs. OECD Working Papers on International Investment: 2010/2.
2010	L80	Reid, Marsha. 2010. "The New Services PE Provision of the Canada-US Tax Treaty." <i>Canadian Tax Journal</i> , 58(4): 845-96. The service sector is the fastest-growing economic sector in the world today, and service exports are an important component of the Canadian economy. Canada's principal trading partner with respect to services is the United States. The provision of cross-border services has significant tax implications. Canada, like most countries, taxes the income earned from business activities carried on within its territory. Under international tax treaties, however, this right is modified by the concept of the permanent establishment (PE). Treaties that follow the Organisation for Economic Co-operation and Development (OECD) model tax convention define a PE as, essentially, "a fixed place of business through which the business of an enterprise is wholly or partly carried on." In a global service-based economy, however, substantial business activity can occur within a country's territory without any need for a fixed place of business. The fifth protocol to the Canada-US income tax treaty, which came into force on December 15, 2008, amends article V of the treaty to deem services to be provided through a PE if certain conditions are met where the provision of the services would not otherwise create a fixed place of business. Canada is not the only country to be concerned that the traditional concept of a PE as a fixed place of business does not adequately address the taxation of cross-border services. For example, the UN model tax convention, which addresses the economic concerns of developing countries, has long included a services PE provision. In addition, in 2008, the commentary on article V of the OECD model was updated to include an alternative provision

Year	DE	Title and Abstract
		with respect to services for member countries that wish to include such additional taxation rights in their treaties. The term "services" can encompass a broad range of activities; therefore, it is important that all businesses involved in cross-border trade between Canada and the United States be aware of and understand the new services PE provision of the Canada-US treaty. The consequences of having a services PE in Canada are significant. The profits attributable to the services PE will be subject to Canadian income tax. The services PE will also create a tax liability for non-resident employees working at the PE, which will result in additional compliance and compensation costs. There may be indirect tax consequences as well. This article reviews the services PE provision of the Canada-US treaty in light of the OECD alternative provision and the UN model provision, discusses the implications for providers of cross-border services, and makes recommendations to assist businesses in monitoring compliance.
2010	M40	Tamaki, Paul K., and Gabrielle Richards. 2010. "The Significance of Commercial and Accounting Principles in Canadian Tax Cases." <i>Canadian Tax Journal</i>, 58(0): 101-09.
2010	M42	Hashimzade, Nigar, Zhanyi Huang, and Gareth D. Myles. 2010. "Tax Fraud by Firms and Optimal Auditing." <i>International Review of Law and Economics</i>, 30(1): 10-17. Tax fraud is an issue of increasing importance in China. One particularly significant fraud involves excessive claims for the rebate of VAT on exported goods. This fraud has two interesting features. First, it requires the collusion of an intermediary to supply the false documentation that supports a rebate application. Second, the punishment schedule is convex - with capital punishment used in major fraud cases. These features ensure that the payoff function of a firm engaging in fraud is strictly concave in the level of fraud. This gives a well-defined optimization without the need to appeal to risk aversion. We show that the existence of fraud does not affect the real output decision of the firm nor the tax policy of the government. Audit resources can be used to detect firms engaged in fraud as well as the intermediaries who supply false documents. Under reasonable assumptions it is shown that resources should be focused on detecting firms and not intermediaries. Finally, if the government must take action on fraud a convex punishment scheme is shown to be optimal.
2010	O24	Burson, James M. 1999. "The Blaze Construction Case: An Analysis of the Blaze Construction Tax Cases and the Implications on Avoidance of Taxation in Indian Country." <i>Natural Resources Journal</i>, 39(4): 845-86.
2010	Q12 Q14	Williamson, James M., Michael P. Brady, and Ron Durst. 2010. "Tax-Deferred Exchanges of Farmland: Theory and Evidence from Federal Tax Data." <i>Agricultural Finance Review</i>, 70(2): 214-30. The purpose of this paper is to examine the use of Section 1031 of the Internal Revenue Code (IRC), a piece of US tax law that allows for tax-deferred exchanges of like-kind property. The paper derives a theoretical premium value for exchanges and presents the first national level analysis of Federal tax data on the use of like-kind exchanges involving farmland between 1999 and 2005. There is significant interest in Section 1031 from stakeholders in rural communities because there is widespread belief that the recent growth in farmland values may have, in part, been stimulated by Section 1031 exchanges of farmland. Despite these concerns, little is known about the extent of such exchanges.
2010	Q18	Trojanek, Maria. 2010. "Sources of Municipal Incomes in Poland - Current State." <i>Journal of International Studies</i>, 3(1): 9-17. Own incomes, especially taxes and local charges, play a crucial role in a local budget system. By existing regulations, local tax revenues are diversified depending on type of municipality, economic basis, local tax policy, and other circumstances. District councils have the right to set tax and local charges levels or to introduce tax deductions or tax exemptions. The subject of this study is to analyse local governments' incomes with particular emphasis on municipal incomes.
2010	Q34 Q41	Banful, Ama Jantuah. 2010. "The Legal Regime of Ghana's Upstream Petroleum Industry and the Role of GNPC as Player and Regulator." <i>Ghana Policy Journal</i>, 4(0): 68-80. Oil (or 'black gold') has the capacity to make and unmake nations, ensure prosperity, or cause conflict. December 2010 will be remembered as when Ghana joined the league of oil-producing countries. As promising a step as it is, the question on the minds of many is: can Ghana successfully manage its petroleum industry and can the legal and regulatory framework provide effective organization of the industry? The framework to organize the prospective industrial activities was put in place in the 1980s and given legal backing by two main statutes: Ghana National Petroleum Corporation (PNDC Law 64) and The Exploration and Production Law (PNDC Law 84). These were supplemented by the Petroleum Income Tax Law, PNDC Law 188 of 1987. As impressive as these steps were for an industry that was far from promising, a number of questions have arisen recently. Are the extant laws crafted in the early 1980s comprehensive and sustaining enough to guide the emerging petroleum industry? What ought to be the appropriate role of the national oil company? This paper examines the industry's evolution, the legal and regulatory regime that is in place, the role that the national oil company plays as a regulator of the industry and also as a player, and concludes that while separation of roles is inevitable, and indeed desirable, it need not be immediate. Rather there should be a clear defined policy of capacity building to enable separation of functions within a three-year time frame with clearly defined timelines for implementation.
2010	Q57	Zweibel, Ellen, and Karen J. Cooper. 2010. "Charitable Gifts of Conservation Easements: Lessons from the US Experience in Enhancing the Tax Incentive." <i>Canadian Tax Journal</i>, 58(1): 25-61. In Canada, the Income Tax Act provides favourable capital gains treatment for gifts of full and partial interests in ecologically sensitive land made to eligible conservation charities, municipalities, and federal and provincial governments through the ecological gifts program (EGP). Such donations increasingly take the form of conservation easements-binding agreements between landowners and conservation organizations that permanently restrict land development or create affirmative obligations in favour of specific conservation objectives. This article compares key features of the current Canadian and US tax incentives for donations of conservation easements with a view to considering whether Canada's EGP should expand its current provisions to include some US features aimed at increasing donations from "land-rich and cash-poor" taxpayers. These features include transferable tax credits, longer carryforward periods, the possibility of carrybacks, limited refundable tax credits, and intergenerational transfers of unused charitable credits.

2011	D23	Shavell, Steven. 2011. "Corrective Taxation versus Liability as a Solution to the Problem of Harmful Externalities." <i>Journal of Law and Economics</i>, 54(4): S249-66. Although the corrective tax has long been viewed by economists as a desirable remedy for the problem of harmful externalities, its actual use has been limited, mainly to the domain of pollution. Liability, in contrast, has great importance in controlling harmful externalities. I compare the tax and liability in theory and suggest that the conclusions help explain the observed predominance of liability over taxation, except in the area of pollution. The following factors are emphasized: inefficiency of incentives under taxes when the state cannot practically take into account all variables that significantly affect expected harm; efficiency of incentives under strict liability, which requires only that actual harms be measured; efficiency of incentives under the negligence rule; administrative cost advantages of liability deriving from its being applied only when harm occurs; and dilution of incentives under liability when suit is unlikely or injurers cannot pay fully for harm.

2011	G33	Leyman, Bart, Koen J. L. Schoors, and Peter Coussement. 2011. "Does Court-Supervised Reorganization Work? Evidence from Post-confirmation Firm Failure." <i>International Review of Law and Economics</i>, 31(3): 149-68. Unlike the US Chapter 11, the Belgian reorganization legislation requires that distressed firms remain temporarily under court-supervision during the post-confirmation stage. Using a hand-collected sample of firms, we analyze the likelihood of business failure and the time to failure during this period. Less viable firms are more likely to fail and do faster so, indicating relatively effective reorganization proceedings. Firms that are indebted to highly secured banks or owe high sums of unpaid taxes are more likely to fail. Judicial discretion affects the likelihood of failure only in a subsample of sole proprietorships.
2011	G33	Howe, Harry, and Jeffrey W. Lippitt. 2011. "Uncertainty Disclosure in Disputed Business Valuations." <i>Journal of Legal Economics</i>, 18(1): 27-46. For every circumstance that leads to the need for a business valuation - e.g., M&A, a shareholder derivative action, estate planning, bankruptcy - there are at least as many reasons for the valuation to be disputed as there are entities who will be affected by a relatively high or relatively low value: buyer and seller negotiating a purchase price, minority and majority shareholder arguing over the value of an interest, business owner and the U.S. Treasury calculating a tax exposure, senior and junior creditors bargaining in a reorganization, etc. This paper presents a metric for incorporating valuator-generated measures of uncertainty in competing valuations, and a resolution protocol based on that metric which avoids some of the well-known problems associated with simple averaging or final offer arbitration. Considering the dispersion of each valuator's estimate and creating the threat of a third-party unbiased estimate increases the likelihood that an extreme estimate will be discarded or discounted. By focusing not only on the point estimate but also on its variability, the process creates incentives for settlement.

2011	L66	Sen, Anindya, and Nafeez Fatima. 2011. "Do Lower Cigarette Taxes Increase Smoking? Evidence from the Canadian National Experiment." <i>Canadian Tax Journal</i>, 59(2): 221-38. In 1994, in response to widespread tobacco smuggling, the Canadian government and the governments of five provinces - Ontario, Quebec, New Brunswick, Nova Scotia, and Prince Edward Island - reduced excise tobacco taxes by 45-60 percent. The excise taxes in the other five provinces, however, remained relatively unchanged. We exploit this quasi-experimental variation in order to evaluate the effects of lower taxes on daily smoking. In contrast, most US-based research has relied on rather modest annual changes to taxes at the state level and focused on the impact of increases to excise and sales taxes on cigarette consumption. Our study pools cross-sectional data from the 1991 General Social Survey and the 1994-95, 1996-97, and 1998-99 cycles of the National Population Health Survey. Our results offer some evidence that the reduction in taxes increased daily smoking among males, but not females. We also find differences in implied tax elasticities by age.
2011	N44	Visco, Vincenzo. 2011. "L'evoluzione dell'imposta sulle societa in Italia. (The Evolution of the Taxation of Business Income in Italy. With English summary.)." <i>Politica Economica</i>, 27(1): 5-24. The article examines some aspects of the evolution of the taxation of business income in Italy during the last 100 years. For a very long period business taxation in Italy followed a scheduler approach which lasted until 1954 when a corporation income tax was introduced. The tax was subsequently changed by the tax reforms of 1971-73, 1997, 2003 and 2006. The prospects for a further evolution of the tax are also examined.
2011	N45	Brownlee, W. Elliot. 2011. "Shoup vs. Dodge: Conflict over Tax Reform in Japan, 1947-1951." <i>Keio Economic Studies</i>, 47(1): 91-122. The 1949-1950 mission of Carl S. Shoup to Japan failed to accomplish its objective of reforming the Japanese tax system in comprehensive ways, making it more equitable and efficient. Scholars have suggested many reasons for that failure; this paper describes and analyzes the weak support of the American occupation authorities for the Shoup mission. Divisions within the occupation, and particularly the conflict between Shoup and Joseph Dodge, each of whom had allies within GHQ, doomed Shoup. With greater support from GHQ, Shoup's recommendations might have had more time to win support from the Japanese government.

2011	Q13	Mari Vidal, Sergio. 2011. "La limitacion de las bases imposables del IBI rustico para las cooperativas agrarias en el regimen fiscal de cooperativas y su necesaria reforma. (Limitations of the Tax Base on the Land Tax for Agricultural Cooperatives in the Cooperative Tax System, and Its Necessary Reform. With English summary.)." <i>Revista de Estudios Cooperativos</i>, 0(104): 125-42. Cooperatives in Spain, as in other countries, have been enjoying tax benefits under the protection that legislator intended to confer on them. The legislation currently in force in Spain is the cooperative tax system (CTS), which provides different levels of benefits depending on the degree of protection afforded to the cooperative. In the case of agricultural cooperatives certain requirements are established to achieve the highest degree of protection, which is the tax base on the land tax. It can't exceed 39,065.79 euros. In the present paper we analyze whether the failure to update this limit since the publication of the CTS in 1990 can be a problem for the performance thereof by the agricultural cooperatives to continue to enjoy special protection. In this sense we will show how cadastral values (which determine the tax base of the land tax) have been updated annually, with their consequent increase and therefore it becomes necessary to reform this limit in CTS.

(Federal Income Tax on Salaries Generated by Micro-enterprises: Case Cancun, Mexico. With English summary.)." <i>Investigaciones Europeas de Direccion y Economia de la Empresa</i> , 18(3): 200-205. The objective was given to identify which salary scales exist within micro-enterprises (SMEs) of the economical sector depending on tourism, through representative sample taking, as well as determining the sector to which the SMEs belong that generate greater revenue or, on the contrary, those that are largely subsidized by the government. The tax requirements for Mexican SMEs are multiple. There is therefore a necessity for specific research and articles on this subject that can provide investors with elements of evaluation. The article focuses on Benito Juarez County, Quintana Roo, Mexico, home to tourist destination Cancun. The article begins with an outline of the importance of the SME's and a basis is established according to which we can consider SME's as being Mexican together with the origin of tax obligations. Furthermore a mechanism is introduced which calculates the federal tax fee on incomes, according to the main sectors a stratified sample of SME's is being determined, in accordance with the sample an estimation of revenue is made and finally the conclusions are presented. The presented information has added value as it constitutes a manual with regard to the payment of federal income tax generated in Mexico.
2012	D22	Langham, Jo'Anne, Neil Paulsen, and Charmine E. J. Hartel. 2012. "Improving Tax Compliance Strategies: Can the Theory of Planned Behaviour Predict Business Compliance?" <i>eJournal of Tax Research</i> , 10(2): 364-402. For many taxpayers the uncertainty inherent in the tax system makes paying taxes akin to a game of chance. Some people gamble on the ambiguity of the law and intentionally under-report their earnings, whilst at the other end of the spectrum, others overcompensate for any possible misdemeanours and pay more than they owe. There is great variety of taxpayer behaviour patterns in between these extremes. Existing theories have failed to clarify the complexities of taxpayer decision making and thus failed to establish a useful platform for agencies to influence and encourage voluntary compliance. This study investigated the factors influencing business tax payers' decision on whether to report income and deductions correctly in their 2011 income tax return. The proposed model based on Ajzen and Fishbein's reasoned action approach (the Theory of Planned Behaviour - TPB) has genuine applicability in the tax compliance context. The research was conducted in two phases. Firstly, an online pilot survey was used to elicit salient beliefs in order to construct the primary (TPB) questionnaire. The resulting online survey was distributed to taxpayers who were asked to identify whether, in the previous 12 months they had (i) self-initiated contact or received assistance from the Tax Office; (ii) been contacted via an audit or other verification scenario; or (iii) had no personal contact with the Tax Office. The aim was to determine whether the TPB can reliably predict taxpayers' intention to fulfil their tax obligations and if so, whether it can be used to develop intervention strategies to improve voluntary compliance. The results show that intention to comply is not always a strong predictor of compliance behaviour. The majority of taxpayers who wanted to comply, failed. As complexity and difficulty in performance increases, additional factors are required to predict compliance, such as awareness of the rules. Complexity also reduces the predictability of behaviour. Behaviour prediction can be enhanced by quantifying environmental complexity, providing performance support, and eliminating potential obstacles. Intention can only be leveraged for compliance strategies when the tax system creates the optimal environment for taxpayers to successfully comply. The paper reports the findings and discusses their theoretical and practical implications. The results have significant implications for both behaviour prediction and tax compliance strategy development. The study has broad generalisability as it provides a new model for government agencies to assist them to understand and engage effectively with the people they serve.
2012	D22	Wu, Shih-Ying. 2012. "Taxation, Organizational Form and Efficiency Loss. (In Chinese. With English summary.)." <i>Taiwan Economic Review</i> , 40(1): 37-71. Previous studies document the taxation effect on firms' organizational choice and the welfare losses associated with this organizational distortion. However, studies examining firms' organizational distortion due to Taiwan's tax system are rare. This study utilizes industry-level data from profit-making enterprise income taxes to estimate the tax effect on firms' organizational choice. The estimates reveal that the ratios of sales and taxable income in each organizational form are affected by the tax gaps between organizations, implying that the distribution of the firms' business activities among different organizations are affected by the tax gaps. Based on the estimates, this study also evaluates the efficiency loss of firms' organizational distortion from tax differentials between organizations and finds that the efficiency loss was substantial before the 1998 tax integration but was lessened by the tax integration.
2012	D22	Fan, Joseph P. H., Sheridan Titman, and Garry Twite. 2012. "An International Comparison of Capital Structure and Debt Maturity Choices." <i>Journal of Financial and Quantitative Analysis</i> , 47(1): 23-56. This study examines how the institutional environment influences capital structure and debt maturity choices of firms in 39 developed and developing countries. We find that a country's legal and tax system, corruption, and the preferences of capital suppliers explain a significant portion of the variation in leverage and debt maturity ratios. Specifically, firms in more corrupt countries and those with weaker laws tend to use more debt, especially short-term debt; explicit bankruptcy codes and deposit insurance are associated with higher leverage and more long-term debt. More debt is used in countries where there is a greater tax gain from leverage.
2012	D74	Zaccarini, Pierpaolo. 2012. "Gli effetti della mediazione tributaria sull'operativita bancaria. (Mediation in Tax Disputes and Banking Operations. With English summary.)." <i>Bancaria</i> , 0(10): 74-86. The introduction in the Italian legislation of the new instrument of mediation in tax disputes of an amount not exceeding 20,000 euros is aimed to increase the use of out of court disputes resolution and to develop tax compliance.

"The Impact of Tax Evasion and Avoidance on the Economy: A Case of Harare, Zimbabwe." <i>African Journal of Economic and Sustainable Development</i> , 1(3): 284-96. The twin devils (tax evasion and avoidance) are problems which seem to have defied solution, and have bedevilled the Zimbabwe tax system ever since independence. While others put the blame on the Zimbabwe Revenue Authority (ZIMRA) for not living up to expectation ever since the inception with regards to tax administration, others attribute it to the unpatriotic attitude of the taxpayers. Hence the study tries to come up with the causes, effects and the perpetrations of the twin devils and their economic and social impact. It was therefore found that tax loopholes and taxpayers interference with revenue agents through corruption and bribery are the major problems and the best way of curbing this problem is to continually train and re-train revenue officers. Also, coming up with stiffer penalties like as in developed countries such as the USA and Britain where tax evasion or tax avoidance is considered as felony and a very serious crime which carries stiffer penalties and fines.
2012	O14	Coolidge, Jacqueline. 2012. "Findings of Tax Compliance Cost Surveys in Developing Countries." <i>eJournal of Tax Research</i> , 10(2): 250-87. The World Bank Group (WBG) has carried out a number of tax compliance cost surveys (TCCS) for businesses in developing and transition countries in Africa, Asia, Latin America and the Middle East between 2006 and 2011. While there has long been plenty of evidence of regressivity in tax compliance costs in the developed world, the WBG has documented extremely regressive patterns in the developing world, with small businesses incurring tax compliance costs of up to 15% or more of turnover. Complex tax accounting requirements are associated with high tax compliance costs, while well-designed tax accounting software and e-filing in middle-income countries appear to yield significant reductions in such costs. The WBG surveys have also documented very high rates of tax inspections and audits (including all kinds of visits, official and unofficial, by tax authorities). While both tax evasion and corruption seem to be common issues in the majority of developing countries, some show more evidence of the problem than others, and in some countries, tax officials appear to have a significantly better reputation for competence, helpfulness and integrity than other government officials. Most surveys also include questions about tax morale and evasion, and questionnaires for informal businesses regarding their perceptions about tax compliance and likelihood of future registration.
2012	O41	Chu, Hsun. 2012. "Optimal Thin Capitalisation Rule in a Simple Endogenous Growth Model with Tax Havens." <i>Australian Economic Papers</i> , 51(3): 123-33. In this paper we study the optimal thin capitalisation rules by developing a simple dynamic general-equilibrium growth model incorporating tax havens. It is found that a stricter thin capitalisation rule will reduce the incentive to invest, and is therefore harmful to growth. This effect is ignored in previous static studies on the welfare analysis of tax havens. Accordingly, when taking the growth effect into consideration, reducing the utilisation of tax havens has ambiguous effects on social welfare. We also show that a looser thin capitalisation rule could be favourable for the policymakers if (i) the production technology is high; (ii) the existing income tax rate is high; (iii) the rate of time preference is low; or (iv) the weight factor of public consumption in utility is small.

2012	P36	Altiparmakov, Nikola. 2012. "Da li su fiskalni nameti na zarade u Srbiji regresivni? (With English summary)." <i>Ekonomске ideje i praksa</i> , 0(5): 33-51. The two priorities of economic policy in Serbia in the coming period will be a decisive action to bring down the extremely high unemployment rate and systemic personal income tax reform. Thus, there exists a need to thoroughly analyze the magnitude and structure of fiscal burden (wage tax and social contributions) on wages - since valid diagnosis of a problem is a precondition for adopting an appropriate remedy. Positive economic analysis is especially important when discussing optimal tax treatment of workers' wages, since political and ideological preconceptions often get mixed with economic reality in this case. This article presents statistical data and economic analysis that challenge some professional views that have characterized fiscal burden on wages in Serbia as regressive. Fiscal burden on wages in the period 2001 to 2006 can be best described as proportional, and slightly progressive in the period 2007 to date. There exist valid socio-economic arguments in support of more progressive wage taxation in the coming period. However, attempts to increase progressivity by introducing multiple-rate global personal income tax system - would clearly be counterproductive. Optimal approach to increasing progressivity is to maintain the existing single-rate flat tax system and to significantly increase the tax-exempt threshold, with possible upward adjustment to the existing tax rate as well.
2012	R11	Stornaiuolo, Gaetano. 2012. "Il sistema di perequazione fiscale in Germania e gli effetti sulla riduzione dei divari. (Germany Tax Equalization System and Its Effects on Gap Reduction. With English summary)." <i>Rivista Economica del Mezzogiorno</i> , 26(3): 333-88. It is under debate if the organization of the German Federal State, with its features and its peculiarities, has been adequate or not to reduce or possibly to equalize territorial differences. This research paper proves that the reduction of economic differences in Germany has been strictly dependent on some principles present in the fundamental law. These principles, up to now, have influenced and bonded some variables, such as the degree of approval that the community as a whole reserved to solidarity, the repartition of duties among the different levels of the country's government, the fiscal system influencing financial relationships, the tools, and the mechanisms used to reach such results. The concepts of interpersonal equity and solidarity among territories discussed in this research paper provide useful information applicable to the Italian scenario, often referring to the German experience as benchmark.

National Bureau of Economic Research, Inc, NBER Working Papers: 19081. Courts have articulated a number of legal tests to distinguish corporate transactions that have a legitimate business or economic purpose from those carried out largely, if not solely, for favorable tax treatment. We outline an approach to analyzing the economic substance of corporate transactions based on the property rights theory of the firm, and describe its application in two recent tax cases.
2013	C93	Torgler, Benno. 2013. "A Field Experiment in Moral Suasion and Tax Compliance Focusing on Underdeclaration and Overdeduction." <i>FinanzArchiv</i>, 69(4): 393-411. One of very few field experiments in tax compliance, this study generates a unique data set on Swiss taxpayers' underdeclaration of income and wealth and overdeduction of tax credits by obtaining exclusive access to tax-return corrections made by the tax administration. Using this commune-level data from Switzerland, it explores the influence on tax compliance of moral suasion, introduced through a treatment in which taxpayers receive a letter containing

Year	DE	Title and Abstract
		normative appeals signed by the commune's fiscal commissioner. This letter also serves to operationalize elements of social identity and (mutual) trust. Interestingly, the results not only echo the earlier finding that moral suasion has barely any effect on taxpayer compliance, but show clear differences between underdeclaration and overdeduction.
2013	C93	Fochmann, Martin, and Joachim Weimann. 2013. "The Effects of Tax Salience and Tax Experience on Individual Work Efforts in a Framed Field Experiment." <i>FinanzArchiv</i> , 69(4): 511-42. We present a simple model with tax biases that shows that tax perception depends on (1) the tax rate, (2) tax salience, and (3) tax experience. To test our model predictions, we first draw on the results of Fochmann et al. (2013) and show that tax misperceptions are lower with a higher tax rate. Second, we conduct a framed field experiment with 118 employees (no students) as subjects and a tax levied on the subjects' income from working in a real-effort experiment. In four treatments employing a direct and an indirect progressive tax scale, we show that a higher tax salience and tax experience level lead to lower tax misperception. Interestingly, the tax-experience effect does not play a role in simple cases with a proportional income tax.
2013	D02	THE SAME AS C24 Borek, T. Christopher, Angelo Frattarelli, and Oliver Hart. 2013. <i>Tax Shelters or Efficient Tax Planning? A Theory of The Firm Perspective On the Economic Substance Doctrine</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 19081.
2013	D03	Hashimzade, Nigar, Gareth D. Myles, and Binh Tran-Nam. 2013. "Applications of Behavioural Economics to Tax Evasion." <i>Journal of Economic Surveys</i> , 27(5): 941-77. The paper reviews recent models that have applied the techniques of behavioural economics to the analysis of the tax compliance choice of an individual taxpayer. The construction of these models is motivated by the failure of the Yitzhaki version of the Allingham-Sandmo model to predict correctly the proportion of taxpayers who will evade and the effect of an increase in the tax rate upon the chosen level of evasion. Recent approaches have applied non-expected utility theory to the compliance decision and have addressed social interaction. The models we describe are able to match the observed extent of evasion and correctly predict the tax effect but do not have the parsimony or precision of the Yitzhaki model.
2013	D03	LaLumia, Sara, and James M. Sallee. 2013. "The Value of Honesty: Empirical Estimates from the Case of the Missing Children." <i>International Tax and Public Finance</i> , 20(2): 192-224. How much are people willing to forego to be honest, to follow the rules? When people do break the rules, what can standard data sources tell us about their behavior? Standard economic models of crime typically assume that individuals are indifferent to dishonesty, so that they will cheat or lie as long as the expected pecuniary benefits exceed the expected costs of being caught and punished. We investigate this presumption by studying the response to a change in tax reporting rules that made it much more difficult for taxpayers to evade taxes by inappropriately claiming additional dependents. The policy reform induced a substantial reduction in the number of dependents claimed, which indicates that many filers had been cheating before the reform. Yet, the number of filers who availed themselves of this evasion opportunity is dwarfed by the number of filers who passed up substantial tax savings by not claiming extra dependents. By declining the opportunity to cheat, these taxpayers reveal information about their willingness to pay to be honest. In our analysis, we develop a novel method for inferring the characteristics of taxpayers in the absence of audit data. Our findings indicate both that this willingness to pay to be honest is large on average and that it varies significantly across the population of taxpayers.
2013	E12	Kalbasi Anaraki, Nahid. 2013. "The U.S. Corporate Tax Reform and Its Macroeconomic Outcomes." <i>Research in World Economy</i> , 4(1): 14-21. The corporate tax reform has been among the most controversial issues during the past U.S. presidential debates. Though much has been said about the adverse macroeconomic effects of the corporate tax hike, less attention has been paid to the magnitude of such effects. This study attempts to measure the adverse effects of the corporate tax hike on macroeconomic variables such as investment, real GDP, productivity growth, hourly wages, unemployment rate, natural rate of unemployment, and consumer price index (CPI). The estimated regression results with quarterly data from 1960 to 2010 suggest that a 10% increase in the effective corporate tax rate reduces private investment by 3.1%, real GDP by 1.5%, productivity by 2.6%, and hourly wages by 4%. The results also indicate that this increase in the effective corporate tax rate raises short-term unemployment rate by 0.5%, the natural rate of unemployment by 1%, and the consumer price index (CPI) by 0.9%.
2013	E52	Flores-Macias, Gustavo A., and Sarah E. Kreps. 2013. "Political Parties at War: A Study of American War Finance, 1789-2010." <i>American Political Science Review</i> , 107(4): 833-48. What determines when states adopt war taxes to finance the cost of conflict? We address this question with a study of war taxes in the United States between 1789 and 2010. Using logit estimation of the determinants of war taxes, an analysis of roll-call votes on war tax legislation, and a historical case study of the Civil War, we provide evidence that partisan fiscal differences account for whether the United States finances its conflicts through war taxes or opts for alternatives such as borrowing or expanding the money supply. Because the fiscal policies implemented to raise the revenues for war have considerable and often enduring redistributive impacts, war finance - in particular, war taxation - becomes a high-stakes political opportunity to advance the fiscal interests of core constituencies. Insofar as the alternatives to taxation shroud the actual costs of war, the findings have important implications for democratic accountability and the conduct of conflict.
2013	F16	Huberman, Michael. 2013. "One World of Labour Regulation, Two Worlds of Trade: Examples of Belgium and Brazil." <i>European Review of Economic History</i> , 17(3): 251-71. Supposedly, labour regulation makes firms less competitive in international markets. This paper studies the adoption of labour laws in Belgium before 1914 and Brazil in the 1920s. In the two countries, regulation induced investments in new plants and equipment. The rise in labour productivity made Belgian firms better exporters in the context of expanding world trade. Brazil did not reap similar gains because international trade was collapsing.
2013	F44	Abuselidze, George. 2013. "Optimal Tax Policy - Financial Crisis Overcoming Factor." <i>Asian Economic and Financial Review</i> , 3(11): 1451-59. Among economic reforms implemented for overcoming of world financial and economic recessions, a special accent is brought to macroeconomic stabilization; strengthening of the financial sphere is recognized as one of imperatives of economic policy and considerable precondition of its ensuring includes adjustment of tax policy. Creation of optimal tax policy is one of the most difficult problems of economic sciences. One of the main lines of tax budget reformation includes formation of a tax code taking into consideration optimal tax burden. Besides, realization of the tax strategy shall be economically grounded. Tax rates and preferences and the forms of punishment of tax violators shall be selected not mechanically, but by means of mathematic calculation taking into consideration the real economic situation. Just these matters are covered by the present work.

With English summary.)." <i>Maliye Dergisi</i>, 0(164): 120-30. Gold, which has undertaken various tasks in different periods of time, has been a serious investment tool in modern times. Jewelers which have been the main factor of gold market have encountered with some alternatives over time. Banks are one of these alternatives. Previously have conducted gold-related transactions over deposit accounts, banks later aimed at physical gold accounts. In this study, the historical process in gold banking sector and an overview of gold market in Turkey will be emphasized. Furthermore, the study will point out the taxation method for the income obtained from the gold banking, which is core objective of the study.
2013	H53	Colombino, Ugo. 2013. "A New Equilibrium Simulation Procedure with Discrete Choice Models." <i>International Journal of Microsimulation</i>, 6(3): 25-49. Many microeconomic models of discrete choice include alternative-specific constants meant to account for (possibly besides other factors) the density or accessibility of particular types of alternatives. A notable area of application is labour supply where, for example, part-time jobs vs. full-time jobs might be more or less accessible. The most common use of these models is the simulation of tax-transfer reforms. The simulation is usually interpreted as a comparative statics exercise, i.e., the comparison of different equilibria induced by different policy regimes. The simulation procedure, however, typically keeps fixed the estimated alternative-specific constants. In this note, we argue that this procedure is not consistent with the comparative statics interpretation. Since the constants reflect the number of jobs and since the number of people willing to work changes as a response to the change in tax-transfer regime, the new equilibrium induced by the reform implies that the constants should also change. A structural interpretation of the alternative-specific constants leads to the development of a simulation procedure consistent with the comparative statics interpretation. The procedure is illustrated with a simulation of alternative reforms of the income support policies in Italy.

2013	N23 N24	Coyle, Christopher, and John D. Turner. 2013. "Law, Politics, and Financial Development: The Great Reversal of the U.K. Corporate Debt Market." <i>Journal of Economic History</i>, 73(3): 810-46. This article examines the role of creditor protection in the development of the U.K. corporate bond market. This market grew rapidly in the late nineteenth century, but in the twentieth century it experienced a reversal, albeit with a short-lived post-1945 renaissance. Such was the extent of the reversal that the market from the 1970s onwards was smaller than it had been in 1870. We find that law does not explain the variation in the size of this market over time. Alternatively, our evidence suggests that inflation and taxation policies were major drivers of this market in the post-1945 era.

2013	N47	Taylor, C. John. 2013. "The Negotiation and Drafting of the First Australia-Canada Taxation Treaty (1957)." <i>Canadian Tax Journal</i>, 61(4): 915-87. The 1957 Australia-Canada taxation treaty was the third comprehensive taxation treaty entered into by Australia and the 11th entered into by Canada. Neither the negotiation and drafting of the treaty nor its relevance for understanding the development of the treaty practice and policy of each country has previously been the subject of published research. This article is based on archival sources located in the National Archives of Australia and in Library and Archives Canada. The impetus for the treaty came from Canada following submissions by Canadian businesses (initially shipping companies and subsequently Ford and Massey-Harris-Ferguson), which, after the signing of the 1946 Australia-UK taxation treaty and the 1953 Australia-US taxation treaty, regarded themselves as being at a competitive disadvantage as compared with UK or US businesses investing in or doing business with Australia. The active lobbying by Canadian business reflected the high levels of source taxation in Australia and Canada's then net capital export position in relation to Australia. Australia was initially reluctant to enter into further taxation treaties; but in 1953, awareness of the direct benefit that could flow to foreign investors through treaties, coupled with a desire not to offend Canada and notions of Commonwealth solidarity, meant that Australia was then willing to enter into a treaty with Canada on similar terms to those in the 1953 Australia-US treaty. Remarkably, following face-to-face negotiations in 1953, officials continued to negotiate via correspondence until 1957, even though the only technical issue of substantial disagreement between them concerned Australian undistributed profits tax. Canadian Department of Finance officials may have been concerned about a possible adverse US reaction if Canada conceded more to Australia on undistributed profits tax than it had to the United States in the 1946 Canada-US treaty. Once the technical issues had been resolved, following a concession by Canada on undistributed profits tax, the Australian Treasury reignited its general opposition to taxation treaties in response to adverse public reaction to high levels of dividend remittances by the Australian subsidiary of General Motors to its us parent. In both countries, the departments of External Affairs and relevant ministers were more concerned with promoting Commonwealth solidarity and direct investment between the two countries than with technical issues. Ultimately, this pragmatic and foreign-policy-oriented perspective prevailed, leading to the signing of the treaty in 1957. The treaty entered into was similar to earlier Canadian treaties but with variations resulting from Australia's desire to protect the operation of specific features of its domestic law. Some of those distinctive features continue in Australian treaty practice to this day. The impression gained from the negotiations is that, in this period, Canada was prepared to agree to unusual features in some treaties provided that they did not conflict with key features that Canada considered essential to all its taxation treaties.

Year	DE	Title and Abstract
		superpower that manifested its domination in the Mediterranean zone between 1299 and 1922. At the moment of their maximum glory, the Ottomans ruled over three continents, meaning 19.9 millions km ² . The tax system applied during 600 years, but also the accounting methods used, prove a remarkable administrative and fiscal organization in the Empire. There were taxes based on Islamic law, but also taxes established by the sultan concerning the salaries of employees and the military campaigns. The necessity of correct evidence of tax collecting and distribution required keeping registers "in stairs", according to an accounting method overtook from the Arabs, named the "Merdivan Method". The method was based on principles available until nowadays. It was applied until the end of 19th century, when it was replaced with the method based on double-entry recording, taken from the West.

2013	O10 O21	Rakesh, C., and K. Manjunatha. 2013. "Direct Tax Code in India: A Major Tax Reform for the Emerging Economy." <i>International Journal of Research in Commerce, Economics and Management</i> , 3(11): 107-12. In India, Tax is one of the major sources of revenue to the Government. In view of federal structure of governance in India, there is a multiplicity of taxes on both direct taxes and indirect taxes. Besides these, there is plethora of taxes like cesses, surcharges, stamp duty, entertainment tax, road tax etc. This shows the rigidity and complexity of the Indian tax system. So in order to avoid this rigidity and complexity the Central Government is focusing towards changing some of the tax methods. Among them, the Direct Tax Code is one. The present tax system is facing with the problem of uniformity in all the phases which brings to more complexity to assessee. So in order to wash these complexities, the Central Government is spotlighting to introduce the Direct Tax Code system in India. This major direct tax reforms helps to boost up the Indian Economy as much as possible. Here an attempt is made to analyze in detail about the major issues in Direct Tax Code and its relationship between developments of the Indian Economy. Along together, the study covers few other relevant aspects of the Direct Tax Code.
2013	P25	Fan, Ziyang, and Binbin Tian. 2013. "Tax Competition, Tax Enforcement and Tax Avoidance. (In Chinese. With English summary.)" <i>Jingji Yanjiu/Economic Research Journal</i> , 48(9): 99-111. This paper uses the Income Tax Sharing Reform in 2002 to identify the tax enforcement and estimate its effect on the avoidance of corporate income tax. The reform attributes the firms to two tax agencies, National Tax Bureau and Local Tax Bureau, according their established date. Tax competition will decrease the tax enforcement of Local Tax Bureau, while does not affect the National Tax Bureau, so the difference of tax enforcement perfectly measures tax competition. Based on 170 000 firms' data, we find the decreased tax enforcement of Local Tax Bureau induces tax avoidance of firms, which is only robust in firms with enough mobility, such as private firms. These results also explain the helping hand of China local governments and the abnormal increasing of tax revenue.
2013	P32	Simonovic, Zoran, Marko Jelocnik, and Jonel Subic. 2013. "Tax Policy in Serbian Agriculture." <i>Economics of Agriculture</i> , 60(3): 637-51. In this paper the tax policy in agriculture of Serbia was analysed. Tax policy was observed through the current legal framework, such as: Individual Income Tax Law and Corporate Profit Tax Law. Special attention was paid to the Value Added Tax Law, primarily from the aspect of family agricultural husbandries, as from the stand point of the rules that were valid under the old VAT Law, as well as based on the last amendments and supplements adopted at the end of 2012. The mentioned approach of VAT studying leaned on the fact that it represents modern form of tax applicable in the field of consumption. It was implemented primarily to facilitate the reduction of the grey economy, to harmonize national tax policy with European Union (EU) standards, as well as to increase tax collection.
2013	Q11 R52	Diss: Casaburi, Lorenzo. 2013. Essays in Development Economics and Political Economy. PhD diss. Harvard University. Chapter 1 studies the electoral response to the Ghost Buildings program, a nationwide anti tax evasion policy in Italy which used innovative monitoring technologies to target buildings hidden from tax authorities. The difference-in-differences identification strategy exploits both variation across towns in the ex ante program scope to increase enforcement as well as administrative data on actual building registrations. Local incumbents experience an increase in their reelection likelihood as a consequence of the policy. In addition, these political returns are higher in areas with higher speed of public good provision and with lower tax evasion tolerance, implying complementarity among enforcement policies, government efficiency, and the underlying tax culture. Chapter 2 uses a road-level regression discontinuity design in Sierra Leone to study the impact of improvements in rural road infrastructure on agricultural markets. We show that the improved roads reduced the market prices of local crops. These price effects are stronger in markets that are further from major urban centers and in less productive areas. We also find that these price effects are reversed in areas with better cell phone penetration. We show that our empirical findings are consistent with a search cost framework a la Mortensen, but inconsistent with other models, such as Bertrand competition, bilateral bargaining, and Cournot oligopsony. Chapter 3 present results from a randomized controlled experiment designed to study the multiple margins through which value is passed from traders to agricultural producers in the presence of interlinked transactions. Consistent with other studies, we find limited price pass-through in response to an increase in the trader resale price. However, there is a large response in credit provision. We develop a model of interlinked transactions that highlights the substitutability of price and credit pass-through across markets, and verify its predictions empirically. Calibration suggests that to ignore margins of pass-through other than price has substantial implications for welfare analysis.
2013	Q15	Ward, Ruby, Trent Teegerstrom, and Joseph G. Hiller. 2013. "IRS Tax Rules and Native American Producers: One Size Does Not Fit All." <i>Choices</i> , 28(2):
2013	Q20 Q30	Jodoin, Claude E. 2013. "Federal and Quebec Incentives for Resource Exploration - Flowthrough Shares." <i>Canadian Tax Journal</i> , 61(0): 147-66. The issuance of flowthrough shares has been, for a number of years, the cornerstone in the financing of exploration expenses in Canada, and particularly in Quebec. The popularity of this financing mechanism is attributable to tax incentives offered by both the Canadian and the Quebec governments. While the two tax regimes are to a large extent harmonized, Quebec offers some incentives that are not provided under the federal regime, making the province a destination of choice for carrying out exploration activities. The treatment of gains on the disposition of flowthrough shares has always been unique, given that their cost base is nil for tax purposes. In addition, until recently, a generous tax exemption has been available for donations of flowthrough shares to charities. The author reviews the federal and Quebec incentives, and discusses recent amendments relating to the taxation of gains resulting from the disposition or donation of flowthrough shares.

2006		
2006	D53	Li, Wenli, and Pierre-Daniel Sarte. 2006. "U.S. Consumer Bankruptcy Choice: The Importance of General Equilibrium Effects." <i>Journal of Monetary Economics</i>, 53(3): 613-31. We study the implications of U.S. personal bankruptcy rules for resource allocation and welfare. Our analysis shows that general equilibrium considerations along with bankruptcy chapter choice and production matter crucially for the effects of policy reform. Contrary to previous work, we find that completely eliminating bankruptcy provisions causes significant declines in output and welfare by reducing capital formation and labor input. Furthermore, subjecting Chapter 7 filers to means testing, as suggested by recent legislative proposals, would not improve upon current bankruptcy provisions and, at best, leave aggregate filings, output, and welfare unchanged. However, we do find that an alternative tightening of Chapter 7, in the form of lower asset exemptions, can increase economic efficiency.
2006	E24	Athreya, Kartik B., and Nicole B. Simpson. 2006. "Unsecured Debt with Public Insurance: From Bad to Worse." <i>Journal of Monetary Economics</i>, 53(4): 797-825. In U.S. data, income interruptions, the receipt of public insurance, and the incidence of personal bankruptcy are all closely related. The central contribution of this paper is to evaluate bankruptcy protection and public insurance in a unified setting where each program alters incentives in the other. Our analysis delivers two striking conclusions. First, we find that U.S. personal bankruptcy law is an important barrier that prevents the public insurance system from improving welfare. Second, contrary to popular belief, we find that increases in the generosity of public insurance will lead to more, not less, bankruptcy.

Year	DE	Title and Abstract
2006	E42 G24	2006. "Recent Developments in Consumer Credit and Payments: Conference Summary." <i>Federal Reserve Bank of Philadelphia Business Review</i> , 0(0): 35-43. In September 29 and 30, 2005, the Federal Reserve Bank of Philadelphia's Research Department and Payment Cards Center organized the fourth in a series of conferences exploring new academic research on the topic of consumer credit and payments. Nearly 100 participants attended the conference, which included seven research papers on topics such as the design of consumer bankruptcy law, predatory lending, consumers' choice of borrowing terms and indebtedness, the function of credit reporting agencies, and pricing in credit card and ATM networks.
2006	E44 G18	Livshits, Igor, James MacGee, and Michele Tertilt. 2006. <i>Accounting for the Rise in Consumer Bankruptcies</i> . University of Western Ontario, RBC Financial Group Economic Policy Research Institute, University of Western Ontario, RBC Financial Group Economic Policy Research Institute Working Papers: 20066. Personal bankruptcies in the United States have increased dramatically, rising from 1.4 per thousand working age population in 1970 to 8.5 in 2002. We use a heterogeneous agent life-cycle model with competitive financial intermediaries who can observe households' earnings, age and current asset holdings to evaluate several commonly offered explanations. We find that increased uncertainty (income shocks, expense uncertainty) cannot quantitatively account for the rise in bankruptcies. Instead, stories related to a change in the credit market environment are more plausible. In particular, we find that a combination of a decrease in the transactions cost of lending and a decline in the cost of bankruptcy does a good job in accounting for the rise in consumer bankruptcy. We also argue that the abolition of usury laws and other legal changes are unimportant.

2006	I38	Mateos-Planas, Xavier, and Giulio Secchia. 2006. "Welfare Implications of Endogenous Credit Limits with Bankruptcy." <i>Journal of Economic Dynamics and Control</i> , 30(11): 2081-2115. This paper studies the aggregate welfare consequences of changes in the prescribed penalty for personal bankruptcy and in social insurance policies when borrowing limits may respond to these changes. It uses a dynamic general equilibrium model of an exchange economy with incomplete markets and a continuum of agents. The borrowing constraint and the risk of default are endogenous, and the default penalty restricts an individual's access to the markets for a fixed period of time. The effect on the stationary equilibrium of an exogenous reduction of 1 and 2 years in this exclusion period is explored quantitatively. For comparison purposes, the same experiment is carried out under the assumption made in related studies that the borrowing limit is fixed. A small welfare loss follows in either case. In contrast, in a small open economy, welfare may increase substantially but only if the borrowing constraint is endogenous. Similar results follow from an exogenous change in social policy that reduces individual income variability.
2006	J64 J65	Athreya, Kartik B., and Nicole B. Simpson. 2006. "Unsecured Debt with Public Insurance: From Bad to Worse." <i>Journal of Monetary Economics</i> , 53(4): 797-825. In U.S. data, income interruptions, the receipt of public insurance, and the incidence of personal bankruptcy are all closely related. The central contribution of this paper is to evaluate bankruptcy protection and public insurance in a unified setting where each program alters incentives in the other. Our analysis delivers two striking conclusions. First, we find that U.S. personal bankruptcy law is an important barrier that prevents the public insurance system from improving welfare. Second, contrary to popular belief, we find that increases in the generosity of public insurance will lead to more, not less, bankruptcy.
2007		
2007	D72	Hansen, Bradley A., and Mary Eschelbach Hansen. 2007. "The Role of Path Dependence in the Development of US Bankruptcy Law, 1880-1938." <i>Journal of Institutional Economics</i> , 3(2): 203-25. We illustrate mechanisms that can give rise to path dependence in legislation. Specifically, we show how debtor-friendly bankruptcy law arose in the United States as a result of a path dependent process. The 1898 Bankruptcy Act was not regarded as debtor-friendly at the time of its enactment, but the enactment of the law gave rise to changes in interest groups, changes in beliefs about the purpose of bankruptcy law, and changes in the Democratic Party's position on bankruptcy that set the United States on a path to debtor-friendly bankruptcy law. An analysis of the path dependence of bankruptcy law produces an interpretation that is more consistent with the evidence than the conventional interpretation that debtor-friendliness in bankruptcy law began with political compromises to obtain the 1898 Bankruptcy Act.
2007	H62	Todorova, Zdravka. 2007. "Deficits and Institutional Theorizing about Households and the State." <i>Journal of Economic Issues</i> , 41(2): 575-82. The paper focuses on the federal budget deficit and on household financial positions. The household-state analogy with reference to deficits does not differentiate households and the state as distinct institutions with specific characteristics, powers and liabilities. An Institutional discussion of this analogy reveals some questions of importance for theorizing about households and the state as institutions in a pecuniary culture.
2007	H73	CV: Sterk, Stewart E. 2007. "Asset Protection Trusts: Trust Law's Race to the Bottom?." In <i>Economics of Conflicts of Laws. Volume 2.</i> , ed. Erin A. O'Hara, 421-503. An Elgar Reference Collection. Economic Approaches to Law, vol. 10. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	K00	Dolfsma, Wilfred, and Robert McMaster. 2007. "Revisiting Institutional Law and Economics--The Inadequacy of the Chicago School: The Case of Personal Bankruptcy Law." <i>Journal of Economic Issues</i> , 41(2): 557-65. For Chicago style law & economics, bankruptcy is a utility maximizing choice agents make. Preventing personal bankruptcy requires raising its price. We analyze the developments of personal bankruptcy law as a way of allocating risks within a society. As bankruptcy is in large part something that befalls individuals and households, an institutional law & economics, based on instrumental value principles (IVP), suggests that risks should be reduced and shared rather than be shifted from firms to individuals. In addition to evaluating a specific policy area, we, therefore, also suggest a specific way in which institutional law & economics and IVP may be developed.
2007	K36	CV: Sterk, Stewart E. 2007. "Asset Protection Trusts: Trust Law's Race to the Bottom?." In <i>Economics of Conflicts of Laws. Volume 2.</i> , ed. Erin A. O'Hara, 421-503. An Elgar Reference Collection. Economic Approaches to Law, vol. 10. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2007	K42	Djankov, Simeon, Caralee McLiesh, and Andrei Shleifer. 2007. "Private Credit in 129 Countries." <i>Journal of Financial Economics</i> , 84(2): 299-329. We investigate cross-country determinants of private credit, using new data on legal creditor rights and private and public credit registries in 129 countries. Both creditor protection through the legal system and information-sharing institutions are associated with higher ratios of private credit to gross domestic product, but the former is relatively more important in the richer countries. An analysis of legal reforms shows that credit rises after improvements in creditor rights and in information sharing. Creditor rights are remarkably stable over time, contrary to the hypothesis that legal rules are converging. Finally, legal

Year	DE	Title and Abstract
		origins are an important determinant of both creditor rights and information-sharing institutions. The analysis suggests that public credit registries, which are primarily a feature of French civil law countries, benefit private credit markets in developing countries.
2007	N45	CV: Anderson, Kent, and Makoto Ito. 2007. "Insolvency Law for a New Century: Japan's Revised Framework for Economic Failures." In <i>Law in Japan: A Turning Point</i> , ed. Daniel H. Foote, 589-621. Asian Law Series, no. 19. Seattle and London: University of Washington Press.
2007	P34	Safavian, Mehnaz, and Siddharth Sharma. 2007. "When Do Creditor Rights Work?" <i>Journal of Comparative Economics</i>, 35(3): 484-508. Creditor-friendly laws are generally associated with more credit to the private sector and deeper financial markets. But laws mean little if not upheld in the courts. We hypothesize that the effectiveness of creditor rights is strongly linked to the efficiency of contract enforcement. This hypothesis is tested using firm level data on 27 European countries in 2002 and 2005. We find that firms have more access to bank credit in countries with better creditor rights, but the association between creditor rights and bank credit is much weaker in countries with inefficient courts. Exploiting the panel dimension of our data and the fact that creditor rights change over time, we show that the effect of a change in creditor rights on change in bank credit increases with court enforcement. In particular, we show that a unit increase in the creditor rights index will increase the share of bank loans in firm investment by 27 percent in a country at the 10th percentile of the enforcement time distribution (Lithuania). However, the increase will be only 7 percent in a country at the 80th percentile of this distribution (Kyrgyzstan). Legal protections of creditors and efficient courts are strong complements.
2008		
2008	D86	Elul, Ronel, and Piero Gottardi. 2008. <i>Bankruptcy: Is it enough to Forgive or must we also Forget?</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2313. In many countries, lenders are not permitted to use information about past defaults after a specified period of time has elapsed. We model this provision and determine conditions under which it is optimal. We develop a model in which entrepreneurs must repeatedly seek external funds to finance a sequence of risky projects under conditions of both adverse selection and moral hazard. Forgetting a default typically makes incentives worse, ex-ante, because it reduces the punishment for failure. However, following a default it may be good to forget, because by improving an entrepreneur's reputation, forgetting increases the incentive to exert effort to preserve this reputation. Our key result is that if (i) borrowers' incentives are sufficiently strong, (ii) their average quality is not too low, (iii) the output loss from low effort is not too large, and (iv) agents are sufficiently patient, then the optimal law would prescribe some amount of forgetting--that is, it would not permit lenders to fully utilize past information. We also argue that forgetting must be the outcome of a regulatory intervention by the government--no lender would willingly agree to ignore information available to him. Finally, we show that the predictions of our model are consistent with the cross-country relationship between credit bureau reporting regulations and the provision of credit, as well as Musto (2004)'s evidence on the impact of these regulations on individual borrower and lender behavior.
2008	G38 R31	White, Michelle J., and Ning Zhu. 2008. <i>Saving Your Home in Chapter 13 Bankruptcy</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14179. This paper examines how filing for bankruptcy under Chapter 13 helps financially distressed debtors save their homes. Filing under Chapter 13 stops lenders from foreclosing and gives debtors extra time to repay mortgage arrears, but does not reduce the total amount owed. We develop a model of debtors' decisions to default on their mortgages and file for bankruptcy and we evaluate it using a new dataset of debtors who filed for bankruptcy under Chapter 13 in 2006. We also examine the effect of allowing "strip-down" of residential mortgages in Chapter 13, so that bankruptcy judges could reduce the total amount owed. The paper documents that 96% of Chapter 13 filers are homeowners and that more than 90% of Chapter 13 plans involve repayment of mortgages or car loans. The model predicts that introducing strip-down would allow an additional 100,000 debtors to save their homes each year.
2008	H25 H32 J32 K49	Grubb, Michael D., and Paul Oyer. 2008. <i>Who Benefits from Tax-Advantaged Employee Benefits?: Evidence from University Parking</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14062. We use university parking permits to study how firms and employees split the value of employee benefit tax subsidies. Starting in 1998, the IRS allowed employees to pay for parking passes with pre-tax income. This subsidized the parking pass purchases of faculty and staff, but did not affect students. We show that the typical university raised its parking rates by 8-10% extra when it implemented a pre-tax payment system, but that this increase was the same for those affected by the tax change and those that were not affected. We conclude that university employees captured much of the new tax benefit, that faculty and staff that purchase permits benefited relative to those that do not purchase permits, and that students that purchase permits were made worse off relative to those that do not buy permits. We discuss what these results suggest about universities' objectives in setting their parking prices and about the demand for university parking.

Magnus Henrekson and Robin Douhan, 218-42. An Elgar Reference Collection. International Library of Entrepreneurship, vol. 11. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	R31	THE SAME AS G38 White, Michelle J., and Ning Zhu. 2008. <i>Saving Your Home in Chapter 13 Bankruptcy</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14179.
2008	R31	White, Michelle J. 2008. <i>Bankruptcy: Past Puzzles, Recent Reforms, and the Mortgage Crisis</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14549. This paper discusses four bankruptcy-related policy issues. First, what is the economic rationale for having a bankruptcy procedure at all and what defines an economically efficient bankruptcy procedure? Second, why did the number of U.S. bankruptcy filings increase so dramatically between 1980 and 2005? Third, a major bankruptcy reform went into effect in the U.S. in 2005--what did it do and how did it affect credit and mortgage markets? Finally, the paper discusses the mortgage crisis, the high social cost of foreclosures, and the difficulty of avoiding foreclosure by voluntarily renegotiation of mortgage contracts, even when such renegotiations are in the joint interest of debtors and creditors. I also discuss the pros and cons of government programs to refinance mortgages and the possibility of giving bankruptcy judges new power to change the terms of mortgage contracts in bankruptcy.
2009		
2009	G20 R21 R28 R51	Li, Wenli, and Michelle J. White. 2009. <i>Mortgage Default, Foreclosure, and Bankruptcy</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 15472. In this paper we examine the relationship between homeowners' bankruptcy decisions and their mortgage default decisions and the relationship between homeowners' bankruptcy decisions and lenders' decisions to foreclose. In theory, both relationships could be either substitutes or complements. Bankruptcy and default tend to be substitutes because homeowners' budgets are limited and, if they spend less on payments to unsecured lenders, then they have more money

Year	DE	Title and Abstract
		to pay their mortgages. But bankruptcy and default may also be complements if homeowners use bankruptcy to reduce the cost of defaulting on their mortgages. Bankruptcy and foreclosure similarly may be either substitutes or complements. In fact we show that both relationships are complementary, although homeowners reacted to the 2005 bankruptcy reform by treating them as substitutes. We also show that bankruptcies, defaults and foreclosures all tend to spread, i.e., higher bankruptcy rates in the neighborhood raise homeowners' probability of filing, higher default rates raise homeowners' probability of defaulting, and higher foreclosure rates raise homeowners' probability of foreclosure. We provide estimates of the size of these effects. The paper argues that these relationships have important public policy implications. In particular, foreclosures have very high social costs, and some of these costs are external to both borrowers and lenders. As a result, there is a social gain from discouraging bankruptcies, since fewer bankruptcies mean fewer defaults and foreclosures. We show that these considerations shift optimal bankruptcy law in a pro-creditor direction, because pro-creditor bankruptcy policies reduce the number of filings and therefore reduce foreclosures. But the same considerations shift other policies that affect bankruptcy in a pro-debtor direction. This is because pro-debtor shifts in, for example, wage garnishment policy reduce the number of bankruptcy filings and therefore reduce foreclosures.
2009	H23	Grant, Charles, and Winfried Koeniger. 2009. "Redistributive Taxation and Personal Bankruptcy in U.S. States." <i>Journal of Law and Economics</i> , 52(3): 445-67. Personal bankruptcy regulation and redistributive taxes and transfers vary considerably across U.S. states and over time. Our hypothesis is that both policies are imperfect substitutes in insuring consumption of risk-averse agents in incomplete markets. Exploiting data variation over time for 18 U.S. states for the period 1980-2003, we find considerable support for this hypothesis: redistributive taxation and bankruptcy exemptions are negatively correlated, and both policies are associated with more equal consumption growth.

2010	A12	CV: Niemi, Johanna. 2010. "Personal Insolvency." In <i>Handbook of Research on International Consumer Law</i> , ed. Geraint Howells, Iain Ramsay and Thomas Wilhelmsson, 409-30. With David Kraft. Research Handbooks in International Law series. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2010	D82	Grochulski, Borys. 2010. "Optimal Personal Bankruptcy Design under Moral Hazard." <i>Review of Economic Dynamics</i> , 13(2): 350-78. In this paper, we develop a normative theory of unsecured consumer credit and personal bankruptcy based on the optimal trade-off between incentives and insurance. First, in order to characterize this trade-off, we solve a dynamic moral hazard problem in which agents' private effort decisions influence the life-cycle profiles of their earnings. We then show how the optimal allocation of individual effort and consumption can be implemented in a market equilibrium in which (i) agents and intermediaries repeatedly trade secured and unsecured debt instruments, and (ii) agents obtain (restricted) discharge of their unsecured debts in bankruptcy. The structure of this equilibrium and the associated restrictions on debt discharge closely match the main qualitative features of personal credit markets and bankruptcy law that actually exist in the United States.
2010	G11	Corradin, Stefano, Reint Gropp, Harry Huizinga, and Luc Laeven. 2010. <i>Who Invests in Home Equity to Exempt Wealth from Bankruptcy?</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 8097. Homestead exemptions to personal bankruptcy allow households to retain their home equity up to a limit determined at the state level. Households that may experience bankruptcy thus have an incentive to bias their portfolios towards home equity. Using US household data from the Survey of Income and Program Participation for the period 1996-2006, we find that especially households with low net worth maintain a larger share of their wealth as home equity if a larger homestead exemption applies. This home equity bias is also more pronounced if the household head is in poor health, increasing the chance of bankruptcy on account of unpaid medical bills. The bias is further stronger for households with mortgage finance, shorter house tenures, and younger household heads, which taken together reflect households that face more financial uncertainty.
2010	H26	Tonin, Mirco. 2010. <i>Too Low to be True: The Use of Minimum Thresholds To Fight Tax Evasion</i> . Economics Division, School of Social Sciences, University of Southampton, Discussion Paper Series In Economics And Econometrics. The enforcement of compliance with tax regulation is a complex task. This is particularly the case when the administrative capacity of the tax authority is low, as is often the case in developing and transition countries. In this paper, I first formally model the impact of minimum thresholds by explicitly taking into account the low administrative capacity. The model shows that the introduction of a threshold creates a spike and a "missing middle" in the distribution of declared incomes and highlights under which conditions introducing a threshold is likely to increase net revenues for the tax authority. Then, I draw on some international experiences in fighting tax evasion to identify tools that can be used to reduce underreporting by employed labour, small and medium enterprises, self-employed, and professionals. In particular, I analyze the Italian "Business Sector Analysis" and the Bulgarian "Minimum Social Insurance Thresholds".
2010	J12	Hackney, Donald D., Matthew Q. McPherson, Daniel L. Friesner, and Candice Correia. 2010. "Domestic Support Obligations and Bankruptcy: An Analysis of Chapter 13 Filings." <i>Atlantic Economic Journal</i> , 38(4): 457-58.
2010	K33	CV: Niemi, Johanna. 2010. "Personal Insolvency." In <i>Handbook of Research on International Consumer Law</i> , ed. Geraint Howells, Iain Ramsay and Thomas Wilhelmsson, 409-30. With David Kraft. Research Handbooks in International Law series. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2010	K40	Dugar, Boris-Anze. 2010. "Unovcevanje zastavljenih vrednostnih papirjev. (Realisation upon Securities Pledged as Collateral With English summary.)." <i>Bančni Vestnik</i> , 59(6): 33-37. The intention of the following contribution is to introduce to the reader procedures of first establishing lien on securities and also of cashing these securities in if liabilities consolidated with lien securities are not met with in full. Regulation concerning this matter in the Slovenian legal system is inconclusive and dispensed in various legislative acts. Jurisprudence in this area is modest as well, therefore numerous question and dilemmas occur while implementing enforced regulation. If and when overdue claims are not paid in full, the creditor decides, whether he will cash in the pledged securities or not, in order to settle the borrower's debt. The procedure of cashing in depends on the type of the securities and above all on the actual contract between creditor and borrower.

Year	DE	Title and Abstract
2011		
2011	E49	Livshits, Igor, James MacGee, and Michele Tertilt. 2011. <i>Costly Contracts and Consumer Credit</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17448. Financial innovations are a common explanation of the rise in consumer credit and bankruptcies. To evaluate this story, we develop a simple model that incorporates two key frictions: asymmetric information about borrowers' risk of default and a fixed cost to create each contract offered by lenders. Innovations which reduce the fixed cost or ameliorate asymmetric information have large extensive margin effects via the entry of new lending contracts targeted at riskier borrowers. This results in more defaults and borrowing, as well as increased dispersion of interest rates. Using the Survey of Consumer Finance and interest rate data collected by the Board of Governors, we find evidence supporting these predictions, as the dispersion of credit card interest rates nearly tripled, and the share of credit card debt of lower income households nearly doubled.
2011	G01	Li, Wenli, Michelle J. White, and Ning Zhu. 2011. "Did Bankruptcy Reform Cause Mortgage Defaults to Rise?" <i>American Economic Journal: Economic Policy</i>, 3(4): 123-47. Homeowners in financial distress can use bankruptcy to avoid defaulting on their mortgages, since filing loosens their budget constraints. But the 2005 bankruptcy reform made bankruptcy less favorable to homeowners and therefore caused mortgage defaults to rise. We test this relationship and find that the reform caused prime and subprime mortgage default rates to rise by 23% and 14%, respectively. Default rates rose even more for homeowners who were particularly negatively affected by the reform. We calculate that bankruptcy reform caused mortgage default rates to rise by one percentage point even before the start of the financial crisis.
2011	J23	Akyol, Ahmet, and Kartik Athreya. 2011. "Credit and Self-Employment." <i>Journal of Economic Dynamics and Control</i>, 35(3): 363-85. The US personal bankruptcy system allows debtors to discharge uncollateralized debts if they give up assets in excess of a threshold known as an "exemption". However, since exemptions erode repayment incentives, they may increase borrowing costs. Our paper evaluates the tradeoff between credit costs and the insurance against failure created by bankruptcy exemptions. We find that exemptions change self-employment rates and the timing, size, and financing of projects. We also find that the positive relationship between wealth and self-employment rates may not arise from credit constraints: such a relationship is present even when credit is plentiful at low interest rates.
2011	K10 P48	CV: Sgard, Jerome. 2011. "Bankruptcy Laws: East versus West." In <i>Law and Long-Term Economic Change: A Eurasian Perspective</i>, ed. Debin Ma and Jan Luiten van Zanden, 198-220. Stanford: Stanford University Press, Stanford Economics and Finance.
2011	K20	White, Michelle J. 2011. <i>Corporate and Personal Bankruptcy Law</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17237. Bankruptcy is the legal process by which the debts of firms, individuals, and occasionally governments in financial distress are resolved. Bankruptcy law always includes three components. First, it provides a collective framework for simultaneously resolving all debts of the bankrupt entity, regardless of when they are due. Second, it provides rules for determining how the assets and earnings used to repay are divided among creditors. Third, bankruptcy law specifies punishments intended to discourage debtors from defaulting on their debts and filing for bankruptcy. This review discusses and evaluates bankruptcy law by examining whether and when the law encourages debtors and creditors to behave in economically efficient ways. It also considers how bankruptcy law might be changed to improve economic efficiency. The review shows that there are multiple economic objectives of bankruptcy law, because the law affects has very diverse effects. Some of these objectives differ for individuals versus corporations in bankruptcy.

2012		
2012	D91	Athreya, Kartik B., Xuan S. Tam, and Eric R. Young. 2012. "Debt Default and the Insurance of Labor Income Risk." <i>Federal Reserve Bank of Richmond Economic Quarterly</i>, 98(4): 255-307. In this article, we evaluate in detail the role of debt forgiveness in altering the transmission of labor income risk in the absence of catastrophic out-of-pocket "expense shocks" used in the literature on consumer default. The experiments we present can be thought of as: "If we insure the out-of-pocket expenses that constitute expenditure shocks, is there still a role of debt relief as a form of insurance against 'pure labor income risk'?" We address this question by studying a range of specifications for households' attitudes toward the intra- and intertemporal properties of income risk alone. Our main finding is that, absent expense shocks, the ability to default very generally hinders the ability of households to protect themselves against labor income risk. Our findings suggest the scope of shocks that debt forgiveness is providing insurance against may be limited, perhaps principally to relatively catastrophic outcomes.
2012	D91 H41	Chen, M. Keith, and Alan Schwartz. 2012. "Intertemporal Choice and Legal Constraints." <i>American Law and Economics Review</i>, 14(1): 1-43. We study the effect of legal constraints in an environment in which agents face demand shocks they would like to smooth but also have weakness of will: agents' long and short run preferences are misaligned. Some agents are sophisticated--they know they will make inconsistent intertemporal choices--while other agents are naive. The consequent public policy problem is complex. The state should facilitate consumer borrowing to help agents' smooth consumption and cushion the effect of shocks, but should also facilitate precommitment, to help agents control excessive present-biased preferences. We show that in many simple settings, naive and sophisticated agents make similar consumption/savings choices, which simplifies the policy problem. We also show that all agents borrow when they experience consumption shocks and that agents with relatively strong present-biased preferences who face relatively mild consumption shocks will borrow to finance excessive current consumption. Other agents save appropriately. Legal constraints that severely restrict agents' access to credit thus would be over-inclusive. Offering agents access to both a liquid and an illiquid savings vehicle appears to be welfare improving relative to either allowing agents complete freedom to borrow or strongly restricting their access to the credit market. Creating and regulating such vehicles are public goods that the market will not supply.
2012	H51 I13	Mahoney, Neale. 2012. <i>Bankruptcy as Implicit Health Insurance</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 18105. This paper examines the implicit health insurance households receive from the ability to declare bankruptcy. Exploiting cross-state and within-state variation in asset exemption law, I show that uninsured households with greater seizable assets make higher out-of-pocket medical payments, conditional on the amount of care received. In turn, I find that households with greater wealth-at-risk are more likely to hold health insurance. The implicit insurance from bankruptcy distorts the insurance coverage decision. Using a microsimulation model, I calculate that the optimal Pigovian penalties are similar on average to the penalties under the Affordable Care Act (ACA).
2012	H55	Nevondwe, Lufuno, Mashele Rapatsa, and Nicholas Matloga. 2012. "Payment of Divorce Benefits to the Former Spouse upon Divorce and Changes Brought by the South African Government Employees Pension Law Amendment Bill, 2011." <i>Pensions: An</i>

Year	DE	Title and Abstract
		International Journal, 17(2): 94-102 . This article analyses the laws relating to the payment of divorce benefits to the former spouse upon divorce and recent amendments to the South African Government Employees Pension Law Amendment Bill. It will further evaluate the payment of divorce benefits before and after the Bill. It will further analyse the definition of pension interest with specific reference to relevant statutory provisions and case laws jurisprudence. It will also finally clarify whether between the member spouse and former spouse, who is responsible to pay tax upon divorce.

2012	J13	Allen, Douglas W., and Margaret Brinig. 2012. "Child Support Guidelines and Divorce Incentives." <i>International Review of Law and Economics</i>, 32(3): 309-16. A child support guideline is a formula used to calculate support payments based on a few family characteristics. Guidelines began replacing court awarded support payments in the late 1970s and early 1980s, and were eventually mandated by the federal government in 1988. Two fundamentally different types of guidelines are used: percentage of obligor income, and income shares models. This paper explores the incentives to divorce under the two schemes, and uses the NLSY data set to test the key predictions. We find that percentage of obligor income models are destabilizing for some families with high incomes. This may explain why several states have converted from obligor to income share models, and it provides a subtle lesson for the no-fault divorce debate.
2012	K23 L10 L82	Mulligan, James G., and Daniel J. Wedziewski. 2012. "Government Intervention to Prevent Bankruptcy: the Effect of Blind-Bidding Laws on Movie Theaters". University of Delaware, Department of Economics, Working Papers: 12-03. In the 1970s motion picture studios increased their use of blind bidding and non-refundable guarantees in an attempt to reduce the risks associated with producing a small number of large budget films. However, theater owners claimed that blind bidding and guarantees shifted risk to them and increased the likelihood of bankruptcy, since they were required to bid for the right to exhibit a movie without seeing it first. In response to the lobbying of theater owners, twenty-four states passed laws between 1978 and 1984 that banned blind bidding, while seven states also banned non-refundable guarantees. This paper provides the first empirical analysis of the conflicting claims made by theater owners and movie studios about the impact of these laws on the survival rates of independent theaters, admission prices, and delays in the release of movies. We find that the laws were not only ineffective in keeping theater owners at risk of bankruptcy from exiting the market; they may have been even detrimental to those theater owners converting theaters to multiplexes at that time.

The onset of the Great Depression did not spark a surge in personal bankruptcy. For debtors in default, state garnishment law played a significant role in the decision to file for bankruptcy. Only states that made it easy to garnish a debtor's wages experienced significant increases in bankruptcy as a consequence of the Depression.

2012	Z13	Lopes, C. Abreu, and C. Frade. 2012. "The Way into Bankruptcy: Market Anomie and Sacrifice among Portuguese Consumers." <i>Journal of Consumer Policy</i>, 35(4): 477-96. Portugal ranks among the EU27 countries with higher levels of consumer indebtedness. Contrary to the trend observed in countries with similar indebtedness rates, Portugal has one of the lowest rates of consumer default. Previous studies (e.g., Frade et al. 2006) have identified three strategies that have contributed to keep levels of credit default low: reliance on savings, financial support from relatives and friends, and cuts in household expenses. These strategies have been widely used for the last decade and have been strained since the very beginning of the global financial crisis in 2007. We argue that these three strategies are near to collapse and consequently the levels of consumer default will rise steeply in the next years. The savings rate in Portugal has been declining over time, and the social networks are limited in their action due to the current crisis that affects everyone. In this article, we advance the hypothesis that sacrificing living standards is rooted on collective beliefs about the current economic crisis in Portugal and trust in political and market agents in line with the Theory of Market Anomie (Karstedt and Farrall 2006). The conclusions are based on macroeconomic statistics and on the results of a Web survey of 1244 Portuguese households, which focuses on attitudes towards the financial crisis, trust in political and economic institutions, and strategies to cope with the crisis. The results show that trust in financial companies (banks and insurance companies) and in the European Parliament promotes a sense of empowerment to contribute to the country economic restoration. This attitude induces citizens to avoid default by sacrificing living standards. But in the current austerity context, with low levels of trust in political institutions and detachment of the economy, consumers will be less prone to sacrifice. In this scenario, credit default and insolvency is expected to rise especially in those households most exposed to unemployment and to cuts in social benefits. This reality puts a huge and growing pressure on bankruptcy procedure, civil courts, and economic and social policies. Some adjustments should be made to the Portuguese Bankruptcy Code by facilitating and simplifying the bankruptcy regime in order to accommodate the increase in insolvency cases. But the improvement of the insolvency procedure will not resolve the situation of financial distress if the structural causes persist, such as unemployment and deterioration of salaries, and cuts in social benefits. A reform of the Bankruptcy Code facilitating and simplifying the bankruptcy regime should

Year	DE	Title and Abstract
		be coupled with measures that boost the economy and stimulate the labour market. Otherwise, Portuguese households will not have the resources necessary to benefit from the bankruptcy process and regain the control over their financial lives.
2013		
2013	I32	Diss: Pace, Levi Nelson. 2013. Debtors in Consumer Bankruptcy: Navigating 2005 Bankruptcy Reform. PhD diss. University of Utah. In response to rising consumer bankruptcy filing rates, federal bankruptcy reform under the Bankruptcy Abuse Prevention and Consumer Prevention Act of 2005 (BAPCPA) reduced households' demand for bankruptcy through a variety of measures that made it less generous. To evaluate impacts of reform beyond plummeting filing rates, this study introduces a unique dataset of Utah bankruptcy filers from 2003-2007 that reveals changing consumer characteristics and outcomes during the bankruptcy process. Compared to the state's general population, households in the bankruptcy sample have lower incomes, higher poverty rates, more unmarried individuals, and lower home ownership rates. More of the debtors filing since BAPCPA attempted partial repayment under Chapter 13 rather than seeking a Chapter 7 discharge. Cases under both chapters took longer to complete and were more likely to be dismissed. Households entering bankruptcy postreform were more likely to have a recent debt collection proceeding before filing and a subsequent bankruptcy after filing. The percentage of medical debt rose and share of credit card debt fell for cases filed under BAPCPA compared to before. Among Chapter 7 filers, we observe higher income and more households with nonexempt assets. Chapter 13 cases postreform exhibit a lower share of secured debt and the absence of a significant increase in the percentage of debt repaid. Relative to those filing for the first time in 8 years, repeat bankruptcy filers were more likely to have children, mortgages, and medical debt. BAPCPA appears to have reduced repeat filings. Self-employed, repeat bankruptcy filers in large households with an income-earning spouse tended to choose Chapter 13 over Chapter 7. More income and student loans are also associated with preferring Chapter 13. Married filers with higher levels of debt, particularly medical and secured debt, are more likely to file jointly than individually, as are filers with government assistance as an income source. Joint filings were less common after BAPCPA reform than before.
2013	J14	Greenhalgh-Stanley, Nadia, and Shawn Rohlin. 2013. "How Does Bankruptcy Law Impact the Elderly's Business and Housing Decisions?" <i>Journal of Law and Economics</i>, 56(2): 417-51. The elderly are the population most likely to file for bankruptcy, with filings increasing by 150 percent from 1991 to 2007. This is likely because they live with relatively flat incomes and high medical expenses, and their retirement and housing assets are typically exempt from bankruptcy filings. In addition, nine states adopted higher asset exemptions specifically for the elderly. Using the Health and Retirement Study and recent state-by-time variation in homestead exemptions, we are the first to test whether the benefits of partial wealth insurance or the cost of supply-side credit constraints are predominant for the elderly. Using pooled cross-sectional analysis, we find that an increase in a state's homestead exemption increases the elderly's home equity and business ownership; however, the credit constraint is dominant in unlimited-exemption states, which decreases home and business ownership. Panel analysis reveals that an increase in the homestead exemption positively affects home ownership rates and home equity.
2013	O11 O47	Diss: Pouokam, Nathalie. 2013. Essays in Public Economics. PhD diss. University of Minnesota. This dissertation consists of two essays of public economics. In the first essay, I build a new and rich quantitative model of unsecured and secured debt to study the impact of the 2005 bankruptcy reform law on the foreclosure crisis during the great recession. In the second essay, I use a game theoretical model to show how political institutions shape prospects of economic growth. In October 2005, a bankruptcy reform law was implemented with the intent to reduce the proportion of bankrupts among U.S. households. Prior to the bankruptcy reform law, U.S. households in bankruptcy had to repay their unsecured debts only up to the amount of their non-exempt home equity. The 2005 bankruptcy reform law imposed that above-median income earners repay their unsecured debts in bankruptcy up to the maximum between their non-exempt home equity and 5 years of "disposable income" (income over necessary living expenses). After the bankruptcy reform had fully taken place, housing prices fell steeply in most U.S. states, with certain states like the state of Nevada facing a percentage fall above 50% between 2007 and 2009. For the U.S. economy overall, the average price for U.S. single-family houses fell by 26% between the first quarter of 2007 and the last quarter of 2009. The U.S. average foreclosure rate rose from 0.16% in the period 2002-2004 to 0.9% in the period 2007-2009. The first essay investigates the impact of the 2005 bankruptcy reform law on this surge in the foreclosure rate. To assess the quantitative impact of the bankruptcy reform law on the foreclosure crisis, I model a life-cycle economy in which households face idiosyncratic income and expense risks; they access homeownership by entering into 30-year fixed interest rate mortgage contracts with a "piggyback lien" option; they smooth consumption by borrowing in a second mortgage market and in an unsecured credit market; and they discharge unsecured debts through a bankruptcy system that mimics key features of both Chapter 7 and Chapter 13 of the U.S. bankruptcy code. I model the U.S. economy as a recourse economy in which following a mortgage default, households are liable for the fraction of the mortgage loan that is not covered by the proceeds of the foreclosure sale with a probability that is estimated using foreclosure data from the LPS Analytics Inc. database. I find that the bankruptcy reform did not significantly affect the foreclosure rate, but it moderately lowered the foreclosure rate by raising the opportunity cost of a bad credit record, thereby making households less likely to default simultaneously on mortgage contracts and on unsecured credit contracts. The second essay is motivated by the observation that the standard neoclassical growth model fails to explain why during the last decade South-East Asian countries appeared to be catching up with leading economies while Sub-Saharan African and Latin American countries did not. While good performances from South-East Asian countries support the standard neoclassical growth model, economic stagnation in Sub-Saharan Africa and Latin America calls for a different theory that is capable of explaining both growth miracles and growth tragedies. The second essay of this dissertation shows that a high degree of patience in the preferences of citizens and politicians and the ability of citizens to replace a politician in power are key ingredients for economic growth. I characterize the necessary conditions for growth to occur in a context where technological progress is available and free, but requires the approval of self-interested politicians to be adopted. In the model proposed, when politicians in power have a low discount factor, they find it optimal to stop technological progress in exchange for static rewards that the representative citizen does not control. The study predicts that everything else equal, economies that are the most likely to grow are those with the strongest political institutions: the lowest probabilities of occurrence of a coup d'etat and the lowest probabilities of falling in an absorbing state of dictatorship. Consistently with empirical facts on growth, the relationship predicted between dictatorship and economic growth by the model is a non-linear one: given a probability of falling in the state of dictatorship, the occurrence of growth depends on the discount factor of citizens. The essay also shows that even when the economy is already growing as a dictatorship, a one-shot transition to democracy is still desirable to citizens as it reduces the payoffs that are necessary to provide dynamic incentives to politicians in power.

2006	D14 J14	Palmer, Lance, Vibha Bhargava, and Gong-Soog Hong. 2006. "Will Adoption and Life Events among Older Adults." <i>Financial Services Review</i> , 15(4): 281-95. This study examines the relation between life events and the adoption of wills among older adults using the 1996 and 2000 surveys of the Health and Retirement Study. The results suggest that the adoption of wills and trusts is associated with four life events (i.e., becoming a widow, being diagnosed with cancer, retiring, and having a positive change in assets). Older adults experiencing these events appear to be taking financial planning actions; therefore, appropriate educational and marketing efforts targeting these individuals may be more effective, readily accepted, and more cost efficient compared to general outreach and marketing campaigns.

2006	J16	Festy, Patrick. 2006. "Legal Recognition of Same-Sex Couples in Europe." <i>Population</i> , 61(4): 417-53. Between 1989 and 2003, nine European countries (Denmark, Finland, Iceland, Norway and Sweden, Germany, Belgium and France) gave same-sex couples the possibility of having their union registered by a state representative and of thereby acquiring legal rights and obligations. To determine the frequency of these alternative forms of union recognition, the classic measurement tools must be adapted to a new reality that gives prominence to categories that were habitually neglected. Legal recognition of same-sex couples is considerably less frequent than that of different-sex couples, despite the shift away from the institution of marriage. The new laws are probably judged too far short of the marriage laws to be attractive, and at the same time are too similar to them to match the specific needs of the couples they target. In addition, the frequency of registration varies between the different countries, and to a much greater extent than that of marriage. However, the countries that have granted the most extensive rights to registered couples are not always those where the law is the most widely used. Finally, the laws have been adopted in a general context of declining interest in marriage and widespread questioning of traditional family forms. Hence the hypothesis that this environment influences the attitude of the affected couples towards the new legislation.

2006	K23	Hansen, Mary, and Daniel Pollack. 2006. <i>Tradeoffs in Formulating a Consistent National Policy on Adoption</i> . American University, Department of Economics, Working Papers: 2006-14. Just as the courts must consider the tradeoff between the best interest of the child and parental rights in involuntary termination of parental rights, policy on international adoption must consider the tradeoffs between the best interest of the child and the long-term interests of the nation. We argue that countries that suspend international adoptions do not maximize social welfare. A consistent national policy to maximize the well-being of the children and society at large would be to devote resources today to the oversight of international adoption in accord with child protections under the Hague Convention, while at the same time developing a domestic system of care that provides for the physical and developmental needs of orphaned children in the context of permanent families.

2007	D10	Pollak, Robert A. 2007. <i>Bargaining Around the Hearth</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13142. In "Unpacking the Household: Informal Property Rights Around the Hearth" (Yale Law Journal, 2006) Robert Ellickson argues that as long as members of a household expect their relationship to continue, norms, rather than law, will determine allocations among them. More specifically, Ellickson argues that in "midgame" household members either ignore the "endgame" completely or, if they do take endgame considerations into account, the relevant endgame considerations are determined by norms rather than by law. This paper examines the fit between Ellickson's claims and four bargaining models that economists have used to understand interactions within household and families.
2007	D10 H31 J10	Stevenson, Betsey, and Justin Wolfers. 2007. <i>Marriage and Divorce: Changes and their Driving Forces</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12944. We document key facts about marriage and divorce, comparing trends through the past 150 years and outcomes across demographic groups and countries. While divorce rates have risen over the past 150 years, they have been falling for the past quarter century. Marriage rates have also been falling, but more strikingly, the

Year	DE	Title and Abstract
	N30	importance of marriage at different points in the life cycle has changed, reflecting rising age at first marriage, rising divorce followed by high remarriage rates, and a combination of increased longevity with a declining age gap between husbands and wives. Cohabitation has also become increasingly important, emerging as a widely used step on the path to marriage. Out-of-wedlock fertility has also risen, consistent with declining "shotgun marriages". Compared with other countries, marriage maintains a central role in American life. We present evidence on some of the driving forces causing these changes in the marriage market: the rise of the birth control pill and women's control over their own fertility; sharp changes in wage structure, including a rise in inequality and partial closing of the gender wage gap; dramatic changes in home production technologies; and the emergence of the internet as a new matching technology. We note that recent changes in family forms demand a reassessment of theories of the family and argue that consumption complementarities may be an increasingly important component of marriage. Finally, we discuss the welfare implications of these changes.
2007	D10 H31 I38	Cohen, Alma, Rajeev Dehejia, and Dmitri Romanov. 2007. <i>Do Financial Incentives Affect Fertility?</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13700. This paper investigates empirically whether financial incentives, and in particular governmental child subsidies, affect fertility. We use a comprehensive, nonpublic, individual-level panel dataset that includes fertility histories and detailed individual controls for all married Israeli women with two or more children from 1999-2005, a period with substantial variation in the level of governmental child subsidies but no changes in eligibility and coverage. We find a significant positive effect on fertility, with the mean level of child subsidies producing a 7.8 percent increase in fertility. The positive effect of child subsidies on fertility is concentrated in the bottom half of the income distribution. It is present across all religious groups, including the ultra-Orthodox Jewish population whose religious principles forbid birth control and family planning. Using a differences-in-differences specification, we find that a large, unanticipated reduction in child subsidies that occurred in 2003 had a substantial negative impact on fertility. Overall, our results support the view that fertility responds to financial incentives and indicate that the child subsidy policies used in many countries can have a significant influence on incremental fertility decisions.
2007	D12 D72 J24 K12	CV: Brinig, Margaret F., and Douglas W. Allen. 2007. "'These Boots Are Made for Walking': Why Most Divorce Filers Are Women." In <i>Economics of Family Law. Volume 2.</i> , ed. "Les contributions privees au financement de la dependance dans le cadre de l'obligation alimentaire: Pratiques judiciaires et implications distributives. (Private Contributions of the Financing of Long-Term Care under the Support Obligation: Court Decisions and Macroeconomic Implications. With English summary.)" <i>Economie et Prevision</i> , 0(177): 35-54. This paper seeks to analyze economic transfers relating to the financing of long-term care for the elderly, as they arise from court decisions on the legal duty to financially support ascendants. The first section reviews the computation of the support obligation based on a sample of court decisions between 2000 and 2003. The financial contribution rule estimated from the decisions is found to be anti-redistributive in interfamily distribution terms but redistributive in intrafamily distribution terms. The second section uses the DESTINE model to simulate a representative sample of persons aged 75 or older and those legally responsible for their financial support, and uses the sample to examine the distributive effects of the financial contribution rule.

2007	I21	Diss: Leo, Teng Wah. 2007. Three Essays on the Impact of Child Custody Law on Child Educational Attainment. PhD diss. University of Toronto. AB: I examine in this thesis, the impact changes in Child Custody Law can have on children of differing family structures in terms of their educational attainment, and educational mobility between parents and their children. I then explore possible explanations for these changes. Chapter 2 studies the impact of the regime shift from maternal preference to joint custody in the U.S., in custody dispute adjudication during the 1980s using the one percent Integrated Public Use Microsample Series (IPUMS) of the decennial Census for the decades from 1970 to 1990. We focused on children between the ages of 15 to 18, who were living with a single divorced or separated parent and children of intact families. Educational attainment was used to quantify child outcomes. Using cross state and year variation in the timing of adoption of those laws, we found strong evidence that the children of these single parent households, living in states which adopted joint custody, had a higher probability of high school graduation by age 18. On the other hand, we found that children from intact families suffered a decrease in probability of high school graduation by age 18. This suggests that the law has important unintended negative effects that had been thus far neglected. The result on children from intact families was replicated using the IPUMS Current Population Survey Sample, and results concur with the findings from the census dataset. The results were also replicated when we relaxed the distributional assumption using stochastic dominance techniques. Chapter 3 addresses the intergenerational mobility question by examining the role of family structure in the transmission of educational attainment within a family using the same dataset. We first examined whether production technology itself has changed between 1970 and 1990 using a distribution overlap and a Gini based measure. We found some evidence of reduction in alienation between children of intact and single parent families, and particularly between divorced and separated (endogenously single) parent families compared with children of widowed parents. The latter comparison accords with the findings of chapter 2 since widowed parent households would not have been affected by the changes in family law. With the positive impact we found in chapter 2 among children of endogenously single parent families, expectations would inform us that attainment between children of these two single parent family structures would have converged. We next assume that human capital production for children is of a quadratic form, and performed similar comparisons. Our results suggest that parental income, and attainment effects have waned since the 1970s, implying movement towards greater equality of opportunity. We then introduce mobility indices and tests which examine the proximity of the transition matrix to that which would pertain in the perfectly mobile state. Unlike existing transition matrix based mobility indices, these indices and tests can be employed when the transition matrix is not square, and when the transition matrix is between states that are defined multivariately or more generally when the quantiles of the marginal states are unmatched. Using educational attainment as a proxy for permanent income for children and both educational attainment and income as proxies for parents, the tests indicate that mobility significantly increased, both in the population as a whole and within intact parent and single parent sub-populations, over the period. Within the single parent group there was much less evidence for significant mobility change for children from widowed parent families than for children from endogenously single parent families. There is also some evidence of convergence between intact and single parent groups, suggesting that there is a trend towards equal opportunity for children of intact and endogenously single parent families as noted before. Chapter 4 develops a model of familial choices in labor supply and investments in the quality of children in the shadow of evolving child custody legislations, from the perspective of differential fecundity. Relying on biological differences in fertility between men and women, it shows the higher remarriage rates among men allow them to substitute between child quality from different marriages. The shift to joint custody and consequent increase in support obligations reduces the value of child quality from a remarriage, hence raising paternal valuation of his children, and child quality from the first marriage, while reducing parental labor participation rates. The reduction in weight placed on remarriage, reduces the incidence of remarriage, and consequently raises lifetime welfare of women. As a result of higher support payments commensurate with greater custody, men's welfare falls. Further, endogenizing support payment choices, it is shown that distortions created by the remarriage option prevent the realization of optimal intact family outcomes in divorced families under any custody regime, but the socially optimal arrangement remains Joint Child Custody.

"Note: Divorcees Turn About in Their Graves as Ex-spouses Cash In: Codified Constructive Trusts Ensure an Equitable Result Regarding ERISA-Governed Employee Benefits Plans." Michigan Law Review, 106(2): 373-97. A revocation-by-divorce statute essentially nullifies a devise in a divorced decedent's will when the devise bequeaths property to the decedent's ex-spouse and the will was executed during their marriage. Until recently, state revocation-by-divorce statutes unquestionably applied not only to wills but also to will substitutes, including ERISA-governed employee benefit plans. In 2001,

Year	DE	Title and Abstract
		the Supreme Court held in <i>Egelhoff v. Egelhoff ex rel. Breiner</i> that ERISA preempts traditional state revocation-by-divorce statutes as applied to ERISA-governed employee benefit plans. In the wake of the <i>Egelhoff</i> decision, plan administrators may automatically pay proceeds to the listed beneficiary, even an ex-spouse, regardless of the existence of a traditional state revocation-by-divorce statute. One solution to this preemption is the use of a constructive trust. Uniform Probate Code section 2-804(h)(2) imposes a constructive trust against an ex-spouse when the ex-spouse receives proceeds from an employee benefit plan because ERISA preempts a state revocation-by-divorce statute. The constructive trust is in favor of those persons who would take if the corresponding state revocation-by-divorce law were not preempted. This note argues that state statutory constructive trusts adopting Uniform Probate Code section 2-804(h)(2) can resurrect the revocation-by-divorce doctrine as applied to ERISA-governed employee benefit plans. In doing so, constructive trusts would achieve an equitable result consistent with the law's treatment of other will substitutes as well as wills themselves. The Note begins by discussing the revocation-by-divorce doctrine and ERISA jurisprudence and explains how ERISA intertwines with traditional revocation-by-divorce statutes. The note then reviews currently suggested methods to harmonize ERISA-governed employee benefit plans with the treatment of other will substitutes and contends that those proposals are inadequate because they undermine ERISA's goals. The note concludes that state constructive trust statutes will avoid ERISA preemption while also furthering ERISA's goals.

2007	P37	Palmer, Michael. 2007. "Transforming Family Law in Post-Deng China: Marriage, Divorce and Reproduction." <i>China Quarterly</i>, 0(191): 675-95. This article considers the principal changes in family law in the People's Republic of China during the post-Deng period. The developments that have occurred during the period of review have been notable for their pace and their contribution to a growing legal sophistication in China's corpus of family law. They expand on a series of major reforms in family law documented in my earlier <i>China Quarterly</i> article. Overall, it is in the area of divorce that the most dramatic changes have taken place in family law over the past decade.
2007	P37	Fu, Hualing. 2007. "Commentary on 'Transforming Family Law in Post-Deng China'." <i>China Quarterly</i>, 0(191): 696-98. Michael Palmer's article examines the development of three important aspects in Chinese family law: divorce, adoption and family planning. It is a commendable effort to approach Chinese family law broadly in order to bring family planning policy within its study. There remains a glaring gap in Chinese legal scholarship between the study of family law and the study of population. The disciplines are divided into two camps with little cross-fertilization. Palmer's article clearly demonstrates the importance and necessity of including family planning within the study of family law. The article is also a laudable attempt to examine the dynamic interaction between family law and socioeconomic changes.

"The Effect of Conflicting Moral and Legal Rules on Bargaining Behavior: The Case of No-Fault Divorce." <i>Journal of Legal Studies</i>, 37(1): 315-38. We hypothesize that the no-fault divorce law is in conflict with moral intuitions favoring punishment for people who break the marriage contract and that people will be either unwilling or unable to fully ignore marital fault in the context of divorce settlement negotiations. In four Web-based experiments, we asked subjects to read vignettes about divorcing couples and then to rate proposals by each party about how to divide the marital property. Under instructions to ignore fault, subjects nonetheless rated wrongdoers' proposals lower than victims' proposals. Some subjects ignored fault purposely, while others were unaware of their own bias. We also find evidence of self-serving bias; subjects taking

Year	DE	Title and Abstract
		the perspective of a victim showed more fault-based bias than did subjects taking the perspective of a wrongdoer. We conclude that under certain conditions of unilateral fault, the no-fault divorce law may actually increase the likelihood of impasse in divorce negotiations.
2008	D30 E24 I20 O43	Saint-Paul, Gilles. 2008. <i>Genes, Legitimacy and Hypergamy: Another Look at the Economics of Marriage</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6828. In order to credibly "sell" legitimate children to their spouse, women must forego more attractive mating opportunities. This paper derives the implications of this observation for the pattern of matching in marriage markets, the dynamics of human capital accumulation, and the evolution of the gene pool. A key consequence of the trade-off faced by women is that marriage markets will naturally tend to be hypergamous - that is, a marriage is more likely to be beneficial to both parties relative to remaining single, the greater the man's human capital, and the lower the woman's human capital. As a consequence, it is shown that the equilibrium can only be of two types. In the "Victorian" type, all agents marry somebody of the same rank in the distribution of income. In the "Sex and the City" (SATC) type, women marry men who are better ranked than themselves. There is a mass of unmarried men at the bottom of the distribution of human capital, and a mass of single women at the top of that distribution. It is shown that the economy switches from a Victorian to an SATC equilibrium as inequality goes up. The model sheds light on how marriage affects the returns to human capital for men and women. Absent marriage, these returns are larger for women than for men but the opposite may occur if marriage prevails. Finally, it is shown that the institution of marriage may or may not favour human capital accumulation depending on how genes affect one's productivity at accumulating human capital.
2008	D91 E21	Luna, Libertad Gonzalez, and Berkay Ozcan. 2008. <i>The Risk of Divorce and Household Saving Behavior</i>. Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. We analyze the impact of an increase in the risk of divorce on the saving behaviour of married couples. From a theoretical perspective, the expected sign of the effect is ambiguous. We take advantage of the legalization of divorce in Ireland in 1996 as an exogenous increase in the likelihood of marital dissolution. We analyze the saving behaviour over time of couples who were married before the law was passed. We propose a difference-in-differences approach where we use as comparison groups either married couples in other European countries (not affected by the law change), or Irish families who did not experience a significant increase in the expected risk of divorce (such as very religious families, or single individuals). Our results suggest that the increase in the risk of divorce brought about by the law was followed by an increase in the propensity to save of married couples, consistent with a rise in precautionary savings interpretation. An increase in the risk of marital dissolution of about 40 percent led to a 7 to 13 percent rise in the proportion of married couples reporting positive savings.

"Blaming the Victim' vis-a-vis Child-Focused Western Law: Implications of Evidence-Based Policy-Making for the Rescue of Black Families." <i>Policy Studies</i>, 29(1): 51-69. Blaming the victim' policies remain largely intact under the facade of family law and policy construction. Based on empirical evidence, lack of employment for Black men is a major factor in their inability to sustain the Black family as a functional unit. The existence of child-focused family laws has had a devastating effect upon the construction of family policies vis-a-vis Black men. Evidence-based policy-making (EBPM) is intended to provide a means for creating legislation independent of politics. EBPM is predicated on the most rigorous scientific evidence available from recognized experts in relevant fields. Accordingly, policy-makers loyal to the Black family may simultaneously rescue its children and play a pivotal role in its viability.

2008	J20	Stevenson, Betsey. 2008. <i>Divorce Law and Women's Labor Supply</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 14346. Divorce law changes made in the 1970s affected marital formation, dissolution, and bargaining within marriage. By altering the terms of the marital contract these legal changes impacted the incentives for women to enter and remain in the labor force. Whereas earlier work had suggested that the impact of unilateral divorce on female employment depended critically on laws governing property division, I show that these results are not robust to alternative specifications and controls. I find instead that unilateral divorce led to an increase in both married and unmarried female labor force participation, regardless of the pre-existing laws regarding property division.

2009	G32 G34	DiGabriele, James. 2009. "Gender, Valuation of Private Companies, and State Specific Variables in the Division of Marital Assets." <i>Journal of Legal Economics</i>, 15(2): 1-16. The value of a closely held company may represent a significant component of a marital estate. Business valuation services play an increasingly crucial role in determining the value of a closely held family business and often facilitate a divorce settlement by providing an appraisal estimate in the absence of an actual sale as a basis to distributing marital assets. The results of the current study investigate family courts' decisions in cases where the marital estate includes a closely held company. In each case a valuation expert was retained by both spouses. The favorable decision was the verdict that selected either the husband's or wife's expert. The decisions were influenced by two factors: state law (community property versus equitable distribution) and the owner of the business (the husband alone or either the wife alone or as co-owner). Cases in equitable distribution states had an odds ratio that was four times higher for a decision for the wife than cases in community property states, and cases in which the wife was either the sole owner or co-owner of the business had an odds ratio that was over four times higher to render a decision for the wife.

Year	DE	Title and Abstract
		in the marketplace based on the earlier results of Chichilnisky (2005, 2008a, 2008b). Expectations about women's lower market wages leads to the over utilisation of women in the household, and this, in turn, leads to lower productivity and lower wages for women in the marketplace. The situation is rational, but (as the prisoner's dilemma) it is generally Pareto inferior. Inequity at home breeds inequity in the marketplace and reciprocally, leading to a persistent gender gap. With learning by doing, at high levels of skill there is a Pareto superior equilibrium where men and women share efforts equally at home and receive the same pay in the marketplace, firms enhance their profits, and there is additionally more welfare at home. Updated Family Law and appropriate contracts can help resolve this Pareto inferior situation as well as increase productivity and economic growth in the economy as a whole (Pyle, 1990).

NBER Working Papers: 15728. Between 1972 and 1978 U.S. high schools rapidly increased their female athletic participation rates - to approximately the same level as their male athletic participation rates - in order to comply with Title IX, a policy change that provides a unique quasi-experiment in female athletic participation. This paper examines the causal implications of this expansion in female sports participation by using variation in the level of boys' athletic participation across states before Title IX to instrument for the change in girls' athletic participation. Analysis of differences in outcomes across states in changes between pre- and post-cohorts reveals that a 10-percentage point rise in state-level female sports participation generates a 1 percentage point increase in female college attendance and a 1 to 2 percentage point rise in female labor force participation. Furthermore, greater opportunities to play sports leads to greater female participation in previously male-dominated occupations, particularly in high-skill occupations.

2011	C23	Lee, Jin Young, and Gary Solon. 2011. <i>The Fragility of Estimated Effects of Unilateral Divorce Laws on Divorce Rates</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 16773. Following an influential article by Friedberg (1998), Wolfers (2006) explored the sensitivity of Friedberg's results to allowing for dynamics in the response of divorce rates to the adoption of unilateral divorce laws. We in turn explore the sensitivity of Wolfers's results to variations in estimation method and functional form, and we find that the results are extremely fragile. We conclude first that the impact of unilateral divorce laws remains unclear. Second, extending Wolfers's methodological insight about sensitivity of differences-in-differences estimation to allowance for dynamic response, we suggest that identification in differences-in-differences research becomes weaker in the presence of dynamics, especially in the presence of unit-specific time trends.

2011	D74 F22	Ben Nefissa, Sarah, and Blandine Destremau, eds. 2011. <i>Protestations sociales, revolutions civiles. Transformations du politique dans la Mediterranee arabe. (In French.)</i> , Hors serie 2011. Paris: Revue Tiers-Monde. Eleven papers, all in French and with English summaries, examine the mobilizations before, during, and after the Arab Spring. Papers discuss whether protest movements in Gafsa (Tunisia) and Sidi Ifni (Morocco) are for state involvement or against the political order (Amin Allal and Karine Bennafla); moving from Redeyef to Nantes - social mobilization and international migration (Antoine Dumont); saying "no to the enterprise state, yes to the welfare state" - the rationale and constraints of social mobilizations in post-war Lebanon (Marie-Noelle AbiYaghi and Myriam Catusse); workers' protests in Egypt since 2004 - casualization and local mobilization in the textile sector (Marie Duboc); new strategies of mobilization for family law reform - the "Khul' law" in Egypt (Nathalie Bernard-Maugiron); contemporary Coptic contests in Egypt (Laure Guirguis); collective mobilization in the context of a changing Morocco (Bouchra Sidi Hida); social movements and immobility in the hinterland of Tangier-Med - a consequence of the reform of the state (Sabine Planel); the transition from misery to dignity - the Tunisian revolution of 2011 (Michael Beechir Ayari); the power of civil disobedience - understanding the fault of the Ben Ali regime (Larbi Chouikha and Eric Gobe); and the eighteen days that changed Egypt - civil and political revolution (Sarah Ben Neefissa).
2011	G33	White, Michelle J. 2011. <i>Corporate and Personal Bankruptcy Law</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 17237. Bankruptcy is the legal process by which the debts of firms, individuals, and occasionally governments in financial distress are resolved. Bankruptcy law always includes three components. First, it provides a collective framework for simultaneously resolving all debts of the bankrupt entity, regardless of when they are due. Second, it provides rules for determining how the assets and earnings used to repay are divided among creditors. Third, bankruptcy law specifies punishments intended to discourage debtors from defaulting on their debts and filing for bankruptcy. This review discusses and evaluates bankruptcy law by examining whether and when the law encourages debtors and creditors to behave in economically efficient ways. It also considers how bankruptcy law might be changed to improve economic efficiency. The review shows that there are multiple economic objectives of bankruptcy law, because the law affects has very diverse effects. Some of these objectives differ for individuals versus corporations in bankruptcy.

(With English summary.)." <i>Economie Publique</i> , 0(26-27): 193-218. Since an Act in 2000, the French system of alimony has been deeply reformed, from a life annuity payment to a lump sum payment. We show that alimony is justified in that sense it contributes, in case of divorce, to protect its beneficiaries against the risk of standard of living reduction in one hand and against the opportunistic behavior from the partner in the other hand. So alimony might pursue two functions - - distributive and compensatory - which determine its mode of payment, life annuity or lump sum.

2011	J11 K39	Degtyareva, Victoria. 2011. "Defining Family in Immigration Law: Accounting for Nontraditional Families in Citizenship by Descent." <i>Yale Law Journal</i> , 120(4): 862-908. Most immigrants who gain permanent residence or citizenship in the United States do so through familial relations. As a result, immigration authorities must constantly decide what constitutes a family. Unfortunately, the Immigration and Nationality Act (INA) provides little guidance. While the INA provides some definitions of what constitutes a family, the definitions generally assume a traditional view of the family in which all parental roles lie with only two individuals. This assumption creates substantial problems when applying the INA's provisions to nontraditional families in which parental roles may be split between three or more people. Because the INA does not account for such families, it is often unclear whether the families are entitled to the plethora of immigration and citizenship benefits available to those with familial relations in the United States. In response to the lack of clarity, this Note proposes the adoption of a unified definition of family that is based on interpersonal, rather than biological, relationships. The proposed solution is consistent with existing provisions of the INA, finds support in state family law, and provides an effective way of dealing with nontraditional families.

2012	D81	Halla, Martin, and Johann Scharler. 2012. "Marriage, Divorce, and Interstate Risk Sharing." <i>Scandinavian Journal of Economics</i> , 114(1): 55-78. In this paper, we study the importance of marriage for interstate risk sharing in the US. We find that US federal states in which married couples account for a higher share of the population are less exposed to state-specific output shocks. Thus, in addition to improving the allocation of risk at the individual level, marriage also has implications for risk sharing at the more aggregated state level. Quantitatively, the impact of marriage on interstate risk sharing varies over divorce regimes.

2012	G18 G23 O55 Z10	Kutsoati, Edward, and Randall Morck. 2012. <i>Family Ties, Inheritance Rights, and Successful Poverty Alleviation: Evidence from Ghana</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 18080. Ghanaian custom views children as members of either their mother's or father's lineage (extended family), but not both. Patrilineal custom charges a man's lineage with caring for his widow and children, while matrilineal custom places this burden on the widows' lineage - her father, brothers, and uncles. Deeming custom inadequate, and to promote the nuclear family, Ghana enacted the Intestate Succession (PNDC) Law 111, 1985 and 1998 Children's Act 560 to force men to provide for their widows and children, as in Western cultures. Our survey shows that,

Year	DE	Title and Abstract
		although most people die intestate and many profess to know Law 111, it is rarely implemented. Knowledge of the law correlates with couples accumulating assets jointly and with inter-vivos husband to wife transfers, controlling for education. These effects are least evident for widows of matrilineal lineage men, suggesting a persistence of traditional norms. Widows with closer ties with their own or their spouse's lineage report greater financial support, as do those very few who benefit from legal wills or access Law 111 and, importantly, widows of matrilineal lineage. Some evidence also supports Act 560 benefiting nuclear families, especially if the decedent's lineage is matrilineal. Overall, our study confirms African traditional institutions' persistent importance, and the limited effects of formal law.

"Economics behind the Law: Why Number of Divorce Cases Grows When Families Become Wealthier?" <i>European Journal of Law and Economics</i> , 35(1): 137-43. In this paper, we study the effects of increasing family wealth on the number of divorce cases in a society. We assume that, when one party of a married couple seeks for divorce, the physical family wealth is equally divided between the homemaker and the breadwinner according to the law. Through some simple mathematical analysis, we discover that the number of divorce cases will increase when the amounts of family wealth increase. Our theoretical result is well-justified by the observation from the Chinese society after the Reforms.

2010	J15 J23 J61 L25 L26 O15	Kalitanyi, Vivence, and Kobus Visser. 2010. "African Immigrants in South Africa: Job Takers or Job Creators?" <i>South African Journal of Economic and Management Sciences, N.S.</i> , 13(4): 376-90. During the last decade African immigrants have been met with and exposed to severe forms of hostility towards their presence in this country. A significant number of these migrants have successfully applied their entrepreneurial flair in establishing small enterprises and employing workers, often to the envy of their local counterparts. This paper presents the findings of an empirical study conducted in 2007 on job creation by African immigrant entrepreneurs for South Africans with face-to-face interviews with 120 African immigrant entrepreneurs. These findings triangulated 7 non-governmental organisations that interact with immigrants in Cape Town. A review of the literature on migration, entrepreneurship and immigrant entrepreneurs formed the basis for the study. The findings indicate that more than 80% of African immigrant entrepreneurs interviewed employ South Africans in their businesses. Despite a generally negative national perception towards immigrants, this study has also revealed that entrepreneurial skills are transferred from immigrant entrepreneurs to their South African employees. Whilst the study was only conducted in the suburban areas of Cape Town, the researcher believes that the results represent the general trend for South Africa. Furthermore, the study only involved those migrants who come from African continent. The overall result is the acknowledgement of the contribution that non-citizens are making to the country's growth and development. The findings suggest recommendations geared towards policy changes regarding South African immigration law, an inclusive research about the role of immigrants on job creation in South Africa, as well as the consideration of immigrant entrepreneurs when allocating financial support.

2011	D72 J18 J68	Banaian, King, Orn B. Bodvarsson, and Anton D. Lowenberg. 2011. "Determinants of Immigration Policy: An Empirical Study of US Legislative Voting." <i>Journal of Public Finance and Public Choice/Economia delle Scelte Pubbliche</i> , 29(1-3): 77-103. Immigration policy is supplied endogenously through a political process that weighs the impacts of immigration on factor owners, together with other interests, in determining policy outcomes. The relative significance of constituent interests and legislator ideology in shaping policy is tested by identifying the correlates of congressional voting on immigration legislation in the United States. Conservative lawmakers are found to generally support stricter immigration controls. Legislators representing border states and urban areas favor looser restrictions, possibly reflecting the political influence of recent immigrants. There is evidence that immigration reform is a normal good and that substitutability between native and immigrant labor promotes tighter immigration restrictions.

2012	F22 F24	Ortmeyer, David L., and Michael A. Quinn. 2012. "Coyotes, Migration Duration, and Remittances." <i>Journal of Developing Areas</i>, 46(2): 185-203. The migration of Mexican immigrants to the U.S. is one of the largest bilateral migration flows in the world and remittances from these immigrants represent a crucial source of income for Mexican households. As the United States tightens controls on illegal migration, this may impact both migration durations and remittances. Tighter borders increase crossing costs, often because migrants need to pay smugglers (coyotes). Using data from the Mexican Migration Project, we find that higher crossing costs increase the probability of remitting, the remittance rate and the duration of stay as undocumented workers pay off the crossing debt. If immigrants did not incur these crossing debts, then more of their earnings could be spent in the United States or by their households in Mexico on productive activities and durations in the U.S. might be lessened at the margin. This suggests some potential gain to both the U.S. and Mexican economies through expanding guest worker programs and consequently reducing the hiring of coyotes.
2012	F22 F52 F55	Sirin Oner, N. Asli. 2012. "In Which Direction Do the Efforts Proceed? The European Union's Attempts to Develop a Common Immigration and Asylum Policy." <i>Marmara Avrupa Arastirmalari Dergisi/Marmara Journal of European Studies</i>, 20(2): 121-40. In the period which began in the mid-1980s and continued until today, there has been an increase in the number of refugees, asylum-seekers and irregular migrants. The Central and Eastern Europeans, who had the opportunity to participate in the migration movements with the removal of the political barriers and the persons displaced as a result of bloody conflicts in the Balkans played an important role in the increase in the number of people migrating to Western Europe. The increase in the migratory pressures since the 1990s paved the way for the Western European states to tighten measures about immigration. This situation brought about the discussions on "fortress Europe" because the European Union tried to decrease the number of migrants entering the Union countries. However, the measures do not seem to be effective since more and more people enter the Union countries in an illegal way. This fact lies at the centre of the EU's wish to develop a common immigration and asylum policy. In this regard, the aim of this article is to elaborate on the attempts to develop a common immigration and asylum policy within the context of turning the EU territories into an "area of justice, freedom and security".

(Judgment of the Court of 8 December 2011, Not Yet Reported)." <i>Marmara Avrupa Arastirmalari Dergisi/Marmara Journal of European Studies</i>, 20(2): 165-75. This case is about the scope of certain provisions of EU law: is the so-called 'citizens' directive' (replacing the EU worker's directive) applicable by analogy to a Turkish worker resident in Germany if the long-term resident directive is not applied? In reply, the Court acts as a doctor who cuts out a sore without spending much time on explaining the diagnosis. Its answer comes down to saying that for Turkish workers the citizens' directive does not entail any rights that extend beyond those already applicable under the EU-Turkey Association Council Decisions and associated case law. As a result, in the case at hand, the EU restriction of the reasons for the expulsion of foreign nationals to public security did not apply as a matter of EU law to Turkish workers. No analogy was drawn to the situation of workers of the European Economic Area in this case.

2013	F18 F64 Q54 Q58	Mota Borges, Isabel. 2013. "Protection Starts at Home but Does Not Stop There! The Dynamics of the Human Rights Obligations of States for Protecting Environmentally Displaced Persons." <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(22): 17-49. Environmental degradation and the effects of climate change have direct and indirect impacts on the effective enjoyment of human rights. Countries where the effects of environmental change and degradation occur are mostly likely to be vulnerable to human displacement, due to the lack of available adaptation resources, poor human resource implementation capacity and often a deficient human rights protection record. Such countries are also the ones least likely to proactively lobby governments at the national and international levels. While the exact number of people displaced is hard to estimate predictions are of approximately 150 million of environmentally displaced persons by 2050. This analysis starts by portraying the human impacts of environmental change, and then concentrates on the home states obligations under international human rights standards in parallel scrutiny with regional and international jurisprudence. The aim is to establish which duties home states have with regards to respecting human rights and ensuring a healthy and safe environment by avoiding environmental degradation. A further aim is to establish how states duties are transferable in the environmental change context; in particular, what protecting obligations states have towards environmentally displaced persons. This paper explores the duty of states to protect environmentally displaced people through a dynamic model of internalisation of protection obligations: respecting and fulfilling people's needs in an interactive, international assistance, cooperative and participatory process. Ultimately, the global polity of states must find ways to deal with new legislative challenges in this current world of permanent emergencies of natural and human made environmental degradation and change.

"On Estimating the Effects of Immigrant Legalization: Do U.S. Agricultural Workers Really Benefit?" <i>American Journal of Agricultural Economics</i> , 95(4): 932-48. The question of whether legalization affects immigrants' economic returns has been the focus of many empirical studies in recent decades. Results have consistently shown that there are significant wage differences between legal and illegal workers. However, the validity of such findings has been questioned, given the lack of good identification strategies to account for omitted variables. In this article we propose using techniques designed to address the issue of selection into treatment based (to some degree) on unobservables. Our results suggest that lower skill levels--not discrimination--explain differences in immigrants' economic outcomes.

2013	K32 Q58	Da Silva, Cesar Augusto Silva. 2013. "Brazil: Human Rights and Environmental Refugees." <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(22): 211-41. These notes seek to establish a discussion regarding the evolution of the refugee definition, particularly the so-called environmental refugees in the context of human rights and environmental law in order to establish possible proposals for the modification or extension of the concept, in the international treatise and in the Brazilian law, with regard to the issue of forced displacement in the contemporary world. The text aims to analyze the trajectory and the advancement of human rights in view of the category of refugees in Brazilian and international legislation in the context of new phenomena that challenges the current definition, like desertification, soil degradation, biodiversity loss and insecurity food, which can also cause displacement. These environmental phenomena have gained the centrality of the political debate of the world's political agenda since the end of the Cold War until nowadays, since few times in history, there have been so many people moving from one country to another, from one continent to another, or even one region to another, fleeing from persecution or natural phenomena or lack of food.
2013	K33	Allveri, Robynn L. 2013. "Protocol No. 24: Fact or Fiction for EU Roma?" <i>Marmara Avrupa Arastirmalari Dergisi/Marmara Journal of European Studies</i> , 21(1): 1-18. The legal systems of the European Union (EU) and the United States (U.S.) are premised upon common norms, resulting in very similar bodies of jurisprudence. Due to these shared legal principles, one would expect the EU and the U.S. to use similar standards in the adjudication of asylum claims. For the most part, this expectation holds true. However, a glaring difference exists when an applicant's country of origin is an EU member state. Asylum adjudicators in the U.S. examine the individual merits of a claim, regardless of the applicant's country of origin. On the other hand, EU adjudicators are required to presume that asylum claims filed by EU nationals are without merit. This presumption comes primarily from the Protocol on Asylum for Nationals of Member States of the European Union (Protocol No. 24), the main subject of this paper. Protocol No. 24 eviscerates the asylum claims of Roma who are persecuted in the EU. It creates an almost irrefutable presumption against EU asylum applicants, stating that EU member states are "safe countries of origin" and EU origin asylum claims are deemed "manifestly unfounded." Protocol No. 24 is discriminatory and conflicts with the reality faced by many EU Roma. The multi-faceted approach of the U.S. asylum regime provides a more thorough and meaningful review of Roma asylum claims. Cases are assessed on an individual basis, with little (if any) legal presumptions against the applicant. The EU should adopt a similar asylum regime and reject the exclusionary mandate of Protocol No. 24.

2013	K33	Ermumcu, Senem. 2013. "Siginmacilarin ve Multecilerin Sosyal Guvenlik Hakki. (Right to Social Security of Refugees and Asylum Seekers. With English summary.)." <i>Calisma Iliskileri Dergisi/Journal of Labour Relations</i> , 4(2): 58-76. Despite the existence of a contract relating to refugees under international law, this agreement is much more than a refuge for asylum seekers that need social security rights. It also seems to have a holistic legislation for a long time when we look at the legislation that regulates the right of asylum in Turkey. The law on foreigners that came into force in 2014 is a step taken to remedy this lack. However, even in that law, Turkey maintains the geographical limitations reservation that it put on the 1951 Convention on Refugees. Turkey's geographical limitation continue to impede the solution of problems in this regard. In particular, social security rights in the context of Act 5510 has not been given to refugees while the refugee definition reinforces the concept of discrimination in this regard. Circulars issued on the subject try to eliminate this distinction, but issued circulars do not meet the full social security rights of asylum seekers. Circulars issued cover more Syrian and Iraqi asylum seekers. Therefore, in terms of the distinction between refugees and asylum seekers would be appropriate to reveal the social security law with legal regulations.

2013	R23	Atehortua-Arredondo, Clara, and Diana Fuentes-Becerra. 2013. "Efectos desapercibidos de la sentencia T/025 de 2004: Sobre la necesidad de una aproximacion cualitativa a las realidades de la poblacion en situacion de desplazamiento. (Disregarded Effect of Court Ruling T/025 of 2004: On the Need of a Qualitative Approach to the Situation of Displaced Populations. With English summary.)." <i>International Law: Revista Colombiana de Derecho Internacional</i> , 0(22): 121-45. Most of the analyses on court ruling T/025 of 2004 have been centred on the conditions necessary to overcome the unconstitutional state of things regarding the situation of displaced people. In this sense, attention has been focused on the ruling's direct and indirect effects on institutions, and on improving their capacity to fulfil the rights of displaced people. Nevertheless, this type of studies has overlooked the day-to-day implementation of the measures set by the Government in order to comply with the judicial orders included in the ruling. For this reason, the present paper presents the results of a field research carried out in the neighbourhoods of Bosa and Soacha (in Cundinamarca, Colombia) where displaced and host populations coexist. These reveal a series of disregarded effects in the daily lives of these people resulting from the execution of forced displacement public policies.

Year	DE	Title and Abstract
2013	Z12	Velasco Retamosa, Jose Manuel. 2013. "Libre circulacion de personas en la union europea: Los nacionales de terceros estados como beneficiarios de esta libertad. (Free Circulation of People in the European Union: Third State Citizens as Its Beneficiaries. With English summary.)." <i>Internacional Law: Revista Colombiana de Derecho Internacional</i> , 0(22): 51-85. One of the greatest challenges of the European Union in the following years will be the correct regulation and control of migratory fluxes with the EU as their destination. In this sense, the entrance and movement of non-Community citizens and their access to the different rights established by community norms constitute a particular preoccupation for the legislator. Controlling the entrance of third state citizens by using norms such as the Schengen acquis, regulating types of visas, establishing residence models and their beneficiaries, and acknowledging certain fundamental rights, like the right to family life, would solve many questions regarding the right to free circulation of non-Community citizens. Nevertheless, it is clear that a lot remains to be done in this field, for in a changing society such as ours, in the middle of an economic crisis, the factors that determine the work market, a key element in the displacement of people from one state to another, is bound to be variable and unpredictable and requires a constant updating of new forms of regulation to match the existing realities. The present paper analyses the current situation of Community freedom, by observing both the norms that regulate extreme cases and the jurisprudence that determines its interpretation and evolution.

Table K39.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	K33	Hallwood, Paul, and Thomas J. Miceli. 2006. "Murky Waters: The Law and Economics of Salvaging Historic Shipwrecks." <i>Journal of Legal Studies</i> , 35(2): 285-302. The salvage of historic shipwrecks involves a debate between salvors, who wish to maximize profit, and archaeologists, who wish to preserve historical value. Traditionally, salvage of shipwrecks has been governed by admiralty law, but the Abandoned Shipwreck Act of 1987 transferred title of historically important wrecks in U.S. waters to the state in whose waters the wreck is found, thereby abrogating admiralty law. This paper examines incentives to locate and salvage historic wrecks under traditional admiralty law and proposes an efficient reward scheme. It then reconsiders current U.S. and international law in light of the results.

2007	D13	Cigno, Alessandro. 2007. <i>A Theoretical Analysis of the Effects of Legislation on Marriage, Fertility, Domestic Division of Labour and the Education of Children</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2143. Decisions concerning marriage, fertility, participation, and the education of children are explained using a two-stage game-theoretical model. The paper examines the effects of (i) family law (cost of obtaining a divorce, alimony, availability of quasi-marriages such as PACS in France, and civil partnership in the UK), (ii) legislation concerning the assignment of property rights over total goods and assets acquired within marriage, (iii) enforceability of bride-price contracts, and (iv) length and effective enforcement of compulsory education. The predictions are consistent with two empirical observations. One is that, the tendency in developed countries is towards mother and father sharing market work and the care of the children equally between them, while the predominant pattern in developing countries is for the father to specialize in market work leaving the care of the children to the mother. The other is that the sign of the cross-country correlation between fertility and female labour market participation, negative until the mid-1970s, has turned positive where developed, but not developing countries are concerned since that date. The model provides a gender-neutral explanation of why girls in developing countries tend to get less education than boys of the same educational ability, and of why a substantial minority of women in some developed countries work and earn more than their male partners. We also derive and discuss the implications of a number of normative propositions.

2007	L86	Popovici, Ioana. 2007. <i>The Determinants of Open Source Quality: An Empirical Investigation</i> . Florida International University, Department of Economics, Working Papers: 0704. Open source (OS) licenses differ in the conditions under which licensors and OS contributors are allowed to modify and redistribute the source code. While recent research has explored the determinants of license choice, we know little about the impact of license choice on project success. In this paper, we measure success by the speed with which programming bugs are fixed. Using data obtained from SourceForge.net, a free service that hosts OS projects, we test whether the license chosen by project leaders influences bug resolution rates. In initial regressions, we find a strong correlation between the hazard of bug resolution and the use of highly restrictive licenses. However, license choices are likely to be endogenous. We instrument license choice using (i) the human language in which contributors operate and (ii) the license choice of the project leaders for a previous project. We then find weak evidence that restrictive licenses adversely affect project success.

2008		
2008	D82	Daughety, Andrew, and Jennifer Reinganum. 2008. <i>Settlement</i> . Department of Economics, Vanderbilt University, Working Papers: 0809. We develop and explore a new model of the economics of privacy. Previous work has focused on "privacy of type," wherein an agent privately knows an immutable characteristic. We consider "privacy of action," wherein privacy means that an agent's choice of action is unobservable to others. To show how a policy of privacy can be socially optimal, we assume that an agent derives utility from an action he takes, from the aggregate of all agents' actions, and from other agents' perceptions of the agent's type (that are based on his action). If his action is observable, then he distorts it (relative to his full-information optimal action) so as to enhance the perceptions that others have of him. This contributes to aggregate welfare through increasing the public good, but the disutility associated with the distortion of agents' actions is also a social cost. If his action is unobservable, then he can take his full-information optimal action and still be "pooled" with other types. When the disutility of distortion is high relative to the marginal utility of the public good, a policy of privacy is optimal. We also consider a policy of waivable privacy, and find that equilibria exist in which some, but not all, types waive privacy. More significantly, if policies of privacy or publicity are costlessly enforceable, then a policy of waivable privacy is never socially preferred. Finally, we consider a number of examples (some of which involve a public bad and/or social disapproval): open-source software development; charitable giving; recycling; consumption of health services; DNA dragnets; student rankings; constraints on information disclosure at trial; electricity and water usage during periods of voluntary rationing; shaming of speeders; and the use of earmarks by Congress.

Year	DE	Title and Abstract
2008	R21	Nanda, Anupam. 2008. "Property Condition Disclosure Law: Why Did States Mandate 'Seller Tell All'?" <i>Journal of Real Estate Finance and Economics</i>, 37(2): 131-46. Thirty-four US states have already enacted some form of seller's Property Condition Disclosure Law. At a time when there is a movement in this direction nationally, this paper attempts to ascertain the factors that lead states to adopt disclosure law. Motivation for the study stems from the fact that not all states have yet adopted the law, and states that have enacted the law have done so in different years. The analytical structure employs hazard models, using a unique set of economic and institutional attributes for a panel of 50 US States spanning 21 years, from 1984 to 2004. The proportional hazard analysis of law adoption reveals that greater number of disciplinary actions tends to favor passage of the law. Greater broker supervision, implying generally higher awareness among real estate agents, seems to have a negative impact on the likelihood of a state adopting a Property Condition Disclosure Law.
2009		
2009	F34 F37 G21	Haselmann, Rainer, Katharina Marsch, and Beatrice Weder di Mauro. 2009. <i>Real Effects of Bank Governance: Bank Ownership and Corporate Innovation</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7488. In this paper we analyze the impact of government and private ownership of banks on firms' probability to innovate. We estimate firms' decision to innovate and their selection of a main lender for a sample of 9000 German manufacturing companies. Since these two decisions may be simultaneously made we use the number of private and government bank branches located in close proximity to our sample firms as an instrument for the selection of each firm's main lender. We find that the probability of a firm to innovate is about 10 to 13 percent higher if the main lender is a private compared to a government bank (after controlling for firm characteristics and selectivity bias). The ownership type of the main lender is especially important for small firms since their access to finance is more dependent on the local supply of lenders. Therefore, extensive government involvement in the allocation of credit comes at the cost of lower corporate innovation and economic growth.
2009	H32 L10 L12	Vichyanond, Jade. 2009. <i>Intellectual Property Protection and Patterns of Trade</i>. Princeton University, Department of Economics, Center for Economic Policy Studies., Working Papers: 1201. The paper provides a simple theoretical model for understanding how the difference in the level of intellectual property rights protection determines trade patterns. In particular, I examine how countries' levels of patent rights protection affect exports in industries with different degrees of reliance on innovation. In contrast to most models of institutional comparative advantage, which predict that countries with superior institutions specialize in industries that are very dependent on institutions, I show that higher patent rights protection does not necessarily lead to specialization in industries that rely heavily on innovation. There may exist a threshold beyond which occurs a reversal of specialization patterns, a consequence of monopoly power inherent in intellectual property rights protection. I then use the model's implications to assess empirically whether such predicted patterns hold in cross-country trade data and find evidence for general patterns of specialization as well as a reversal of such patterns among countries with high levels of patent rights protection.

2011	J14	Pratt, Robert W. 2011. "Whither the Disability Rights Movement?" <i>Michigan Law Review</i>, 109(6): 1103-08. While reading this book in 2010, almost twenty years to the date after President George H.W. Bush signed the Americans with Disability Act ("ADA"), one realizes how much the world of politics has changed. It is difficult to remember a time when such major legislation passed the U.S. Senate by a vote of 91 to 6 and the House of Representatives by 377 to 28. Even more surprising, as we look back to 1990, is the fact that the executive branch was controlled by a different political party than the legislative branch. Contrast this legislative record with the milieu surrounding the health care reform legislation of 2010 and the economic stimulus bill of 2009, and the overwhelming bipartisan vote on the ADA seems quite remarkable. This unique legislative history provides the context for Professor Bagenstos's new book, <i>Law and the Contradictions of the Disability Rights Movement</i> . In his book, Professor Bagenstos traces how the often-diverging strands of the disability rights movement coalesced to create change, and how the diversity of the movement is now inhibiting future change. In short, Bagenstos's book is about the contradictions and tensions within the disability rights movement and the law it forged. His analysis and conclusions are very insightful and appear to be drawn from both his numerous articles on the subject and his experience in the movement, including arguing several significant ADA cases before the Supreme Court. Indeed, while there are many aspects of Bagenstos's book that make it worth reading, his analysis of the movement's core contradiction, its history, and its ongoing impact are particularly helpful, even to those who have already had significant exposure to the ADA.
2011	K36	Degtyareva, Victoria. 2011. "Defining Family in Immigration Law: Accounting for Nontraditional Families in Citizenship by Descent." <i>Yale Law Journal</i>, 120(4): 862-908. Most immigrants who gain permanent residence or citizenship in the United States do so through familial relations. As a result, immigration authorities must constantly decide what constitutes a family. Unfortunately, the Immigration and Nationality Act (INA) provides little guidance. While the INA provides some definitions of what constitutes a family, the definitions generally assume a traditional view of the family in which all parental roles lie with only two individuals. This assumption creates substantial problems when applying the INA's provisions to nontraditional families in which parental roles may be split between three or more people. Because the INA does not account for such families, it is often unclear whether the families are entitled to the plethora of immigration and citizenship benefits available to those with familial relations in the United States. In response to the lack of clarity, this Note proposes the adoption of a unified definition of family that is based on interpersonal, rather than biological, relationships. The proposed solution is consistent with existing provisions of the INA, finds support in state family law, and provides an effective way of dealing with nontraditional families.

2013	D73	Kropf, Martha, Timothy Vercellotti, and David C. Kimball. 2013. "Representative Bureaucracy and Partisanship: The Implementation of Election Law." <i>Public Administration Review</i>, 73(2): 242-52. Studies of representative bureaucracy argue that public administrators hold attitudes that are generally representative of the public and will implement policy in accordance with those attitudes. However, studies of representative bureaucracy generally have not considered the partisanship of local administrators. Many local election officials affiliate with a political party, and there is concern that partisan officials will manipulate election procedures to help their party. The authors analyze a survey of local election officials about their attitudes toward provisional voting. Findings show that Democratic local election officials have significantly more positive attitudes toward provisional voting programs in highly Democratic jurisdictions and significantly less positive attitudes in highly Republican jurisdictions. No such relationship occurs for Republican administrators. In addition, positive attitudes toward provisional voting are associated with more provisional votes being cast and counted in the 2004 presidential election. This work questions whether representative bureaucracy--when it concerns partisanship--is always a desirable outcome.
2013	D73 D83	Costa, Samia. 2013. "Do Freedom of Information Laws Decrease Corruption?" <i>Journal of Law, Economics, and Organization</i>, 29(6): 1317-43. International organizations have encouraged countries to adopt Freedom of Information (FOI) laws as a means to increase transparency and thus combat corruption. This article uses the recent introduction of FOI laws in several countries as a natural experiment to determine their effect on corruption perceptions and the quality of governance. Using different corruption perception indices, both at the macro- and micro-level, I find that countries that adopted FOI laws saw an increase in perceived corruption and a decrease in the quality of governance, rather than the expected improvement. This increase in corruption perception seems to take place in the initial years of the reform, with no significant decrease in the long term. Countries with a free press appear to be the ones experiencing the increase. Results are robust throughout different samples and specifications.
2013	F68	Margaritis, Konstantinos. 2013. <i>FUNDAMENTAL RIGHTS IN THE EEC TREATY AND WITHIN COMMUNITY FREEDOMS</i>. Centre for European Studies, Alexandru Ioan Cuza University, CES Working Papers. It has been widely argued that the European Economic Community (EEC) was based on principles of economic integrity and growth through the creation of a common market; this is not far from reality. The Treaty of Rome was full of provisions that enhanced economic co-operation and increased the sense of liberalization in Europe, such as the four, now traditional, Community freedoms. Although all the above applied, there were articles within the EEC Treaty where fundamental rights were guaranteed; more than that, fundamental rights that occurred from the Community freedoms, even in a basic level. This is of highest importance since the interpretation of those provisions gave the initiative for further development in the field of fundamental rights protection within the Community legal order, throughout legislative procedure and case law. The aim of this paper is to present the fundamental rights as highlighted in the EEC Treaty and critically approach their concept under Community law.
2013	G23 J45	Ghasemi, Mojtaba. 2013. "Economic Analysis of Pension Fund's Laws for Female Heirs: Case of Iran's Civil Servants Pension Fund (CSPF)." <i>European Journal of Law and Economics</i>, 36(2): 407-21. The key twin objectives of pension and retirement system are income security and consumption smoothing for members and their family (heirs). Accordingly, pension funds worldwide devise laws that preserve and improve these key objectives. Laws that failed to take into account these objectives not only impose extra financial burden on the pension system, but also may pose undesirable social and economic effects. In this respect, economic analysis of pension laws would help lawmakers to make workable and implementable laws. Generally, economic analysis of law seeks to answer two basic questions regarding legal rules: what are the effects of legal rules on the behavior of relevant actors and are these effects socially desirable? This paper examines the pension law of Iran's civil servant pension fund (CSPF) for female heirs in light of the aforementioned key objectives of pension system, and from social justice point of view. The results from the analysis reveal that this does not only adhere to social justice and pension system's main purpose, but also it imposes economic and social costs. The weak side of the law also creates financial burden on the pension fund, the young generation (paying pension benefits to the considered heirs from its contribution), and the public at large. The study also shows that lifetime payment of pensions to heirs by CSPF encourages late or informal marriages hence defecting acceptable social norms and may increase informal labor supply, creating a further problem in the labor market. The study thus recommends the need for reforming the existing law and rules of CSPF for female heirs.
2013	I23 K10	Kennedy, Randall. 2013. <i>For Discrimination: Race, Affirmative Action, and the Law</i>, New York: Random House, Pantheon Books. Explores the complexities surrounding the practice of affirmative action in the United States, including its legal history, arguments made by the left and right, the impacts of Supreme Court decisions on higher education, and the future of affirmative action. Discusses affirmative action in the history of American race relations; the affirmative action policy debate--the key arguments pro and con; the colorblind challenge to affirmative action; the Supreme Court and affirmative action--the case of higher education; and reflections on the future of the affirmative action controversy.

2013	P36 P37	Bowmaker, Simon W., and Patrick M. Emerson. 2013. "Still Waiting for Mister Right? Asymmetric Information, Abortion Laws and the Timing of Marriage." <i>Applied Economics</i>, 45(22-24): 3151-69. Previous studies have suggested that more liberal abortion laws should lead to a decrease in marriage rates among young women as 'shotgun weddings' are no longer necessary. Empirical evidence from the United States lends support to that hypothesis. This article presents an alternative theory of abortion access and marriage based on the cost of search which suggests that more liberal abortion laws may actually promote young marriage. An empirical examination of marriage data from Eastern Europe shows that countries that liberalized their abortion laws saw an increase in marriage rates among nonteenage women.

2006	H76	Raghav, Manu. 2006. Why do budgets received by state prosecutors vary across districts in the United States?. Center for Applied Economics and Policy Research, Economics Department, Indiana University Bloomington. Caep Working Papers: 2006-018. This paper analyzes how the budget allocated to state prosecutors varies from one district to another and the reasons for such variation by using theoretical and empirical methods. The main results of this paper are as follows: Other factors being equal, more politically conservative prosecutorial districts get less budget, this decrease in budget with political conservatism is steeper in more affluent and also in more populous districts, and that there are fixed costs in operating a prosecutor's office. Other less surprising results are that other factors remaining same, prosecutorial budget increases with the population, the crime rate, and with the affluence of the district.
2006	H83	Vizzard, William. 2006. "Transforming the FBI: A Challenge of Culture, Resources, and Mission." <i>Public Administration Review</i>, 66(5): 764-66. A recent review of restructuring efforts at the Federal Bureau of Investigation published by the National Academy of Public Administration examines several studies that precipitated the reorganization and discusses the current state of counterterrorism, intelligence, and internal security functions within the agency. However, the report fails to seriously engage the benefits of restructuring federal agencies to separate criminal investigation from antiterrorism or to address the financial implications of the current reorganization. Although it provides a useful overview of current changes within the FBI, it lacks theoretical linkages.
2006	J10 J40	McCrary, Justin. 2006. The Effect of Court-Ordered Hiring Quotas on the Composition and Quality of Police. National Bureau of Economic Research, Inc, NBER Working Papers: 12368. Arguably the most aggressive affirmative action program ever implemented in the United States was a series of court-ordered racial hiring quotas imposed on municipal police departments. My best estimate of the effect of court-ordered affirmative action on workforce composition is a 14 percentage point gain in the fraction African American among newly hired officers. Evidence on police performance is mixed. Despite substantial black-white test score differences on police department entrance examinations, city crime rates appear unaffected by litigation. However, litigation lowers slightly both arrests per crime and the fraction black among serious arrestees.
2006	J41	Haruvy, Ernan, Alvin E. Roth, and M. Utku Unver. 2006. "The Dynamics of Law Clerk Matching: An Experimental and Computational Investigation of Proposals for Reform of the Market." <i>Journal of Economic Dynamics and Control</i>, 30(3): 457-86. In September of 1998, the Judicial Conference of the United States abandoned as unsuccessful the attempt – the sixth since 1978 – to regulate the dates at which law students are hired as clerks by Federal appellate judges. The market promptly resumed the unraveling of appointment dates that had been temporarily slowed by these efforts. In the academic year 1999-2000 many judges hired clerks in the fall of the second year of law school, almost two years before employment would begin, and before hardly any information about candidates other than first year grades was available. Hiring dates moved still earlier in the Fall of 2000 and 2001. The present paper explores proposed reforms of the market, experimentally in the laboratory, and computationally using genetic algorithms. Our results suggest that some of the special features of the judge/law-clerk market – in particular the feeling among many students and judges that students must accept offers when they are made – present obstacles to the success of the proposed reforms, including the latest reforms proposed by the judges, in 2002 and 2003. Unlike markets in which the inability to make binding contracts contributes to market failure, in the law clerk market it is the ease with which binding contracts are forged that harms efficiency.

2006	M14	Parry, Craig. 2006. "The Importance of Wa When Doing Business in Japan." <i>Journal of Asia-Pacific Business</i> , 7(3): 105-15. Japan has a reputation for being a non-litigious society. In Japan, the law and the minutiae of a written contract are not the guiding principles of relationships, but rather something to reluctantly fall back on if business people cannot act reasonably and fairly of their own accord. Under such a view, litigation serves only to make society more confrontational, less harmonious, and less orderly. An examination of the reactions of most Japanese in business settings can yield productive suggestions for those desiring to do business with the Japanese.

2006	O12	Hunt, Jennifer. 2006. <i>HOW CORRUPTION HITS PEOPLE WHEN THEY ARE DOWN</i> . McGill University, Department of Economics, Departmental Working Papers. Using cross – country and Peruvian data, I show that victims of misfortune, particularly crime victims, are much more likely than non – victims to bribe public officials. Misfortune increases victims' demand for public services, raising bribery indirectly, and also increases victims' propensity to bribe certain officials conditional on using them, possibly because victims are desperate, vulnerable, or demanding services particularly prone to corruption. The effect is strongest for bribery of the police, where the increase in bribery comes principally through increased use of the police. For the judiciary the effect is also strong, and for some misfortunes is composed equally of an increase in use and an increase in bribery conditional on use. The expense and disutility of bribing thus compound the misery brought by misfortune.
2006	O20	Root, Hilton L., and Karen May. 2006. "Judicial Systems and Authoritarian Transitions." <i>Pakistan Development Review</i> , 45(4): 1301-21. A casual link between the judicial system, economic growth, and democracy is a staple of the literature on development policy. Yet the linkage between the judiciary and political liberalisation has been difficult to demonstrate empirically. Legal reforms that are narrowly focused, such as better enforcement of property rights and contract law, enhance trade and investment. Nevertheless, studies are usually unable to substantiate causality between the rule of law, economic growth, and democracy. Our investigation of the political role of the courts during economic transition indicates that the incentives for strengthening the role of courts as a framework for investment and trade, fiscal discipline, and administrative centralisation exist in various political regimes. Autocratic and democratic regimes both require judicial independence for legitimacy but with different effects on political rents, corruption, and aggregate economic activity. The distributional consequences of judicial development exhibit significant variation according to regime type, and there is insufficient evidence to link judicial development with political liberalisation.

2006	P26	Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers. This paper surveys China's legal system in the economic reform era. We analyze the role of law in the economy, assessing whether China's formal legal system contributed to those expectations of stable and predictable rights of property and contract that are prerequisites for growth. The paper begins by detailing legal developments. The relationship between legal and economic development was bidirectional - a coevolutionary process. We then examine three spheres of activity - property rights, agreements to trade, and corporate governance - asking whether law plays an important role, how that role has changed, and what the current problems are. Common themes arise. First, there have been profound changes, with law playing an increasingly important role. Second, formal legal institutions have not made a critical contribution to China's remarkable economic success. This latter conclusion leaves open the question of which mechanisms generated the necessary expectations of reasonable returns from decentralized economic activity. We briefly reflect on mechanisms other than law that might have produced such expectations, for example, the role of local Communist Party officials. However, lack of empirical information suggests this is a topic for future research.
2006	P52	McLeod, Ross H. 2006. <i>Doing Business in Indonesia: Legal and Bureaucratic Constraints</i> . Australian National University, Economics RSPAS, Departmental Working Papers. The World Bank's new series of Doing Business reports attempt to measure the relative ease of doing business in countries around the world. The output of this research is a set of rankings that enable each country to see how it looks relative to the others from the point of view of private sector businesses. This paper highlights a number of concerns about the Doing Business methodology, and presents a critique of the 'law and finance' view regarding the influence of legal system origins on countries' economic performance, which was highly influential in the first of the Doing Business reports. Selected data from the 2006 report are used to explain why Indonesia is having difficulty getting back to Soeharto-era rates of economic growth. The report's findings in relation to Indonesia are then interpreted within the framework of an analysis of the way the Soeharto 'franchise' operated.
2006	Q23 Q24	Casari, Marco. 2006. <i>Emergence of Endogenous Legal Institutions: Property Rights and Community Governance in the Italian Alps</i> . Purdue University, Department of Economics, Purdue University Economics Working Papers. This paper studies the legal institutions set up by communities in the Italian Alps in the 13th - 19th century to manage their common pastures and forests. Over time, private-order institutions in the form of charters replaced informal arrangements sustained by the long-run interaction among villagers. Although costly to run, the charters accomplished several tasks that increased resource use efficiency. We present an empirical analysis of institutional choice of about two hundred communities and show that relative efficiency was an important factor in the selection of a governance regime.
2006	R20	Linden, Leigh L., and Jonah E. Rockoff. 2006. <i>There Goes the Neighborhood? Estimates of the Impact of Crime Risk on Property Values From Megan's Laws</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12253. We combine data from the housing market with data from the North Carolina Sex Offender Registry to estimate how individuals value living in close proximity to a convicted criminal. We use the exact location of these offenders to exploit variation in the threat of crime within small homogenous groupings of homes, and we use the timing of sex offenders' arrivals to control for baseline property

		values in the area. We find statistically and economically significant negative effects of sex offenders' locations that are extremely localized. Houses within a one-tenth mile area around the home of a sex offender fall by four percent on average (about \$5,500) while those further away show no decline. These results suggest that individuals have a significant distaste for living in close proximity to a known sex offender. Using data on crimes committed by sexual offenders against neighbors, we estimate costs to victims of sexual offenses under the assumptions that all of the decline in property value is due to increased crime risk and that neighbors' perceptions of risk are in line with objective data. We estimate victimization costs of over \$1 million – far in excess of estimates taken from the criminal justice literature. However, we cannot reject the alternative hypotheses that individuals overestimate the risk posed by offenders or view living near an offender as having costs exclusive of crime risk.

We study the determinants of 19th century mass migration with special attention to the role of institutional factors beside standard economic fundamentals. We find that economic forces associated with income and demographic differentials had a major role in the determination of this historical event, but that the quality of institutions also mattered. We evaluate separately the impact of political institutions linked to democracy and suffrage and of those institutions more specifically targeted at attracting migrants, i.e., citizenship acquisition, land distribution, and public education policies. We find that both sets of institutions contributed to this event, even after controlling for their potential endogeneity through a set of instruments exploiting colonial history and the quality of institutions inherited from the past.

2007	J01	Moehling, Carolyn, and Anne Morrison Piehl. 2007. <i>Immigration and Crime in Early 20th Century America</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13576. Research on crime in the late 20th century has consistently shown that immigrants have lower rates of involvement in criminal activity than natives. We find that a century ago immigrants may have been slightly more likely than natives to be involved in crime. In 1904 prison commitment rates for more serious crimes were quite similar by nativity for all ages except ages 18 and 19 when the commitment rate for immigrants was higher than for the native born. By 1930, immigrants were less likely than natives to be committed to prisons at all ages 20 and older. But this advantage disappears when one looks at commitments for violent offenses. Aggregation bias and the absence of accurate population data meant that analysts at the time missed these important features of the immigrant-native incarceration comparison. The relative decline of the criminality of the foreign born reflected a growing gap between natives and immigrants at older ages, one that was driven by sharp increases in the commitment rates of the native born, while commitment rates for the foreign born were remarkably stable.

2007	J12	Aizer, Anna, and Pedro Dal Bo. 2007. <i>Love, Hate and Murder: Commitment Devices in Violent Relationships</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13492. Many violent relationships are characterized by a high degree of cyclicity: women who are the victims of domestic violence often leave and return multiple times. To explain this we develop a model of time inconsistent preferences in the context of domestic violence. This time inconsistency generates a demand for commitment. We present supporting evidence that women in violent relationships display time inconsistent preferences by examining their demand for commitment devices. We find that "no-drop" policies – which compel the prosecutor to continue with prosecution even if the victim expresses a desire to drop the charges – result in an increase in reporting. No-drop policies also result in a decrease in the number of men murdered by intimates suggesting that some women in violent relationships move away from an extreme type of commitment device when a less costly one is offered.

Comments on the Judgment of the Court of First Instance in GlaxoWellcome." <i>World Competition: Law and Economics Review</i>, 30(2): 291-305. In September 2006, the Court of First Instance of the European Union (CFI) issued its judgment in the case opposing GlaxoSmithKline (GSK) to the European Commission. The Commission had found that the dual pricing system introduced by GSK violated the European antitrust rules (Article 81 of the EC Treaty), because it constituted an agreement with wholesalers whose object was to restrict competition by blocking parallel imports of pharmaceuticals. For the Commission, the agreement could not be exempted and was therefore to be prohibited. The CFI disagreed with the Commission and found that the agreement could qualify for an exemption. More importantly, the CFI ruled

		that, at least in the pharmaceutical sector, an agreement whose object is to prevent parallel imports by imposing a dual pricing system is not automatically contrary to Article 81, as it cannot be automatically inferred that the end consumer is harmed. This holding is highly questionable in view of the prior EU case law, prohibiting per se agreements with anticompetitive objects. Therefore, the change brought about by the CFI's judgment could have major ramifications on the innovative pharmaceutical industry which is vigorously opposed to the principle of parallel imports.

2007	O33	Lee, Gwanghoon. 2007. "R&D Spillovers and Optimal Anti-trust Enforcement." <i>Journal of Economic Theory and Econometrics</i>, 18(2): 61-83. Using a three-stage game model, this paper analyzes the optimal level of anti-trust enforcement against joint production in relation to the degree of R&D spillovers. It shows that the optimal level of anti-trust enforcement is negatively related to the magnitude of R&D spillovers. In particular, the government should show some tolerance of joint production cartels only when R&D spillovers are sufficient for firms to cooperate voluntarily in their R&D activities. When R&D spillovers are so weak that firms do not cooperate voluntarily in the R&D stage, the government should intensify anti-trust enforcement against joint production to a prohibitive level.

2007	Q00	Di Vita, Giuseppe. 2007. <i>Legal Families and Environmental Protection: Is there a Causal Relationship?</i>. Fondazione Eni Enrico Mattei, Working Papers: 2007.78. In this paper we build up the analysis of La Porta et al. (1998), to investigate the importance of legal families in explaining the variations in pollution emissions in different countries. The main intuition behind our analysis is that the nations in which the rights of shareholders are more protected, promote real and financial investment; this increases the speed at which the per-capita income corresponding to the declining branch of the Environmental Kuznets Curve (EKC) is achieved. In econometrics different regression analyses were performed using as dependent variables three different kinds of pollutants (CO2, fine suspended particulates and waste), including as an explanation some financial variables never before considered in this kind of study.

2008	D86	Bisso, Juan Carlos, and Albert H. Choi. 2008. "Optimal Agency Contracts: The Effect of Vicarious Liability and Judicial Error." <i>International Review of Law and Economics</i>, 28(3): 166-74. Under the doctrine of vicarious liability, a deep-pocket principal is often held responsible for a third-party harm caused by a judgment-proof agent's negligence. We analyze the incentive contract used by the principal to control the agent's behavior when a court can make an error in determining the agent's negligence. We show that (1) reducing the error of declaring the agent not negligent even when he was (pro-defendant or type II error) is better than reducing the error of declaring the agent negligent even when he was not (pro-plaintiff or type I error) and (2) allowing the principal to penalize the agent even when the court declares the agent not negligent improves welfare. The latter supports the argument that causing an accident (or a reliable allegation of misconduct) should be sufficient to justify a "just cause" termination of an employee.

We argue that a higher degree of de facto independence of the legal system from other government branches as well as strong public trust in the working of the legal system may reduce the average inflation rate of countries through two channels: by lowering transaction costs in the economy and by strengthening de facto central bank independence. In the empirical section of the paper, we present evidence in favour of both channels after controlling for other influences in a sample containing both developed and less-developed countries.

2008	F12	Crozet, Matthieu, Pamina Koenig, and Vincent Rebeyrol. 2008. <i>Exporting to Insecure Markets: a Firm-Level Analysis</i>. CEPII research center, Working Papers. This paper proposes an original approach to investigate the influence of insecurity and institutional quality on international trade. We emphasize that insecurity is hardly comparable with other trade barriers such as tariffs because it does not affect all firms similarly. We develop a monopolistic competition trade model with insecurity as a random additional sunk cost for exporting firms. A higher level of insecurity may dissuade large firms to export, while some smaller ones may be able to enter the export market. Hence, insecurity disrupts firms' selection into export markets, and this has particular effects on trade margins. Two discriminating predictions are derived from the model and confronted to the data. Using individual French firms exports to 100 destination countries, we find clear evidence corroborating our theoretical predictions.

This paper relies on rich firm-level data on transition economies to examine the role of informality as an important channel through which regulatory and other policy constraints affect firm growth. We find that firms reduce their formal operations with greater tax and regulatory burdens, but increase them with better enforcement quality. In terms of firm growth, we find a differential impact of regulatory burden and enforcement quality on formal and informal firm growth. In particular, we find that growth in formal firms is negatively affected by both tax and financing constraints, whereas these constraints are insignificant for growth in informal firms. Moreover, formal firm growth improves with better enforcement, while informal firm growth is constrained by organized crime, pointing to informal firms' inability to take full advantage of the legal and judicial systems. Finally, we find that an interaction term between a countrywide measure of the rule of law and formality is positive, suggesting that better rule of law improves formal firm growth.

2008	K34	Jacyk, David. 2008. "The Dividing Line between the Jurisdictions of the Tax Court of Canada and Other Superior Courts." <i>Canadian Tax Journal</i>, 56(3): 661-707. Tax law is arguably one of the most challenging and complicated areas of the law in Canada. One might expect that one of the simplest and most straightforward questions in the area of tax law would be that of jurisdiction: Which court can adjudicate issues relating to the administration of tax legislation? Surprisingly, this very question has been the subject matter of much litigation for decades, in trial and appellate courts across Canada, illustrating the complexity of the issue of court jurisdiction in the context of a federal state, even in a well-defined area of the law such as taxation. The volume of jurisprudence on the issue of jurisdiction has been high in the last few years, and includes several decisions from appellate courts that have brought greater clarity to this issue. The clarity brought to bear is a welcome development. This article provides a comprehensive review and analysis of the law on jurisdiction by reviewing the structure of the Tax Court and the Federal Court; tracing the development of the case law prior to and following the reorganization of the federal tax appeal system in 1991; considering the decisions of provincial courts that have tackled the issue independently of the federal court system; considering the body of rectification cases, an area that, I argue, has created anomalous but nevertheless manageable and predictable results; considering the developments in recent abuse-of-process and judicial review cases, which, I suggest, have definitively and emphatically clarified the fine parameters of the jurisdictions of the Tax Court and of the other Canadian superior courts; and providing a summary of principles extracted from the jurisprudence regarding the demarcation of jurisdiction between the Tax Court and the other Canadian superior courts.

2008	P34	Harper, Joel T., and James E. McNulty. 2008. "Financial System Size in Transition Economies: The Effect of Legal Origin." <i>Journal of Money, Credit, and Banking</i>, 40(6): 1263-80. Gorton and Winton (1998) link the size of the banking system in transition economies to financial stability. We provide empirical evidence consistent with their notion that the size of the financial system will be smaller in these countries. This effect holds even after controlling for the effect of rule of law and/or legal origin, and other relevant variables. Transition economy status, thus adds additional explanatory power to traditional law and finance explanations of financial development. Classification of transition economies by legal origin reveals that Russian legal origin has a strong negative effect on financial development. Regression analysis shows claims on the private sector/gross domestic product (GDP) to be 46 to 60 percentage points lower in the countries of the former Soviet Union, and 23 to 39 percentage points lower in

		non-Soviet transition economies compared to countries of English legal origin. There is a positive relation between claims on the private sector and the rule of law for a broad cross section of countries.

2008	R58	Aalbers, Manuel B., and Sara Rancati. 2008. "Feeling Insecure in Large Housing Estates: Tackling Unsicherheit in the Risk Society." <i>Urban Studies</i> , 45(13): 2735-57. The aim of this paper is to analyse Zygmunt Bauman's three-part concept of Sicherheit (safety, certainty and security) in the specific context of large housing estates in Amsterdam (the Netherlands) and Milan (Italy). The efficacy of the different actions and policies, which seek to tackle unsafety, uncertainty and insecurity will be qualified on the basis of their correspondence and potential to face the various dimensions of Sicherheit. In both Amsterdam and Milan, there is a weak connection between the three dimensions of Sicherheit. Amsterdam has implemented so many initiatives within one framework that one cannot see the wood for the trees, while Milan lacks a framework for a comprehensive approach. Contrary to Bauman's ideas, we observe that even though Unsicherheit is partly a result of globalisation processes, this does not imply that local solutions are superfluous or useless.
2008	Z10	Bo , Ernesto Dal, and Marko Tervio. 2008. <i>Self-Esteem, Moral Capital, and Wrongdoing</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14508. In order to help understand adherence to moral principles and the force of intrinsic motivation, we present an infinite-horizon model where an individual receives random temptations (such as bribe offers) and must decide which to resist. Individual actions depend both on conscious intent and a type reflecting unconscious drives. Temptations yield consumption value, but keeping a good self-image (a high belief of being the type of person that resists) yields self-esteem. We identify conditions for individuals to build an introspective reputation for goodness ("moral capital") and for good actions to lead to a stronger disposition to do good. Bad actions destroy moral capital and lock-in further wrongdoing. Economic shocks that result in higher temptations have persistent effects on wrongdoing that fade only as new generations replace the shocked cohorts. Societies with the same moral fundamentals may display different wrongdoing rates depending on how much past luck has polarized the distribution of individual beliefs. The model illustrates how optimal deterrence may change under endogenous moral costs and how wrongdoing may be compounded as high temptation activities attract individuals with low moral capital.

2009	C01 D03	Lee , David, and Justin McCrary. 2009. <i>The Deterrence Effect of Prison: Dynamic Theory and Evidence</i> . Princeton University and NBER 1171. Using administrative, longitudinal data on felony arrests in Florida, we exploit the discontinuous increase in the punitiveness of criminal sanctions at 18 to estimate the deterrence effect of incarceration. Our analysis suggests a 2 percent decline in the logodds of offending at 18, with a standard errors ruling out declines of 11 percent or more. We interpret these magnitudes using a stochastic dynamic extension of Becker's (1968) model of criminal behavior. Calibrating the model to match key empirical moments, we conclude that deterrence elasticities with respect to sentence lengths are no more negative than -0.13 for young offenders.

2009	D40	Logan , Trevon, and Manisha Shah. 2009. <i>Face Value: Information and Signaling in an Illegal Market</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14841. Economists argue that rich information environments and formal enforcement of contracts are necessary to prevent market failures when information asymmetries exist. We test for the necessity of formal enforcement to overcome the problems of asymmetric information by estimating the value of information in an illegal market with a particularly rich information structure: the online market for male sex work. We assemble a rich dataset from the largest and most comprehensive online male sex worker website to estimate the effect of information on pricing. We show how clients of male sex workers informally police the market in a way that makes signaling credible. Using our institutional knowledge,

		we also identify the specific signal male sex workers use to communicate quality to clients: face pictures. We find that the premium to information is large and that it is due entirely to face pictures. More importantly, the premium is in the range of premiums to information estimated for legal markets. We also show that the evidence is inconsistent with alternative explanations such as beauty premiums. The findings provide novel evidence on the ability of rich information environments to overcome the problems of asymmetric information without formal enforcement, and show that the value of information in illegal markets is similar to its value in legal markets.

2009	D61	Schauer, Frederick, and Richard Zeckhauser. 2009. <i>The Trouble with Cases</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 15279. For several decades now a debate has raged about policy-making by litigation. Spurred by the way in which tobacco, environmental, and other litigation has functioned as an alternative form of regulation, the debate asks whether policy-making or regulation by litigation is more or less socially desirable than more traditional policy-making by ex ante rule-making by legislatures or administrative agencies. In this paper we step into this debate, but not to come down on one side or another, all things considered. Rather, we seek to show that any form of regulation that is dominated by high-salience particular cases is highly likely, to make necessarily general policy on the basis of unwarranted assumptions about the typicality of one or a few high-salience cases or events. Two cornerstone concepts of behavioral decision – the availability heuristic and related problems of representativeness – explain this bias. This problem is virtually inevitable in regulation by litigation, yet it is commonly found as well in ex ante rule-making, because such rule-making increasingly takes place in the wake of, and dominated by, particularly notorious and often unrepresentative outlier events. In weighing the net advantages of regulation by ex ante rule-making against those of regulation by litigation, society must recognize that any regulatory form is less effective insofar as it is unable to transcend the distorting effect of high-salience unrepresentative examples.

2009	E23	Roe, Mark J., and Jordan I. Siegel. 2009. "Finance and Politics: A Review Essay Based on Kenneth Dam's Analysis of Legal Traditions in The Law-Growth Nexus." <i>Journal of Economic Literature</i>, 47(3): 781-800. Strong financial markets are widely thought to propel economic development, with many in finance seeing legal tradition as fundamental to protecting investors sufficiently for finance to flourish. Kenneth Dam finds that the legal tradition view inaccurately portrays how legal systems work, how laws developed historically, and how government power is allocated in the various legal traditions. Yet, after probing the legal origins' literature for inaccuracies, Dam does not deeply develop an alternative hypothesis to explain the world's differences in financial development. Nor does he challenge the origins core data, which could be origins' trump card. Hence, his analysis will not convince many economists, despite that his legal learning suggests conceptual and factual difficulties for the legal origins explanations. Yet, a dense political economy explanation is already out there and the origins-based data has unexplored weaknesses consistent with Dam's contentions. Knowing if the origins view is truly fundamental, flawed, or secondary is vital for financial development policy making because policymakers who believe it will pick policies that imitate what they think to be the core institutions of the preferred legal tradition. But if they have mistaken views, as Dam indicates they might, as to what the legal traditions' institutions really are and which types of laws are effective, or what is really most important to financial development, they will make policy mistakes – potentially serious ones.
2009	E23	Yao, Yang, and Linda Yueh. 2009. "Law, Finance, and Economic Growth in China: An Introduction." <i>World Development</i>, 37(4): 753-62. China has experienced remarkable economic growth for three decades despite having a weak legal system and underdeveloped financial markets thought to be crucial for economic development. An assessment of the relationship among the legal and financial systems and economic growth reveals a complex set of institutional factors that have underpinned China's marketization, and which is not premised on the establishment of a legal or financial system before development takes off. China's experience holds lessons for other developing countries struggling with imperfect legal systems and nascent financial markets, which are not uncommon features of economies at an early stage of development.
2009	E23	Feng Lu, Susan, and Yang Yao. 2009. "The Effectiveness of Law, Financial Development, and Economic Growth in an Economy of Financial Repression: Evidence from China." <i>World Development</i>, 37(4): 763-77. In an economy characterized by financial repression, enhancing the legal system may hinder the development of some aspects of the financial sector, especially informal arrangements aiming at circumventing the repression. Using Chinese provincial data in the 1990s, we find that enhanced legal system suppresses private investment and has no effect on financial depth although it increases the private share of bank credits and bank competition. We interpret these findings as evidence showing the existence of the leakage effect that moves financial resources from the privileged state sector to the rationed private sector. In addition, we find that enhanced legal system does not have a significant effect on the average GDP growth rate. We conclude that the smooth functioning of the legal system requires other institutions to complement.
2009	E24	Lee, David, and Justin McCrary. 2009. <i>The Deterrence Effect of Prison: Dynamic Theory and Evidence</i>. Princeton University, Department of Economics, Center for Economic Policy Studies., Working Papers: 189lee.pdf. Using administrative, longitudinal data on felony arrests in Florida, we exploit the discontinuous increase in the punitiveness of criminal sanctions at 18 to estimate the deterrence effect of incarceration. Our analysis suggests a 2 percent decline in the log-odds of offending at 18, with standard

		errors ruling out declines of 11 percent or more. We interpret these magnitudes using a stochastic dynamic extension of Becker's (1968) model of criminal behavior. Calibrating the model to match key empirical moments, we conclude that deterrence elasticities with respect to sentence lengths are no more negative than -0.13 for young offenders.
2009	E24	Feldmann, Horst. 2009. "The Quality of the Legal System and Labor Market Performance around the World." <i>European Journal of Law and Economics</i>, 28(1): 39-65. Using data on 75 countries for six years in the period 1995-2003, this paper analyzes empirically whether and to what extent the quality of the legal system affects the performance of the labor market. According to the regression results, a legal system characterized by a dependent judiciary, biased courts, a lack of intellectual property protection and a lack of integrity increases unemployment and lowers the employment level. The magnitude of the effect seems to be substantial, particularly among young people.

2009	F14	Wancheck, Tanya. 2009. "Exports and Legal Institutions: Exploring the Connection in Transition Economies." <i>Journal of Institutional Economics</i>, 5(1): 89-115. Secure property rights, established through court enforcement of contracts, are widely acknowledged to be fundamental to economic exchange. Despite their essential function, weak legal and judicial institutions remain the norm across much of Eastern European and former Soviet Union. Barzel (2002) hypothesizes that the value of contract trade, as opposed to relationships and reputation, increases as products travel further and are more costly to inspect. Combining Barzel's theory with the high cost of searching for foreign buyers (Rauch 1999), this article presents evidence that international trade played a significant role in the emergence of institutions. Search costs influence the potential to export value-added, or complex, products. The level of potential complex exports in turn influences the intensity with which businesses lobby for more credible legal and juridical institutions. Both a micro-level model and empirical evidence provide evidence consistent with an endogenous link between exports and legal and judicial institutions.
2009	F53	Caporaso, James A., and Sidney Tarrow. 2009. "Polanyi in Brussels: Supranational Institutions and the Transnational Embedding of Markets." <i>International Organization</i>, 63(4): 593-620. Many have argued that the success of European integration is predicated on reinforcing market structures and some have gone further to state that the creation of a transnational market results in a decoupling of markets from their national political and social frameworks, thus threatening to unravel historical social bargains. Drawing on the work of Karl Polanyi and John Ruggie and using their insights regarding the social embedding of markets, we dissent from this view by examining how the European Court of Justice (ECJ) has handled a key sector of the emerging European market-labor mobility. We argue that rather than disembedding markets, decisions of the ECJ – just as Polanyi and Ruggie would have predicted – activate new social and political arrangements. We find evidence for the development of a new legal and political structure, largely inspired by the Court but also indicated in European Union legislation, at the regional level.

Presents a comparative analysis of public policy making and management among hospitals and the police in England and Belgium. Discusses theory and method in comparative studies of organizational change; national reforms in the Belgian and English regimes, the hospitals, the police, and intersectoral comparison; what happened locally among hospitals and the police; reflections on theories of change; and reflections on doctrines of comparison.
2009	I21	Nicholson-Crotty, Sean, Zachary Birchmeier, and David Valentine. 2009. "Exploring the Impact of School Discipline on Racial Disproportion in the Juvenile Justice System." <i>Social Science Quarterly</i>, 90(4): 1003-18. It is widely recognized that African-American youths are significantly overrepresented in many juvenile justice systems relative to their population percentages. Research has also determined that similar disproportion exists in school discipline and speculated about a "school-to-prison pipeline" for minority youth. This study explores empirically the degree to which disciplinary decisions made in schools can help to explain observed rates of disproportionate minority contact with juvenile courts. It does so in an assessment of education and justice system data from a sample of counties in Missouri. The findings suggest that racial disproportion in out-of-school suspensions, which cannot be explained solely by differences in delinquent behavior, is strongly associated with similar levels of disproportion in juvenile court referrals. The association between disproportionate patterns of school discipline and court referrals persists after controlling for poverty, urbanization, and other relevant factors. The implication is that school-based programs that offer alternatives to suspension and expulsion and promote disciplinary equity may help alleviate racial disproportion in the juvenile justice system.

2009	L24	Roy, Jean-Paul, and Christine Oliver. 2009. "International Joint Venture Partner Selection: The Role of the Host-Country Legal Environment." <i>Journal of International Business Studies</i>, 40(5): 779-801. This study attempts to enhance our understanding of how a host country's legal environment influences international joint venture (IJV) partner selection criteria. Empirical results based on survey data collected on 169 IJVs revealed that host-country rule of law perceptions negatively influence appropriation and coordination cost concerns, which positively influence partner-related criteria. Furthermore, these concerns mediate the relationship between perceptions of host-country rule of law and partner-related criteria.
2009	L42	Geradin, Damien. 2009. "A Proposed Test for Separating Pro-competitive Conditional Rebates from Anti-competitive Ones." <i>World Competition: Law and Economics Review</i>, 32(1): 41-70. While the granting of rebates is a common commercial practice largely used by dominant and non-dominant firms, the assessment of rebates is one of the most complex and unsettled

		areas of competition law. In the EU, the decisional practice of the European Commission and the case-law of the Community courts have been harshly criticized as unnecessarily strict, following a form-based approach that sits uneasily with modern economic theory. In response, DG COMP published in December 2005 a Discussion Paper that promotes an effects-based approach to the assessment of rebates. This approach was recently confirmed in the Guidance Paper of the Commission on Article 82 EC published in December 2008. US courts have generally shown greater deference to conditional rebates adopted by dominant firms, but the case-law remains unsettled, notably in the area of bundled rebates. Against this background, this paper proposes an analytical framework, based on a three-step test, designed to separate pro-competitive rebates from anticompetitive ones. A particular emphasis will be placed on the treatment of single product "retroactive" rebates, which create complex issues.
2009	L81	CV: Hillman, Robert A., and Jeffrey J. Rachlinski. 2009. "Standard-Form Contracting in the Electronic Age." In <i>Behavioral Law and Economics. Volume 1.</i> , ed. Jeffrey J. 2009	M12	Larchet, Keltoume, and Jerome Pelisse. 2009. "Une professionnalisation problématique: Les experts judiciaires interprètes-traducteurs. (Problematic Skills Training: Expert Legal Translators/Interpreters. With English summary.)" <i>Formation Emploi: Revue Française de Sciences Sociales</i>, 0(108): 9-24. Focused on an analysis of the status and practices of interpreters/translators working within the legal system, this paper investigates the problematic process of skills training for this work. Expert interpreters and translators in effect have an ambiguous status, common to other forensic experts, but also largely specific. They are specialists in language and may indeed not be recognized professionals. In addition, their sociodemographic, the nature of their activities, and their working conditions mean that they are marginal experts in an invisible and undervalued activity. This paper therefore proposes, based on various types of data, to understand the problematic nature of skills training and the role played by the judiciary, the critical input factors for a dual market professional, who transcends the mere role of judicial expert.

2009	N73	Klerman, Daniel. 2009. "The Emergence of English Commercial Law: Analysis Inspired by the Ottoman Experience." <i>Journal of Economic Behavior and Organization</i>, 71(3): 638-46. Thirteenth-century England was a commercial backwater whose trade was dominated by foreigners. To accommodate and encourage foreign merchants, England modified its legal system by creating legal institutions that were available to both domestic and foreign traders. Among the most important of these institutions were streamlined debt collection procedures and mixed juries composed of both Englishmen and foreigners. By introducing institutions that treated locals and foreigners equally, England created a level playing field that enabled English merchants to become increasingly prominent in the later Middle Ages. England's ability to modernize its law was facilitated by the secular nature of English law, the representation of merchants in Parliament, and legal pluralism. Medieval England contrasts sharply with the early modern Ottoman Empire. The latter created special institutions for foreign merchants, which eventually put Ottoman Muslims at a competitive disadvantage.
2009	P24	Yao, Yang, and Linda Yueh. 2009. "Law, Finance, and Economic Growth in China: An Introduction." <i>World Development</i>, 37(4): 753-62. China has experienced remarkable economic growth for three decades despite having a weak legal system and underdeveloped financial markets thought to be crucial for economic development. An assessment of the relationship among the legal and financial systems and economic growth reveals a complex set of institutional factors that have underpinned China's marketization, and which is not premised on the establishment of a legal or financial system before development takes off. China's experience holds lessons for other developing countries struggling with imperfect legal systems and nascent financial markets, which are not uncommon features of economies at an early stage of development.
2009	P24	Feng Lu, Susan, and Yang Yao. 2009. "The Effectiveness of Law, Financial Development, and Economic Growth in an Economy of Financial Repression: Evidence from China." <i>World Development</i>, 37(4): 763-77. In an economy characterized by financial repression, enhancing the legal system may hinder the development of some aspects of the financial sector, especially informal arrangements aiming at circumventing the repression. Using Chinese provincial data in the 1990s, we find that enhanced legal system suppresses private investment and has no effect on financial depth although it increases the private share of bank credits and bank competition. We interpret these findings as evidence showing the existence of the leakage effect that moves financial resources from the privileged state sector to the rationed private sector. In addition, we find that enhanced legal system does not have a significant effect on the average GDP growth rate. We conclude that the smooth functioning of the legal system requires other institutions to complement.
2009	P25	Shen, Mingming, and Yuhua Wang. 2009. "Litigating Economic Disputes in Rural China." <i>China Review</i>, 9(1): 97-121. Development theory hypothesizes that the higher level of economic development a region has, the more likely that individuals prefer to use formal legal institutions in resolving their disputes. Drawn from a national survey conducted by the Research Center of Contemporary China at Peking University, this paper sets out to test this hypothesis in the context of China's countryside. The analysis shows first that cost concern, legal knowledge, and traditions are the main obstacles for people using the formal legal institutions. In an examination of rural residents' institutional preferences when they have economic disputes, statistical analysis reveals: 1) The speed of economic growth, rather than the level of economic prosperity, reinforces the consolidation of formal legal institutions; 2) Information and social resource factors, including media usage, legal knowledge, and social network, all have positive effects when people decide whether to go to court; 3) When economic prosperity crosses a certain threshold, its marginal effect on people's preferences decreases.
2009	P40	Lydon, Ghislaine. 2009. "A Paper Economy of Faith without Faith in Paper: A Reflection on Islamic Institutional History." <i>Journal of Economic Behavior and Organization</i>, 71(3): 647-59. This article contributes to the literature on Islamic institutional history by examining how the discounting of documents in Islamic legal practice constrained the organization of early modern Muslim trade. It is argued that the reliance on literacy, on the one hand, and an Islamic legal framework, on the other, gave early modern Muslim traders a comparative advantage in economic organization, but the lack of faith in paper as documentary evidence in Islamic law posed fundamental constraints to the development of Muslim economies.

2010	A33	Immerfall, Stefan, and Goran Therborn, eds. 2010. <i>Handbook of European Societies: Social Transformations in the 21st Century</i>, New York and Dordrecht: Springer. Twenty papers analyze the current social patterns of European integration, focusing on the social consequences of the integration process as well as the social basis of political integration. Papers discuss association and community; bureaucracy and the state; cities; cleavages and political transformations; collective action; crime and justice; culture; education; elites and power structure; identity; leisure and consumption in Europe; life course; population; religion and churches; sexuality and family formation; stratification and social mobility; transnationality; welfare state; well-being and inequality; and European integration and the elusive European dream.
2010	D24	Guzowska, Malgorzata, and Tomasz Strak. 2010. "DEA Method in Examining the Efficiency of Polish Courts." <i>Transformations in Business and Economics</i>, 9(2): 389-405. The article presents the results of the study on the technical efficiency analysis conducted in Polish provincial courts of law by means of the DEA. The analysis considered the operation of provincial courts in the years of 2006-2008. The aim of the study was not only to find ways of cutting down costs in the system, but also to answer the question if there is a possibility to reduce delays without increasing the input. The study was divided into three stages: the technical efficiency of the courts in 2006-2008, comparative analysis of the courts operation in 2006 and 2008, and the final stage was devoted to estimating maximum output of individual courts, with the efficiency frontier built on the basis of 2006-2008 observations.
2010	D31	Gutierrez-Romero, Roxana. 2010. <i>The Dynamics of the Informal Economy</i>. University of Oxford, Department of Economics, Economics Series Working Papers: CSAE WPS/2010-07. This paper analyses the factors that give rise to the existence of the informal economy and how it evolves over time. Using an occupational-choice model the paper shows that at early stages of development, informal and formal markets coexist, but in the long-run the size of the informal economy can decline depending on the initial distribution of wealth. The model shows that the higher the initial wealth inequality the larger the size of the informal economy and the higher the wealth inequality will be in the long-run. The paper calibrates the model using numerical simulations.
2010	E32 E44	Cavalcanti, Marco Antonio F. H. 2010. "Credit Market Imperfections and the Power of the Financial Accelerator: A Theoretical and Empirical Investigation." <i>Journal of Macroeconomics</i>, 32(1): 118-44. We investigate, both theoretically and empirically, the relationship between credit market imperfections and the degree of shock amplification arising from the so-called financial accelerator. We begin by simulating a dynamic stochastic general equilibrium model with two types of financial frictions – costly contract enforcement and anti-creditor bias in the judicial system. Our model builds on the standard financial accelerator framework of Bernanke et al. (1999), to which we add imperfect judicial enforcement in the line of Krassa and Villamil (2000). According to our simulations, the power of the financial accelerator may either increase or decrease with financial frictions, depending on the source and initial level of such frictions. We then turn to the empirical investigation, based on panel data for 62 countries over 1981-1999. We rely on Djankov et al. (2005) and the World Bank's Doing Business Database for proxies of credit market imperfections. According to our results, which are consistent with the theoretical model's main predictions, macroeconomic volatility and the power of the financial accelerator seem to increase with contract enforcement costs, but vary non-monotonically with the degree of anti-creditor bias in the judicial and legal system.
2010	E62	Schmitt, John, Kris Warner, and Sarika Gupta. 2010. <i>The High Budgetary Cost of Incarceration</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The United States currently incarcerates a higher share of its population than any other country in the world. We calculate that a reduction in incarceration rates just to the level we had in 1993 (which was already high by historical standards) would lower correctional expenditures by \$16.9 billion per year, with the large majority of these savings accruing to financially squeezed state and local governments. As a group, state governments could save \$7.6 billion, while local governments could save \$7.2 billion. These cost savings could be realized through a reduction by one-half in the incarceration rate of exclusively non-violent offenders, who now make up over 60 percent of the prison and jail population. A review of the extensive research on incarceration and crime suggests that these savings could be achieved without any appreciable deterioration in public safety.
2010	G24	Choi, Stephen J., Jill E. Fisch, and A. C. Pritchard. 2010. "Attorneys as Arbitrators." <i>Journal of Legal Studies</i>, 39(1): 109-57. We study the role of attorneys as arbitrators in securities arbitration. We find that arbitrators who also represent brokerage firms or brokers in other arbitrations award significantly less compensation to investor-claimants than do other arbitrators. We find no significant effect for attorney-arbitrators who represent investors or both investors and brokerage firms. The relation between representing brokerage firms and arbitration awards remains significant even when we control for political outlook. Arbitrators who donate money to Democratic political candidates award greater compensation than do arbitrators who donate to Republican

		candidates. We also study the dynamics of panel interaction. We find that the position of chair is an important factor in assessing an arbitrator's influence, although the financial relationships of other arbitrators may also affect arbitration awards. Coalitions with the other arbitrators are also important. If the chair and another panelist possess a common attribute, the effect on the arbitration award increases.

National Bureau of Economic Research, Inc. NBER Working Papers: 16626. The goal of this paper is to examine the implied penalty policies underlying the remedies created by the National Labor Relations Act (NLRA) in terms of the policies' impact on employer and union behaviors. We present a simple model of deterrence as a means of evaluating workplace penalty policies in terms of their influence on employer behavior, particularly through deterrence effects. We also compare the remedies for violations embodied in the NLRA with penalty policies under other workplace legislation, such as the Fair Labor Standards Act and the Occupational Safety and Health Act. We then evaluate the size of financial costs for violations against individuals of specific provisions of the NLRA by firms and unions for the period 2000-2009. We show that the implied penalties are modest, particularly in terms of providing sufficient incentives to comply with the law in a timely manner. Given this finding, we examine other potential remedies available under the NLRA, in particular, methods to address the impact of delays (the length of time from the filing of the charge or the issuance of the charge to the time of its adjudication before an administrative law judge at the National Labor Relations Board or through the federal courts) on workplace representation through unionization.

2010	K35	Dugar, Boris-Anze. 2010. "Novovevanje zastavljenih vrednostnih papirjev. (Realisation upon Securities Pledged as Collateral With English summary)." <i>Bančni Vestnik</i>, 59(6): 33-37. The intention of the following contribution is to introduce to the reader procedures of first establishing lien on securities and also of cashing these securities in if liabilities consolidated with lien securities are not met with in full. Regulation concerning this matter in the Slovenian legal system is inconclusive and dispensed in various legislative acts. Jurisprudence in this area is modest as well, therefore numerous question and dilemmas occur while implementing enforced regulation. If and when overdue claims are not paid in full, the creditor decides, whether he will cash in the pledged securities or not, in order to settle the borrower's debt. The procedure of cashing in depends on the type of the securities and above all on the actual contract between creditor and borrower.
2010	L32	Long, Cheryl Xiaoning. 2010. "Does the Rights Hypothesis Apply to China?" <i>Journal of Law and Economics</i>, 53(4): 629-50. Using firm-level data from a World Bank survey, this paper examines how legal development in China relates to various firm decisions. I find that a more active court system is associated with more investment, more adoption of technology, more innovation, and more complex transactions. Specifically, when a higher percentage of business disputes are resolved through the court system, firms tend to have higher investment rates, higher propensities to adopt new automated technology, and higher probabilities of developing new products. In addition, they tend to have more nonlocal sales. These findings are consistent with a sophisticated version of the rights hypothesis, in which the rule of law eventually replaces relation-based governance as a superior governance mechanism. I find two limitations of China's legal system. The court system does a better job facilitating the growth of state-owned enterprises than of private firms, and it protects local firms better than nonlocal firms.

NBER Working Papers: 15697. During Britain's industrialization, Parliament operated a forum where rights to land and resources could be reorganized. This venue enabled landholders and communities to exploit economic opportunities that could not be accommodated by the inflexible rights regime inherited from the past. In this essay, historical evidence, archival data, and statistical analysis demonstrate that Parliament increased the number of acts reorganizing property rights in response to increases in the demand for such acts. Tests with placebo groups confirm the robustness of this result. This evidence indicates that Parliament responded elastically to changes in the public's demand for reorganizing property rights. Parliament's efforts to adapt property rights to modern economic conditions may have accelerated Britain's economic ascent

2010	P43	Kahf, Monzer. 2010. "Islamic Finance: Business as Usual." <i>Journal of Islamic Economics, Banking and Finance</i>, 6(1): 11-36. Like all contracting laws, Islamic law presents two classes of principles that govern contracts: general and objective specific. First, general principles of contracting include civil aptitude, consent, and moral foundation. These are common between all legal systems and societies, although there are variations in some respects. For instance, while Islamic law defines civil competence for financial contracts at age 18, some states or countries carry the age limit to 21. Also, while all laws are founded on moral values, they differ on the extent to which they promote/incorporate moral values within the texture of law. The second group of principles reflects a specific viewpoint. In this regard, the Islamic law has a strong and detailed moral/ethical commitment and screening, prohibits the practice of interest in all its forms, and sticks to the crude reality or real-life validity.
2010	P43	Ahmad, Abu Umar Faruq, Noor Mohammad Osmani, A. K. M. Shahed, and M. Fazlul Karim. 2010. "Shari'ah Maxims and Their Implication on Modern Financial Transactions." <i>Journal of Islamic Economics, Banking and Finance</i>, 6(3): 75-104. The practices of contemporary Islamic finance have been mounted with criticisms that are assumingly based on lack of incorporating the maqasid (goals and objectives) of Shari'ah and failure to extrapolate all sources available for 'dynamising' the Islamic legal theory and practice. The Shari'ah maxims is one of the sciences which aphoristically subsume all the spectrums in which the purpose of Shari'ah is promoted. There are five basic legal maxims on which the tenet of Shari'ah is based. Some are of general application, while others apply to a particular area of Islamic jurisprudence including fiqh al-mu'amalaat (the jurisprudence of financial transactions). One such maxim which is reflected in this notion is a particular activity is permissible unless there is a clear prohibition against it. The study is aimed inter-alia to address how the application of Shari'ah maxims to financial transactions can be explored to respond to criticisms mounted about modern Islamic finance practices.

2011	B21	Backhaus, Jurgen G. 2011. "Lawyers cum Economists: Did They Bring about Law and Economics? – Gierke, Schmoller, and the German Civil Code." <i>Review of Economics and Finance</i>, 0(2): 91-95. This essay traces the question whether the key figures in the development of law and economics have been both lawyers and economists, or whether they rather were one or the other and the field emerged from close cooperation, partially in order to find out how to institutionally organize law and economics studies. A defining moment in the history of law and economics was the genesis of the German Civil Code of 1900, which profoundly changed shape due to the interaction of the lawyer Otto v. Gierke and the economist Gustav v. Schmoller. This story is narrated and analysed and lessons for today are drawn.
2011	D12 D87	Trzaskowski, Jan. 2011. "Behavioural Economics, Neuroscience, and the Unfair Commercial Practises Directive." <i>Journal of Consumer Policy</i>, 34(3): 377-92. This article suggests how and to what extent insights from behavioural economics and neuroscience may be used for the interpretation of the 2005 Unfair Commercial Practices Directive. These disciplines provide useful insight in how the average consumer's decisions are influenced by commercial information and conducts. As the Directive focuses on whether a commercial practise distorts the economic behaviour of consumers, arguments for whether a particular commercial practise should be considered unfair may be found within these disciplines. It is important to bear in mind that the assessment that courts are to make is normative, and that behavioural economics and neuroscience is of a more descriptive nature. Thus these disciplines may not help draw the fine line between the legitimate influence of commercial activities and the illegal distortion of the average consumer's behaviour. However, the average consumer test is at least in principle flexible enough to allow the inclusion of research within human decision-making in order to apply a more realistic average consumer than the "Homo Economicus" applied by the European Court of Justice.
2011	D45	Yow, Jeffrey Wern Loong. 2011. "'Creative Competition' with a Pan-European Licensing Body: Reconsidering the European Commission's Approach to Collecting Societies." <i>World Competition: Law and Economics Review</i>, 34(2): 287-308. Collecting societies are organisations which are responsible for managing the copyright licenses and royalty payments of right holders. In the European Union, collecting societies which manage the public performance of music rights have historically operated with reciprocal representation agreements, with many of them being national monopolies. These prima facie anti-competitive agreements were criticised, particularly by commercial users, who felt that such a system was inefficient and a hindrance to digital music broadcasting. On 16 July 2008, following an investigation, the European Commission adopted a decision which introduces competition between collecting societies by prohibiting membership and territorial restrictions as well as a concerted practice among the societies. The decision is the subject of an ongoing appeal. The objective of this article is to critically evaluate the decision and its implications. It will be argued that the Commission has over looked several implications of its decision, which could have negative effects on the collecting societies themselves as well as on cultural diversity in the EU. A preferable solution is to retain the respective national collecting societies, but to establish a central licensing body to grant pan-European licenses. The dynamic concept of 'creative competition' should also be implemented within the framework of each collecting society to preserve cultural diversity in the European music industry.
2011	D87	THE SAME AS D12 Trzaskowski, Jan. 2011. "Behavioural Economics, Neuroscience, and the Unfair Commercial Practises Directive." <i>Journal of Consumer Policy</i>, 34(3): 377-92.

2011	E22	Ferrando, Annalisa, and Nicolas Griesshaber. 2011. <i>Financing obstacles among euro area firms: Who suffers the most?</i>. European Central Bank, Working Paper Series: 1293. In this study we investigate the determinants of financing obstacles using survey data on a sample of around 5000 firms from the euro area countries. This completely new survey – started at the end of 2009 – gives us the opportunity to test whether firm characteristics such as size, age, economic branch, financial autonomy and ownership are valid predictors of financing obstacles also during the recent financial crisis. Our results show that only age and ownership are robust explanatory variables for firms' perceived financing obstacles while mixed results are found for size and economic branches.

2011	F51	CV: Alter, Karen J. 2011. "The Evolving International Judiciary." In <i>Annual Review of Law and Social Science. Volume 7</i> , ed. John Hagan, 387-415. Associate Editors: Kim Lane Scheppele and Tom R. Tyler. Palo Alto, Calif.: Annual Reviews.

2011	G02	Spindler, Gerald. 2011. "Behavioural Finance and Investor Protection Regulations." <i>Journal of Consumer Policy</i> , 34(3): 315-36. The article deals with behavioural assumptions in legal norms, in particular with regard to investor protection norms in Europe and Germany as well as court rulings. Whereas traditional legal norms are based on the assumption of rationale behaviour, the financials crisis has demonstrated the pitfalls of the classical notions of economics, thus leading to new insights of behavioural economics. However, it is still unclear how behavioural economics may serve as a means to improve legal protection of investors. Neither a strong paternalism nor a simple extension of information obligation may suffice in the future.
2011	G18	Brivot, Marion. 2011. "Trust in Freedom or in Equality? A Comment." <i>Accounting, Economics, and Law: A Convivium</i> , 1(2): 1-8. "At the end of the day, the notion of a 'free market' is a fiction. There is simply no such thing as a non-regulated market – a market that operates without legal, social and professional regulation. Those forms of regulation, including the criminal sanction, are precisely what distributes wealth and resources, what makes it possible for the Chicago Board of Trade to exclude non-members from the trading floor, for the Big Four accounting firms to effectively control accounting standards and for large commercial banks to essentially coordinate lending practices" (p. 242). This erudite and forcefully written book's chief endeavour is to propose a genealogy of the reason why, in the United States and, by extension, in most western neoliberal societies, proclaimed state abstention in the economic sphere combined with actual state intervention in the criminal sphere have come to be perceived as perfectly "natural" and fail to trigger much social contestation, despite the devastating social consequences that this seemingly paradoxical juxtaposition of practices has had over time.
2011	H51	Greer, Scott L. 2011. "The Weakness of Strong Policies and the Strength of Weak Policies: Law, Experimentalist Governance, and Supporting Coalitions in European Union Health Care Policy." <i>Regulation and Governance</i> , 5(2): 187-203. The experience of European Union (EU) health care services policy shows the importance of supporting coalitions in any effort to effect policy change and the extent to which the presence or absence of such coalitions can qualify generalizations about policymaking. EU health care services law is substantively liberalizing and procedurally driven by the courts, with little legislative input. But the European Court of Justice (ECJ) has been much better at establishing an EU competency in law than in causing policy development in the EU or member states. Literature on courts helps to explain why: courts are most effective when they enjoy supporting coalitions and the ECJ does not have a significant supporting coalition for its liberalizing health care services policy. Based on interview data, this article argues that the hard law of health care services deregulation and the newer forms of health care governance, such as the open method of coordination and the networks on rare diseases, depend on supporting coalitions in member states that are willing to litigate, lobby, budget, decide cases, and otherwise implement EU law and policy. Given the resistance that the Court has met in health care sectors, its overarching deregulatory approach might produce smaller effects than expected, and forms of experimentalist governance that are easy to deride might turn out to have supporting coalitions that make them unexpectedly effective.
2011	H51	Studdert, David M., Allen Kachalia, Joshua A. Salomon, and Michelle M. Mello. 2011. "Rationalizing Noneconomic Damages: A Health-Utilities Approach." <i>Law and Contemporary Problems</i> , 74(3): 57-101. A major area shaping the healthcare arena in recent decades that has received only minor attention in the Obama healthcare legislation is that of malpractice reform. This article advances the adoption of noneconomic damages schedules as an alternative to caps for addressing the "profound, longstanding, and seemingly intractable problem" of widely disparate jury valuations of such damages. The authors explain why caps on non-monetary damages – the most common reform proposal for addressing the problem of "jackpot" awards – are inadequate. The problem of rising insurance costs, warped deterrence signals, inequitable compensation, and reduced public trust and confidence in the system cannot be cured by caps that do not provide juries with substantive guidance as to what constitutes an appropriate award in a given case. They therefore advance damages schedules as "the next generation of tiered caps – more sophisticated, principled, and sensitive than their forebears." The authors draw upon methodologies developed to grade health states in formulating a health-utilities approach to schedules for noneconomic damages in malpractice cases. Studdert et al. go beyond the development of a theoretical model by providing empirical "proof of concept" for the feasibility of their approach to be further developed and refined in "careful state-based experimentation with a health utilities-based noneconomic damages schedule." Significantly, Studdert et al.'s call for the adoption of schedules for noneconomic damages can be expected to impact not only the formal arena, but also informal negotiations and settlements, offering increased predictability and higher prospects of settlement.

2011	I22	Cann, Damon, and Teena Wilhelm. 2011. "Policy Venues and Policy Change: The Case of Education Finance Reform." <i>Social Science Quarterly</i> , 92(4): 1074-95. In the U.S. states, policy development can occur in multiple venues. In fact, the likelihood of policy success may be directly related to the policy arena chosen by advocates. In this article, we examine those conditions under which policy reform results in success within education finance reform. We model the likelihood that successful reform may take place via courts, legislatures, or referenda, and whether it occurs over multiple policy events. We simultaneously estimate the relative probability of the occurrence of different possible policy events (judicial action, legislative action, and referendum) in a given state and year. Our data comprise an exhaustive analysis of all litigation and policy events in education finance over time (1971-2005), for all states. Our findings indicate court-ordered policy reform will most likely take place when judicial ideology supports it, while legislative-ordered reform is meaningfully influenced by the passage of time. We also find that policy reform via direct democracy has a resounding and constraining effect on the other branches of government. In our conclusions, we evaluate those scenarios in which reform will most likely occur within a specific policy venue, and the possible implications this may have for policy change in the states.

		with the U.S. National Labor Relations Board." <i>Betriebswirtschaft/Business Administration Review</i> , 71(3): 205-16. Are decisions by the German Federal Labor Court (Bundesarbeitsgericht, BAG) influenced by politics, and is the BAG truly independent? We address this issue by comparing the judicial organization, in particular the nomination procedure and the career system, of the BAG with that of the U.S. National Labor Relations Board (NLRB). The BAG judges are better protected than the NLRB members from political pressure exerted by the government and the legislature in power. However, the Federal government influences the nomination process of judges, so BAG decisions – as those of the NLRB – may reflect appointments that are biased towards either labor-friendly or employer-friendly candidates. We summarize the available evidence on these arguments and indicate how they may be tested by analyzing the chances of winning for labor versus employers.

2011	K19	Eisenberg, Theodore, and Henry Farber. 2011. <i>Why do Plaintiffs Lose Appeals? Biased Trial Courts, Litigious Losers, or Low Trial Win Rates?</i>. Princeton University, Department of Economics, Industrial Relations Section., Working Papers: 1329. Multiple studies find that plaintiffs who lose at trial and subsequently appeal are less successful on appeal than are losing defendants who appeal. The studies attribute this to a perception by appellate judges that trial courts are biased in favor of plaintiffs. However, at least two alternative explanations exist. First, losing plaintiffs may appeal at higher rates independent of the potential merits. Second, if plaintiffs tend to pursue to trial lawsuits where they should win on the merits less than half the time, then errors at trial will be more likely to adversely affect defendants. This study revisits the analysis of the appellate process with a theoretical model that has implications not only for appellate outcomes but for the rate of appeal. By tying together win rates at trial, appeals rates, and success rates on appeal, the model can distinguish the competing explanations for differential appellate success rates. We estimate this model using matched data on Federal District Court trials and appeals to the U. S. Circuit Courts of Appeal. We provide evidence that the lower plaintiffs success rate on appeal is due to plaintiffs' pursuing lawsuits where they should win on the merits (which we define to be an outcome that will not be reversed or remanded on appeal) less than half the time. We also provide evidence against explaining asymmetric success on appeal being attributable to trial courts favoring plaintiffs and evidence against juries being favorable to plaintiffs compared to judges.
2011	L22	CV: Schroeder, Dirk. 2011. "Normative and Institutional Limitations to a More Economic Approach." In <i>Competition Policy and the Economic Approach: Foundations and Limitations</i> , ed. Josef Drexl, Wolfgang Kerber and Rupprecht Podszun, 279-90. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2011	L66	Andreangeli, Arianna. 2011. "From Mobile Phones to Cattle: How the Court of Justice Is Reframing the Approach to Article 101 (Formerly 81 EC Treaty) of the EU Treaty." <i>World Competition: Law and Economics Review</i>, 34(2): 215-43. This paper considers the implications of the preliminary ruling in the case of Competition Authority v. Beef Industry Development Society and Barry Brothers Meats for the legal standards applicable to restrictions of competition 'by object' and analyse its wider impact on the interpretation of Article 101 TFEU (formerly Article 81 EC Treaty). Its first part will examine whether this preliminary ruling is consistent with the existing principles governing the application of Article 101(1) EU Treaty to 'restructuring deals'. The second will briefly consider the principles governing the application of section 1 of the US Sherman Act and in the light of this examination will try to gauge the wider ramifications of Barry Brothers for the interpretation of Article 101 TFEU. It will be argued that the Court of Justice of the EU, responsive to the call for a 'modernized' interpretation of this provision, applied some of the elements characterizing the more flexible and 'economics-principled' approach hitherto relevant for 'by effect' cases to the assessment of a prima facie restrictions by object. The paper will conclude that the Court of Justice, in a manner which displays some similarities with the US Supreme Court's interpretation of section 1 of the US Sherman Act, seems now to adopt an interpretation of the prohibition clause inspired more by an idea of 'continuum' between more and less serious infringements than by a relatively stark alternative between 'by object' and 'by effect' restrictions of competition.
2011	L66	Da Correggio Luciano, Laise. 2011. "The AmBev Decision and the Regulation of Economic Power in Brazil: At a Crossroads between the US and the EU Competition Law Models." <i>World Competition: Law and Economics Review</i>, 34(1): 139-55. In July 2009, AmBev was condemned in a unanimous decision by the Brazilian competition authority. The conduct in question concerned AmBev's loyalty scheme, which consisted of giving discounts to retailers with the effect of increasing barriers to entry. AmBev, which is the biggest beer manufacturer in South America and part of the multinational Anheuser-Busch InBev group, emerged from a controversial merger between Brahma and Antarctica approved by the competition authority in 1999. In the recent decision, AmBev received the highest fine ever imposed for an abuse of dominance offence in Brazil. The Brazilian competition law and policy has been shaped by both US and EU competition law and case law. This article seeks to convey the relevance and complexities of the ongoing developments and evolution of Brazilian competition law and policy, as well as the regulation of economic power. In this respect, the landmark AmBev decision is relevant as it suggests a departure from the US model and an approximation towards the EU model.
2011	M40	Brivot, Marion. 2011. "Trust in Freedom or in Equality? A Comment." <i>Accounting, Economics, and Law: A Convivium</i>, 1(2): 1-8. "At the end of the day, the notion of a 'free market' is a fiction. There is simply no such thing as a non-regulated market – a market that operates without legal, social and professional regulation. Those forms of regulation, including the criminal sanction, are precisely what distributes wealth and resources, what makes it possible for the Chicago Board of Trade to exclude non-members from the trading floor, for the Big Four accounting firms to effectively control accounting standards and for large commercial banks to essentially coordinate lending practices" (p. 242). This erudite and forcefully written book's chief endeavour is to propose a genealogy of the reason why, in the United States and, by extension, in most western neoliberal societies, proclaimed state abstention in the economic sphere combined with actual state intervention in the criminal sphere have come to be perceived as perfectly "natural" and fail to trigger much social contestation, despite the devastating social consequences that this seemingly paradoxical juxtaposition of practices has had over time.

2012	C83	Eigen, Zev J., and Yair Listokin. 2012. "Do Lawyers Really Believe Their Own Hype, and Should They? A Natural Experiment." <i>Journal of Legal Studies</i>, 41(2): 239-67. Research suggests that attorneys are too confident in the merits of their clients' cases. But attorneys often self-select (1) the area of law in which they practice, (2) the side on which to practice within that area, (3) law firms with whom they practice, and (4) the clients they represent. We exploit a natural experiment involving participants in moot court competitions at four U.S. law schools over 2 years to explore whether, after stripping away these selection biases through random assignment to the role of petitioner or respondent, legal advocates are still overconfident in their clients' claims. We find that, following participation in moot court contests, students overwhelmingly perceive that the legal merits favor the side that they were randomly assigned to represent. We also find that overconfidence is associated with poorer performance in advocacy as measured by legal writing instructors.

2012	F16	Ghosh, Arghya, and Peter E. Robertson. 2012. "Trade and Expropriation." <i>Economic Theory</i>, 50(1): 169-91. We examine the effect of international trade on expropriation in a setting where law enforcement is costly. We show that, in general equilibrium, trade liberalization can reduce expropriation activities and have a first-order effect on the gains from trade. One interpretation of our results is that unskilled-labor abundant countries facing popular militia or rebel groups will experience amplified gains from trade, as expropriation levels and cost of enforcement decline with trade liberalization. However, the model also admits the possibility that globalization causes an increase in crime, particularly for skilled-labor abundant countries.

2012	M52	Azmat, Ghazala, and Rosa Ferrer. 2012. <i>Gender Gaps in Performance: Evidence from Young Lawyers</i>. Centre for Economic Performance, LSE, CEP Discussion Papers. This paper documents and studies the gender gap in performance among associate lawyers in the United States. Unlike most high-skilled professions, the legal profession uses widely-accepted and objective methods to measure and reward lawyers' productivity: the number of hours billed to clients and the amount of new client revenue generated. We find clear evidence of a gender gap in annual performance. Male lawyers bill ten-percent more hours and bring in more than double the new client revenue. We show that the differential impact across genders in the presence of young children and the differences in aspirations to become a law-firm partner account for a large part of the difference in performance. These gaps in performance have important consequences for gender gaps in earnings. While individual and firm characteristics explain up to 50 percent of the gap in earnings, the inclusion of performance measures explains most of the remainder.

With English summary.)." <i>Economie et Prevision</i> , 0(202-203): 37-52. Courts often face the difficult problem of establishing damage causation and apportioning compensation payments among multiple tortfeasors. However, legal scholars and practitioners are still looking for a systematic apportionment method. We analyse these issues from a cooperative game perspective. The problem is modelled as a transferable utility game to which standard solution concepts can be applied. Instead of reasoning on causation, we use the traditional solution of cooperative game theory to apportion the damages due by each tortfeasor. The Shapley value is particularly suited to this legal context, as its axioms are consistent with the fundamental principles of private law.
2013	C90	Gabuthy, Yannick, and Nicolas Jacquemet. 2013. "Analyse economique du droit et methode experimentale. (Economic Analysis of Law and the Experimental Method. With English summary.)." <i>Economie et Prevision</i> , 0(202-203): 121-45. We summarise the main contributions of experimental economics to the field of law and economics. Laboratory experiments are designed to replicate a microeconomic environment and to observe the behaviour of real people interacting in that environment. Theoretical predictions can then be compared with observed behaviour to assess their empirical relevance. We present a set of illustrations derived from this comparison. We review four streams of research in experimental law and economics: the Coase theorem, competition policy, the efficiency of dispute resolution mechanisms, and criminal behaviour.

2013	L63 L67	Mueller, Bernardo, Nauro Campos, and Mariana Iooty. 2013. "Legal Institutions and Firm Performance in Brazil." <i>Economic Analysis of Law Review</i> , 4(1): 35-55. This paper analyses the specific mechanisms through which legal institutions and the Rule of Law affect firm performance using survey evidence from a sample of about one hundred Brazilian firms in the textile and electronics industries. The data provide firms' perceptions of whether judicial institutions are just, impartial, corruptible, swift, accessible, consistent, and effective, which allowed to create an index of firms' perception of legal institutions. It is analyzed how these perceptions vary across firms with different characteristics, such as large/small employer, foreign/domestic-owned, exporter/non-exporters and revenues level. The results suggest that firms that had a better perception of the judiciary increased levels of employment and had better economic performance.

2013	R23	Klugman, Joshua, Gretchen Condran, and Matt Wray. 2013. "The Role of Medicolegal Systems in Producing Geographic Variation in Suicide Rates." <i>Social Science Quarterly</i> , 94(2): 462-89. In this analysis, we ask whether there is systematic variation in the reporting of suicide by medicolegal systems and if so whether this biases estimated effects of social correlates on suicide. With cause of death records (1999-2002) and 2000 Census data, we use negative binomial regression to analyze the effects of medicolegal system on suicide and nonsuicide mortality aggregated at county of occurrence. We find that elected coroners have slightly lower official suicide rates than medical examiners (MEs; all of whom are appointed) and appointed coroners. In addition, we find that omitting medicolegal system does not bias estimates of the social determinants of suicide. Contrary to arguments that MEs' greater scientific training makes them more likely to underreport suicides, we conclude that appointed death investigators (MEs and appointed coroners) underreport suicide to a lesser degree than elected coroners, who are subject to greater public pressures that result in the misclassification of suicides.
2013	R23	Dillon, Denis, and Bryan Fanning. 2013. "The Tottenham Riots: The Big Society and the Recurring Neglect of Community Participation." <i>Community Development Journal</i> , 48(4): 571-86. This paper locates responses to the 2011 Tottenham riots within a historical analysis of planning, regeneration, and the politics of community participation in the London Borough of Haringey. It examines understandings of the role of such participation and related recommendations within three 2012 reports: North London Citizens, an alliance of mostly faith organizations; The Tottenham Community Panel established by Haringey Council; and the Riots, Communities, and Victims Panel set up by Parliament.
2013	R48	Deniz Perez, Alejandro, and Fernando Gonzalez Botija. 2013. "Contratacion publica y ayudas del fondo de cohesion para el proyecto de construccion del tren de alta velocidad en Espana. (Public Contracts and Assistance from the Cohesion Fund for the High-Speed Rail Line in Spain. With English summary.)." <i>Revista Universitaria Europea</i> , 0(19): 65-86. This article refers to the application for annulment of Commission Decision C(2011) 1023 final on 18 February 2011, reducing assistance from the Cohesion Fund for the project phases entitled "Supply and assembly of track materials for the Madrid-Zaragoza-Barcelona-French border High-Speed Line. Madrid-Lleida section"; "Madrid-Barcelona High-Speed Rail line. Lleida-Martorell section (Platform, 1st phase)"; "Madrid-Zaragoza-Barcelona-French border High-Speed Line. Approaches to Zaragoza"; "Madrid-Barcelona-French border High-Speed Line. Lleida-Martorell section. X-A sub-section (Olerdola – Avinyonet del Penedes)," "New High-Speed rail access to Levante. La Gineta-Albacete sub-section (Platform)" and the application for partial annulment of the same decision so far as concerns the corrections made by the Commission. The Court dismisses the actions.
2013	Z18	Cesur, Resul, and Naci H. Mocan. 2013. <i>Does Secular Education Impact Religiosity, Electoral Participation and the Propensity to Vote for Islamic Parties? Evidence from an Education Reform in a Muslim Country.</i> National Bureau of Economic Research, Inc. NBER Working Papers: 19769. Turkey, which is a predominantly Muslim country, enacted an education law in 1997 which increased the compulsory secular education from five to eight years. We employ a unique nation-wide survey of adults in 2012 to investigate the impact of education on religiosity, lifestyles and political preferences by using exposure to the law as an instrument for schooling. The data set includes information about the extent of religiosity, lifestyle choices (e.g. modern, conservative, religious), ethnic background (e.g. Kurd, Turk, Arab) and the religious sect of the respondents (Sunni, Alevite Shii'te, etc.). The results show that the reform had a significant impact on middle school completion for both men and women, with stronger effects on women. An increase in education, generated by exposure to the law, decreases women's propensity to identify themselves as religious. Education also lowers women's tendency to wear a religious head cover (head scarf, religious turban or burka) and it increases their propensity to have a modern lifestyle. Education reduces women's propensity to cast a vote for Islamic parties, but it has no impact on the propensity to vote. Education has no statistically significant impact on men's religiosity or their tendency to vote for Islamic parties. The results are robust to controlling for indicators of individuals' economic well-being as well as variations in empirical specification of the treatment by the law. Using a smaller version of the survey, conducted in 2008, we perform a variety of tests, which demonstrate that the results are not due to a cohort effect. Finally, we show that the effect of education on religiosity and voting preference is not working through migration, residential location or labor force participation.

Table K41.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	D24	CV: Tulkens, Henry. 2006. "On FDH Efficiency Analysis: Some Methodological Issues and Applications to Retail Banking, Courts and Urban Transit." In <i>Public Goods, Environmental Externalities and Fiscal Competition: Selected Papers on Competition, Efficiency and Cooperation in Public Economics</i> by Henry Tulkens. Henry Tulkens, 311-42. Edited and introduced by Parkash Chander, Jacques Dreze, C. Knox Lovell, and Jack Mintz. New York: Springer.
2006	D70	Skaperdas, Stergios. 2006. Bargaining Versus Fighting. University of California-Irvine, Department of Economics, Working Papers: 060705. I examine the determinants of conflict and settlement by embedding probabilistic contests in a bargaining framework. Different costly enforcement efforts (e.g., arming, litigation expenditures) induce different disagreement points and Pareto frontiers. After examining the incentives for settlement, I demonstrate how different division rules and bargaining norms have real, economic effects. I then analyze some sources of conflict. I emphasize long-term, strategic considerations by examining an illustrative model and discussing particular historical examples.

Year	DE	Title and Abstract
2006	E23	Narayan, Paresh Kumar, and Russell Smyth. 2006. "Temporal Causality and the Dynamics of Judicial Appellate Caseload, Real Income and Socio-economic Complexity in Australia." <i>Applied Economics</i>, 38(19): 2209-19. This study applies Granger causality tests within a multivariate error correction framework to examine the relationship between judicial caseload, real income and urbanization for Australia using annual data from 1904 to 2001. Decomposition of variance and impulse response functions are also considered. The Granger causality results as well as the decomposition of variance and impulse response functions suggest that urbanization is the most exogenous of the three variables in both the long run and short run while judicial caseload and real income are relatively exogenous in the short run.
2006	E24 J53	Berger, Helge, and Michael Neugart. 2006. <i>Labor Courts, Nomination Bias, and Unemployment in Germany</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 1752. Labor courts play an important role in determining the effective level of labor market regulation in Germany, but their application of law may not be even-handed. Based on a simple theoretical model and a new panel data set, we identify a nomination bias in labor court activity - that is, court activity varies systematically with the political leaning of the government that has appointed judges. In an extension, we find a significant positive relation between labor court activity and unemployment, even after controlling for the endogeneity of court activity. The results have potentially important policy implications regarding the independence of the judiciary and labor market reforms.
2006	F21	CV: Zegers, Jean-Benoit. 2006. "Foreign Investment Protection in Saudi Arabia." In <i>Doing Business with Saudi Arabia</i>, ed. Anthony Shoult, 97-115. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	F34 K49	Miller, Marcus, and Dania Thomas. 2006. <i>Sovereign Debt Restructuring: the Judge, the Vultures and Creditor Rights</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5710. What role did the US courts play in the Argentine debt swap of 2005? What are the implications for the future of creditor rights in sovereign bond markets? The judge in the Argentine case has, it appears, deftly exploited creditor heterogeneity--between holdouts seeking capital gains and institutional investors wanting a settlement--to promote a swap with a supermajority of 76% of creditors. Our analysis of Argentine debt litigation reveals a process of "judge-mediated" sovereign debt restructuring, which resolves the key issues of Transition and Aggregation--two of the roles envisaged for the IMF's still-born Sovereign Debt Restructuring Mechanism (SDRM). For the future we note how the judge-mediated sovereign debt restructuring, together with creditor committees, may complement the market-based alternative promoted by the Treasury, namely collective action clauses (CACs) in sovereign bond contracts.
2006	G24	Leung, Sidney, and Bin Srinidhi. 2006. "The Effect of the Private Securities Litigation Reform Act on Analyst Forecast Properties: The Impact of Firm Size and Growth Opportunities." <i>Journal of Business Finance and Accounting</i>, 33(5-6): 767-92. We provide evidence that the effect of the Private Securities Litigation Reform Act (the Act) of 1995 on analyst forecast properties is conditional on firm size and growth opportunities. We show that analyst coverage, frequency of forecast revisions, forecast errors and dispersion after the Act decreased for large firms and for firms with low growth opportunities but increased for small firms and for firms with high growth opportunities. These results are consistent with the hypothesis that the Act results in additional high quality disclosures in large firms, which face higher litigation risk and tighter scrutiny from investors but not in smaller firms. Our findings of increases in analyst coverage and revision but deterioration in accuracy and precision of analyst forecasts for firms with high growth opportunities after the Act suggest that in spite of increased corporate disclosures, the information environment for analysts deteriorated in those firms.
2006	G34	CV: Fingleton, John. 2006. "The Role of Economics in Merger Review." In <i>Regulating Utilities and Promoting Competition: Lessons for the Future</i>, ed. Colin Robinson, 161-80. Cheltenham, U.K. and Northampton, Mass.: Elgar In association with the Institute of Economic Affairs and the London Business School.
2006	H76	Raghav, Manu. 2006. <i>Why do budgets received by state prosecutors vary across districts in the United States?</i>. Center for Applied Economics and Policy Research, Economics Department, Indiana University Bloomington, Caep Working Papers: 2006-018. This paper analyzes how the budget allocated to state prosecutors varies from one district to another and the reasons for such variation by using theoretical and empirical methods. The main results of this paper are as follows: Other factors being equal, more politically conservative prosecutorial districts get less budget, this decrease in budget with political conservatism is steeper in more affluent and also in more populous districts, and that there are fixed costs in operating a prosecutor's office. Other less surprising results are that other factors remaining same, prosecutorial budget increases with the population, the crime rate, and with the affluence of the district.
2006	J53	THE SAME AS E24 Berger, Helge, and Michael Neugart. 2006. <i>Labor Courts, Nomination Bias, and Unemployment in Germany</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 1752.
2006	K49	THE SAME AS F34 Miller, Marcus, and Dania Thomas. 2006. <i>Sovereign Debt Restructuring: the Judge, the Vultures and Creditor Rights</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5710.
2006	L10	Graham, Stuart J. H., and Dietmar Harhoff. 2006. <i>Can Post-Grant Reviews Improve Patent System Design? A Twin Study of US and European Patents</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5680. This paper assesses the impact of adopting a post-grant review institution in the US patent system by comparing the "opposition careers" of European Patent Office (EPO) equivalents of litigated US patents to those of a control group of EPO patents. We demonstrate several novel methods of "twinning" US and European patents and investigate the implications of employing these different methods in our data analysis. We find that EPO equivalents of US litigated patent applications are more likely to be awarded EPO patent protection than are equivalents of unlitigated patents, and the opposition rate for EPO equivalents of US litigated patents is about three times higher than for equivalents of unlitigated patents. Patents attacked under European opposition are shown to be either revoked completely or narrowed in about 70 percent of all cases. For EPO equivalents of US litigated patents, the appeal rate against opposition outcomes is considerably higher than for control-group patents. Based on our estimates, we calculate a range of net welfare benefits that would accrue from adopting a post-grant review system. Our results provide strong evidence that the United States could benefit substantially from adopting an administrative post-grant patent review, provided that the post-grant mechanism is not too costly.
2006	L53	CV: Zegers, Jean-Benoit. 2006. "Foreign Investment Protection in Saudi Arabia." In <i>Doing Business with Saudi Arabia</i>, ed. Anthony Shoult, 97-115. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	L60	Pyle, William. 2006. "Resolutions, Recoveries and Relationships: The Evolution of Payment Disputes in Central and Eastern Europe." <i>Journal of Comparative Economics</i>, 34(2): 317-37. In this article, we use a survey of small and medium-sized manufacturing enterprises in three Central and East European countries to investigate the resolution of commercial disputes and the ability of aggrieved parties to recover damages. The evidence suggests that the spatial relationship of the disputants and the claimant's membership in a business association are important to the outcomes. These findings complement results regarding the costs of transacting and market evolution in other contexts. Specifically, greater geographic distance between trade partners is associated with greater transaction costs that can be attenuated by non-public institutions that facilitate information exchange.
2006	M16	CV: Zegers, Jean-Benoit. 2006. "Foreign Investment Protection in Saudi Arabia." In <i>Doing Business with Saudi Arabia</i>, ed. Anthony Shoult, 97-115. Third edition. Global Market Briefings. London and Philadelphia: GMB.

2006	R11	Narayan, Paresh Kumar, and Russell Smyth. 2006. "Temporal Causality and the Dynamics of Judicial Appellate Caseload, Real Income and Socio-economic Complexity in Australia." <i>Applied Economics</i> , 38(19): 2209-19. This study applies Granger causality tests within a multivariate error correction framework to examine the relationship between judicial caseload, real income and urbanization for Australia using annual data from 1904 to 2001. Decomposition of variance and impulse response functions are also considered. The Granger causality results as well as the decomposition of variance and impulse response functions suggest that urbanization is the most exogenous of the three variables in both the long run and short run while judicial caseload and real income are relatively exogenous in the short run.

2007	B00 D30 D91	Jolls, Christine. 2007. <i>Behavioral Law and Economics</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12879. Behavioral economics has been a growing force in many fields of applied economics, including public economics, labor economics, health economics, and law and economics. This paper describes and assesses the current state of behavioral law and economics. Law and economics had a critical (though underrecognized) early point of contact with behavioral economics through the foundational debate in both fields over the Coase theorem and the endowment effect. In law and economics today, both the endowment effect and other features of behavioral economics feature prominently and have been applied in many important legal domains. The paper concludes with reference to a new emphasis in behavioral law and economics on "debiasing through law" - using existing or proposed legal structures in an attempt to reduce people's departures from the traditional economic assumption of unbounded rationality.

2007	F53	Voeten, Erik. 2007. "The Politics of International Judicial Appointments: Evidence from the European Court of Human Rights." <i>International Organization</i> , 61(4): 669-701. Theories of government-international court relations assume that judges share an interest in expanding the reach of their court. Yet, casual observation suggests that international judges vary in their activist orientations and that governments selectively appoint judges. This article explores a new data set of dissents in the European Court of Human Rights (ECHR) to estimate the ideal points of judges. The results show that activism-restraint is indeed the main dimension of contestation among judges. Variation in judicial activism cannot be accounted for by different legal cultures of judges or by levels of domestic human rights observance in the judges' countries of origins. Instead, aspiring European Union (EU) members and governments more favorably disposed toward European integration appoint more activist judges. These results imply that politics matters in the appointment of international judges and that EU expansion was an important driving force behind the ECHR's increased activism. More generally, the analysis suggests that agent selection is an important and understudied tool for influencing international organizations.

2007	J22	Fenn, Paul, Alastair Gray, and Neil Rickman. 2007. "Standard Fees for Legal Aid: An Empirical Analysis of Incentives and Contracts." <i>Oxford Economic Papers</i> , 59(4): 662-81. This paper asks whether lawyers respond to financial incentives in ways that are consistent with predictions from contract theory. It uses data collected from before/after the introduction of standard fees for legal aid lawyers in England and Wales. For some inputs (not all), these substituted fixed price contracts for retrospective fee-for-service remuneration. We consider the effects of these new contracts on case-level inputs and examine the extent of substitution across inputs remunerated by fixed prices and fee-for-service. We find that lawyers' responses were consistent with theory: (i) high-powered incentives for cost-reduction lowered inputs that may have been difficult to monitor, and (ii) substitution across inputs took place in line with multitask agency. Our results have implications for legal aid expenditure control, and current policies on personal injury litigation, as well as providing empirical evidence on the effects of remuneration contracts.

2007	O18 Q15	Rao, Nitya. 2007. "Custom and the Courts: Ensuring Women's Rights to Land, Jharkhand, India." <i>Development and Change</i> , 38(2): 299-319. Based on field research in Dumka district, Jharkhand, this article examines the mechanisms through which women operationalize their rights to land. It questions the polarization of legitimization systems into statutory codes and customary practices, as operating independent of each other, and demonstrates the political and temporal situatedness of 'law', and the processes of hybridization that allow for the actualization of a legal right, by providing it social recognition and validity. The article explores the choice of different arenas by women for making their claims, with the choice of a particular arena depending not just on access and resource availability, but also on the women's social positionality.

2007	R00	Guttinger, Philippe. 2007. "Approche du paysage en droit francais. (The Concept of Landscape in French Law. With English summary.)" <i>Cahiers d'Economie et Sociologie Rurales</i> , 0(84-85): 11-60. The study of the correlations between yesterday and today's juridical rules and types of landscape is still to be made. Nevertheless, the association "right and landscape" can provoke more theoretical thoughts to the jurists. The term "landscape" appeared in French law in 1906. More recently, the law of January 8th 1993, named "Landscapes Law", confirms the landscape as a value to be promoted to the biggest benefit of the individuals and the Society. However the jurists still agree to wonder how the Right takes possession of the landscape. First, two questions will be examined: the juridical definition of the landscape and its juridical qualification, that is to say the operation to enter a fact into the categories of Right and, consequently, to assure it a full reception in the legal system. However, the Napoleonic Civil Code specified the juridical categories of the property law used in French law and the category "common heritage" is hardly satisfactory. Then, the internal tensions present in the rules applicable to landscapes will be assessed: they can be explained by the burst of these rules and mostly by the multiplicity and the variety of the persons subject to feel concerned by the future of the very landscape. Private possession, public possession, and common possession are indeed likely to express themselves, and the promoters of a public policy centred on the protection or the management of the landscape have to keep this fact continually in mind. More precisely, we evaluate if French law considers the wish of common possession of the landscape, a tendency highlighted by the Council of Europe in its European Landscape Convention.
2007	R21 R28 R38	Wasmer, Etienne. 2007. "Analyse economique du marche du logement locatif. (An Economic Analysis of the Rental Housing Market. With English summary.)" <i>Revue Economique</i> , 58(6): 1247-64. Housing is fully an economic good. Demand and supply factors play first order roles on prices and quantity exchanged. It is also a heavily regulated market. The law, in particular in France, is complex, its execution described by the "Code de procedure civile" is even more complex. In this text, we focus on the rental housing market and attempt to rationalize the existence of such regulations by various market imperfections. In a first part, we describe the length of litigation procedures between landlords and tenants. In a second part, we study the consequences of such delays under adverse selection: landlords attempt to screen tenants according to their (exogenous) propensity to sustain the rent. In a third part, we consider moral hazard issues, whereby tenants undertake actions affecting their likelihood of defecting on the rent. We conclude on the need for economists to consider asymmetries of information in urban economics and for law scholars willing to defend the Civil Code of French origin, to investigate where economic inefficiencies lie in order to keep its initial spirit.

2007	R58	Willey, Stephen. 2007. "Planning Appeal Processes: Reflections on a Comparative Study." <i>Environment and Planning A</i> , 39(7): 1676-98. The author reflects on a recent comparative study of the planning appeal systems in England and three Australian states. A range of issues relating to the processes by which appeals are heard, issues of expert evidence, and the composition and expertise of the appeal body are examined. A number of areas where appeal processes might be improved are highlighted and it is concluded that although each of these systems is unique, they are all confronted by similar challenges. In a theoretical sense, the author observes that there is currently a significant lacuna in planning knowledge with respect to understanding planning-appeals processes.

2008	A20	Baye, Michael R., and Joshua D. Wright. 2008. <i>Is Antitrust Too Complicated for Generalist Judges? The Impact of Economic Complexity and Judicial Training on Appeals</i> . Indiana University, Kelley School of Business, Department of Business Economics and Public Policy, Working Papers: 2008-19. Modern antitrust litigation sometimes involves complex expert economic and econometric analysis. While this boom in the demand for economic analysis and expert testimony has clearly improved the welfare of economists--and schools offering basic economic training to judges--little is known about the empirical effects of economic complexity or judges' economic training on decision-making in antitrust litigation. We use a unique data set on antitrust litigation

Year	DE	Title and Abstract
		in district courts during 1996--2006 to examine whether economic complexity impacts decisions in antitrust cases, and thereby provide a novel test of the frequently asserted hypothesis that antitrust analysis has become too complex for generalist judges. We also examine the impact of one institutional response to economic complexity--basic economic training by judges. We find that decisions involving the evaluation of complex economic evidence are significantly more likely to be appealed, and decisions of judges trained in basic economics are significantly less likely to be appealed than are decisions by their untrained counterparts. Our results are robust to a variety of controls, including the type of case, circuit, and the political party of the judge. Our tentative conclusion, based on a revealed preference argument that views a party's appeal decision as an indication that the district court got the economics wrong, is that there is support for the hypothesis that some antitrust cases are too complicated for generalist judges.
2008	B15	Voigt, Stefan. 2008. <i>The (Economic) Effects of Lay Participation in Courts - A Cross-Country Analysis</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2365 Legal philosophers like Montesquieu, Hegel and Tocqueville have argued that lay participation in judicial decision-making would have benefits reaching far beyond the realm of the legal system narrowly understood. From an economic point of view, lay participation in judicial decision-making can be interpreted as a renunciation of an additional division of labor, which is expected to cause foregone benefits in terms of the costs as well as the quality of judicial decision-making. In order to be justified, these foregone benefits need to be overcompensated by other - actually realized - benefits of at least the same magnitude. This paper discusses pros and cons of lay participation, presents a new database and tests some of the theoretically derived hypotheses empirically. The effects of lay participation on the judicial system, a number of governance variables but also on economic performance indicators are rather modest. A proxy representing historic experiences with any kind of lay participation is the single most robust variable.

2008	H40	Stremitzer, Alexander. 2008. <i>Plaintiffs exploiting Plaintiffs</i>. University of Bonn, Germany, Bonn Econ Discussion Papers We consider a model of a single defendant and N plaintiffs where the total cost of litigation is fixed on the part of the plaintiffs and shared among the members of a suing coalition. By settling and dropping out of the coalition, a plaintiff therefore creates a negative externality on the other plaintiffs. It was shown in Che and Spier (2007) that failure to internalize this externality can often be exploited by the defendant. However, if plaintiffs make sequential take-it-or-leave-it settlement offers, we can show that they will actually be exploited by one of their fellow plaintiffs rather than by the defendant. Moreover, if litigation is a public good as is the case in shareholder derivative suits, parties may fail to reach a settlement even having complete information. This may explain why we observe derivative suits in the US but not in Europe.

CEPR Discussion Papers: 6946 We study how fragmentation of patent rights ('patent thickets') and the formation of the Court of Appeal for the Federal Circuit (CAFC) affected the duration of patent disputes, and thus the speed of technology diffusion through licensing. We develop a model of patent litigation which predicts faster settlement agreements when patent rights are fragmented and when there is less uncertainty about court outcomes, as was associated with the 'pro-patent shift' of CAFC. The model also predicts that the impact of fragmentation on settlement duration should be smaller under CAFC. We confirm these predictions empirically using a dataset that covers nearly all patent suits in U.S. federal district courts during the period 1975-2000. Finally, we analyze how fragmentation affects total settlement delay, taking into account both reduction in duration per dispute and the increase in the number of required patent negotiations associated with patent thickets.

2008	P51	Balas, Aron, Rafael La Porta, Florencio Lopez-de-Silanes, and Andrei Shleifer. 2008. <i>The Divergence of Legal Procedures</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13809. Djankov et al. (2003a) propose and measure for 109 countries in the year 2000 an index of formalism of legal procedure for two simple disputes: eviction of a non-paying tenant and collection of a bounced check. For a sub-sample of 40 countries, we compute this index every year starting in 1950, which allows us to study the evolution of legal rules. We find that between 1950 and 2000, the formalism of legal procedure did not converge, and possibly diverged, between common law and French civil law countries. At least in this specific area of law, the results are inconsistent with the hypothesis that national legal systems are converging, and support the view that legal origins exert long lasting influence on legal rules.
2008	P51	Voigt, Stefan. 2008. <i>The (Economic) Effects of Lay Participation in Courts - A Cross-Country Analysis</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2365. Legal philosophers like Montesquieu, Hegel and Tocqueville have argued that lay participation in judicial decision-making would have benefits reaching far beyond the realm of the legal system narrowly understood. From an economic point of view, lay participation in judicial decision-making can be interpreted as a renunciation of an additional division of labor, which is expected to cause foregone benefits in terms of the costs as well as the quality of judicial decision-making. In order to be justified, these foregone benefits need to be overcompensated by other - actually realized - benefits of at least the same magnitude. This paper discusses pros and cons of lay participation, presents a new database and tests some of the theoretically derived hypotheses empirically. The effects of lay participation on the judicial system, a number of governance variables but also on economic performance indicators are rather modest. A proxy representing historic experiences with any kind of lay participation is the single most robust variable.

2009	G01	Tuleasca, Luminita. 2009. "Insolvency in the Context of the Present Financial Crises--A Comparative Analysis." <i>Romanian Economic and Business Review</i>, 4(2): 33-44. This paper presents the current trends in the view of various national states and their impact on the application of collective insolvency proceedings, also called bankruptcy procedure in common language, by analysing their main pieces of legal regulation, extremely useful both for specialists as well as for creditors and debtors. The fact is that thanks to this procedure, businesses which are in a state of financial crisis, either actual or upcoming can be placed under court protection from creditors which results in blocking enforcement and increasing interest and penalties, allowing them a new start through a reorganization of their activities. Reorganizing the activities of insolvent debtors activity may also be in the interest of creditors, if they cannot obtain sufficient repayment through the debtor's bankruptcy. Thus, requests to open insolvency proceedings by them will appear as a means to preserve their rights and to avoid irreversible deterioration of the situation of the debtor. On the other hand, an aggressive insolvency procedure may be used by creditors as a means of pressure in order to obtain a quick settlement of their receivables from solvent borrowers acting in a state of panic created by the existence of an application to open a bankruptcy procedure. And not least, the paper presents how the situation has seriously deteriorated regarding the criteria allowing businesses to apply for an insolvency procedure and the proper use of the benefits of this procedure.

2009	G30	Gennaioli, Nicola, and Enrico Perotti. 2009. Standardized enforcement: Access to justice vs contractual innovation. Department of Economics and Business, Universitat Pompeu Fabra. Economics Working Papers. We model the different ways in which precedents and contract standardization shape the development of markets and the law. In a setup where more resourceful parties can distort contract enforcement to their advantage, we find that the introduction of a standard contract reduces enforcement distortions relative to precedents, exerting two effects: i) it statically expands the volume of trade, but ii) it crowds out the use of innovative contracts, hindering contractual innovation. We shed light on the large scale commercial codification occurred in the 19th century in many countries (even Common Law ones) during a period of booming commerce and long distance trade.

(Access and Career of Public Servants: The Specific Case of Prosecutors in France. With English summary.)." <i>Economies et Societes</i>, 43(1): 27-54. The judiciary system offers a specific example of how careers evolve in the public sector in France. A magistrate can always choose between a career as a prosecutor or as a magistrate. This paper addresses the following issues: on the demand side, what variables do affect this choice, and on the supply side, is it efficient to restrict the choice to one specific career? In order to become a prosecutor rather than a magistrate: is there a specific skill to acquire, and to invest in? This issue is relevant in the French debate where prosecutors and magistrates are hired through the same school and the same rules of careers. We invest this issue through three different data sources. We find that there is no evidence of a specific skill but rather a choice, an exogenous preference linked to age or matrimonial status, or a preference revealed by experience. Thus we find no efficiency argument in favor of segmentation between prosecutors and magistrates.

2009	N32	Konnoth, Craig J. 2009. "Created in Its Image: The Race Analogy, Gay Identity, and Gay Litigation in the 1950s-1970s." <i>Yale Law Journal</i>, 119(2): 316-72. Existing accounts of early gay rights litigation largely focus on how the suppression and liberation of gay identity affected early activism. This Note helps complicate these dynamics, arguing that gay identity was not just suppressed and then liberated, but substantially transformed by activist efforts during this period, and that this transformation fundamentally affected the nature of gay activism. Gay organizers in the 1950s and 1960s moved from avoiding identity-based claims to analogizing gays to African-Americans. By transforming themselves in the image of a successful black civil rights minority, activists attempted to win over skeptical courts in a period when equal protection doctrine was still quite fluid. Furthermore, through this attempted identity transformation, activists replaced stigmatizing medico-religious models of homosexuality with self-affirming civil rights-based models. This identity transformation through analogy cemented gay rank-and-file perception of the social treatment they faced as unjust, and helped determine what remedies gays would seek. For example, defensive gay litigation of the 1950s soon gave way to the affirmative impact-type litigation of the civil rights movement. Similarly, in the image of the 1960s racial justice movement, 1970s gays began to pursue legal acceptance of gay marriage rather than first seeking intermediate relationship recognition. Thus, analogies and identity claims can be useful tools for perceiving and remedying oppression. They should, however, be tools that unite, not divide groups: gays and blacks, especially, should recognize their (contingent) commonalities, created as gays remade themselves in the image of blacks.
2009	O11	Chemin, Matthieu. 2009. "The Impact of the Judiciary on Entrepreneurship: Evaluation of Pakistan's "Access to Justice Programme"." <i>Journal of Public Economics</i>, 93(1-2): 114-25. In 2002, the Pakistani government implemented a judicial reform that cost \$350 million or 0.1% of Pakistan's 2002 GDP. This reform did not involve increased incentives for judges to improve efficiency but merely provided them with more training. Nonetheless, the reform had dramatic effects on judicial efficiency and consequently on entrepreneurship: judges disposed of a quarter more cases and entry rate of new firms increased by half due to the reform. Using data from the World Bank Group Entrepreneurship Database, our estimates suggest that this translates into an increase of Pakistan's GDP by 0.5%.

2010	E13	Fabbri, Daniela. 2010. "Law Enforcement and Firm Financing: Theory and Evidence." <i>Journal of the European Economic Association</i> , 8(4): 776-816. This paper investigates the economic effects on firms' policies of differences in law enforcement. We find that in judicial districts where trials are longer, bank financing is more costly and firms are smaller. However, we do not find any significant relation between law enforcement and firms' leverage ratio. We rationalize our results within a two-region dynamic general equilibrium model with asymmetric information and collateralized credit contracts. We find that a stronger enforcement of creditors' rights not only improves credit conditions (partial equilibrium effect), but also fosters individual capital accumulation (general equilibrium effect). In line with this theoretical prediction, we find a positive relation between individual savings and quality of legal enforcement.

2010	H10	Anwar, Shamena, Patrick Bayer, and Randi Hjalmarsson. 2010. <i>Jury Discrimination in Criminal Trials</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16366. This paper examines the impact of jury racial composition on trial outcomes using a unique dataset of all felony trials in Sarasota County, Florida between 2004 and 2009. We utilize a research design that exploits day-to-day variation in the composition of the jury pool to isolate quasi-random variation in the composition of the seated jury. We find strong evidence that all-white juries acquit whites more often and are less favorable to black versus white defendants when compared to juries with at least one black member. Using the Anwar-Fang rank order test, we find strong statistical evidence of discrimination on the basis of defendant race. These results are consistent with racial prejudice on the part of white jurors, black jurors, or both. Using a simple model of jury selection and decision-making, we replicate the entire set of empirical regularities observed in the data, including the fact that blacks in the jury pool are just as likely as whites to be seated. Simulations of the model suggest that jurors of each race are heterogeneous in the standards of evidence that they require to convict and that both black and white defendants would prefer to face jurors of the same race.

2010	H53 J32	Hyatt, Henry. 2010. <i>The Closure Effect: Evidence from Workers Compensation Litigation</i> . Center for Economic Studies, U.S. Census Bureau, Working Papers. Consideration of the "best interests" of Workers Compensation (WC) claimants often involves the assumption that those who receive benefits in a "lump-sum" behave "too myopically" with respect to labor supply. However, many attorneys argue that lump-sum settlements induce a beneficial "sense of closure." In this paper, I provide an empirical context for these ideas using a unique set of linked administrative databases owned by the State of California. Upon receipt of a court-approved lump-sum settlement, WC claimants immediately increase labor supply. No such change is found for claimants who receive a court-approved settlement in which the insurer provides benefits over time, suggesting that the method of litigation settlement is a determinant of labor supply.

National Bureau of Economic Research, Inc, NBER Working Papers: 16626. The goal of this paper is to examine the implied penalty policies underlying the remedies created by the National Labor Relations Act (NLRA) in terms of the policies' impact on employer and union behaviors. We present a simple model of deterrence as a means of evaluating workplace penalty policies in terms of their influence on employer behavior, particularly through deterrence effects. We also compare the remedies for violations embodied in the NLRA with penalty policies under other workplace legislation, such as the Fair Labor Standards Act and the Occupational Safety and Health Act. We then evaluate the size of financial costs for violations against individuals of specific provisions of the NLRA by firms and unions for the period 2000-2009. We show that the implied penalties are modest, particularly in terms of providing sufficient incentives to comply with the law in a timely manner. Given this finding, we examine other potential remedies available under the NLRA, in particular, methods to address the impact of delays (the length of time from the filing of the charge or the issuance of the charge to the time of its adjudication before an administrative law judge at the National Labor Relations Board or through the federal courts) on workplace representation through unionization.

2011	H50	Asghar, Nabila, Parvez Azim, and Hafeez ur Rehman. 2011. "Impact of Government Spending in Social Sectors on Economic Growth: A Case Study of Pakistan." <i>Journal of Business and Economics (Air University)</i> , 3(2): 214-34. This study intends to observe empirically the effect of government spending in social sectors on economic growth during the period 1974-2008 in Pakistan. The results of the study reveal the existence of positive relationship between government expenditure on human capital and economic and community services and economic growth. The government expenditure on law and order and subsidies appear to be negatively related to economic growth. This study may help the policy makers in formulating and implementing policies consistent with the prevailing economic conditions of the country. The study suggests that government expenditure on subsidies should be gradually reduced and expenditure on law and order needs to be re-allocated for providing educational and training facilities to the concerned employees responsible for maintaining law and order in the country.

2011	K19	Eisenberg, Theodore, and Henry Farber. 2011. <i>Why do Plaintiffs Lose Appeals? Biased Trial Courts, Litigious Losers, or Low Trial Win Rates?</i> . Princeton University, Department of Economics, Industrial Relations Section., Working Papers: 1329. Multiple studies find that plaintiffs who lose at trial and subsequently appeal are less successful on appeal than are losing defendants who appeal. The studies attribute this to a perception by appellate judges that trial courts are biased in favor of plaintiffs. However, at least two alternative explanations exist. First, losing plaintiffs may appeal at higher rates independent of the potential merits. Second, if plaintiffs tend to pursue to trial lawsuits where they should win on the merits less than half the time, then errors at trial will be more likely to adversely affect defendants. This study revisits the analysis of the appellate process with a theoretical model that has implications not only for appellate outcomes but for the rate of appeal. By tying together win rates at trial, appeals rates, and success rates on appeal, the model can distinguish the competing explanations for differential appellate success rates. We estimate this model using matched data on Federal District Court trials and appeals to the U. S. Circuit Courts of Appeal. We provide evidence that the lower plaintiffs success rate on appeal is due to plaintiffs' pursuing lawsuits where they should win on the merits (which we define to be an outcome that will not be reversed or remanded on appeal) less than half the time. We also provide evidence against explaining asymmetric success on appeal being attributable to trial courts favoring plaintiffs and evidence against juries being favorable to plaintiffs compared to judges.

"Impact of Government Spending in Social Sectors on Economic Growth: A Case Study of Pakistan." <i>Journal of Business and Economics (Air University)</i> , 3(2): 214-34. This study intends to observe empirically the effect of government spending in social sectors on economic growth during the period 1974-2008 in Pakistan. The results of the study reveal the existence of positive relationship between government expenditure on human capital and economic and community services and economic growth. The government expenditure on law and order and subsidies appear to be negatively related to economic growth. This study may help the policy makers in formulating and implementing policies consistent with the prevailing economic conditions of the country. The study suggests that government expenditure on subsidies should be gradually reduced and expenditure on law and order needs to be re-allocated for providing educational and training facilities to the concerned employees responsible for maintaining law and order in the country.
2011	O43 Q23 Q24 Q38 Q49 R10 R13	Alston, Lee J., and Krister Andersson. 2011. <i>Reducing Greenhouse Gas Emissions by Forest Protection: The Transaction Costs of REDD</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16756. Understanding and minimizing the transaction costs of policy implementation are critical for reducing tropical forest losses. As the international community prepares to launch REDD+, a global initiative to reduce greenhouse gas emissions from tropical deforestation, policymakers need to pay attention to the transactions costs associated with negotiating, monitoring and enforcing contracts between governments and donors. The existing institutional design for REDD+ relies heavily on central government interventions in program countries. Analyzing new data on forest conservation outcomes, we identify several problems with this centralized approach to forest protection. We describe options for a more diversified policy approach that could reduce the full set of transaction costs and thereby improve the efficiency of the market-based approach for conservation.

2011	P25	He, Xin. 2011. "Debt Collection in the Less Developed Regions of China: An Empirical Study from a Basic-Level Court in Shaanxi Province." <i>China Quarterly</i> , 0(206): 253-75. Contrary to the prevailing view in the literature that Chinese courts have been notoriously incompetent in enforcement, this article contends that the situation may not be so bad. Based on in-depth fieldwork investigations of 60 debt collection cases at a basic-level court in the less developed hinterland region of China, this study finds that the majority of plaintiffs recover most of their debts through the court. Local protectionism persists, but seems to be contained within legal rules. Nevertheless, the underdeveloped economy of the region has limited the effectiveness of several core judicial reform measures. Unlike the situation in more developed regions, the forces of economic development outside the court have not been significant enough to reshape the power structure inside the court. The overall situation suggests, however, that China's efforts in the field of legal reform, including the promulgation of substantive laws as well as strengthened institution-building have, in general, been conducive to the effective processing of routine debt collection cases.

2012	C61	Brooks, J. Paul. 2012. "The Court of Appeals of Virginia Uses Integer Programming and Cloud Computing to Schedule Sessions." <i>Interfaces</i> , 42(6): 544-53. Each spring, a deputy clerk of the Court of Appeals of Virginia manually schedules panel sessions and assigns judges to sessions for the following calendar year. The information technology department for the Supreme Court of Virginia, the head of the judicial branch of government in Virginia, also serves the Court of Appeals of Virginia. In the spring of 2010, the staff of the Court of Appeals of Virginia and the information technology staff contacted Virginia Commonwealth University to explore a computational approach to generating schedules. Together, we developed a tool that uses integer programming to generate schedules; we used the method to generate the 2011 schedule, resulting in savings of up to 150 hours of work annually. The schedule satisfies all the constraints required by the court by properly distributing panel sessions among its districts throughout the year. The court places great importance on its members not becoming parochial; to that end, judges sit in disparate panels to hear litigants, who convene in regions throughout the state, to ensure a more uniform application of the law. The court used industrial-strength integer programming software to generate the 2011 schedule at low cost by using resources available on the Cloud.

2012	F63 P45	Gaukrodger, David, and Kathryn Gordon. 2012. <i>Investor-State Dispute Settlement: A Scoping Paper for the Investment Policy Community</i>. OECD Publishing, OECD Working Papers on International Investment: 2012/3. Governments are facing an increasing number of arbitration claims by foreign investors relating to important public policies or seeking substantial damages, and many governments are taking a greater joint interest in how such cases are resolved in investor-state dispute settlement (ISDS).

Year	DE	Title and Abstract
		This scoping paper has supported inter-governmental dialogue about ISDS at several OECD-hosted investment Roundtable meetings. Part I compares ISDS with other international and domestic processes for resolving disputes including the WTO and European Court of Human Rights, and considers how ISDS may affect domestic policy making processes. Part II examines eight current and emerging issues in ISDS: (i) investors' access to justice; (ii) the costs of ISDS cases; (iii) remedies for foreign investors under investment treaties and their possible impact on a level playing field for domestic and foreign investors; (iv) the enforcement and execution of ISDS awards; (v) third party financing of ISDS; (vi) the characteristics, selection and regulation of arbitrators in ISDS; (vii) forum shopping and treaty shopping by investors; and (viii) the question of the consistency of decision-making in ISDS. Part III outlines key findings from a statistical survey of ISDS provisions in 1,660 bilateral investment treaties. Public comment on this paper, including 46 investment policy questions (as outlined in the paper), was obtained in May-July 2012 and is available on the OECD website.

2012	P36	Ivaschenko, Oleksiy, Anton Nivorozhkin, and Eugene Nivorozhkin. 2012. "The Role of Economic Crisis and Social Spending in Explaining Crime in Russia: Regional Panel Data Analysis." <i>Eastern European Economics</i> , 50(4): 21-41. The paper investigates crime rate dynamics and its determinants using a panel data set for the Russian regions over the period 1995-2007. We focus on the determinants of convergence and divergence of crime rates across regions, focusing on the periods of economic turbulence such as the 1998 financial crisis. We also simulate the impact of the 2008-10 financial crisis on crime rates in Russia and identify the impact of government spending on reducing crime. Real income, unemployment level, and income inequality are found to be the most important factors explaining the crime rates. High levels of urbanization are also closely linked to higher crime rates. We find that the observed convergence in the regional crime rates during the 1998 crisis was driven mainly by the deteriorating crime situation in the regions with relatively low crime rates. The finding allows us to draw policy conclusions with respect to the role of the anti-crisis government programs in reducing crime. With respect to the types of crime, our analysis confirms that economic and property crimes tend to be the most responsive to the changing economic conditions.
2012	P45	THE SAME AS F63 Gaukrodger, David, and Kathryn Gordon. 2012. <i>Investor-State Dispute Settlement: A Scoping Paper for the Investment Policy Community</i>. OECD Publishing, OECD Working Papers on International Investment: 2012/3.
2012	P45	Pohl, Joachim, Kekeletso Mashigo, and Alexis Nohen. 2012. <i>Dispute Settlement Provisions in International Investment Agreements: A Large Sample Survey</i>. OECD Publishing, OECD Working Papers on International Investment: 2012/2. Investor-State dispute settlement mechanisms (ISDS) are an important component of most International Investment Agreements (IIAs) and have significant influence on how disputes between States and investors are resolved. This statistical survey of a large sample of 1,660 bilateral investment treaties (BITs) identifies the main parameters of ISDS regulation in BITs; traces their emergence, frequency and dissemination over time; and highlights past and recent country-specific treaty practice. The survey finds among other things that many countries define the procedural framework thinly compared to advanced domestic procedural frameworks, despite a broad trend toward greater regulation in treaties of parameters of ISDS. Many treaties offer foreign investors a range of procedural choices, such as a choice between arbitration fora. The survey also highlights the diversity that characterises the design of ISDS: over a thousand different combinations of rules regulating ISDS can be found in only 1,660 bilateral treaties--with variation found both at editorial and substantial level. Differences in policy approaches between countries are the source of some of this variance, but it appears that much of it may not reflect differences in policy. The study also found little evidence of general convergence of approaches towards regulating ISDS in BITs, or indeed much development in the BIT negotiating practice of a number of countries. A different approach, characterised by significantly more thorough ISDS regulation and pioneered by some countries, seems to spread increasingly in multilateral IIAs and more comprehensive treaties.

2013	C71	Brams, Steven J., and D. Marc Kilgour. 2013. "Kingmakers and Leaders in Coalition Formation." <i>Social Choice and Welfare</i>, 41(1): 1-18. Assume that players strictly rank each other as coalition partners. We propose a procedure whereby they "fall back" on their preferences, yielding internally compatible, or coherent, majority coalition(s), which we call fallback coalitions. If there is more than one fallback coalition, the players common to them, or kingmakers, determine which fallback coalition will form. The first player(s) acceptable to all other members of a fallback coalition are the leader(s) of that coalition. The effects of different preference assumptions--particularly, different kinds of single-peakedness--on the number of coherent coalitions, their connectedness, and which players become kingmakers and leaders are investigated. The fallback procedure may be used (i) empirically to identify kingmakers and leaders or (ii) normatively to select them. We illustrate the model using data from the U.S. Supreme Court, 2005-2009.
2013	D85	Nieto Carraminana, Enrique, Julio García del Junco, Rafael de Reyna Zaballa, and Rafael Robina Ramirez. 2013. "Los roles de colaboración entre las principales ONG españolas. (Roles in Collaboration between the Main Spanish NGOs. With English summary.)" <i>CIRIEC-Espana, Revista de Economía Pública, Social y Cooperativa</i>, 0(79): 87-114. The paper attempts to identify the roles played by major Spanish NGOs (44 of the 100 largest in terms of their budget) in the process of collaboration between

Year	DE	Title and Abstract
		them. The results seem to show three groups of organizations with homogeneous behaviour. The first, those with very large budgets, engage in very active collaboration with other less related sectors. The second group is also made up of large-scale organizations, which focus on development activities and collaborate with other organizations in their sector. Finally, the third group is more heterogeneous, and the organizations cooperate less, for different reasons: either they are very wary of engaging with other organizations, or they prefer to engage in smaller-scale collaborations with other organizations with which they share a mission (values, ideology, beliefs, etc.), or they are isolated from the rest because they are involved in some legal process or judicial intervention. The method applied is Blockmodel Analysis, in the context of Network Theory.
2013	E40	CV: Kasap, Murat. 2013. "Adli Muhasebecilik Meslegi ve Aklama Sucuyla Mucadele. (Forensic Accounting Profession and Prevention of Money Laundering. With English summary.)." <i>Cankiri Karatekin Universitesi Iktisadi ve Idari Bilimler Fakultesi Dergisi/Cankiri Karatekin University Journal of the Faculty of Economics and Administrative Sciences</i> , 3(1): 121-32. In today's world, globalization and the increased use of information technology have resulted in significant increases of economic crimes in recent years. Accordingly, financial crimes, such as money laundering misconducts have increased significantly. The police play active roles in the fight against money laundering and related crimes in Turkey. However, professional support is essential in order to effectively combat money laundering. In other words, not only a good level of economics, finance, accounting knowledge is critical; but also, a decent level of law information is crucial in the detection and prevention of these crimes. Increasing the effectiveness of the forensic accounting profession, especially in the USA, has an important role in the prevention and detection of money laundering since forensic accountants have skills and capacities of litigation support, investigative accounting and expertise.

2013	I13	Grace, Martin F., and J. Tyler Leverty. 2013. "How Tort Reform Affects Insurance Markets." <i>Journal of Law, Economics, and Organization</i>, 29(6): 1253-78. The impact of a statute that is currently in effect depends on expectations about its future constitutionality. We investigate the effect of tort reform by segmenting reforms into those that are eventually declared unconstitutional (temporary) and those that are unchallenged or upheld (permanent). We find permanent tort reforms lower medical malpractice insurance losses and premiums and increase insurer profitability. In contrast, the effects of temporary reforms are never statistically significant. Measures that combine temporary and permanent reforms, the norm in the literature, significantly misestimate the impact of tort reform. Our results suggest that examining the effect of a current law without accounting for its future treatment produces misleading results.
2013	I13	Carnis, Laurent, Nicolas Vaillant, and Benoit Dervaux. 2013. "Is Injury Compensation Inequitable? Evidence from Road Accidents Victims in France." <i>Applied Economics Letters</i>, 20(1-3): 28-33. This article analyses the heterogeneous character of compensation amounts awarded by insurance companies and the courts. The information source--the Association for Insurance Risk Information (AGIRA) database--covers all surviving victims of injuries resulting from road accidents in France over the period 2002 to 2008. Three results emerge: first, compensation amounts awarded under different headings--partial permanent incapacity (PPI), solatium (emotional harm), disfigurement, and loss of amenity--are not determined independently of each other; second, victim characteristics, notably age and sex, play a major part; and third, inequalities of treatment across the country are strikingly low.

2013	N33	Paul, K. Tawny. 2013. "Credit, Reputation, and Masculinity in British Urban Commerce: Edinburgh, c. 1710-70." <i>Economic History Review</i>, 66(1): 226-48. This article draws on cases of public insult from the Edinburgh consistory court to explore constructions of credit and reputation during the eighteenth century. Scotland's unique legal context offers new insights into the honour of men and women, replacing the received view that female honour was almost entirely about sexual honour and complicating our understanding of male honour among the middling sort. In contrast to studies that view the credit of men and women as principally contradictory, this study instead identifies significant points of both overlap and divergence in male and female reputation and discusses honour as a family matter. Unlike in England, levels of defamation litigation in Scotland remained high through the eighteenth century, and both the social composition of defamation litigants and the types of insult they brought to court remained consistent. However, the forms and settings of disputes over honour changed, reflecting the interiorization of conflict as the eighteenth century progressed.
2013	O14	Dini, Tamara. 2013. "South African Merger Litigations." <i>Antitrust Bulletin</i>, 58(2-3): 357-400. Due in part to the rights of third parties in merger litigation, there have been a number of highly contested litigated merger cases in South Africa. The article initially provides background to the mandatory premerger notification regime in South Africa, including setting out the roles of the various bodies and courts involved in the review and litigation of mergers. The article goes on to discuss the rights of third parties in merger litigation; not all third parties have the same status with regard to participating or intervening in merger proceedings. The article provides an analysis of a number of recent merger cases, including Wal-Mart Stores Inc./Massmart Holdings Ltd. and Pioneer Hi-Bred/Pannar Seed, before concluding with a brief discussion of the rights of merging parties to implement a merger pending an appeal.

2013	P43	Trakic, Adnan. 2013. "The Adjudication of Shari'ah Issues in Islamic Financial Contracts: Is Malaysian Islamic Finance Litigation a Solution?" <i>Humanomics</i> , 29(4): 260-75. Purpose--This research aims to explore the possibility of raising and adjudicating Shari'ah issues in Islamic financial contracts before the secular courts with specific reference to the UK and Malaysia. Design/methodology/approach--This is a legal research, and therefore, the paper uses the qualitative research methodology whereby a content analysis, in-depth case study, and library-based research were mainly used. Findings--Shari'ah issues raised before the UK courts, and arguably, before the secular courts in other Western jurisdictions, would not be adjudicated and enforced. English courts, in particular, would decide Islamic financial contracts according to the English law, disregarding Shari'ah issues. Conversely, Shari'ah issues raised before Malaysian civil courts would be duly adjudicated and enforced. The civil court is bound, by the new Central Bank of Malaysia Act 2009, to refer those issues to the Shari'ah Advisory Council of the Central Bank of Malaysia for them to be ascertained. The subsequent ruling of the SAC is binding on the courts. Originality/value--The Malaysian model for the adjudication of Shari'ah issues in Islamic financial contracts is very effective. Therefore, the research proposes to the parties in international Islamic financial contracts to choose Malaysian law as the law of reference and Malaysian courts as the forum for settlement of disputes. The Malaysian model, being already tested, can also be successfully exported to other countries wishing to introduce or develop Islamic finance.

Year	DE	Title and Abstract
2006		
2006	C83	Lensvelt-Mulders, Gerty J. L. M., Peter G. M. van der Heijden, Olav Laudy, and Ger van Gils. 2006. "A Validation of a Computer-Assisted Randomized Response Survey to Estimate the Prevalence of Fraud in Social Security." <i>Journal of the Royal Statistical Society: Series A (Statistics in Society)</i>, 169(2): 305-18. In the Netherlands, there is a research tradition that measures fraud against regulations by interviewing eligible individuals using a survey. In these studies the sensitive questions about fraud are posed by using a randomized response method. The paper describes the results of a Dutch study into the consequences of replacing home interviews by trained interviewers with Internet-delivered interviews in a survey on fraud in the area of disability benefits. Both surveys used computer-assisted self-interviews with randomized response questions. This study has three goals: first to present the research tradition that makes use of randomized response, second to compare the results of home interviews and the Internet survey and finally to introduce an adapted weighted logistic regression method to test the relationship between the probability of fraud and explanatory variables. The results show that there are no systematic differences between modes of interview, either for estimates of the prevalence of fraud or for the identification of associated variables. These outcomes result in the conclusion that the Internet survey is a useful and cost-effective instrument for measuring fraud in a population, and that it is unlikely that replacing home interviews with the Internet survey will result in a significant break with tradition.
2006	E01	CV: Gordon, Robert J. 2006. "The 1920s and the 1990s in Mutual Reflection." In <i>The Global Economy in the 1990s: A Long-Run Perspective</i>, ed. Paul W. Rhode and Gianni Toniolo, 161-92. Cambridge and New York: Cambridge University Press.
2006	E20	Naor, Ziv. 2006. "Untimely Death, the Value of Certain Lifetime and Macroeconomic Dynamics." <i>Defence and Peace Economics</i>, 17(4): 343-59. In the past few years, several studies have documented the fact that terrorism has a negative impact on economic activity. The present study attempts to provide an explanation that rests on two pillars. The first pillar expands on Eckstein and Tsiddon (2004) to account explicitly for a subjective assessment of the probability of death due to an act of terror; the second explicitly accounts for the dissatisfaction that derives from untimely death. In the first pillar, individuals estimate the risk of death by invoking the cumulative-prospect theory (Kahneman and Tversky, 1992). Since the probability of death in a terrorist attack is low, decision weights are higher than the actual probabilities. Needless to say, while cumulative-prospect theory governs individuals' behavior, the economy is governed by actual probabilities. The second pillar on which our explanation rests is the disutility that emerges from an individual's untimely and unnatural death. When calibrated, the integration of both explanations seems to show that terror has a rather strong impact on economic activity, one that may be observed in terror-affected regions.
2006	E23	Coppier, Raffaella, and Elisabetta Michetti. 2006. "Corruption vs Production: A Non-Linear Relationship." <i>Economic Modelling</i>, 23(4): 622-37. This paper analyzes the relationship between corruption, monitoring and production that exists in an economy. We show that high levels of corruption can be connected to high levels of production and that increased monitoring of corruption over some range negatively affects production. In point of fact, we prove that equilibrium production is a non-linear function of the monitoring level, by presenting three different equilibria: high corruption with intermediate production, no corruption but low production and no corruption with high production. We also analyze an optimal strategy depending on the policy objective of the State.
2006	E63	CV: Holmes, Jennifer S., and Sheila Amin Gutierrez de Pineres. 2006. "Corruption: Is Dollarisation a Solution?." In <i>Institutions, Globalisation and Empowerment</i>, ed. Kartik C. Roy and Jorn Sideras, 130-47. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	F54	Agathangelou, Anna M. 2006. "Colonising Desires: Bodies for Sale, Exploitation and (In)Security in Desire Industries." <i>Cyprus Review</i>, 18(2): 37-73. Desire industries have emerged as a major social relation of seduction under the Neoliberal Imperium. Through the household domestic and entertainment reproductive sectors, the desire industries promise fulfilment, while intimately tying freedom and prosperity with securitisation for individuals and states alike and preserving wealth through access to the market, the state, and masculine power for what comes to be constituted as the bourgeois and white elite. More concretely, this paper examines how the "higher income generating" peripheries of Cyprus, Greece, and Turkey actively participate in bringing female migrant labour from "lower income generating" countries. Albeit in contradictory ways, these countries work toward realising the historical tendencies of capital by feminising, racialising, sexualising, and constituting the subject of exploitation as a threat to the (re)production of the neoliberal imperium's relations. Through the "import" and exploitation of cheap reproductive labour for what is referred to in this article as the "desire" or sex industries, these peripheries work toward realising the (re)production of neoliberalism, albeit with strategies, activities, contestations, and struggles. Female migrants face daily violence as their labour is exploited to realise the historical tendencies of capital, and yet, these working class migrant women exceed capital's push and attempt to seize their corporeal bodies, and/or appropriate their feminine labour. They invest time and energy toward constituting communities that do not exploit, violate, appropriate, and indeed, kill their bodies. In moving to realise this potential, the creative power of labourers, as producers of their own communities, is crucial toward social and self-affirmation and social and self-realisation.
2006	F54	Germer, Andrea. 2006. "'The Inner and the Outer Domain': Sexuality and the Nation-State in Japanese Feminist Historiography." <i>Social Science Japan Journal</i>, 9(1): 51-72. "The inner and the outer domain" are the key terms of a model by Partha Chatterjee, with which he theorizes the conceptualization of colonial and postcolonial histories: The inner domain refers to the concept of the nation and the outer domain to the concept of the colonial or postcolonial state. Taking on this theoretical distinction, this article analyzes feminist historiographies of 1950s through 1970s Japan, namely the works of Takamura Itsue and Yamazaki Tomoko that deal with the categories of sexuality and the nation-state. I argue that both authors dealt with the sexual politics at work in premodern and modern Japan, and were theorizing history from a position that would nowadays be called

Year	DE	Title and Abstract
		postcolonial, depicting women and children as victims of sexual exploitation in a framework of domestic Japanese or international trafficking in Asia.
2006	G11	Levy, Ori, and Itai Galili. 2006. "Terror and Trade of Individual Investors." <i>Journal of Socio-Economics</i> , 35(6): 980-91. A great number of psychological studies document the influence of emotions on individuals' decision-making processes. This paper contributes to this literature by analyzing the possible impact of terrorism on financial trade by individual investors. Using account data for over 3000 households obtained from a large Israeli bank, we look into reactions of common stock investments to terrorist incidents in the years 1998-2002. The empirical analysis indicates that terror has a significant adverse effect on actual trade, possibly limiting the scope of risk-sharing available through traded securities. Several psychological explanations for investors' reluctance to trade are provided. Amongst them are the increase in public fear (resulting in pessimistic risk estimates and risk averse choices); the sense of ambiguity caused by terror; repercussions of anxiety and depression disorders; a desire to avoid future regret. Our results add to the recent literature documenting the harmful effects terrorist acts have on various facets of the economy.
2006	H55	Lensvelt-Mulders, Gerty J. L. M., Peter G. M. van der Heijden, Olav Laudy, and Ger van Gils. 2006. "A Validation of a Computer-Assisted Randomized Response Survey to Estimate the Prevalence of Fraud in Social Security." <i>Journal of the Royal Statistical Society: Series A (Statistics in Society)</i> , 169(2): 305-18. In the Netherlands, there is a research tradition that measures fraud against regulations by interviewing eligible individuals using a survey. In these studies the sensitive questions about fraud are posed by using a randomized response method. The paper describes the results of a Dutch study into the consequences of replacing home interviews by trained interviewers with Internet-delivered interviews in a survey on fraud in the area of disability benefits. Both surveys used computer-assisted self-interviews with randomized response questions. This study has three goals: first to present the research tradition that makes use of randomized response, second to compare the results of home interviews and the Internet survey and finally to introduce an adapted weighted logistic regression method to test the relationship between the probability of fraud and explanatory variables. The results show that there are no systematic differences between modes of interview, either for estimates of the prevalence of fraud or for the identification of associated variables. These outcomes result in the conclusion that the Internet survey is a useful and cost-effective instrument for measuring fraud in a population, and that it is unlikely that replacing home interviews with the Internet survey will result in a significant break with tradition.
2006	H55 I10	Auerbach, Alan J., David Card, and John M. Quigley, eds. 2006. <i>Public Policy and the Income Distribution</i> , New York: Russell Sage Foundation. Eight papers, originally presented at a conference held in Berkeley in December 2003, analyze the complex interactions among demographics, poverty, the distribution of income, and public policy from a longer-run perspective, taking stock of our knowledge of trends and causes, and identifying key areas where positive economics can contribute further to our understanding of policy options. Papers discuss what the 1990s welfare reforms accomplished (Rebecca M. Blank); the take-up of social benefits (Janet Currie); government programs and social outcomes--a comparison of the United States with other rich nations (Timothy M. Smeeding); income and wealth concentration in a historical and international perspective (Emmanuel Saez); social security and the evolution of elderly poverty (Gary V. Engelhardt and Jonathan Gruber); the measurement and evolution of health inequality--evidence from the U.S. Medicare population (Jonathan Skinner and Weiping Zhou); the socioeconomic status of black males--the increasing importance of incarceration (Steven Raphael); and public health and mortality--what we can learn from the past (Dora L. Costa and Matthew E. Kahn).

2006	H61	CV: Marshall, Denis. 2006. "Afterword." In <i>The Role of Parliament in Curbing Corruption</i> , ed. Rick Stapenhurst, Niall Johnston and Riccardo Pelizzo, 227-36. WBI Development Series. Washington, D.C.: World Bank.
2006	H61	Coats, R. Morris, Gokhan Karahan, and Robert D. Tollison. 2006. "Terrorism and Pork-Barrel Spending." <i>Public Choice</i> , 128(1-2): 275-87. The horrifying, tragic events of 9/11 made Americans aware of their vulnerability to terrorist attacks and triggered the creation of the Department of Homeland Security along with a substantial increase in federal spending to both thwart terrorist attacks and to increase our ability to respond to such emergencies. Much of this large increase in spending was in the form of direct transfers to states and cities through several grant programs. Homeland Security grants may be used for protection against terrorist activities, thereby enhancing public interests, or as wealth transfers to state and local governments, enhancing the reelection efforts of incumbents, and thus, private interests. Using 2004 per capita Homeland Security grant funding to states and their cities, we find that the funding formula used for some of the grant programs, which allocates almost 40% of the funds in some grant programs through a minimum percent to each state with the rest allocated based on population, means that per capita funding is related to electoral votes per capita, i.e., to the politics of Presidential re-election. However, the funding in other grant programs is also related to some of the dangers and vulnerabilities faced by states and their cities. Some of the variation in per capita grant allocations is also explained by the amount of airport traffic in the state and the state's population density, which are variables closely linked to the state's vulnerability to attack. Per capita Homeland Security grant allocations, however, do not seem to be related to the closeness of the 2000 presidential race.
2006	H62	CV: Kirshner, Jonathan. 2006. "Currency and Coercion in the Twenty-First Century." In <i>International Monetary Power</i> , ed. David M. Andrews, 139-61. Cornell Studies in Money. Ithaca and London: Cornell University Press.
2006	H75	Kalist, David E., and Noelle A. Molinari. 2006. "Is the Marginal Child More Likely to Be Murdered? An Examination of State Abortion Ratios and Infant Homicide." <i>Journal of Human Resources</i> , 41(3): 611-30. We examine whether abortion removes from the population those infants most at risk of homicide. As part of our identification strategy, we find that abortion reduces the number of unwanted births, estimating that 1 percent increase in the abortion ratio reduces unwanted births by approximately 0.35 percent. Using cross-sectional time-series data for U.S. states between 1970 and 1998, we find that an increase in the abortion ratio (a proxy for unwanted births) reduces the expected number of infant homicides, especially among black infants. Overall, the elasticity of infant homicides with respect to unwanted births is approximately 0.089.

2006	I10	McInnes, Colin, and Kelley Lee. 2006. "Health, Security and Foreign Policy." <i>Review of International Studies</i> , 32(1): 5-23. Over the past decade, health has become an increasingly important international issue and one which has engaged the attention of the foreign and security policy community. This article examines the emerging relationship between foreign and security policy, and global public health. It argues that the agenda has been dominated by two issues--the spread of selected infectious diseases (including HIV/AIDS) and bio-terror. It argues that this is a narrow framing of the agenda which could be broadened to include a wider range of issues. We offer two examples: health and internal instability, including the role of health in failing states and in post-conflict reconstruction; and illicit activities. We also argue that the relationship between global public health, and foreign and security policy has prioritized the concerns of the latter over the former--how selected health issues may create risks for (inter)national security or economic growth. Moreover the interests of the West are prominent on this agenda, focusing (largely though not exclusively) on how health risks in the developing world might impact upon the West. It is less concerned with the promotion of global public health.
2006	I10	Corman, Hope, Kelly Noonan, Nancy E. Reichman, and Ofira Schwartz-Soicher. 2006. <i>Crime and Circumstance: The Effects of Infant Health Shocks on Fathers' Criminal Activity</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12754. Few studies in the economics literature have linked individuals' criminal behavior to changes in their personal circumstances. Life shocks, such as natural or personal disasters, could reduce or sever a person's connections to his/her family, job, or community. With fewer connections, crime may become a more attractive option. This study addresses the question of whether an exogenous shock in life circumstances affects criminal activity. Specifically, we estimate the effects of the birth of a child with a random and serious health problem (versus the birth of a healthy infant) on the likelihood that the child's father becomes or remains involved in illegal activities. Controlling for the father's pre-birth criminal activity, we find that the shock of having a child with a serious health problem increases both the father's post-birth conviction and incarceration by 1 to 8 percentage points, depending on the measure of infant health used.
2006	J40	Calvo-Armengol, Antoni, Thierry Verdier, and Yves Zenou. 2006. <i>Strong and Weak Ties in Employment and Crime</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5448. This paper analyses the interplay between social structure and information exchange in two competing activities, crime and labour. We consider a dynamic model in which individuals belong to mutually exclusive two-person groups, referred to as dyads. There are multiple equilibria. If jobs are badly paid and/or crime is profitable, unemployment benefits have to be low enough to prevent workers for staying too long in the unemployment status because they are vulnerable to crime activities. If, instead, jobs are well paid and/or crime is not profitable, unemployment benefits have to be high enough to induce workers to stay unemployed rather than commit crime because they are less vulnerable to crime activities. Also, in segregated neighbourhoods characterized by high interactions between peers, a policy only based on punishment and arrest will not be efficient in reducing crime. It has to be accompanied by other types of policies that take into account social interactions.
2006	J88	Friebel, Guido, and Sergei Guriev. 2006. "Smuggling Humans: A Theory of Debt-Financed Migration." <i>Journal of the European Economic Association</i> , 4(6): 1085-1111. We introduce financial constraints in a theoretical analysis of illegal immigration. Intermediaries finance the migration costs of wealth-constrained migrants, who enter temporary servitude contracts to repay the debt. These debt/labor contracts are easier to enforce in the illegal than in the legal sector of the host country. Hence, when moving from the illegal to the legal sector becomes more costly--for instance, because of stricter deportation policies--fewer immigrants default on debt. This reduces the risks for intermediaries, who are then more willing to finance illegal migration. Stricter deportation policies may thus, ex ante, increase rather than decrease the flow of illegal migrants. Furthermore, stricter deportation policies worsen the skill composition of immigrants. While stricter border controls decrease overall immigration, they may result in an increase of debt-financed migration. We also show that there are complementarities between employer sanctions and deportation policies. We use available evidence to check the empirical consistency of the theory.

2006	L23	Garicano, Luis, and Paul Heaton. 2006. <i>Computing Crime: Information Technology, Police Effectiveness and the Organization of Policing</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5837. How does information technology (IT) affect the organization of police work? How does it in turn affect police crime-fighting effectiveness? To answer these questions, we construct a new panel data set of police departments covering 1987-2003. We find that while IT adoption had substantial effects on a wide range of police organizational practices, it had, by itself, a negligible impact on crime-fighting effectiveness. These results are robust to various methods for controlling for agency-level characteristics and the endogeneity of IT use. We then suggest and test two explanations for this puzzle. First, we demonstrate that use of a particular technology, computerized record-keeping, increased recorded crime rates. Second, we provide evidence that IT investments only had a substantial impact on crime clearance rates and crime rates when undertaken as part of a broad set of complementary organizational practices such as those in the Compstat program.
2006	L90	Banerjee, Sudeshna Ghosh, Jennifer M. Oetzel, and Rupa Ranganathan. 2006. "Private Provision of Infrastructure in Emerging Markets: Do Institutions Matter?" <i>Development Policy Review</i> , 24(2): 175-202. Governments in developing countries have encouraged private sector investment to meet the growing demand for infrastructure. According to institutional theory, the role of institutions is paramount in private sector development. A longitudinal dataset of 40 developing economies between 1990 and 2000 is used to test empirically how different institutional structures affect private investment in infrastructure, in particular its volume and frequency. The results indicate that property rights and bureaucratic quality play a significant role in promoting private infrastructure investment. Interestingly, they also suggest that countries with higher levels of corruption attract greater private participation in infrastructure.
2006	M16	Luo, Yadong. 2006. "Political Behavior, Social Responsibility, and Perceived Corruption: A Structuration Perspective." <i>Journal of International Business Studies</i> , 37(6): 747-66. This study unites the three lenses--political behavior, corporate social

Year	DE	Title and Abstract
		responsibility, and corruption--and evaluates the way in which multinational enterprises (MNEs) manage political and social forces in a foreign emerging market. Using the theory of structuration as the conceptual foundation, we propose that an MNE's propensity to cooperate with the host government is positively related to its philanthropic contribution and resource accommodation, whereas its propensity to be assertive with the host government is positively associated with its emphasis on ethics and organizational credibility. We argue that when perceived corruption in the business segment increases, an MNE's propensity to cooperate and be assertive with the government decreases, its focus on ethics heightens, and its philanthropic contribution diminishes. As to the three-way interactions, when perceived corruption in the business segment increases, MNEs that focus more on ethics have a greater propensity to use arm's length bargaining to deal with the government, whereas those focusing less on ethics have a greater propensity to use social connections to deal with the government. Our analysis of sample MNEs in China generally supports these propositions.
2006	M16	Rodriguez, Peter, Donald S. Siegel, Amy Hillman, and Lorraine Eden. 2006. "Three Lenses on the Multinational Enterprise: Politics, Corruption, and Corporate Social Responsibility." <i>Journal of International Business Studies</i> , 37(6): 733-46. Scholars who analyze multinational enterprises (MNEs) recognize the complex relationship between international business (IB) and society. However, compared with other IB topics, research on politics, corruption and corporate social responsibility--'three lenses' on the MNE--remains somewhat embryonic, with unresolved issues regarding frameworks, measurement, methods, and theory. This presents unique opportunities for integration and extension of disciplinary perspectives, which we explore in this article. We provide an introduction to potential linkages across these three lenses, an agenda for additional theoretical and empirical research, and a review of the papers in the JIBS Focused Issue.
2006	M16	Kwok, Chuck C. Y., and Solomon Tadesse. 2006. "The MNC as an Agent of Change for Host-Country Institutions: FDI and Corruption." <i>Journal of International Business Studies</i> , 37(6): 767-85. Most empirical research examines how the institutional environment of corruption shapes the behavior of multinational corporations (MNCs). In this study, we would like to highlight the other side of the picture: how the presence of MNCs may shape the institutional environment of corruption over time. We propose three avenues through which the MNCs may have an impact on its host institutions: regulatory pressure effect, demonstration effect, and professionalization effect. Based on extensive data on foreign direct investment and corruption for a large sample of countries over the last 30 years, the empirical results are generally consistent with our hypothesis. Such findings provide a glimmer of hope for the future of the host country where corruption is prevalent.
2006	M16	Cuervo-Cazurra, Alvaro. 2006. "Who Cares about Corruption?" <i>Journal of International Business Studies</i> , 37(6): 807-22. This paper examines the impact of corruption on foreign direct investment (FDI). It argues that corruption results not only in a reduction in FDI, but also in a change in the composition of country of origin of FDI. It presents two key findings. First, corruption results in relatively lower FDI from countries that have signed the Organization for Economic Cooperation and Development Convention on Combating Bribery of Foreign Public Officials in International Business Transactions. This suggests that laws against bribery abroad may act as a deterrent against engaging in corruption in foreign countries. Second, corruption results in relatively higher FDI from countries with high levels of corruption. This suggests that investors who have been exposed to bribery at home may not be deterred by corruption abroad, but instead seek countries where corruption is prevalent.
2006	M16	Weitzel, Utz, and Sjors Berns. 2006. "Cross-Border Takeovers, Corruption, and Related Aspects of Governance." <i>Journal of International Business Studies</i> , 37(6): 786-806. We use a panel of 4979 cross-border and domestic takeovers to test the relation between host country corruption and premiums paid for local targets. Host country corruption is negatively associated with target premiums, after correcting for other governance-related factors such as political stability, legal systems, and financial disclosure standards. We estimate that deterioration in the corruption index by one point (on a 10-point scale) is, on average, associated with a reduction of 21% of local targets' premiums. Our results do not support the notion that local corruption constitutes a significant market barrier to foreign investors; rather, it represents a discount on local takeover synergies, which affects foreign and domestic acquirers alike. However, we find that the major effects of corruption can alternatively be explained by government effectiveness, pointing towards an endogenous relationship between bribery and bureaucracy.

2006	N90	Basson, Steve. 2006. "'Oh Comrade, What Times Those Were!' History, Capital Punishment and the Urban Square." <i>Urban Studies</i> , 43(7): 1147-58. From the perspective of traditional Western histories of the urban realm, public squares have been seen to represent a privileged site of urban containment expressive of a community's highest values of individual freedom, social inclusion and cultural refinement. But such views can be misleading. For what is omitted from the scope of these conventional historical visions and their ideal and conforming subjects of public spatial discourse, is an entire array of other and darker narratives that equally speak of personal choice, collective participation and cultural value. Capital punishment reflects such an example, a practice that once comprised an integral part of the political, social and cultural landscape of a Western city's squares and streets. Drawing from Michel Foucault's Discipline and Punish and its implications on how we might begin to re-read the history of the urban square, the paper seeks to explore those practices and modes of rationality that underpinned the once-public spectacle of executions and torture as a vital condition of urban life. In particular, this discussion will question the assumptions of an historical tradition that continues to reduce our understanding of the city and its open spaces of public appearance and action to an idealistic and illusory reality of the urban realm and its narrow framing of collective conduct, necessity and significance.

2006	N93	Mlinaric, Dubravka. 2006. "Uloga drzave u prevenciji i sanaciji loseg utjecaja bolesti na gospodarstvo sjeverne Dalmacije u 18. stoljecu. (The Role of State in Prevention of Consequences That Diseases Had on Economy of Northern Dalmatia in the Eighteenth Century. With English summary.)" <i>Ekonomika i ekohistorija/Economic- and Ecohistory</i> , 2(0): 39-54. The analysis of northern Dalmatia in the 18th century as the geographical area of specific diseases and specific economy. By the way the state (the Venetian Republic) reclaimed the lowland and swampy areas to prevent the spread of diseases (the sanitary cordons) challenged demographic increase, and all the while economic production. Poverty, starvation, apathy, and diseases supported the illegal commercial and business activities of the local inhabitants as well as the local criminal activities.
2006	P19	Lebert, Didier, and Carlo Vercellone. 2006. "Mafia et capitalisme: Dix theses sur la nature et les transformations de l'entreprise mafieuse. (Mafia and Capitalism: Ten Propositions about the Nature and Transformations of the Mafia. With English summary.)" <i>Economie Appliquee</i> , 59(1): 23-58. The aim of this paper is to develop an analytical framework which allows us to consider the Mafia as an endogenous form of the dynamics of capitalism. In the first part, the socio-economic form Mafia is regarded as a structural manifestation of the "primitive accumulation of capital" logic. In the second part, this approach is supported by stating ten propositions. Finally, the paper offers an analysis of both the continuity and breakings of the Mafia in the long-run dynamics of Italian capitalism.
2006	P40	Rathbone Bradley, Anne E. 2006. "Institutional Change in the Absence of the Rule of Law and Market Mechanisms." <i>Public Choice</i> , 128(1-2): 197-219. This paper outlines and evaluates the nature of terrorism as perpetrated by al-Qaeda. To begin it graphs the institutional blueprint of society, and identifies the ubiquitous relationship between state, market and culture in any society. It goes on to describe how private markets and cultures are harmed and diminished by the relative expansion of the state. At some stage in this relative expansion, private markets and cultures simply collapse. At this point, a societal backlash ensues. al-Qaeda, in this sense, is the modern day coup d'etat against the overwhelming power of an over-extended autocracy. The paper evaluates this hypothesis through an institutional examination, largely focused on Saudi Arabia, the initial homeland of Osama bin Laden, the highly effective leader of al-Qaeda, and current home to the world's largest financial contributors to the cause of al-Qaeda. Understanding the specific and purposeful institutional nexus from which al-Qaeda has emerged must be a first step in any systematic attempt to reduce the terrorist threat that it poses.
2006	Q30	van der Ploeg, Frederick. 2006. <i>Challenges and Opportunities for Resource Rich Economies</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5688. The political economy of resource rich countries is surveyed. The empirical evidence suggests that countries with a large share of primary exports in GNP have bad growth records and high inequality, especially if the quality of institutions and the rule of law are bad. The economic argument that a resource bonanza induces appreciation of the real exchange rate and a decline of non-resource export sectors may have some relevance. More important, a resource boom reinforces rent grabbing, especially if institutions are bad, and keeps in place bad policies. Optimal resource management may make use of the Hotelling rule and the Hartwick rule. However, a recent World Bank study suggests that resource rich economies squander their natural resource wealth and more often have negative genuine saving rates. Still, countries such as Botswana, Canada, Australia and Norway suggest it is possible to escape the resource curse. Some practical suggestions for a better management of natural resources are offered.
2006	R33	Abadie, Alberto, and Sofia Dermisi. 2006. <i>Is Terrorism Eroding Agglomeration Economies in Central Business Districts? Lessons from the Office Real Estate Market in Downtown Chicago</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12678. The attacks of September 11, 2001, and more recently the Madrid and London downtown train bombings, have raised concerns over both the safety of downtowns and the continuous efforts by terrorists to attack areas of such high density and significance. This article employs building-level data on vacancy rates to investigate the impact of an increased perception of terrorist risk after 9/11 on the office real estate market in downtown Chicago. Chicago provides the perfect laboratory to investigate the effects of an increase in the perceived level of terrorist risk in a major financial district. Unlike in New York, the 9/11 attacks did not restrict directly the available office space in downtown Chicago. Moreover, the 9/11 attacks induced a large increase in the perception of terrorist risk in the Chicago Central Business District, which includes the tallest building in the U.S. (the Sears Tower) and other landmark buildings which are potential targets of large-scale terrorist attacks. Our results show that, following the 9/11 attacks, vacancy rates experienced a much more pronounced increase in the three most distinctive Chicago landmark buildings (the Sears Tower, the Aon Center and the Hancock Center) and their vicinities than in other areas of the city of Chicago. Our results suggest that economic activity in Central Business Districts can be greatly affected by changes in the perceived level of terrorism.
2006	R33	Dermisi, Sofia V. 2006. "Terrorism Protection and Prevention Measures for Office Buildings." <i>Journal of Real Estate Literature</i> , 14(1): 59-86. The events of September 11, 2001 in the United States have changed the perspective of owners and management companies towards the security of office buildings. The initial reaction, which included general security measures with an unclear prevention role, is continuously being replaced by improved and more thorough decision-making process of prevention measures targeting specific types of threats. This paper proposes a layered approach for the protection and prevention against terrorism attacks in office buildings and the development of a city-wide Property Anti-Terrorism Taskforce, which will increase the cross-collaboration between real estate and law enforcement and emergency management agencies, while strategically preparing owners and property managers.
2006	R33	Dermisi, Sofia V. 2006. "Recovering from an External Economic Shock: The Effect of Terrorism Threat on Chicago 'Trophy' Buildings and Their Immediate Area." <i>Journal of Real Estate Literature</i> , 14(3): 401-21. This paper studies the extent of the office market recovery of the shadow (immediate) areas of three Chicago trophy buildings (Sears Tower, Aon Center, and John Hancock Center) comparing before and after September 11, 2001 (9/11) office market trends from 1997 until 2005. The results indicate that these three areas have not yet fully recovered almost five years after 9/11 based on their direct and sublease vacancy rates. Controlling for all three shadow area fixed effects, sublease vacancies after 9/11 increased on average by 84% and direct vacancies increased by 69%. In contrast, there is no statistical difference between the before and after 9/11 rent levels for all three shadow areas.

2007	B53 D01	Knepper, Paul. 2007. "Situational Logic in Social Science Inquiry: From Economics to Criminology." <i>Review of Austrian Economics</i>, 20(1): 25-41. Karl R. Popper proposed that the method of explanation in economics, or situational logic, should become the general model for analyses across the social sciences. This article makes good Popper's proposal by extending situational logic to a social problem outside the traditional scope of economics: crime. Specifically, the discussion reviews models developed by economist Gary S. Becker and criminologist Ronald V. Clarke. Becker's 'economic approach' to crime incorporates essential features of situational logic. Clarke's 'situational crime prevention' offers an even better demonstration; it explicitly incorporates the ideas of piecemeal social engineering and unintended social repercussions. Popper took situational logic from Menger and the Austrians, making this emerging area of criminology an extension of Austrian economics.
2007	C23	Patacchini, Eleonora, and Yves Zenou. 2007. <i>Ethnicity and Spatial Externalities in Crime</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6130. We develop a model where the decision to commit a crime in a neighboring area is a positive function of the percentage of same-race individuals residing in that area since they can provide crucial information on crime possibilities. The model then predicts a positive spatial correlation in crime between different contiguous areas; this correlation is higher the closer the distance between the areas. We empirically investigate these relationships using data from the crime statistics that are recorded by the police in Britain. We find results that are consistent with the model. In particular, the agglomeration of a given ethnic minority group is positively related to its crime activity and this effect declines quite sharply with distance between areas.

2007	E21	Dietz, Simon, Eric Neumayer, and Indra de Soysa. 2007. "Corruption, the Resource Curse and Genuine Saving." <i>Environment and Development Economics</i>, 12(1): 33-53. Genuine saving is a measure of net investment in produced, natural and human capital. It is a necessary condition for weak sustainable development that genuine saving not be persistently negative. However, according to data provided by the World Bank, resource-rich countries are systematically failing to meet this condition. Alongside the well-known resource curse on economic growth, resource abundance might have a negative effect on genuine saving. In fact, the two are closely related, as future consumption growth is limited by insufficient genuine saving now. In this paper, we apply the most convincing conclusion from the literature on economic growth—that it is institutional failure that depresses growth—to data on genuine saving. We regress gross and genuine saving on three indicators of institutional quality in interaction with an indicator of resource abundance. The indicators of institutional quality are corruption, bureaucratic quality and the rule of law. We find that reducing corruption has a positive impact on genuine saving in interaction with resource abundance. That is, the negative effect of resource abundance on genuine saving is reduced as corruption is reduced.

2007	G30	Povel, Paul, Rajdeep Singh, and Andrew Winton. 2007. "Booms, Busts, and Fraud." <i>Review of Financial Studies</i>, 20(4): 1219-54. Firms sometimes commit fraud by altering publicly reported information to be more favorable, and investors can monitor firms to obtain more accurate information. We study equilibrium fraud and monitoring decisions. Fraud is most likely to occur in relatively good times, and the link between fraud and good times becomes stronger as monitoring costs decrease. Nevertheless, improving business conditions may sometimes diminish fraud. We provide an explanation for why fraud peaks towards the end of a boom and is then revealed in the ensuing bust. We also show that fraud can increase if firms make more information available to the public.
2007	H32	Curry, Philip, and Steeve Mongrain. 2007. <i>What You Don't See Can't Hurt You: An Economic Analysis of Morality Laws</i>. Department of Economics, Simon Fraser University, Discussion Papers. This paper provides an efficiency explanation for regulation of sex, drugs and gambling (the so-called "morality laws"). The argument is motivated by the observation that the design an enforcement of these laws often promotes discretion by the people engaging in such activities. We propose that morality laws can be best explained by considering the proscribed activities to impose a negative externality on others when the activity is observed. In such a case, efficiency requires discretion by the individual who engages in such activities. When discretion is difficult to regulate directly, the activities can instead be proscribed thereby giving individuals incentive to hide their actions from others. We find conditions for the first-best levels of consumption and hiding to be implementable. In addition, since some level of activity is efficient, this paper provides another environment in which the optimal sanctions are not maximal.

2007	K35	Djankov, Simeon, Caralee McLiesh, and Andrei Shleifer. 2007. "Private Credit in 129 Countries." <i>Journal of Financial Economics</i>, 84(2): 299-329. We investigate cross-country determinants of private credit, using new data on legal creditor rights and private and public credit registries in 129 countries. Both creditor protection through the legal system and information-sharing institutions are associated with higher ratios of private credit to gross domestic product, but the former is relatively more important in the richer countries. An analysis of legal reforms shows that credit rises after improvements in creditor rights and in information sharing. Creditor rights are remarkably stable over time, contrary to the hypothesis that legal rules are converging. Finally, legal origins are an important determinant of both creditor rights and information-sharing institutions. The analysis suggests that public credit registries, which are primarily a feature of French civil law countries, benefit private credit markets in developing countries.
2007	L43	Zimmerman, Paul R., and Susan M. V. Flaherty. 2007. "Location Monopolies and Prison Phone Rates." <i>Quarterly Review of Economics and Finance</i>, 47(2): 261-78. Prisoners incarcerated in state correctional facilities are often limited to making operator-assisted collect calls to their families and associates. Prison phone services are supplied by a single carrier who receives an exclusive service contract through a procurement auction conducted by the state's Department of Corrections (DOC). To win the

Year	DE	Title and Abstract
		<p>auction, a firm must offer the highest "kickback" or "site commission" to the DOC, which in turn is passed-on to the recipients of prison collect calls--typically family members--in the form of higher rates. The recipients have little choice but to pay these inflated rates since there is no other alternative for maintaining contact with their incarcerated loved one. Some states have attempted to alleviate the burden of excessive prison collect call rates by changing the methodology used to assess site commissions. The purpose of this study is to empirically evaluate the efficacy of these reforms. The empirical results suggest that the cost of receiving IntraLATA prison collect calls is approximately 41% higher in those states that impose site commissions based as a percentage of the carriers' ex post revenues relative to those states that impose fixed commissions ex ante. The results are shown to be highly robust with respect to model specification, estimation technique, and control for outliers.</p>
2007	L43	<p>Huang, Qunhui. 2007. "China's Next Step: To Reform Monopoly Industries." <i>China Economist</i>, 0(8): 98-107. Based on the study of enterprise managerial corruption in Chinese SOEs, this paper points out the new characteristics of managerial corruption in Chinese SOEs: administrative monopoly has become increasingly common, while corruption for personal gain by SOE leaders has become less and less frequent. This means the reform of SOEs has entered a new stage in which the core problem is how to deal with administrative monopoly.</p>
2007	L60	<p>Diss: Toukan, Amjad. 2007. Essays on Corruption and Governance. PhD diss. University of California, Irvine. Nearly 2500 years ago, the old Indian treatise entitled 'Arthashastra' had recognized the impact of corruption on the conduct of the economy. Corruption is not just an economic problem, however; it is also associated with bad governance (governance being defined as the way in which both public and private institutions perform their functions in a country). In my dissertation, I focus on the principal-agent model of corruption. The agency relationship links at least two actors and is the basic unit of analysis. The first chapter evaluates a corporation's decision to go public, draws the distinction between large and dispersed shareholders and examines how the differences in their incentives to monitor the managers affect the shape of ownership structure in public firms. In the second chapter, I find evidence contradicting the predictions of the Rybczynski theorem using a sample of 28 manufacturing industries in 16 developing countries over eight years. This contradiction is examined using a modification of the Heckscher-Ohlin model to allow for international variability in corruption and risk of expropriation. The final chapter explores the properties and implications of a general class of 'difference-form' contests that has been derived for settings in which rent-seeking involves persuasion. Such class of contests could be employed to analyze the impact of corruption in governance such as the decision-making in the courtroom, the decision making within bureaucracies, the interactions among interest groups among others.</p>
2007	L70	<p>Durnev, Artyom, and Sergei Guriev. 2007. <i>The Resource Curse: A Corporate Transparency Channel</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6547. We propose and investigate a new channel through which the resource curse--a stylized fact that countries rich in natural resources grow slower--operates. Predatory governments are more likely to expropriate corporate profits in natural-resource industries when the price of resources is higher. Corporations whose profits are more dependent on the price of resources can mitigate the risk of expropriation by reducing corporate transparency. Lower transparency, in turn, leads to inefficient capital allocation and slower economic growth. Using a panel of 72 industries from 51 countries over 16 years, we demonstrate that the negative effect of expropriation risk on corporate transparency is stronger for industries that are especially vulnerable to expropriation, in particular, for industries whose profits are highly correlated with oil prices. Controlling for country, year, and industry fixed effects, we find that corporate transparency is lower in more oil price-dependent industries when the price of oil is high and property rights are poorly protected. Furthermore, corporate growth is hampered in oil price-sensitive industries because of less efficient capital allocation driven by adverse effects of lower transparency.</p>

2007	M48	<p>Sen, Pradyot K. 2007. "Ownership Incentives and Management Fraud." <i>Journal of Business Finance and Accounting</i>, 34(7-8): 1123-40. Agency Theory would suggest that increased firm ownership should mitigate a manager's propensity to fraudulently divert resources for unauthorized consumption. However, most of the frauds in recent times have been committed by senior managers and/or Chief Executives who may own a significant portion of the firm. Although such management fraud has been studied extensively in the economics of crime literature as white collar crime and has been the focus of many legislative initiatives such as the Sarbanes Oxley Act of 2002, the Securities Enforcement Remedies and Penny Stock Reform Act of 1995 and study teams such as the Treadway Commission (National Committee on Fraudulent Financial Reporting 1987), the assumptions behind many of these studies and legislative initiatives is that an increase in severity and certainty of ex-post penalty is an effective deterrent to financial fraud regardless of this ownership question. What separates financial fraud from other crime is that it is committed in the context of a market that is considered efficient in that it rationally anticipates and reacts to all information and uncertainty. Thus, the market is potentially able to protect itself to some extent by rationally pricing such possible behavior. Such ability to 'self protect' changes the nature of incentive and gain from fraud to a manager who, because of his part ownership, must face some consequences of his own fraud. In the ensuing game, though the penalty for fraud deterrence increases the cost of fraud, whether it can ensure complete honesty is a function of how efficient the legal system is and the extent of firm ownership by the manager. As the analysis of this paper shows, the question of fraudulent behavior can only be answered in conjunction with the question of the extent of ownership of the firm by the manager. The results show that increased ownership may not necessarily reduce the propensity to commit fraud. As the gain from fraud and the corresponding penalty increases, unless the gain from fraud is completely offset through the penalty, the results suggest that more and more managers may find it optimal to engage in a mixed strategy and behave fraudulently some of the time. What is more likely to be successful is the certainty of determination and application of the penalty rather than its size. These results have significant implications in countries such as those in Europe where the insider holdings vary significantly.</p>
2007	O43	<p>THE SAME AS L70 Durnev, Artyom, and Sergei Guriev. 2007. <i>The Resource Curse: A Corporate Transparency Channel</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6547.</p>
2007	O43	<p>Subramanian, Arvind. 2007. "The Evolution of Institutions in India and Its Relationship with Economic Growth." <i>Oxford Review of Economic Policy</i>, 23(2): 196-220. This paper examines the evolution in a few public institutions over time in India. It presents three types of evidence: on institutional outcomes (such as losses in power generation, backlogs in disposal of court cases); on perceptions-based measures of governance, some going back to the 1960s; and, finally, on customs administration and whether it has been more effective at detecting evasion over time. All the evidence suggests that institutional quality has not improved over time. It then addresses the two-way relationship between growth and institutions in terms of two apparent paradoxes. The first is why growth has turned around so dramatically in India despite the relatively limited nature of reforms, especially compared with other countries. The second paradox is why, despite nearly 30 years of rapid growth, institutions have not improved. The paper offers some explanations that might help explain these paradoxes.</p>
2007	Q50	<p>Brown, Charles S. 2007. "Beyond Intrinsic Value: Undermining the Justification of Ecoterrorism." <i>American Journal of Economics and Sociology</i>, 66(1): 113-25. Both Aldo Leopold's "land ethic" and Arne Naess's "deep ecology" have been criticized</p>

Year	DE	Title and Abstract
		as providing intellectual justifications for both a misanthropic ecofascism and a policy of ecoterrorism for environmental activists. This chapter argues that each of these two approaches to providing a ground or framework for an environmental ethics is subject to the charges of ecofascism or ecoterrorism only to the extent that each is committed to the notion of "intrinsic value" as a nonnegotiable moral absolute or, as Kant puts it, "a value beyond all price." This chapter begins by describing shared value experience between humans and animals and then points the way to an alternative and pragmatic concept of value that can better guide environmental thinking on matters of law, policy, and activism. This concept of value emerges from an experiential and epistemic understanding of the inherent rationality of value experience. A description of value experience reveals that the lived significance of value experience exhibits a meaningful and referential structure in which anticipations of future experience are either satisfied or frustrated in future experience. This meaningful structure of value experience, in which value experiences point to their own confirmation or disconfirmation, constitutes a self-correcting tendency or a prima facie rationality inherent in value experience. The result is a pragmatic conception of value that takes all value intuition and attribution to be intrinsically revisable in light of future experience. As such, value experience is always subject to negotiation, dialogue, and the weight of future experience. This conception of value undercuts the intellectual, psychological, and moral justification for ecofascism or ecoterrorism.

2007	R42	Olken, Benjamin A. 2007. "Monitoring Corruption: Evidence from a Field Experiment in Indonesia." <i>Journal of Political Economy</i> , 115(2): 200-249. This paper presents a randomized field experiment on reducing corruption in over 600 Indonesian village road projects. I find that increasing government audits from 4 percent of projects to 100 percent reduced missing expenditures, as measured by discrepancies between official project costs and an independent engineers' estimate of costs, by eight percentage points. By contrast, increasing grassroots participation in monitoring had little average impact, reducing missing expenditures only in situations with limited free-rider problems and limited elite capture. Overall, the results suggest that traditional top-down monitoring can play an important role in reducing corruption, even in a highly corrupt environment.

2008	C25	Bhati, Avinash Singh. 2008. "A Generalized Cross-Entropy Approach for Modeling Spatially Correlated Counts." <i>Econometric Reviews</i> , 27(4-6): 574-95. This article discusses and applies an information-theoretic framework for incorporating knowledge of the spatial structure in a sample while extracting from it information about processes resulting in count outcomes. The framework, an application of the Generalized Cross-Entropy (GCE) method of estimating count outcome models, allows researchers to incorporate such real-world features as unobserved heterogeneity--with or without spatial clustering--when modeling spatially correlated counts. The information-recovering potential of the approach is investigated using a limited set of simulations. It is then used to study the determinants of counts of homicides recorded in 343 neighborhoods in Chicago, Illinois.
2008	D70	Frey, Bruno S., and Benno Torgler. 2008. <i>Politicians: Be Killed or Survive</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2483. In the course of history, a large number of politicians have been assassinated. Rational choice hypotheses are developed and tested using panel data covering more than 100 countries over a period of 20 years. Several strategies, in addition to security measures, are shown to significantly reduce the probability of politicians being attacked or killed: extended institutional and governance quality, democracy, voice and accountability, a well functioning system of law and order, decentralization via the division of power and federalism, larger cabinet size and strengthened civil society. There is also support for a contagion effect.

Causes and consequences of the current "subprime" financial crisis are analysed. The large number of fraudulent and criminal mortgages obtained by means of false statements unverified by the mortgagees, explains why this crisis was not predicted. The crisis was enhanced by unwise regulations like marking-to-market of untraded assets and "Basel" capital requirements.
2008	G23	Bollen, Nicolas P. B., and Veronika K. Pool. 2008. "Conditional Return Smoothing in the Hedge Fund Industry." <i>Journal of Financial and Quantitative Analysis</i> , 43(2): 267-98. We show that if true returns are independently distributed and a manager fully reports gains but delays reporting losses, then reported returns will feature conditional serial correlation. We use conditional serial correlation as a measure of conditional return smoothing. We estimate conditional serial correlation in a large sample of hedge funds. We find that the probability of observing conditional serial correlation is related to the volatility and magnitude of investor cash flows, consistent with conditional return smoothing in response to the risk of capital flight. We also present evidence that conditional serial correlation is a leading indicator of fraud.

2008	H44	Zajac, Marek Krzysztof, and Alina Zajac. 2008. "Mozliwosci funkcjonowania wieziennictwa w ramach Partnerstwa Publiczno-Prywatnego. (Possibilities of Prisons Functioning in Support of Public Private Partnership Model. With English summary.)." <i>Contemporary Economics</i> , 2(2): 113-24. From the end of the third quarter of the year 2000, the number of penal individuals crossed the number of places provided for them. Therefore the building of many convict prisons is necessary. The problem is whether the private enterprises should or can participate. This publication portrays in small degree the current situation of prison management, the idea of PPP as well as advantages and disadvantages of building prisons in support of the public private partnership model.
2008	I00	Mocan, Naci H. 2008. <i>Vengeance</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14131. This paper investigates the extent of vengeful feelings and their determinants using data on more than 89,000 individuals from 53 countries. Country characteristics (such as per-capita income, average education of the country, presence of an armed conflict, the extent of the rule-of-law, uninterrupted democracy, individualism) as well as personal attributes of the individuals influence vengeful feelings. The magnitude of vengeful feelings is greater for people in low-income countries, in countries with low levels of

Year	DE	Title and Abstract
		education, low levels of the rule-of-law, in collectivist countries and in countries that experienced an armed conflict in recent history. Females, older people, working people, people who live in high-crime areas of their country and people who are at the bottom 50% of their country's income distribution are more vengeful. The intensity of vengeful feelings dies off gradually over time. The findings suggest that vengeful feelings of people are subdued as a country develops economically and becomes more stable politically and socially and that both country characteristics and personal attributes are important determinants of vengeance. Poor people who live in higher-income societies that are ethno-linguistically homogeneous are as vengeful as rich people who live in low-income societies that are ethno-linguistically fragmented. These results reinforce the idea that some puzzles about individual choice can best be explained by considering the interplay of personal and cultural factors.

2008	L24	Xue, Qiuzhi, and Han Bingjie. 2008. "The Impact of Corruption in Host Country on Multinational's Entry Mode. (In Chinese. With English summary)." <i>Jingji Yanjiu/Economic Research Journal</i> , 43(4): 88-98. As one of the most important parts of a host country investment environment, corruption not only decreases FDI in-flow of the host country, but also affects the strategies of multinationals. Building on institutional theory, we predict that MNEs (multinational enterprises) will respond to corruption in the host country by selecting particular types of entry modes. Using data on 745 MNE's subsidiaries in 19 emerging economies, we find that MNEs adapt to the pressure of perceived corruption in country level or industry level via joint ventures (as the controlling share holders or not). We also find that this kind of influence of corruption on entry mode is moderated by MNE's strategic motivations.

2008	N95	Sinha, Nitin. 2008. "Mobility, Control and Criminality in Early Colonial India, 1760s-1850s." <i>Indian Economic and Social History Review</i> , 45(1): 1-33. The article looks into the ways certain mobile groups like the banjaras, gosains, fakirs, and sanyasis were 'criminalised' by the colonial state between the periods of the 1760s and 1850s. Historiographically, the article argues for looking at the early colonial period more closely than has hitherto been done to understand the changing material and circulatory regimes in which these peripatetic groups operated. Unlike the current historiographical convention, which would explain crime as the artefact of a paranoid colonial mind-set, this article traces criminality to the disruption in prevailing patterns of trade and transport, and the livelihoods supported by them, consequent to colonial settlement and, in this region (eastern India), the rise of the kingdom of Nepal.

2008	O50	Roumasset, James. 2008. <i>The Political Economy of Corruption: A Philippine Illustration</i> . University of Hawaii at Manoa, Department of Economics, Working Papers: 200805. This essay explores the nature, causes, and consequences of corruption as it pertains to entire regimes. Grand corruption is modeled as a type of unproductive rent-seeking at the highest levels of government. The economic costs of corruption are assumed to increase in the decentralization (and relaxation) of its governance, increase convexly in the percentage extracted, and decreasing in the opportunities for productive rent-seeking. Combining these assumptions with the benefits of corruption yields the results that optimal corruption revenues are increasing in greed of the regime and in economic opportunities but that the economic costs of corruption may be highest in the least avaricious regime. The theory is illustrated with a stylized account of corruption in three Philippine administrations, from 1973-1998. Policy implications are discussed, including the role of the economist in making corruption less attractive.
2008	Q27	Le Gallic, Bertrand. 2008. "The Use of Trade Measures against Illicit Fishing: Economic and Legal Considerations." <i>Ecological Economics</i> , 64(4): 858-66. Illegal, unreported and unregulated (IUU) fishing activities are a threat for both the marine environment and society. By undermining effective management systems, IUU fishing activities affect economic performance, social welfare and compliance decisions. So far, "traditional" control and surveillance-like measures have had a limited success in deterring IUU fishing, so this paper aims at throwing light on several forms of trade-related initiatives that can be more effective. The paper suggests that both the effectiveness and further development of such measures strongly depend on the way they are designed, especially with respect to their trade-law compatibility. However, current discussions on future trade-based policy developments within some key economic areas suggest that trade measures are a sound option for policy makers. While the paper

Year	DE	Title and Abstract
		focuses on fisheries issues, it is also expected to inform the international debate surrounding the sustainable use of natural resources in general, as many sectors face similar biodiversity and trade challenges (e.g., tropical forest, mangroves, etc.).

2008	R40	Gibbons, Stephen, and Stephen Machin. 2008. "Valuing School Quality, Better Transport, and Lower Crime: Evidence from House Prices." <i>Oxford Review of Economic Policy</i>, 24(1): 99-119. Housing prices within urban areas exhibit highly localized variation that cannot be explained solely by differences in the physical attributes of dwellings. We consider the role of local amenities and disamenities in generating price variation within urban areas, focusing on three highly policy-relevant urban issues—transport accessibility, school quality, and crime. Our survey of the recent empirical literature highlights what is known and what is not known on these issues, and considers the relevance and reliability of this evidence for policy design and evaluation. Although there are serious empirical challenges, we argue that research on housing values based on careful research designs can offer credible estimates of the social value of place-specific attributes and amenities.

2009	A23	CV: Burke, Ronald J. 2009. "Introduction: Corruption in Organizations: Causes, Consequences and Choices." In <i>Research Companion to Corruption in Organizations</i> , ed. Ronald J. Burke and Cary L. Cooper, 1-30. New Horizons in Management. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2009	B10 B20	Volejnikova, Jolana. 2009. "Reflection of Corruption in the Development of Economic Theories." <i>Ekonomie a Management</i>, 12(2): 15-34. Data relating to corruption could fill up the whole library. Nevertheless, the object of interest could be categorized to different spheres: causes of corruption, results of corruption, analyses of corruption level in accordance with states, concrete corruption causes, anti-corruption experience in single countries and so on. However, a great deal of scientists defends against research on corruption and affirms that "what should not have been, it even may not be". After all, even anti-corruption legislation had originated practically always behind schedule (in England not till year 1889) because the dominated hypocritical tendency to affirm that the problem of corruption in this country does not exist. Although there had been written a number of books about corruption during past decades, really scientific (not only tabloid and journalistic) books and articles on the theme of corruption exist only on a small scale, both in terms of foreign and internal literature. Approaches to corruption are fragmented and only few approaches try to view corruption as economic problem. That is why we attempt to map the reflection of corruption in historical development of economic theories in this text. This article is concerned with problems of corruption and its theoretic reflection in historical development of economic theories. In this context, we analyse the period of origin of early economic thinking, the period of separation of economics as independent branch of science and the period of development of economics during nineteenth and twentieth century that reflected paradigm changes within economic theories. We lay specific stress on analysis of the theory of public choice and the conception of new institutional economics. In the paper, we appear from the fact that corruption was, is, and as well as in the future it will stay with the most probability one of the possible forms of economic behaviour of economic entities with significant impact on quality of economy of individual as well as economy of government. Our purpose in submitted paper is to discuss whether and which way the problems of corruption was analysed and interpreted by economists during historical development of economic theories.
2009	B11 B12	Simon, Fabrizio. 2009. "Criminology and Economic Ideas in the Age of Enlightenment." <i>History of Economic Ideas</i>, 17(3): 11-39. My purpose is to point out that during the age of Enlightenment, and its later nineteenth-century expressions, the most relevant works on law contain examples of economic ideas about criminal phenomena and their legal repression. I will comment the analytic conclusions to which the authors of the time got to, with reference to specific questions such as the definition of crime, the determination of punishment, the judicial procedure. I will take into account some of the most representative European writers: Montesquieu, Beccaria, and Bentham. The authors I selected share the characteristic of being all exponents of utilitarianism and of presenting elements which forerun neoclassical economics in the method and analysis they employ. Besides, they have all worked out models for criminal repression which are quite similar to the contemporary model conceived by Gary Becker.

2009	D85	Patacchini, Eleonora, and Yves Zenou. 2009. <i>Juvenile Delinquency and Conformism</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7565. This paper studies whether conformism behavior affects individual outcomes in crime. We present a social network model of peer effects with ex-ante heterogeneous agents and show how conformism and deterrence affect criminal activities. We then bring the model to the data by using a very detailed dataset of adolescent friendship networks. A novel social network-based empirical strategy allows us to identify peer effects for different types of crimes. We find that conformity plays an important role for all crimes, especially for petty crimes. This suggests that, for juvenile crime, an effective policy should not only be measured by the possible crime reduction it implies but also by the group interactions it engenders.

		minimum values in reaction to the incentives offered by a government. Depending on the organization's network structure, the desertion of an individual member will unleash a contagion process that will destroy the local network at a varying speed. Staging a game between a government and the members of an illegal organization, connected through a network structure, we show that the speed of the desertion process depends on the network structure and on its members' minimum desertion values.
2009	G17	Goldstein, Daniel G., and Gerd Gigerenzer. 2009. "Fast and Frugal Forecasting." <i>International Journal of Forecasting</i>, 25(4): 760-72. Simple statistical forecasting rules, which are usually simplifications of classical models, have been shown to make better predictions than more complex rules, especially when the future values of a criterion are highly uncertain. In this article, we provide evidence that some of the fast and frugal heuristics that people use intuitively are able to make forecasts that are as good as or better than those of knowledge-intensive procedures. We draw from research on the adaptive toolbox and ecological rationality to demonstrate the power of using intuitive heuristics for forecasting in various domains including sport, business, and crime.
2009	I23	Chang, Yang-Ming, and Shane D. Sanders. 2009. "Corruption on the Court: The Causes and Social Consequences of Point-Shaving in NCAA Basketball." <i>Review of Law and Economics</i>, 5(1): This paper is concerned with the economic incentives of crime among agents within a private organization. Specifically, we present a contest model of a college basketball game to identify the winners, losers, and social welfare consequences of point-shaving corruption in men's NCAA basketball as an example of participation in illicit activities. It is shown that, under reasonable conditions, such activities lower the level of social welfare derived from college basketball play by reducing aggregate efforts in a game and distorting relative efforts across teams. We then examine the economic incentives of a player to point-shave and discuss player-types that are at a relatively high risk of engaging in point-shaving corruption. Private and public mechanisms to minimize corruption are compared in terms of efficiency, and a differential "honesty premium" is derived and discussed as an efficient way for the NCAA to decrease the incidence of player corruption.
2009	I23	Schmidt, Martin B., and Lee M. Stuck. 2009. "Point Shaving: Corruption in NCAA College Football?" <i>Economics Letters</i>, 105(1): 90-92. Several recent studies suggest the presence of point shaving in NCAA college basketball. While similar asymmetric incentives between athletes and gamblers exist, evidence for point shaving in college football does not appear to exist.
2009	I23	Andrei, Tudorel, Daniel Teodorescu, Regis Bourbonnais, and Bogdan Oancea. 2009. "A Simultaneous Equation Model for Estimating Corruption in Higher Education." <i>Acta Oeconomica</i>, 59(4): 411-39.
2009	J69	Falk, Armin, Andreas Kuhn, and Josef Zweimuller. 2009. <i>Unemployment and Right-wing Extremist Crime</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7467. It is frequently argued that unemployment plays a crucial role for the occurrence of right-wing extremist crimes. We empirically test this hypothesis using data from Germany. We find that right-wing criminal activities occur more frequently when unemployment is high. The big difference in right-wing crime between East and West German states can mostly be attributed to differences in unemployment. This finding reinforces the importance of unemployment as an explanatory factor for right-wing crime and questions explanations based solely on the different socialization in former communist East Germany and the liberal West German states.

In general, given a particular set of institutions, the greater a county's per capita income, the more extensive will be its provision of goods and services that require concerted public action. We contend that one of the most important aspects of institutions in this regard is public sector corruption. We test this contention by analyzing 85 countries observed in 1990, 1995, 2000, and 2004--the only years for which data on improved drinking water and adequate sanitation are available. The models point to statistically significant, negative relations between corruption and access to both improved drinking water and adequate sanitation.
2009	L95	Guasch, J. Luis, and Stephane Straub. 2009. "Corruption and Concession Renegotiations: Evidence from the Water and Transport Sectors in Latin America." <i>Utilities Policy</i>, 17(2): 185-90. Numerous renegotiations have plagued water and transport concession contracts in Latin America. Using a panel dataset of over 300 concession contracts from Latin America between 1989 and 2000, we show that country-level corruption is a significant determinant of these renegotiations and that the effect of corruption varies depending on the type of renegotiations considered. While a more corrupt environment clearly leads to more firm-led renegotiations, it significantly reduces the incidence of government-led ones. The paper then discusses and tests the likely channels through which these different effects of corruption arise, looking in particular at the interactions between country-level corruption and relevant microeconomic institutions.

2009	N20	Siems, Mathias M., and Michael C. Schouten. 2009. <i>The Evolution of Ownership Disclosure Rules across Countries</i>. ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. Over recent years, a number of regulators have launched proposals to expand the obligation to disclose major share ownership in listed companies. This article shows that these are not stand-alone developments. Using a unique dataset comprising data from 25 countries over 11 years (1995-2005) and collected by the Centre for Business Research of the University of Cambridge, we empirically study the evolution of ownership disclosure rules across countries. The analysis demonstrates that these rules have become more stringent over time, in the sense that disclosure thresholds have been lowered, and that there has been convergence. A breakdown of the results suggests that the degree of countries' economic development is a relevant factor in explaining the differences between countries. The analysis also suggests a positive correlation between ownership disclosure and other variables that protect minority shareholders, as well as a positive correlation between the stringency of countries' ownership disclosure rules and the degree of dispersed ownership. In the article, we offer various possible explanations for these results. Going forward, while it appears unlikely that disclosure thresholds will be lowered much further, ownership disclosure rules can be expected to continue to evolve in other dimensions. Regulators are likely to broaden the definition of the stake that triggers disclosure, so as to ensure that the ultimate owner is reached. In addition, regulators may require more information be disclosed when the notification is made, so as to enable other investors and issuers to adequately assess the implications of major share ownership.
2009	N46	Caimari, Lila. 2009. "Modernidades delictivas. Buenos Aires en la era del "pistolero". (With English summary)." <i>Desarrollo Economico</i>, 49(195): 389-419. During the 1920s and 1930s, Buenos Aires society experienced a "crime wave". Drawing from this perception, this article analyzes the main technological changes underlying the evolution of illegal practices, with particular attention to the expansion of access to automobiles and automatic weapons. Furthermore, it follows transformations in the geography of crime, from the XIXth century notion of 'bajo fondo' to the emerging topic of the dangerous suburb. Finally, it analyzes the rather fashionable figure of the modern pistolero, as opposed to the traditional gaucho matrero and the knife brawling characters of the margins of Buenos Aires.
2009	N36 N46	Villamor, Eduardo, Jorge E. Chavarro, and Luis E. Caro. 2009. "Growing Up under Generalized Violence: An Ecological Study of Homicide Rates and Secular Trends in Age at Menarche in Colombia, 1940s-1980s." <i>Economics and Human Biology</i>, 7(2): 238-45. We examined secular changes in mean age at menarche among 5,577 Colombian women born between 1941 and 1989, and correlated those changes with nation-wide rates of homicide and real gross domestic product per capita (GDP) at the year of birth and at the year at age 5, within predefined historical periods. The mean (standard error) rate of change in age at menarche by year of birth was -0.55 (0.02) years/decade. The rate of change was not constant, but varied between historical periods as follows: -1.44, -0.14, -0.60, and -0.36 years/decade for the periods 1941-1947, 1948-1958, 1959-1978, and 1979-1989, respectively. The changes in age at menarche correlated positively with the changes in the nation-wide rates of homicide within such periods; i.e., decelerations in the menarcheal trend coincided with increases in the rates of homicide and vice versa. The correlation was higher with the rates of homicide when women were 5 years of age ($r = 0.99$, $p = 0.01$) compared to the rates of homicide at the year of birth (0.55 , $p = 0.45$). There were negative correlations between the changes in age at menarche and the changes in GDP, but they were weaker than those with the rates of homicide. These results could suggest a potential impact on maturation of psychosocial stress in childhood due to exposure to a generalized atmosphere of violence and fear.
2009	N87	Shanahan, Martin P., and David K. Round. 2009. "Serious Cartel Conduct, Criminalisation and Evidentiary Standards: Lessons from the Coal Vend Case of 1911 in Australia." <i>Business History</i>, 51(6): 875-906. The criminalisation of anti-competitive behaviour such as price fixing has long been a feature of US antitrust law. Some European countries have introduced criminal penalties for price fixing while in others the matter is under debate. Australia introduced such laws in 2009. Of critical importance when considering criminalisation is the evidentiary standard expected in criminal prosecutions. A century ago, in the Coal Vend case, the High Court of Australia broke new evidentiary ground in applying forensic accounting and economic methods to examine price fixing. Subsequently overturned, much could still be learnt by policy makers and competition agencies from this case.
2009	O25	Sen, Kunal, and Dirk Willem Te Velde. 2009. "State Business Relations and Economic Growth in Sub-Saharan Africa." <i>Journal of Development Studies</i>, 45(8): 1267-83. his paper contributes to the literature on the determinants of economic growth in sub-Saharan Africa by examining the effect of effective state-business relations on economic growth for a panel of 19 sub-Saharan African countries for the period 1970-2004. We propose a measure that we argue captures the various dimensions of effective state-business relations in sub-Saharan Africa. We then estimate standard growth regressions using dynamic panel data methods with this measure, along with the more conventionally used measures of institutional quality such as degree of executive constraints, the rule of law, the degree of corruption and the quality of the bureaucracy. Our results show that effective state-business relations contribute significantly to economic growth--countries which have shown improvements in state-business relations have witnessed higher economic growth, controlling for other determinants of economic growth and independent of other measures of institutional quality.

"Symposium: Energy Issues and Challenges in Emerging Economies: Corruption and Economic Development in Energy-Rich Economies." <i>Comparative Economic Studies</i>, 51(2): 165-80. We empirically model the causes of corruption and test the economic development-corruption link in energy-rich economies, using data from 48 countries with energy resources. The results indicate that energy abundance may not necessarily hurt economic development in energy-rich countries, allowing enterprises to conduct business more effectively to reduce corruption, establishing a better political (democratic) regime improves corruption rankings, and finally while corruption reduces both the level of GDP per capita and its growth rate, economic development decreases corruption.
2009	Q55	Villegas, Clara, and Jessica Coria. 2009. <i>Taxes, Permits, and the Adoption of Abatement Technology under Imperfect Compliance</i>. Resources For the Future, Discussion Papers. This paper analyzes the effects of the choice between price-based and quantity-based emissions regulations on compliance incentives and social welfare in the presence of incomplete enforcement and technology adoption. We show that if the regulator does not adjust the level of the policies in response to the advent of the new

Year	DE	Title and Abstract
		technology, the extent of violations under tradable emissions permits (TEPs)--in contrast to taxes--decreases with the rate of technology adoption. However, in terms of welfare, the ranking of the instruments is not so straightforward: taxes may induce lower emissions damages, while TEPs induce lower abatement, investment, and expected enforcement costs. Therefore, the overall ranking depends on the extent to which these effects offset each other.

2010	D00	Diss: Rivers, David. 2010. Essays in Empirical Microeconomics. PhD diss. University of Wisconsin. Chapter 1. Identifying Production Functions Using Restrictions from Economic Theory: In the first chapter, I (along with Amit Gandhi and Salvador Navarro) develop a methodology for estimating production functions that, in addition to addressing some of the problems in the production function estimation literature, allows for a greater amount of firm-level heterogeneity. The key to the method lies in using the firm's static input decision as a source of identifying information. In particular, we use the first order condition as a second structural equation that allows us to separate out the endogenous part of the error term in the production function. Since we avoid proxy variables altogether, we can allow for richer patterns of firm heterogeneity, such as differences in prices and factor-specific productivity. Chapter 2. Are Exporters More Productive than Non-Exporters? In the second chapter, I provide evidence that, contrary to a common empirical finding in the international trade literature, exporting firms do not possess a productivity advantage relative to non-exporting firms. Productivity in this literature is typically measured by computing labor productivity, or by forming the residual from a regression of deflated value-added on input levels. The former method conflates differences in other inputs (in particular capital) with true differences in efficiency, while the latter suffers from endogeneity biases. I recover productivity through the estimation of a gross output production function. Using the methodology developed in the first chapter, I am able to control for endogeneity caused by the correlation between inputs and both unobserved productivity and unobserved differences between firm-level prices and the deflator. I argue that the relative productivity of exporters is overestimated for two reasons. The first is the use of value-added as opposed to gross output production functions. The second is the fact that the price received by exporting firms is a mixture of the domestic and foreign prices. With these corrections, I find that the estimated productivity gap between exporting and non-exporting firms decreases to zero. This result is inconsistent with productivity being the main determinant of entry into export markets. Chapter 3. Understanding Aggregate Crime Regressions: In the third chapter, I (along with Steven Durlauf and Salvador Navarro) provide a general description of the relationship between individual decision problems and aggregate crime regressions. The analysis is designed to elucidate the behavioral and statistical assumptions that are implicit in the use of aggregate crime regressions for both the analysis of crime determinants as well as in counterfactual policy evaluation. We apply our general arguments to the question of the deterrent effect of capital punishment and show how alternative assumptions affect estimates of the deterrent effect.
2010	D22	Nowakowski, Krzysztof. 2010. "Nowe zjawisko korupcji komercyjnej. (New Phenomenon of Commercial Corruption. With English summary)." <i>Contemporary Economics</i> , 4(2): 111-28. This article is about increase corruption in private sector as commercial corruption. This establishes a wide understanding of that phenomenon in social science and law. Corruption and bribery are types of fraud and are linked with the private sector, too. Although certain types of corruption will decline as the private sector grows and consolidates, other new types involving private sector firms may increase. The commercial corruption can be described as relation inside of an organization and as relation between firms. Corruption in private sector in Poland is connected with social distrust and specific organizational culture, too. Commercial corruption is a familiar feature of their societies and has been the focus of law enforcement and institutional reform. Many others problems do not change the fact that such corruption is a new important problem and causes loss of competitiveness and creates a substitute for fair market and competition in Polish economy and abroad
2010	D52	Cozzi, Marco. 2010. <i>Accounting for the Racial Property Crime Gap in the US: A Quantitative Equilibrium Analysis</i> . Queen's University, Department of Economics, Working Papers: 1233. This paper studies the effects of both labor market conditions and asset poverty on the property crimes involvement of American males. Since the mid 60s, the property crimes arrest rate has been four times higher for black males if compared to white ones. Another set of stylised facts show for the first demographic group lower educational levels and worse labor market outcomes, with the African Americans supplying less hours of labor, gaining lower wages, experiencing both higher unemployment duration and rates. At the same time, more than 30% of black households had a negative net worth. A dynamic general equilibrium model is developed, exploiting these facts to quantitatively assess the race crime gap, that is the difference in crime explained by the difference in observables. The model is calibrated relying on US data and solved numerically. The model captures well relevant dimensions of the crime phenomenon, such as the inmates composition by race, employment status and education. Simulation results show that the observed poverty and labor market

Year	DE	Title and Abstract
		outcomes account for as much as 90% of the arrest rates ratio. Finally the model is used to compare two alternative policy experiments aimed at reducing the aggregate crime rate: increasing the expenditure on police seems to be cost effective, when compared to an equally expensive lump-sum subsidy targeted to the high school dropouts.
2010	H42	Benmelech, Efraim, Claude Berrebi, and Esteban F. Klor. 2010. <i>Economic Conditions and the Quality of Suicide Terrorism</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7995. We analyze the link between economic conditions and the quality of suicide terrorism. While the existing empirical literature shows that poverty and economic conditions are not correlated with the quantity of terror, theory predicts that poverty and poor economic conditions may affect the quality of terror. Poor economic conditions may lead more able, better-educated individuals to participate in terror attacks, allowing terror organizations to send better-qualified terrorists to more complex, higher-impact, terror missions. Using the universe of Palestinian suicide terrorists against Israeli targets between the years 2000 and 2006 we provide evidence on the correlation between economic conditions, the characteristics of suicide terrorists and the targets they attack. High levels of unemployment enable terror organizations to recruit more educated, mature and experienced suicide terrorists who in turn attack more important Israeli targets.
2010	H49	Ehrlich, Isaac, and Tetsuya Saito. 2010. <i>Taxing Guns vs. Taxing Crime: An Application of the "Market for Offenses Model"</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16009. The interaction between offenders and potential victims has so far received relatively little attention in the literature on the economics of crime. The main objective of this paper is twofold: to extend the "market for offenses model" to deal with both "product" and "factor" markets, and to apply it to the case where guns are used for crime commission by offenders and for self-protection by potential victims. Our analysis offers new insights about the association between crime and guns and the limits it imposes on the efficacy of law enforcement and regulatory policies aimed to control both crime and guns.
2010	H60	Schmitt, John, Kris Warner, and Sarika Gupta. 2010. <i>The High Budgetary Cost of Incarceration</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The United States currently incarcerates a higher share of its population than any other country in the world. We calculate that a reduction in incarceration rates just to the level we had in 1993 (which was already high by historical standards) would lower correctional expenditures by \$16.9 billion per year, with the large majority of these savings accruing to financially squeezed state and local governments. As a group, state governments could save \$7.6 billion, while local governments could save \$7.2 billion. These cost savings could be realized through a reduction by one-half in the incarceration rate of exclusively non-violent offenders, who now make up over 60 percent of the prison and jail population. A review of the extensive research on incarceration and crime suggests that these savings could be achieved without any appreciable deterioration in public safety.
2010	J00	Diss: Wie, Dainn. 2010. Essays on Labor Economics. PhD diss. Harvard University. This dissertation consists of three essays on policy studies. The first essay studies the effect of workweek policy on institutional investors' inattention to Friday earnings announcement. The second essay examines how people would respond to divorce waiting period once they file divorce. The third essay investigates the effect of bounty hunter regulation on released defendants' choice to use surety bond and their pretrial release misconduct. The first essay uses stock market data from Korea to test the hypothesis that the five day workweek system is a key factor affecting investor inattention to Friday earnings announcements. It is well known that investors are less likely to pay full attention to Friday earnings announcements because of weekend distractions. Our test focuses on the scheduled attention of institutional investors to review earnings information released on Friday after market close. We use the introduction of the five day workweek system in November 2002 in financial sector of Korea as an exogenous variation to examine the effect of work schedule on relative attention to paid to Friday earnings announcements. Indeed, we find that the immediate response to Friday earnings announcements is strong, and post-earnings announcement drift is weaker under the six day workweek system. On the contrary, under the five day workweek system, Friday earnings announcements show relatively sluggish stock response in the short run and more drift in the long run. We also find the similar movement in trading volume around the earnings announcement day. There is relatively more active trading for Friday earnings news under the six day workweek system, while the trend is reversed under the five day workweek system. This confirms that the source of Friday inattention is not market close but the scheduled attention to work caused by workweek system. The second essay examines the effect of divorce waiting period in Korea. Starting in 2005, couples who file consented divorces were given waiting periods to re-think their decision in several jurisdictions in Korea. In the second essay, we use lagged adoption of divorce waiting period to examine the effect of divorce waiting periods on divorce filing rates and actual divorce rates. Our empirical results show that actual divorce rates significantly decrease about 8% after the introduction of waiting periods while divorce filing rates remained constant. We suggest that projection bias in divorce decisions is an explanation of our findings. If people have projection bias, their decision to divorce will be highly affected by the emotional state they are in when they file for divorce. And as they realize that projection bias influenced their decision during the waiting period they would eventually cancel their divorce, thereby lowering the actually divorce rate. Our empirical findings correspond to the predictions of projection bias theory and also suggest that a "cooling-off" policy can actually contribute to reducing sub-optimal decisions caused by projection bias. The third essay examines the effect of bounty hunter regulations across states on pretrial release outcomes. Until very recently, bounty hunters hired by surety bond companies have been granted extensive power to pursue fugitives and arrest them at any time. Even though they are essential to the criminal justice system, they have been unlicensed and unregulated. After a tragic accident which innocent people were killed by bounty hunters in Arizona, many states enacted new regulation on bounty hunters. However, there also have been worries about overregulation of bounty hunters, because without them, complete responsibility to catch all fugitives will fall upon government law enforcement officials. I used lagged legislation of bounty hunter regulations as a source of exogenous variation to examine whether released defendants are more likely to use surety bond under the new regime. I also look at effect of regulations on pretrial release misconduct among who hire bondsmen to post bail. Estimation results using Difference-in-Difference estimation show that released defendants are more likely to choose surety bond to post bail after the enactment of regulation. However, it shows that there is no effect of regulation on the pretrial release misconduct such as probability to fail to appear, probability to become a fugitive, and likelihood to be rearrested for other crimes during release. These results suggest that the enactment of bounty hunter regulations are proper and do not cause inefficiency in the operation of bounty hunters.
2010	J00	Diss: Lee, Jean Nahrae. 2010. Essays in Development Economics and Labor Economics. PhD diss. Harvard University. This thesis consists of three essays in Development Economics and Labor Economics. The first essay uses data from Brazilian industrial plants to estimate the extent to which employment spillovers between geographically and economically proximate industries lead to larger changes in employment than would be predicted by national trends in Brazilian municipalities. Using establishment-level data from Brazil, we estimate the extent to which firm- and industry-level employment and entry decisions respond to plausibly exogenous changes in the employment decisions of geographically and economically proximate firms between 1995 and 2005. Our results suggest the existence of economically and statistically significant effects of municipality-level predicted trends in other industries on the employment and entry decisions of individual firms. The second chapter estimates the impact of changes in state statutes, which in addition to laws passed at the federal level in the United States, specify procedures for summoning and determining the eligibility of jurors to serve on criminal juries in state courts. This paper uses a series of changes in state laws

Year	DE	Title and Abstract
		governing the compilation of lists of eligible jurors to attempt to identify the impact of increasing the participation of African Americans and other minorities in jury service on the racial composition of admissions to prison. Evidence exploiting the variation in timing of these law changes suggests that the reforms resulted in a 5 to 6 percentage point drop in the share of new admissions to prison accounted for by non-whites, consistent with the existence of racial discrimination in the deliberation of criminal cases. The third chapter uses original survey data as well as administrative data on sales from a distributor for a large multinational firm producing household goods to estimate the returns to additional investments made by small retail establishments in western Kenya. Standard textbook models suggest risk-adjusted rates of return should be equalized across activities within firms, and across firms. We find unexploited investments in inventory which would yield an average annual real marginal rate of return of 113 percent, well above rates of return to debt and equity both in Kenya and in international markets. A second approach, using administrative data on whether firms purchased enough to take advantage of quantity discounts from wholesalers, suggests a lower bound on rates of return of at least 117 percent per year. We reject the hypothesis that the marginal rates of return are equal across shops.
2010	J10	CV: Schmitt, John, and Kris Warner. 2010. <i>The High Budgetary Cost of Incarceration</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. We use Bureau of Justice Statistics data to estimate that, in 2008, the United States had between 12 and 14 million ex-offenders of working age. Because a prison record or felony conviction greatly lowers ex-offenders' prospects in the labor market, we estimate that this large population lowered the total male employment rate that year by 1.5 to 1.7 percentage points. In GDP terms, these reductions in employment cost the U.S. economy between \$57 and \$65 billion in lost output.
2010	J48 J50 L38 M55	CV: Kleiner, Morris M., and David Weil. 2010. <i>Evaluating the Effectiveness of National Labor Relations Act Remedies: Analysis and Comparison with Other Workplace Penalty Policies</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16626. The goal of this paper is to examine the implied penalty policies underlying the remedies created by the National Labor Relations Act (NLRA) in terms of the policies' impact on employer and union behaviors. We present a simple model of deterrence as a means of evaluating workplace penalty policies in terms of their influence on employer behavior, particularly through deterrence effects. We also compare the remedies for violations embodied in the NLRA with penalty policies under other workplace legislation, such as the Fair Labor Standards Act and the Occupational Safety and Health Act. We then evaluate the size of financial costs for violations against individuals of specific provisions of the NLRA by firms and unions for the period 2000-2009. We show that the implied penalties are modest, particularly in terms of providing sufficient incentives to comply with the law in a timely manner. Given this finding, we examine other potential remedies available under the NLRA, in particular, methods to address the impact of delays (the length of time from the filing of the charge or the issuance of the charge to the time of its adjudication before an administrative law judge at the National Labor Relations Board or through the federal courts) on workplace representation through unionization.

2010	L63	CV: Desierto, Desiree A., Karen Annette D. Lazaro, and Kevin Thomas G. Cruz. 2010. "Is It Worth Taxing Pirated Products? The Case of Optical Media Discs in the Philippines." <i>Asian Economic Papers</i> , 9(2): 79-112. This paper questions the conventional argument that the existence of a black market provides negative externalities in the form of foregone tax revenues that could otherwise be used to increase social welfare. It is not enough to estimate the size of the black market, one should also show how much of this can be eradicated, and how much of what is eradicated can be replaced by legitimate (taxable) goods, and how much of what is replaced can generate actual tax revenue. When all these are taken into account, the actual tax loss from piracy may be trivial. We illustrate this point using time-series data on optical media disc piracy in the Philippines.

2010	N76	Leeson, Peter T. 2010. "Pirational Choice: The Economics of Infamous Pirate Practices." <i>Journal of Economic Behavior and Organization</i> , 76(3): 497-510. This paper investigates the economics of infamous pirate practices. Two closely related economic theories--the theory of signaling and the theory of reputation building--explain these practices. First, I examine the pirate flag, "Jolly Roger," which pirates used to signal their identity as unconstrained outlaws, enabling them to take prizes without costly conflict. Second, I consider how pirates combined heinous torture, public displays of "madness," and published advertisement of their fiendishness to establish a reputation that prevented costly captive behaviors. Pirates' infamous practices reduced their criminal enterprise's costs and increased its revenues, enhancing the profitability of life "on the account."
2010	O20	World Bank. 2010. <i>Africa Development Indicators 2010</i> , Washington, D.C.: World Bank. Presents macroeconomic, sectoral, and social indicators covering fifty-three African countries, including provisional data from 2008 for some macroeconomic indicators. Tables cover basic indicators; national and fiscal accounts; the Millennium Development Goals; private sector development; trade and regional integration; infrastructure; human development; agriculture, rural development, and environment; labor, migration, and population; HIV/AIDS; malaria; and capable states and partnership. Includes an essay on how quiet corruption undermines Africa's development. CD-ROM contains additional indicators covering the years 1961-2008.

Explores the relationship between the concepts of market efficiency, natural order, discipline, and regulation and considers flaws in, and possible alternatives for, the current administration of markets and punishment. Discusses Cesare Beccaria on crime and punishment; policing the public economy; the birth of natural order; the rise of legal despotism; Jeremy Bentham's strange alchemy; the Chicago School; the myth of discipline; the illusion of freedom; the penitentiary system and mass incarceration; and private prisons, drugs, and the welfare state..
2011	C11	Amini, Shahram M., and Christopher F. Parmeter. 2011. "Bayesian Model Averaging in R." <i>Journal of Economic and Social Measurement</i> , 36(4): 253-87. Bayesian model averaging has increasingly witnessed applications across an array of empirical contexts. However, the dearth of available statistical software which allows one to engage in a model averaging exercise is limited. It is common for consumers of these methods to develop their own code, which has obvious appeal. However, canned statistical software can ameliorate one's own analysis if they are not intimately familiar with the nuances of computer coding. Moreover, many researchers would prefer user ready software to mitigate the inevitable time costs that arise when hard coding an econometric estimator. To that end, this paper describes the relative merits and attractiveness of several competing packages in the statistical environment R to implement a Bayesian model averaging exercise.
2011	C41	Mastrobuoni, Giovanni, and Paolo Pinotti. 2011. <i>Migration Restrictions and Criminal Behavior: Evidence from a Natural Experiment</i> . Fondazione Eni Enrico Mattei, Working Papers: 2011.53. We estimate the causal effect of immigrants' legal status on criminal behavior exploiting exogenous variation in migration restrictions across nationalities driven by the last round of the European Union enlargement. Unique individual-level data on a collective clemency bill enacted in Italy five months before the enlargement allow us to compare the post-release criminal record of inmates from new EU member countries with a control group of pardoned inmates from candidate EU member countries. Difference-in-differences in the probability of re-arrest between the two groups before and after the enlargement show that obtaining legal status lowers the recidivism of economically motivated offenders, but only in areas that provide relatively better labor market opportunities to legal immigrants. We provide a search-theoretic model of criminal behavior that is consistent with these results.
2011	C45	Picon Viana, Cristian. 2011. "Son mas corruptos los paises menos abiertos a los mercados internacionales? Aplicacion de un modelo predictivo de clasificacion basado en redes neuronales. (Is There More Corruption in Countries Less Opened to International Markets? Application of a Predictive Classification Model Based on Neural Networks. With English summary.)." <i>Revista de Economia del Caribe</i> , 8(0): 45-79. The most common approaches in favor of liberalizing international trade and international finances suggest that opening policies will have a positive impact in reducing corruption. In spite of the complexity of studying about these relationships, most research in this field are limited to correlational studies or deterministic. In this paper, we applied a predictive model of classification based on neural networks called multilayer perceptron (MLP) that meets a set of qualities desired statistics, with the purpose of estimate the characteristics or "symptoms" that presents a countries categorized as more or less corrupt. Of the variables used, the levels of human development (HDI) and levels of economic openness are the common characteristics shared by countries with similar levels of corruption, allowing classified correctly. We found evidence that show us if opening economic level of a country is lower, the chance of being classified at a higher level of corruption will be higher.

2011	D51	Dal Bo, Ernesto, and Pedro Dal Bo. 2011. "Workers, Warriors, and Criminals: Social Conflict in General Equilibrium." <i>Journal of the European Economic Association</i>, 9(4): 646-77. We incorporate appropriation activities (social conflict) into canonical models of trade and study how economic shocks and policies affect the intensity of conflict. We show that not all shocks that could make society richer reduce conflict: positive shocks to labor-intensive industries diminish conflict, while positive shocks to capital-intensive industries increase it. The key requirement is that conflict activities be more labor intensive than the economy as this determines how shocks affect the returns and costs of conflict. Our theory is consistent with several observed patterns of conflict and implies that empirical work should take into account the relative factor intensities of the productive and conflict sectors in each country. Incorporating appropriation into a canonic general equilibrium model affects what policies may be deemed desirable: in order to reduce conflict and generate Pareto-improvements policy must be distortionary, while reforms that appear efficiency-enhancing under the unrealistic assumption of perfect property rights may backfire. This offers one explanation for why reforms based on traditional models without appropriation may be delayed and become unpopular when implemented, and why societies may sympathize with seemingly inefficient redistribution.
2011	D84	Bagchi, Aniruddha, and Siddharth Bandyopadhyay. 2011. <i>Workplace Deviance and the Business Cycle</i>. Department of Economics, University of Birmingham, Discussion Papers. We examine the relationship between the incidence of workplace deviance (on-the-job crime) and the business cycle. A worker's probability of future employment depends on whether she has been deviant as well as on the availability of jobs. Using a two period model we show that the net impact on deviant behaviour to changes in unemployment is ambiguous and depends on the strength of two effects. If the probability of being employed for a non-deviant improves as expected market conditions improve, then that lowers deviant behaviour, while if the deviant's probability of being employed improves as market conditions improve, that increases deviance as market conditions improve. In either case, there is a setup cost to deviant behaviour and the attractiveness of incurring that increases with an increase in expected probability of future employment. This second effect therefore increases the incentive to be deviant and thus can reinforce the first effect or weaken it. Finally, we show that an increase in optimism i.e. the probability of facing a recession going down unambiguously increases deviant behaviour.
2011	E02	Gonzalez-Salzburg, Damian A. 2011. "Economic and Social Rights within the Inter-American Human Rights System: Thinking New Strategies for Obtaining Judicial Protection." <i>International Law: Revista Colombiana de Derecho Internacional</i>, 0(18): 117-54. After more than half a century of existence of international human rights regimes, a differential degree of protection is still received by the so-called economic and social rights, when compared to the ones named civil and political. However, this article aims to show that certain strategies used within the Inter-American Human Rights System, IAHRs, have proved to be relatively successful for granting judiciable character to economic and social rights. Moreover, the paper discusses alternative paths that could be tried in order to obtain an improved judicial protection for these rights within the Americas.

Whilst there are some concerns over the validity

Year	DE	Title and Abstract
		of privatisation as a solution to emerging fiscal and policy dilemmas, it has remained popular with governments. Over the last thirty years, corporations and governments have promoted a view that the market should be mobilised to motivate and discipline the public sector but we know very little about the technologies that are deployed to make this possible. The push to expose public services to market pressures rests on a belief that the market represents a source of 'competitive' and 'innovative' standards that would not be possible within the public sector alone (Funnell et al. 2009). It is a belief that exists with the backing of carefully constructed empirical evidence which, in turn, reproduces itself as a form of truth around which public policy can be constructed.
2011	N50	Hotte, Louis, Randy McFerrin, and Douglas Wills. 2011. <i>On the Dual Nature of Weak Property Rights</i>. University of Ottawa, Department of Economics, Working Papers: 1103E. In the natural resource literature, conventional wisdom holds that weak property rights will cause a resource to be over-exploited. This is because weak property rights are typically perceived as a problem of input exclusion. In this paper, we first present evidence to the effect that weak property rights often take the form of contestable output--or output theft--and that this has an impact on resource use. We then propose a theoretical model of natural resource use under generally weak property rights--or weak state presence--when resource users face the dual problem of input exclusion output appropriation. We show that introducing the possibility that outputs can be contested acts as an output tax, with the added twist that resource users effectively determine the level of the tax. This tax has a depressive effect on input use. As a result, whether the resource is under- or over-exploited in equilibrium will depend on the relative severity of output appropriation and input exclusion problems when property rights are generally weak.

2011	P46	Nourollahi, Mostafa. 2011. "Western Countries' Children's Delinquencies' Increment Compared to Islamic Ones." <i>Indian Journal of Social Development</i>, 11(2): 625-40. By comparative considering of western and Islamic countries' juveniles, we can briefly understand there are several similarities and differences among them in committing crimes and offenses by them. The most important question is determining what the main reasons are for juveniles to commit crimes and offenses. It seems family, school, society and friends are the most important elements that have the great effect on juveniles' offenses. According to the research and studies that have been done by scientists and of course famous legal men, there are obvious factors such as poverty, communicative facilities, internet sites, educational matters and several other items that affect juveniles' personalities and help them choose the direction of their lives. Certainly any mistake and misunderstanding about any of the previous factors would have great influence and therefore could easily cause them to go astray. By comparative considering between previous cultures and customs that have direct relationship with their religion and traditions as a result, we understand that each group has some positive and negative politics which need more attention.
2011	Q49 R13	Alston, Lee J., and Krister Andersson. 2011. <i>Reducing Greenhouse Gas Emissions by Forest Protection: The Transaction Costs of REDD</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16756. Understanding and minimizing the transaction costs of policy implementation are critical for reducing tropical forest losses. As the international community prepares to launch REDD+, a global initiative to reduce greenhouse gas emissions from tropical deforestation, policymakers need to pay attention to the transactions costs associated with negotiating, monitoring and enforcing contracts between governments and donors. The existing institutional design for REDD+ relies heavily on central government interventions in program countries. Analyzing new data on forest conservation outcomes, we identify several problems with this centralized approach to forest protection. We describe options for a more diversified policy approach that could reduce the full set of transaction costs and thereby improve the efficiency of the market-based approach for conservation.
2011	Z19	Silva, Niko De, and Benno Torgler. 2011. <i>Smoke Signals and Mixed Messages: Medical Marijuana & Drug Policy Signalling Effects</i>. School of Economics and Finance, Queensland University of Technology, School of Economics and Finance Discussion Papers and Working Papers Series: 272. Liberal drug policy reform is often criticized for 'sending the wrong message', particularly to youth. Reform opponents argue that liberal policies such as decriminalisation and medical marijuana laws will cause marijuana to be perceived as less risky and lead to an increase in use. We seek to test this claim empirically, exploiting the timing and unique properties of state level medical marijuana laws in the US to isolate policy signalling effects. We use survey-derived state-level estimates of youths' marijuana risk-perceptions and use prevalence, and find evidence of signalling effects on aggregate risk-perceptions of marijuana use that correspond to the introduction of medical marijuana laws. These effects, however, do not conform to what reform opponents predict--medical marijuana provisions appear to send the 'right' message. Further, we find no robust effects on non-medical marijuana use.

2012	C43	Scalco, Paulo Roberto, Ailton Lopes Amorim, and Adriano Provezano Gomes. 2012. "Eficiencia tecnica da Policia Militar em Minas Gerais. (With English summary)." <i>Nova Economia</i>, 22(1): . This study sought to calculate an efficiency index in crime fighting that would allow comparison between Minas Gerais state military police units. The efficiency index were calculated by data envelopment analysis and the results indicated a large discrepancy between the municipalities analyzed and possible public security policy could try to raise efficiency levels in the worst municipalities using the most efficient ones as benchmarks. Furthermore, a Tobit model was estimated to test the relevance of the social and economic environmental exercised in achieving the efficiency index. The results showed that the set of variables used explained only 10% of the variability of the index calculated.
2012	D04	Kuo, Tzu-Chun. 2012. "Evaluating Californian Under-Age Drunk Driving Laws: Endogenous Policy Lags." <i>Journal of Applied Econometrics</i>, 27(7): 1100-1115. When evaluating the effectiveness of a policy, most studies assume that the policy effect begins with the date of enactment. However, there often exists an endogenous policy lag, due to information acquisition and the cost of adjustment. Meanwhile, the policy impact may be a gradual implementation from one level to another, instead of a one-time shift behavior. To account for these issues when evaluating the Californian under-age drunk driving laws, this paper adopts two econometric techniques: the multiple structural change methodology and the smooth transition method. The methods detect two

Year	DE	Title and Abstract
		effective policy changes and also reveal the existence of policy lags. In addition, ignoring these lags leads to severely biased estimates of policy effects. A long transition period is identified for the first under-age drunk driving policy, while an abrupt transition is found for the other. In summary, the paper shows that the two econometric techniques complement each other and will be useful for policy evaluation.
2012	F60	CV: Chang, Hsiao-hung. 2012. "Fake Logos, Fake Theory, Fake Globalization." In <i>Globalization and Culture. Volume 1.</i> , ed. Manfred B. Steger, 293-307. Elgar Research Collection. Globalization of the World Economy series, vol. 26. Cheltenham, U.K. and Northampton, Mass.: Elgar.

2012	J43	Singh, Prakarsh. 2012. "Insurgency, Crime, and Agricultural Labor Expenditure: Evidence from Punjab, 1978-1990." <i>Economics of Peace and Security Journal</i> , 7(2): 33-40. Using micro-level farmer expenditure surveys, this article studies the insurgency in the Punjab region of India, thought to have cost over 20,000 lives. It finds that the violence is statistically associated with an 11.4 percent decline in spending on permanent agricultural labor but did not have a statistically significant effect on the use of temporary labor. Moreover, insurgency-related violence likely signaled an increase in future kidnappings of farm labor and may have incentivized labor away from longer duration contracts. Richer farmsteads appear to be more sensitive to insurgent violence than poorer ones in reducing their labor spending.
2012	J46	Williams, Colin C. 2012. "Cross-National Variations in the Under-Reporting of Wages in South-East Europe: A Result of Over-Regulation or Under-Regulation?" <i>South East European Journal of Economics and Business</i> , 7(1): 53-61. This paper seeks to explain the cross-national variations in the tendency of employers in Southeast Europe to under-report the wages of their employees by paying them two wages, an official declared salary and an additional undeclared envelope wage. Reporting the results of a 2007 Eurobarometer survey of this practice undertaken in five Southeast European countries, the finding is that the commonality of this illicit wage practice markedly varies cross-nationally, with 23 percent of formal employees in Romania but just 3 percent in Cyprus receiving an under-reported salary. Finding that the under-reporting of wages is more prevalent in neo-liberal economies with lower levels of state intervention and less common in more 'welfare capitalist' economies in which there is greater state intervention in work and welfare, the resultant conclusion is that the under-reporting of employees wages by employers is correlated with the under- rather than over-regulation of work and welfare.

Taking into consideration that the world economy is seriously hit, we realize there is a need for solutions, either new or old, which should support the economic re-launch and recovery. In this paper we will not focus on solutions, but on the obstacles which arise in the way of economic recovery, due to the industry of copies (counterfeit products), that had a tremendous growth during the last years, jeopardizing thus both the economic security and the consumer security, according to the examples provided hereinafter.
2012	L87	Barby, Eric. 2012. "The Internet of Things, Legal Aspects: What Will Change (Everything) . . ." <i>Communications and Strategies</i> , 0(87): 83-100. After the birth of the Internet, the rise of Web 2.0, here comes the Internet of Things. Internet has led us to adopt special law, digital economy law . . . Web 2.0 has urged us to rethink core legal concepts such as liability and ownership and introduce notions such as sharing and availability. The Internet of Things--which no one doubts will be the next technological revolution--will be a legal tsunami, the intensity and magnitude of which are unknown to date.
2012	M11	Arnold, Ulli, Joerg Neubauer, and Tobias Schoenherr. 2012. "Explicating Factors for Companies' Inclination towards Corruption in Operations and Supply Chain Management: An Exploratory Study in Germany." <i>International Journal of Production Economics</i> , 138(1): 136-47. The literature on corruption is rich in works focusing on individual and organizational aspects. However, existing research is void in studies that specifically deal with factors for a company's inclination towards corruption in operations and supply chain management. The present paper fills this gap by explicating why some firms are more prone to corruption than others. Within this context it is our objective to explore the structural and organizational bases for companies, especially their purchasing units, to engage in corrupt business practices. Grounding our work in principal-agent theory and the fraud triangle, we suggest that the factors of organizational complexity, corporate culture, internationality and functional complexity all influence a firm's inclination towards corruption, which in turn should manifest itself in the presence or absence of

Year	DE	Title and Abstract
		corruption control- and prevention mechanisms. This framework is tested with data collected from 104 purchasing managers in Germany, and implications for both theory and practice are highlighted.
2012	P11	Diss: Snow, Nicholas. 2012. Rumrunners, Hooligans, and Politicians: Essays on the Political Economy of Intervention. PhD diss. George Mason University. Interventions into the market distort the market's discovery process and lead to unexpected and often undesirable consequences. And the intervener cannot specifically predict nor effectively prevent these consequences from occurring. Further, as Bastiat (1848 [1995]) noted over one hundred and fifty years ago, a good economist looks at not only the immediate and seen effects of a policy but all the effects, including the long run. This dissertation explores this concept in three separate case studies: in the black market for foreign produced liquor during alcohol prohibition in the United States, in fighting amongst football hooligans, and in government's macroeconomic policies. In the first essay I explore how rumrunners, or smugglers of foreign produced liquor, in the 1920s responded to the government's attempts at enforcing alcohol prohibition. In response to alcohol prohibition a thriving market for foreign liquor emerged off the Atlantic Coast of the United States, which lasted throughout Prohibition. Rather than eliminating the trade, the government's various attempts at enforcement had numerous affects upon the market and its supply chain, such as lowering the quality of the products, creating opportunities for violence, and altering the structure of the black market firms. The second essay analyzes how football hooligans, individuals bent on brawling, were able to realize the gains from trade [i.e. fighting each other] despite efforts by authorities to shut down their activities. By forming a sort of fight club, hooligans were able to engage in brawling while minimizing their contact with authorities. Rules emerged within these fight clubs to keep certain individuals, whom we call sadists, from going too far and causing the fight club to break down. We provide evidence from English football hooligans from the 1960s through the 1980s. The final essay looks back on the debate between Friedrich Hayek and John Maynard Keynes in the 1930s on the role of government during a recession and argues that economists are having almost the same exact debate again in response to the current crisis. We argue that despite the long run undesirable consequences that result from Keynesian policies, they remain a popular choice when a crisis appears. This occurs because politicians and other policy makers find the short run results of Keynesian policies to be too electorally beneficial to resist. This debate fails to reach resolution because both sides of the debate continue to rehash the same arguments uncreatively. In all three cases, policymakers failed to use basic economics to understand the full effects of their policies.

2012	Z18	Mell, Andrew. 2012. <i>Reputation in the Market for Stolen Data</i> . University of Oxford, Department of Economics, Economics Series Working Papers: 611. Internet commerce has made it easier to compare prices and shop online. However, it has also exposed consumers to a new kind of crime in the form of the electronic theft of payment details. However the skills required to successfully intercept payment data differ from the skills required to use that information for one's own gain. This creates gains to trade between those who steal the data and those who know how to use it. This particular illicit market has the added disadvantage that trade takes place online and the only identification of any particular trader comes from a username which can be changed at zero cost. This paper examines the reputation mechanisms that keep this market working and considers whether they might constitute an Achilles' Heel that governments keen to reduce crime might exploit.

2013	C31	Lastauskas, Povilas, and Eirini Tatsi. 2013. <i>Spatial Nexus in Crime and unemployment in Times of crisis: Evidence from Germany</i> . Faculty of Economics, University of Cambridge, Cambridge Working Papers in Economics. Space is important. The recent global financial crisis has vividly pointed to spatial patterns in economies' reactions to the global economic shocks. This paper focuses on labor market responses and its interactions with criminal activities in a causal and spatial framework. we study the case of Germany as evidently this country's economy has demonstrated resilience during the whirl of economic crisis. Our contribution is twofold: first, we lay down a parsimonious labor market model with search frictions, criminal opportunities, and, unlike earlier analyzes, productivity shocks which are important in explaining empirical regularity of criminal engagement. Second, we seek empirical support using data on the 402 German districts for 2009-2010, the years following the global financial crisis, in a setting that allows not only crime spatial multipliers but also inherent endogeneity of unemployment. Adverse income shocks clearly unfold a spatial nexus between unemployment and crime rates. More specifically, we find that youth unemployment plays a prominent role in explaining property crime, namely housing burglary. Our results are in line with previous research: neglecting endogeneity of unemployment understates its impact and employing the youth unemployment share instead of rate points to distinctive effects. The analysis offers important implications for countries that are currently undergoing fiscal consolidation and are experiencing high unemployment rates.
2013	C58	Pagano, Michael S., and T. Shawn Strother. 2013. "Risk, Uncertainty, and the Perceived Threat of Terrorist Attacks: Evidence of Flight-to-Quality." <i>Quarterly Journal of Finance</i> , 3(2): 1-25. Information provided by the US Department of Homeland Security regarding potential terrorist attacks significantly affects US Treasury securities markets. When the government announces heightened terror alert levels, investors' perceptions of risk increase and investors purchase 1-month and 1-year Treasury bills and 3-year, 5-year, 7-year, and 10-year US Treasuries in a "flight-to-quality" episode. Partial anticipation of increased threat level announcements is stronger than the anticipation of announcements regarding the federal funds rate during the 10 days prior to an announcement.
2013	C65	Caputo, Michele. 2013. "Memory Oscillator for Modeling Socio-economic Oscillatory Responses to Extreme Events." <i>Economia Politica</i> , 30(2): 221-39. The reaction of markets and people to extreme events is studied with respect to their oscillations following

Year	DE	Title and Abstract
		the occurrence after a severe perturbation. The phenomenon is modeled with a pseudo memory-damped accelerator. In the case of the people, mostly peasants, returning to their homes after leaving them as a consequence of the 1951 Po River flood in Polesine (Italy), of the variation of the number of Revenue Passenger Miles (RPM) in the US after the 2001 September 11th terrorist attack in New York, of the number of abortions in Italy following the 1978 law which legalized abortion and of the embezzlement crimes in Italy during the clean hands period at the end of the last century. We verified that in these four cases, the return to normality had similar features: the number of individual affected by the extreme event had a step-like variation followed by oscillation with decreasing amplitude. The assumption is that the evolution of market or population may be governed by an equation similar to that of an oscillator including a memory formalism, and that extreme event is the delta function with generates the Green function. We also show how the memory may stabilize the market or the population, when the perturbation is constant while an increasing perturbation may lead to a crisis. We estimate the parameters characterizing the effects of the extreme event of the 2001 September 11th terrorist attack and of the 1978 abortion law in Italy.
2013	F61	Torgler, Benno, and Marco Piatti. 2013. "Extraordinary Wealth, Globalization, and Corruption." <i>Review of Income and Wealth</i>, 59(2): 341-59. The billionaires of the world attract significant attention from the media and the public. Surprisingly, only a limited number of studies have explored empirically the determinants of extraordinary wealth. Using a large dataset we investigate whether globalization and corruption affect extreme wealth accumulation. We find evidence that an increase in globalization increases super-affluence. In addition, we also find that an increase in corruption leads to an increase in the creation of super fortune. This supports the argument that in kleptocracies large sums are transferred into the hands of a small group of individuals.
2013	F63 F68	Berman, Eli, Joseph Felner, Jacob N. Shapiro, and Erin Troland. 2013. <i>Modest, Secure and Informed: Successful Development in Conflict Zones</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 18674. Most interpretations of prevalent counterinsurgency theory imply that increasing government services will reduce rebel violence. Empirically, however, development programs and economic activity sometimes yield increased violence. Using new panel data on development spending in Iraq, we show that violence reducing effects of aid are greater when (a) projects are small, (b) troop strength is high, and (c) professional development expertise is available. These findings are consistent with a "hearts and minds" model, which predicts that violence reduction will result when projects are secure, valued by community members, and implementation is conditional on the behavior of non-combatants.

2013	G35	Caskey, Judson, and Michelle Hanlon. 2013. "Dividend Policy at Firms Accused of Accounting Fraud." <i>Contemporary Accounting Research/Recherche Comptable Contemporaine</i>, 30(2): 818-50. Recent studies and some policy and experts have posited that dividends indicate higher-quality earnings. In this study, we test this conjecture by comparing the dividend policies of firms accused of accounting fraud to those of firms not accused of accounting fraud. Specifically, we examine whether alleged fraud firms are as likely to be dividend payers as non-fraud firms, and whether managers of dividend-paying fraud firms increase dividends at the same rate as managers of non-fraud firms. Our data reveal that dividend paying status is negatively associated with the probability of committing accounting fraud. In addition, we also find that, during the alleged fraud period, the earnings-dividends relation is weaker for the alleged fraud firms relative to firms not accused of fraud. Finally, using propensity score match tests, the data provide evidence that managers of alleged fraud firms increase dividends less often than managers of firms not accused of fraud, consistent with the alleged fraud firms not being able to match the dividend policies of firms not accused of fraud. Overall, our results suggest that dividends, especially dividend increases, are associated with higher earnings quality.

2013	H80	Amegashie, J. Atsu. 2013. <i>Consumers' Complaints, the Nature of Corruption, and Social Welfare</i>. CESifo Group Munich. CESifo Working Paper Series: 4295. A primary means of bureaucratic oversight is consumer complaints. Yet, this important control mechanism has received very little attention in the literature on corruption. I study a model of corruption with incomplete information in which consumers require a government service from officials who may be corrupt. A victim of corruption can report corrupt officials to higher-ranking officials (supervisors) who may be corrupt or honest. I find that social welfare may be non-monotonic in the proportion of honest supervisors. In some cases, an increase in the proportion of honest supervisors increases social welfare only if there is a critical mass of honest supervisors. Under certain conditions, there is, surprisingly, an equilibrium in which no one reports corruption regardless of the proportion of honest supervisors although all lower-ranking officials are corrupt. The analysis shows that using an increase in consumer complaints as a measure of the success of an anti-corruption campaign may be wrong because the consumers may benefit in other ways (e.g., a fall in the equilibrium bribe). I also fill a gap in the literature by endogenizing an official's decision to engage in "corruption with theft" or "corruption without theft" as defined by Shleifer and Vishny (1993) and use the model to shed light on recent anticorruption initiatives such as the Punjab Citizen Feedback Model in Pakistan and a recent proposal by Kaushik Basu (2012).
2013	I13	Ericson, Keith Marzilli, and Judd B. Kessler. 2013. <i>The Articulation Effect of Government Policy: Health Insurance Mandates Versus Taxes</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 18913. We examine how the articulation of government policy affects behavior. Our experiment compares a government mandate to purchase health insurance to a financially equivalent tax on the uninsured. Participants report their probability of purchasing health insurance under one of the two articulations of the policy. The experiment was conducted in four waves, from December 2011 to November 2012. We document the controversy over the Affordable Care Act's insurance mandate provision that changed the political discourse during the year. Pre-controversy, articulating the policy as a mandate, rather than a financially equivalent tax, increased probability of insurance purchase by 10.6 percentage points—an effect comparable to a \$1000 decrease in annual premiums. After the controversy, the mandate is no more effective than the tax. Our results show that how a policy is articulated affects behavior and that persuasion and public opinion management can help achieve policy objectives at lower cost.

2013	I14	DelaCruz, Juan J., Nikolaos Papanikolaou, and Rongning Wu. 2013. "The Influence of Imprisonment on HIV and Its Impact on Health-Related Inequalities in New York City." <i>International Journal of Economics and Business Research</i>, 6(2): 115-26. New York City has been the centre of the HIV epidemic where vulnerable populations disproportionately face negative health outcomes. This paper explains the behaviour of the HIV epidemic in terms of its racial/ethnic composition due to the effects of the criminal justice system, and sustains the necessity of more culturally tailored health interventions to prevent the spread of the disease. To achieve this goal, secondary data analysis and a panel regression device including individuals of specific racial/ethnic backgrounds periodically observed between 2002 and 2009, are required. This paper explores the fundamental characteristics of the HIV epidemic and its swings in terms of socio-economic determinants as a result of the unbalanced prevalence of imprisonment amid historically underrepresented groups.
2013	I24	Heller, Sara, Harold A. Pollack, Roseanna Ander, and Jens Ludwig. 2013. <i>Preventing Youth Violence and Dropout: A Randomized Field Experiment</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 19014. Improving the long-term life outcomes of disadvantaged youth remains a top policy priority in the United States, although identifying successful interventions for adolescents--particularly males--has proven challenging. This paper reports results from a large randomized controlled trial of an intervention for disadvantaged male youth grades 7-10 from high-crime Chicago neighborhoods. The intervention was delivered by two local non-profits and included regular interactions with a pro-social adult, after-school programming, and--perhaps the most novel ingredient--in-school programming designed to reduce common judgment and decision-making problems related to automatic behavior and biased beliefs, or what psychologists call cognitive behavioral therapy (CBT). We randomly assigned 2,740 youth to programming or to a control group; about half those offered programming participated, with the average participant attending 13 sessions. Program participation reduced violent-crime arrests during the program year by 8.1 per 100 youth (a 44 percent reduction). It also generated sustained gains in schooling outcomes equal to 0.14 standard deviations during the program year and 0.19 standard deviations during the follow-up year, which we estimate could lead to higher graduation rates of 3-10 percentage points (7-22 percent). Depending on how one monetizes the social costs of crime, the benefit-cost ratio may be as high as 30:1 from reductions in criminal activity alone.
2013	I24	Yildez, Rifat, Oguz Ocal, and Ertugrul Yildirim. 2013. "The Effects of Unemployment, Income and Education on Crime: Evidence from Individual Data." <i>International Journal of Economic Perspectives</i>, 7(2): . There is a large empirical literature on the determinants of crime. But the studies investigating socio-economic determinants of crime reach mixed results. This paper investigates the effects of unemployment, income and education level on number of criminals, using data from 8896 suspects in Kayseri between 2002 and 2009. We create a panel data set which consists of 13 crime types and 8 time periods. A panel GMM-system estimation reveals that income and education substantially affect the number of criminals. However, the impact of unemployment over the number of criminals is marginal. The reason for this may be the obtained income of unemployed criminals. That is, being unemployed does not necessarily mean having no income. The source of obtained income of unemployed criminals may be unregistered employment, unemployment payments, and aid. It is suggested that in crime analysis, the number of unregistered employees and receiving unemployment payments should be dropped in macro data
2013	I25	Botero, Juan, Alejandro Ponce, and Andrei Shleifer. 2013. "Education, Complaints, and Accountability." <i>Journal of Law and Economics</i>, 56(4): 959-96. Better-educated countries have better governments, an empirical regularity that holds in both dictatorships and democracies. Possible reasons for this fact are that educated people are more likely to complain about misconduct by government officials and that more frequent complaints encourage better behavior from officials. Newly assembled individual-level survey data from the World Justice Project show that, within countries, better-educated people are more likely to report official misconduct. The results are confirmed using other survey data on reporting crime and corruption. Citizens' complaints might thus be an operative mechanism that explains the link between education and the quality of government.

2013	R28	Jacobs, Jane M., and Loretta Lees. 2013. "Defensible Space on the Move: Revisiting the Urban Geography of Alice Coleman." <i>International Journal of Urban and Regional Research</i>, 37(5): 1559-83. This article traces the movement of the concept of 'defensible space' from New York City in the 1970s, where it was developed by the Canadian architect/planner Oscar Newman, to London in the 1980s and into design interventions in British public housing in the 1990s, through British geographer Alice Coleman, who acted as an especially powerful transfer agent. In focusing on this urban design 'concept' on the move, we contribute to existing scholarship on policy mobility and city building in a number of ways. First, we explore an instance of the movement/mobility of a planning concept in a historical period (the recent past) largely overlooked to date. Secondly, we demonstrate that this movement was the result of a disaggregated series of expert knowledge transfers and localized translations of pre-policy expert knowledge, generated through university-based research work and networks. We theorize this instance of urban planning mobility by way of the interlinked insights offered by the sociology of science and policy-mobilities literatures. As this is an instance of university research shaping public policy, it also offers an opportunity to reflect upon the meaning of 'evidence-based policy' and the impact agenda in contemporary higher education.
2013	R28	Van Zandt, Shannon S., and Pratik C. Mhatre. 2013. "The Effect of Housing Choice Voucher Households on Neighborhood Crime: Longitudinal Evidence from Dallas." <i>Poverty and Public Policy</i>, 5(3): 229-49. Tenant-based housing assistance is designed to provide access for low-income households to a wider range of housing options, de-concentrating poverty and reducing the exposure of these households to negative conditions. Yet an observed coincidence of crime and subsidized households indicates that something is going wrong. Either households are constrained in their choices and are settling in high-crime neighborhoods, or these households bring crime with them, using vouchers to penetrate otherwise low-crime neighborhoods. We use longitudinal data from Dallas to assess whether changes in the number of Housing Choice Voucher (HCV) households are related to changes in crime, not just whether HCV households are present in high-crime neighborhoods. The evidence supports the hypothesis that observed relationships between crime and HCV households result from a lack of units that accept vouchers in areas that have lower levels of crime. The hypothesis that voucher holders are the cause of increases in neighborhood crime is not supported.
2013	R28	Scambary, James. 2013. "Conflict and Resilience in an Urban Squatter Settlement in Dili, East Timor." <i>Urban Studies</i>, 50(10): 1935-50. Since the end of the Indonesian occupation in 1999, East Timor's capital Dili has experienced a continuous rural-urban

Year	DE	Title and Abstract
		influx. This urban population growth has been concentrated in clusters of crowded and socially fragmented new squatter settlements, posing profound challenges for informal social control and community cohesion. Such neighbourhoods have continued to suffer from endemic communal tensions and gang violence. Using a case study of an urban squatter settlement in Dili, this paper makes two arguments. First, it is argued that, to engage with these communities and address conflict within them, it is imperative to understand the intricate and dynamic linkages between rural-urban migration, urban settlement patterns and communal violence. Secondly, it is argued here that the profuse variety of non-state groups inhabiting such settlements should be viewed from the context of the migrant experience, as unique forms of community resilience to this challenging environment.
2013	R28	Delmelle, Elizabeth, Jean-Claude Thill, Owen Furuseh, and Thomas Ludden. 2013. "Trajectories of Multidimensional Neighbourhood Quality of Life Change." <i>Urban Studies</i>, 50(5): 923-41. This paper provides an empirical analysis of the multidimensional, spatio-temporal quality of life (QoL) trends followed by neighbourhoods in Charlotte, NC, between 2000 and 2010. Employing a combined geocomputational and visual technique based on the self-organising map, the study addresses which types of neighbourhood experienced the most change or stability, where (in attribute and geographical spaces) did neighbourhoods that began the decade with a particular set of characteristics evolve to, and where did neighbourhoods that concluded the decade transition from? Results indicate that the highest QoL neighbourhoods were most stable, while those with lower homeownership, closer to the city centre, exhibited the sharpest longitudinal trajectories. Lower-income neighbourhoods are found to be heterogeneous in terms of their social problems, dividing between high crime concentrations and youth-related social problems. An exchange of these social issues over time is observed as well as a geographical spread of crime to middle-ring suburbs.

Table K49.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	F34 K41	Miller, Marcus, and Dania Thomas. 2006. <i>Sovereign Debt Restructuring: the Judge, the Vultures and Creditor Rights</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5710. What role did the US courts play in the Argentine debt swap of 2005? What are the implications for the future of creditor rights in sovereign bond markets? The judge in the Argentine case has, it appears, deftly exploited creditor heterogeneity--between holdouts seeking capital gains and institutional investors wanting a settlement--to promote a swap with a supermajority of 76% of creditors. Our analysis of Argentine debt litigation reveals a process of "judge-mediated" sovereign debt restructuring, which resolves the key issues of Transition and Aggregation--two of the roles envisaged for the IMF's still-born Sovereign Debt Restructuring Mechanism (SDRM). For the future we note how the judge-mediated sovereign debt restructuring, together with creditor committees, may complement the market-based alternative promoted by the Treasury, namely collective action clauses (CACs) in sovereign bond contracts.
2006	G31 G32 G34 L22	Hainz, Christa. 2006. <i>Business Groups in Emerging Markets-Financial Control & Sequential Investment</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp830. Business groups in emerging markets perform better than unaffiliated firms. One explanation is that business groups substitute some functions of missing institutions, for example, enforcing contracts. We investigate this by setting up a model where firms within the business group are connected to each other by a vertical production structure and an internal capital market. Thus, the business group's organizational mode and the financial structure allow a self-enforcing contract to be designed. Our model of a business group shows that only sequential investments can solve the ex post moral hazard problem. We also find that firms may prefer not to integrate.
2007		
2007	J41 J44 J48	Avery, Christopher, Christine Jolls, Richard Posner, and Alvin E. Roth. 2007. <i>The New Market for Federal Judicial Law Clerks</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13213. In the past, judges have often hired applicants for judicial clerkships as early as the beginning of the second year of law school for positions commencing approximately two years down the road. In the new hiring regime for federal judicial law clerks, by contrast, judges are exhorted to follow a set of start dates for considering and hiring applicants during the fall of the third year of law school. Using the same general methodology as we employed in a study of the market for federal judicial law clerks conducted in 1998-2000, we have broadly surveyed both federal appellate judges and law students about their experiences of the new market for law clerks. This paper analyzes our findings within the prevailing economic framework for studying markets with tendencies toward "early" hiring. Our data make clear that the movement of the clerkship market back to the third year of law school is highly valued by judges, but we also find that a strong majority of the judges responding to our surveys has concluded that nonadherence to the specified start dates is very substantial--a conclusion we are able to corroborate with specific quantitative data from both judge and student surveys. The consistent experience of a wide range of other markets suggests that such nonadherence in the law clerk market will lead to either a reversion to very early hiring or the use of a centralized matching system such as that used for medical residencies. We suggest, however, potential avenues by which the clerkship market could stabilize at something like its present pattern of mixed adherence and nonadherence, thereby avoiding the complete abandonment of the current system.
2007	Q53 Q58	Reyes, Jessica Wolpaw. 2007. <i>Environmental Policy as Social Policy? The Impact of Childhood Lead Exposure on Crime</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13097. Childhood lead exposure can lead to psychological deficits that are strongly associated with aggressive and criminal behavior. In the late 1970s in the United States, lead was removed from gasoline under the Clean Air Act. Using the sharp state-specific reductions in lead exposure resulting from this removal, this article finds that the reduction in childhood lead exposure in the late 1970s and early 1980s is responsible for significant declines in violent crime in the 1990s, and may cause further declines into the future. The elasticity of violent crime with respect to lead is estimated to be approximately 0.8.
2008		
2008	H25 H32 J32 K35	Grubb, Michael D., and Paul Oyer. 2008. <i>Who Benefits from Tax-Advantaged Employee Benefits?: Evidence from University Parking</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14062. We use university parking permits to study how firms and employees split the value of employee benefit tax subsidies. Starting in 1998, the IRS allowed employees to pay for parking passes with pre-tax income. This subsidized the parking pass purchases of faculty and staff, but did not affect students. We show that the typical university raised its parking rates by 8-10% extra when it implemented a pre-tax payment system, but that this increase was the same for those affected by the tax change and those that were not affected. We conclude that university employees captured much of the new tax benefit, that faculty and staff that purchase permits benefited relative to those that do not purchase permits, and that students that purchase permits were made worse off relative to those that do not buy permits. We discuss what these results suggest about universities' objectives in setting their parking prices and about the demand for university parking.
2010		
2010	H23	Antoci, Angelo, Pier Luigi Sacco, and Mauro Sodini. 2010. <i>Public Security vs. Private Self-Protection: Optimal Taxation and the Social Dynamics of Fear</i> . Fondazione Eni Enrico Mattei, Working Papers: 2010.44. In this paper, we develop a simple model of social dynamics governing the evolution of strategic self-protection choices of boundedly rational potential victims facing the threat of prospective offenders in a large population with random matching. We prove that individual (and socially transmitted) fear of exposure to criminal threats may actually condition choices even in the face of objective evidence of declining crime rates, and thereby cause the eventual selection of Pareto inefficient equilibria with self-protection. We also show that a suitable strategy of provision of public security financed through discriminatory taxation of self-protective expenses may actually overcome this problem, and drive the social dynamics toward the efficient no protection equilibrium. In our model, we do not obtain, as in Cressman et al. (1998), a crowding-out result such that the net impact of public spending on the actual social dynamics is neutral and the economy keeps on cycling between phases of high and low criminal activity with varying levels of self-protection; quite to the contrary, it can be extremely effective in implementing the social optimum, in that it acts primarily on the intangible dimension, that is, on the social dynamics of fear. We claim that this kind of result calls for more interdisciplinary research on the socio-psycho-economic determinants of fear of crime, and for consequent advances in modelling approaches and techniques.
2010	J11 J26	Stolzenberg, Ross M., and James Lindgren. 2010. "Retirement and Death in Office of U.S. Supreme Court Justices." <i>Demography</i> , 47(2): 269-98. We construct demographic models of retirement and death in office of U.S. Supreme Court justices, a group that

Year	DE	Title and Abstract
		has gained demographic notice, evaded demographic analysis, and is said to diverge from expected retirement patterns. Models build on prior multistate labor force status studies, and data permit an unusually clear distinction between voluntary and "induced" retirement. Using data on every justice from 1789 through 2006, with robust, cluster-corrected, discrete-time, censored, event-history methods, we (1) estimate retirement effects of pension eligibility, age, health, and tenure on the timing of justices' retirements and deaths in office, (2) resolve decades of debate over the politicized departure hypothesis that justices tend to alter the timing of their retirements for the political benefit or detriment of the incumbent president, (3) reconsider the nature of rationality in retirement decisions, and (4) consider the relevance of organizational conditions as well as personal circumstances to retirement decisions. Methodological issues are addressed.
2011		
2011	C33 O10 O47 O57	Drine, Imed. 2011. <i>Institutions, Governance and Technology catch-up in North Africa</i> . William Davidson Institute at the University of Michigan, William Davidson Institute Working Papers Series: wp1017. This paper aims to analyse the effects of institution quality on technology catch-up in five North African countries (Algeria, Egypt, Morocco, Sudan and Tunisia) compared to 3 groups of developing and emerging countries (Sub Saharan Africa, Asia, and Latin America) over the period 1970-2005. The study adopts a two-stage methodology. In the first step we estimate the technology gap using the metafrontier approach. In second step we test the relationship between the technology gap and the quality of governance. The empirical results show that institutions (corruption, law and rules and investment climate) are very important in closing the technology gap and speeding up the technology catch-up. Other determinants of the technology gap are also identified: foreign direct investment, human capital and trade.
2011	C51 D81 E60 M29	Gander, James P. 2011. <i>Macroeconomic Analysis of Corruption in Developing Economies</i> . University of Utah, Department of Economics, Working Paper Series, Department of Economics, University of Utah. Based on empirical data, a two-equation game-type corruption reaction function model was developed. A "data to model" approach was used rather than the usual a priori approach. The general hypothesis tested was the "monkey see, monkey do" principle. The latest data on corruption among developing countries was obtained from the Enterprise Surveys done by the World Bank Group in 2010. The key variables were the percent of domestic firms expecting to make informal payment to public officials to "get things done," and the percent of foreign firms doing like wise. The time span is from 2002-2010. A variety of econometric methods were used. In general, the statistical results were quite good and supported the hypothesis. Both reaction equations were positively sloped. Time had a reducing effect on the frequency of domestic corruption, yet it had an increasing effect on foreign corruption. Variations in the frequency of corruption across regions of countries were generally not significant.
2012		
2012	M31 Z12 Z13	Dills, Angela K., and Rey Hernandez-Julian. 2012. "Negative Publicity and Catholic Schools." <i>Economic Inquiry</i> , 50(1): 143-52. Between 1990 and 2007, the number of Catholic schools in the United States decreased by 14% and enrollment diminished by 7%. We generate two measures of publicity of sexual abuse at the diocesan level-public disclosure and news coverage. Dioceses with higher rates of negative publicity had a larger decline in both the number of Catholic schools and overall Catholic school enrollment. We estimate that publicity arising from sexual offenders within the Church explains 5% of the decline in the availability of Catholic schooling.

The total volume of derivative works for K49 is equal to 1.76 AS.

Общий объем раздела K49 — 1,76 авторских (уч.-изд.) л.

² AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40,000 characters (including the spaces between words), or 3,000 sq cm of illustrations (maps) like the table K49.E.

Appendix A. Summary¹

This section presents a generalization of the information for all 25 micro categories that belong to the JEL macro category K (see appendix C).

Table A1 includes the following indicators:

DE — the JEL codes of micro categories.

N05 — the numbers of records in EconLit (one record reflects one publication) for the 1991–2005, which contain in the field DE the JEL code shown in column “DE”.

N13 — the same as N05 for the 1991–2013.

$D = N13 - N05$ — the increase of publications in 2006–2013. $T = N13 / N05$ — the growth rate in relation to the level of 2005.

N05S — the indicator of N05 with the addition the numbers of intersections of the JEL code shown in column “DE” with the rest of 821 JEL classification codes for the 1991–2005.

N13S — the same as N05S for the 1991–2013.

Similarly $DS = N13S - N05S$; $TS = N13S / N05S$.

$K05 = N05S / N05$ and $K13 = N13S / N13$ — the number of JEL codes per publication with the code in the DE line for 1991–2005, and for 1991–2013, respectively.

The numbers in the row “S” in the columns N05, N13, D, N05S, N13S, and DS show the sums of values of appropriate indicators for all codes in the column DE. The numbers in the row “S” in the columns T, TS, K05 and K13 show the respective average values.

The color turquoise labels the cells with the values that are more than 1,000. Values in excess of 10 thousand units are marked in bold. The color green marks the growth rates values that are above average values shown in the row “S”. We used the bold font for the values in columns K05 and K13 that exceed three.

The data in Table A1 shows that the largest number of publications in 2013 falls on the micro categories K42 Illegal Behavior and the Enforcement of Law, K33 International Law, and K21 Antitrust Law. The share of these micro categories exceeds 37%.

Champions of the rate of growth are the micro categories K36 Family and Personal Law, K35 Personal Bankruptcy Law, and K11 Property Law.

There was a rise in the number of micro categories, which had links with the basic micro categories in DE column in 2006–2013. The micro categories K11, K21, K22, K31, K32, K36, and new category K37 “Immigration Law” created more than four links per publication according to indicator K13.

We recommend paying attention to the micro categories K22 Business and Securities Law and K32 Environmental, Health, and Safety Law.

Приложение А. Сводная информация

Данный раздел содержит сводную информацию по всем 25 микрокатегориям, принадлежащим JEL-макрокатегории К (см. приложение С).

Таблица А1 включает следующие показатели:

DE — JEL коды микрокатегорий.

N05 — число записей в EconLit (одна запись отражает одну публикацию) за 1991–2005 гг., которые содержат в поле DE JEL-код, указанный в столбце “DE”.

N13 — то же, что и N05 для 1991–2013 гг.

$D = N13 - N05$ — прирост публикаций в 2006–2013 гг.

$T = N13/N05$ — темп роста числа публикаций по отношению к уровню 2005 года.

N05S — показатель N05 с добавлением числа пересечений JEL-кода, указанного в столбце “DE”, с остальными 821 кодами классификации JEL за 1991–2005 гг.

N13S — то же, что и N05S для 1991–2013 гг.

Аналогично $DS = N13S - N05S$; $TS = N13S/N05S$.

$K05 = N05S / N05$ и $K13 = N13S / N13$ — число кодов JEL в расчете на одну публикацию с кодом в строке DE за 1991–2005 гг. и 1991–2013 гг., соответственно.

Числа в строке “S” в столбцах N05, N13, D, N05S, N13S и DS показывают суммы значений соответствующих показателей по всем кодам в столбце DE. Числа в строке “S” в столбцах T, TS, K05 и K13 показывают соответствующие средние значения.

Бирюзовый цвет помечает ячейки, значения в которых больше 1000. Среди них жирным шрифтом выделены значения, превышающие 10 тысяч единиц. Зеленый цвет указывает на темпы роста, которые выше средних значений в строке “S”. Жирным шрифтом в столбцах K05 и K13 выделены значения, которые больше трех.

Из данных таблицы А1 видно, что наибольшее число публикаций в 2013 г. приходится на микрокатегории K42 Противоправное поведение и осуществление закона, K33 Международное право и K21 Антимонопольное законодательство. Доля этих микрокатегорий превышает 37%.

Чемпионами по темпам роста являются микрокатегории K36 Семейное и персональное право, K35 Законодательство по банкротству физических лиц и K11 Имущественное право.

По всем микрокатегориям в 2006–2013 гг. произошел рост числа микрокатегорий, которые имели связи с базовыми микрокатегориями, указанными в столбце DE. Наибольшее число связей ($K13 > 4$) образовали микрокатегории K11, K21, K22, K31, K32, K36 и новая категория K37 Иммиграционное право.

Мы рекомендуем обратить внимание на категории K22 Хозяйственное право и законы о ценных бумагах и K32 Законодательство по охране окружающей среды, здоровья и безопасности.

Indicators N05, N13, N05S, N13S in the Table A2 are identical to those given in Table A1.

The number in column DN05 indicates the share (in percent), that the micro category with code in column DE and the value, shown in the column N05, has in the sum, which is allocated in the cell in row S and in the column N05. We defined the numbers in column DN13 in a similar manner using the data shown in the column N13. Indicator DDN = DN13 – DN05 shows the change of micro categories shares by the end of 2013.

Indicators in columns DS05, DS13 and DDS are calculated in a similar manner to the values shown in the columns N05S and N13S.

The color turquoise labels the cells with the values that are more than 1,000 (like in the Table A1). The color green marks the cells for micro categories with the positive DDN and DDS.

В таблице A2 показатели N05, N13, N05S, N13S идентичны тем, которые приведены в таблице A1.

Число в столбце DN05 показывает долю (в процентах), которая приходится на микрокатегорию с кодом в столбце DE, исчисленную исходя из суммы, приведенной в строке S и столбце N05. Число в столбце DN13 определено аналогичным образом для данных, приведенных в столбце N13. Показатель DDN = DN13 – DN05 показывает изменение удельного веса микрокатегории к концу 2013 года.

Показатели в столбцах DS05, DS13 и DDS исчислены аналогичным образом для значений, приведенных в столбцах N05S и N13S.

Как и в таблице A1 бирюзовым цветом помечены ячейки, числа в которых больше 1000. Зеленым цветом помечены ячейки для микрокатегорий с DDN и DDS больше нуля.

Table A2. The Structure of the Macro Category K by the end of 2005 and 2013**Таблица А2.** Структура макрокатегории К на конец 2005 и 2013 годов

The following are the results of the ranking of micro categories in descending order of relevant indicators in the tables A1 and A2.

Далее приведены результаты ранжирования микрокатегорий в порядке убывания значений соответствующих показателей в таблицах А1 и А2.

N05: K42(3,284), K33(1,869), K21(1,709), K10(1,437), K13(1,334), K32(1,284), K22(1,240), K31(1,175), K11(1,026), K41(952), K34(838), K00(771), K40(713), K12(566), K20(400), K14(329), K23(283), K30(92), K39(86), K19(79), K35(37), K29(33), K49(23), K36(2).

N13: K42(8,535), K33(4,385), K21(4,224), K22(3,531), K10(3,410), K11(3,141), K32(2,504), K31(2,480), K13(2,394), K41(2,268), K34(1,978), K40(1,889), K00(1,266), K12(1,217), K14(885), K23(619), K20(571), K36(253), K35(166), K39(121), K30(120), K19(102), K37(91), K29(51), K49(38).

D: K42(5,251), K33(2,516), K21(2,515), K22(2,291), K11(2,115), K10(1,973), K41(1,316), K31(1,305), K32(1,220), K40(1,176), K34(1,140), K13(1,060), K12(651), K14(556), K00(495), K23(336), K36(251), K20(171), K35(129), K37(91), K39(35), K30(28), K19(23), K29(18), K49(15).

T: K36(126.5), K35(4.49), K11(3.06), K22(2.85), K14(2.69), K40(2.65), K42(2.6), K21(2.47), K41(2.38), K10(2.37), K34(2.36), K33(2.35), K23(2.19), K12(2.15), K31(2.11), K32(1.95), K13(1.79), K49(1.65), K00(1.64), K29(1.55), K20(1.43), K39(1.41), K30(1.3), K19(1.29).

N05S: K42(8,955), K21(6,253), K33(6,151), K32(4,550), K22(4,315), K31(4,223), K10(4,049), K11(3,443), K13(3,430), K34(2,514), K41(2,134), K00(1,976), K40(1,867), K12(1,682), K20(1,400), K23(970), K14(868), K39(259), K30(246), K19(207), K35(118), K29(82), K49(53), K36(5).

N13S: K42(28,876), K21(17,116), K33(16,658), K22(14,462), K11(12,858), K10(12,008), K32(10,665), K31(10,244), K34(6,909), K41(6,794), K13(6,646), K40(6,129), K12(4,269), K00(3,804), K14(2,820), K23(2,345), K20(2,242), K36(1,099), K37(572), K35(547), K39(395), K30(365), K19(278), K29(149), K49(117).

DS: K42(19,921), K21(10,863), K33(10,507), K22(10,147), K11(9,415), K10(7,959), K32(6,115), K31(6,021), K41(4,660), K34(4,395), K40(4,262), K13(3,216), K12(2,587), K14(1,952), K00(1,828), K23(1,375), K36(1,094), K20(842), K37(572), K35(429), K39(136), K30(119), K19(71), K29(67), K49(64).

The Table A3 permits to compare the processes of emergence and evolution of new links in 2006–2013 for all micro categories that belong the general category K. The data was extracted from the tables of the types “E” and “Balance of Links”. Below the Table A3 we can see the results of the ranking of micro categories in descending order of relevant indicators.

L05 — the sum of new links that the micro category with the code in the column DE created with the other JEL micro categories within 1991–2005.

NLS — the sum of new links that the micro category with the code in the column DE created with the other JEL micro categories within 2006–2013.

L13 = L05 + NLS — the sum of new links within 1991–2013.

TN = NLS / L05 — the increase rate of new links.

PL — the sum of potential new links at the end of 2013 because of 822 micro codes of JEL classification.

DZ = L13/822, DN = PL/822 — the shares of created and potential new links at the end of 2013.

Таблица А3 позволяет сравнить, как происходило возникновение и развитие новых связей в 2006—2013 гг. для всех микрокатегорий, входящих в макрокатегорию К. Данные взяты из таблиц типа “Е” и “Баланс связей”. После таблицы приведены результаты ранжирования микрокатегорий в порядке убывания значений соответствующих показателей.

L05 — сумма новых связей, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 1991–2005 гг.

NLS — сумма новых связей, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 2006–2013 гг.

L13 = L05 + NLS — сумма новых связей за 1991–2013 гг.

TN = NLS / L05 — темп прироста новых связей.

PL — сумма потенциальных новых связей на конец 2013 г. на основе 822 микрокодов классификации JEL.

DZ = L13/822, DN = PL/822 — доли созданных и потенциальных новых связей на конец 2013 г.

NFL05 — the sum of first publications with new links (the sum of values within 1991–2005).

NPNL — the total number of publications with new links that the micro category with the code in the column DE created with the other JEL micro categories within 2006–2013.

NPNF — the sum of first publications with new links within 2006–2013 (NPNF < NPNL).

NFL13 = NFL05 + NPNF — the sum of first publications with new links within 1991–2013.

N1L05 = NPL05/L05 — the number of first publications with new links created within 1991–2005, per new link created within 1991–2005.

N1PNF = NPNF / NLS — the number of first publications with new links created within 2006–2013, per new link created within 2006–2013.

N1L13 = NFL13 / L13 — the number of first publications with new links created within 2006–2013, per new link created within 2006–2013.

The numbers in the row “S” show the sums for all codes in columns L05, NLS, L13, NFL05, NPNL, NPNF, NFL13. We give the respective average values in the other columns in the row “S”.

NPL05 — число первых публикаций с новыми связями, образованными в 1991–2005 гг.

NPNL — общее число публикаций с новыми связями, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 2006–2013 гг.

NPNF — сумма первых публикаций с новыми связями в 2006–2013 гг. (NPNF < NPNL).

NFL13 = NFL05 + NPNF — сумма первых публикаций с новыми связями в 1991–2013 гг.

N1L05 = NPL05/L05 — число первых публикаций с новыми связями, образованными в 1991–2005 гг. в расчете на одну новую связь в 1991–2005 гг.

N1PNF = NPNF / NLS — число первых публикаций с новыми связями, образованными в 2006–2013 гг. в расчете на одну новую связь 2006–2013 гг.

N1L13 = NFL13 / L13 — число первых публикаций с новыми связями, образованными в 1991–2013 гг. в расчете на одну новую связь 1991–2013 гг.

В строке “S” по столбцам L05, NLS, L13, NFL05, NPNL, NPNF, NFL13 приведены суммы по всем микрокатегориям. Соответствующие средние значения даны в других столбцах в строке “S”.

Ranking of Indicators — Ранжирование показателей:

N1PNF: K14(1.85), K37(1.73), K36(1.49), K42(1.36), K10(1.36), K34(1.36), K33(1.35), K49(1.34), K21(1.31), K20(1.31), K13(1.30), K29(1.30), K11(1.29), K12(1.28), K22(1.27), K00(1.27), K32(1.24), K40(1.23), K41(1.22), K30(1.21), K39(1.19), K19(1.17), K31(1.13), K23(1.12), K35(1.10).

NIL13: K21(1.91), K13(1.80), K33(1.80), K31(1.79), K37(1.73), K14(1.68), K32(1.67), K42(1.55), K10(1.53), K11(1.49), K36(1.48), K34(1.46), K41(1.45), K20(1.44), K22(1.41), K30(1.40), K00(1.39), K40(1.34), K49(1.33), K29(1.27), K19(1.26), K23(1.23), K39(1.22), K35(1.14), K12(1.10).

At the end of current section we give the list of publication that created in 2006–2013 six and more new links with the micro categories that belong to the macro category K, as well as with the other micro categories (see the list of codes in the round brackets).

В завершение данного раздела приведем перечень публикаций, которые в 2006–2013 гг. образовали шесть и более новых связей с как с микрокатегориями, входящими в макрокатегорию K, так и с другими микрокатегориями (см. перечень кодов в круглых скобках).

Appendix B1. Atlas Tables Guide¹

About JEL subject classification

JEL subject classification at the end of 2013 included 20 General Categories (<https://www.aea-web.org/econlit/jelCodes.php>). Each general category had the name and the code labeled by one English letter. The general category “K” had the name “Law and Economics”. This volume has the number “11”, which is appended to the JEL category “K”.

For our convenience, we use the term “macro” instead of “general” when we consider 20 general categories of JEL classification.

Each scientific classification is the method for division (demarcation, separation, sharing) the whole subject area of a certain science (in our case this science is economics) into a set of parts (regions, fields, etc.). From this standpoint, we consider JEL category “K” as macro field of economics or economic research.

We use the codes and the names of JEL macro categories in the tables with label “A”.

JEL classification shares macro category “K” into 5 *meso* categories with corresponding names and the codes, which include the letter of macro category and one Arabic numeral. There were 127 meso categories at the end of 2013.

We use the codes and the names of JEL meso categories in the tables with label “B”.

JEL classification shares the most of meso categories into a few (from one to ten) *micro* categories with corresponding names and the codes, which include the code of meso category and one Arabic numeral for denotation of micro category. You can see the codes and the names of the five meso and 25 micro categories for the macro category “K” in the following table.

Code and Name of JEL Subject Category
K0 General for Macro Category K
K00 General
K1 Basic Areas of Law
K10 General
K11 Property Law
K12 Contract Law
K13 Tort Law and Product Liability • Forensic Economics
K14 Criminal Law
K19 Other
K2 Regulation and Business Law
K20 General
K21 Antitrust Law
K22 Business and Securities Law
K23 Regulated Industries and Administrative Law
K29 Other
K3 Other Substantive Areas of Law
K30 General
K31 Labor Law
K32 Environmental, Health, and Safety Law
K33 International Law
K34 Tax Law

Code and Name of JEL Subject Category
K35 Personal Bankruptcy Law
K36 Family and Personal Law
K37 Immigration Law
K39 Other
K4 Legal Procedure, the Legal System, and Illegal Behavior
K40 General
K41 Litigation Process
K42 Illegal Behavior and the Enforcement of Law
K49 Other

The current JEL subject classification appeared in 1991. At the beginning, it included 627 micro categories. The number of micro fields reached 757 to the end of 2005. There were 822 micro categories at the end of 2013.

Each publication in the electronic bibliography EconLit has a set of special fields in order to describe the important features of publication. The field DE (“Description”) contains information about JEL micro subject categories, which covers publication.

There are two types of the content in the DE field:

1. With a single JEL micro code.
2. With a few codes.

Let us consider for illustration the EconLit records with code K00.

Here is an example with a single code, K00:

TI: Ireland and EC Membership Evaluated: The Legal System
 AU: McCutcheon, Paul
 AF: U Limerick
 SO: Ireland and EC membership evaluated, 1991, pp. 209-29
 PB: EC Membership Evaluated Series New York: St. Martin's Press
 DT: Collective Volume Article
 PY: 1991
 ED: Keatinge, Patrick, ed.
DE: Law and Economics: General K00

There were 21 records with the code K00 at the end of 1991. One record in this set contains a single code K00 in the field DE. The other records have a few codes (see examples):

TI: Economic Analysis in Civil Law Countries: Past, Present, Future
 AU: Cooter, R.; Gordley, J.
 AF: U CA, Berkeley; U CA, Berkeley
 SO: International Review of Law and Economics, 11(3), December 1991, pp. 261-63
 AV: <http://www.sciencedirect.com/science/journal/01448188>
 DT: Journal Article
 PY: 1991
DE: Law and Economics: General K00; Relation of Economics to Other Disciplines A12

TI: Law and Liberty: A Comparison of Hayek and Bastiat
 AU: Dorn, James A.
 AF: Unlisted
 SO: Friedrich A. Hayek: Critical assessments. Volume 3, 1991, pp. 306-30
 PB: Critical Assessments of Contemporary Economists London and New York: Routledge
 DT: Collective Volume Article
 PY: 1991[1981]
 ED: Wood, John Cunningham; Woods, Ronald N., eds.

DE: History of Economic Thought: Individuals B31; Law and Economics: General K00; Equity, Justice, Inequality, and Other Normative Criteria and Measurement D63

TI: Can the "Rational Egoist" Model Be Expanded to Include Norms? Comments
 AU: Mueller, Dennis C.
 AF: U MD

SO: Social norms and economic institutions, 1991, pp. 103-06

PB: Ann Arbor: University of Michigan Press

DT: Collective Volume Article

PY: 1991

ED: Koford, Kenneth J.; Miller, Jeffrey B., eds.

DE: History of Economic Thought since 1925: Historical; Institutional; Evolutionary; Austrian B25; Law and Economics: General K00; Relation of Economics to Social Values A13; Equity, Justice, Inequality, and Other Normative Criteria and Measurement D63

Theoretically, micro category K00 had possibility to form 626 links with other micro categories that were in JEL classification in 1991. But de facto there were the following 24 links: A12(10), D63(4), A13(3), B25(3), B41(2), B31(1), C20(1), D23(1), D60(1), D62(1), D78(1), I20(1), K40(1), L84(1), N40(1), P21(1).

The numbers in round brackets point to the number of EconLit records which have the code K00 and the corresponding second code in DE field. It is possible to use these numbers as a **measure of link intensity (strength)**. We see that the most intensive (strong) link was between K00 and A12 (10 units). The intensity of link between K00 and D63 holds the second place with four publications.

We shall denote the mentioned 16 links as *existing links* at the end of 1991. If you add a link K00 code itself, then we have 17 links. The remaining 609 (626 – 17) are *potential new links* with the code K00 at the end of 1991.

The search with EconLit shows 29 new publication with the code K00 in 1992. One part of these records has a single code K00 in DE field. The second part contains the same links that were observed in 1991. The third part includes 14 **new links** with the codes from the list “Potential new links”: A11, D33, D61, D72, D81, D82, F02, H41, I31, L50, M21, N43, O10, O29.

We use the described procedures for each micro category.

Table with the “C” label reflects the existing links with their intensities for the 1991–2005 period and the changes of these links during the period of 2006–2013.

Table with the “D” label contains the list of new links that appeared during the 2006–2013 period. We present the emergence and development of these new links in the table with the “E” label.

The table with “F” label provides examples of the first publications for the discovered new links.

The table with “G” label gives the list of potential new links at the end of 2013.

The table with “B” label shows the aggregative picture based on tables with the “C” and “D” labels for all micro categories for two periods, 1991–2005 and 1991–2013 respectfully, according to meso and macro categories. The table with the “A” label presents links according to macro categories.

Tables “C”

Tables with “C” labels are the Cores or the Centers of all other types of tables. We shall use micro category K00 for illustration. Here you can see fragments of table K00.C.

Table K00.C Links in 2005 according to Micro Categories

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	6	2	1.5	0.2	0.16	General Economics: General
...							
J71	1	3	2	3	0.05	0.08	Labor Discrimination
K00	771	1,266	495	1.64	39.02	33.3	Law and Economics: General
K10	9	27	18	3	0.46	0.71	Basic Areas of Law: General (Constitutional Law)
...							
Z13	20	53	33	2.65	1.01	1.39	Economic Sociology; Economic Anthropology; Social and Economic Stratification
S	1,976	3,471	1,495	1.76	100	91.2	Sums and total rate of growth

In this table:

DE — the JEL codes of micro categories, which had the links with the code K00 during the period of 1991–2005.

N05 — the nonzero numbers of records in EconLit for the 1991–2005 for each code shown in the column DE. These numbers show the intensity of links between the basic code X under consideration (in this case X

= K00) and the code in the column DE. The cell in row K00 will indicate the number of records that have a single code D10 in DE field. In this example, the number in this cell is “771”.

Validation of these results for the row K00 and columns N05 can be done by setting in the search window EconLit the expression:

subjdesc: K00 yearmin: 1991 yearmax: 2005

The following screenshot confirms that the number is “771”.

The screenshot shows the EconLit search interface. The search bar contains the query: **subjdesc:K00 yearmin:1991 yearmax:2005**. The search results are displayed as **Top 771 Results**. The first three results are:

- Law's order: What economics has to do with law and why it matters** (new window preview). This book offers a highly readable introduction to the economic analysis of law. More than just a survey of existing theories, it is a careful evaluation...
Citation: Miceli, Thomas J. (Reviewer); Journal of Economic Literature, December 2001, v. 39, iss. 4, pp. 1260-62, Friedman, David D. Princeton: Princeton University Press, 2000. Book Reviews
- Rethinking the progressive agenda: The reform of the American regulatory state** (new window preview). This provocative book argues for a much-expanded role for government action and judicial oversight in the market economy. Rose-Ackerman identifies the "...
Citation: Quigley, John M. (Reviewer); Journal of Economic Literature, December 1993, v. 31, iss. 4, pp. 2001-02, Rose-Ackerman, Susan New York; Macmillan, Free Press, 1992. Book Reviews
- Law and social norms** (new window preview). The author introduces this book by stating: "Most people refrain most of the time from anti-social behavior even when the law is absent or has no force. ...

N13 — the number of records in EconLit for the period of 1991—2013.

Validation of results for the row K00 and column N13 can be done by setting in the search window EconLit the expression:

subjdesc: K00 yearmin: 1991 yearmax: 2013

The following resulting screenshot shows that the number is “1,266”.

The screenshot shows the EconLit search interface. The search bar contains the query: **subjdesc:K00 yearmin:1991 yearmax:2013**. The search results are displayed as **Top 1,148 Results**. The first three results are:

- The law and economics of irrational behavior** (new window preview). Much recent research in psychology and economics, or "behavioral economics," has followed a particular process. Step 1: Researchers draw both on introspection ...
Citation: Silverman, Dan (Reviewer); Journal of Economic Literature, September 2006, v. 44, iss. 3, pp. 728-31, Parisi, Francesco; Smith, Vernon L., eds. Stanford: Stanford University Press, Stanford Economics and Finance, 2005. Book Reviews
- Law's order: What economics has to do with law and why it matters** (new window preview). This book offers a highly readable introduction to the economic analysis of law. More than just a survey of existing theories, it is a careful evaluation...
Citation: Miceli, Thomas J. (Reviewer); Journal of Economic Literature, December 2001, v. 39, iss. 4, pp. 1260-62, Friedman, David D. Princeton: Princeton University Press, 2000. Book Reviews
- Economic Foundations of International Law** (new window preview). The field of international law is not terra incognita for economic analysis but it still qualifies as largely wilderness territory. Perhaps put off by ...
Citation: Hadfield, Gillian K. (Reviewer); Journal of Economic Literature, September 2013, v. 51, iss. 3, pp. 897-900, Posner, Eric A., Sykes, Alan O. Cambridge and London: Harvard University Press, Belknap Press, 2013. Book Reviews

$D = N13 - N05 = 1,266 - 771 = 495$ — the increase of publications in 2006—2013.

The last line in Table K00.C, in cell N05, shows the total number of EconLit records for K00 and the links (or intersections), which K00 had with other 821 JEL codes at the end of 2005. We can see the same result in the tables K00.A and K00.B.

As long as Table K00.C reflects only the links that existed in 2005, then the sum for N13 (3,471) does not include the publications for the new links in 2006–2013. Because of this fact it is necessary to consider together the sum of numbers in the column N13 in table K00.C with the sum in the column D in table K00.D (equal to 333) in order to receive the resulting sums for column N13 in the tables K00.A and K00.B (equal to 3,3804): $3,471 + 333 = 3,804$.

According to the formula: $T = N13/N05$ the numbers in the column “T” show the growth rate in relation to the level of 2005. For the row with code K00 in the table K00.C: $T = 1,266 / 771 = 1.64$. For the resulting row S in the table K00.C: $T = 3,471 / 1,976 = 1.76$.

The number in column DN05 indicates the share (in percent), that the micro category with code in column DE and the intensity of link, shown in the column N05, has in the sum, which is allocated in the cell in row S and in the column N05 in the table with the label “C”.

If we take the row with the code K00 in the table K00.C then:

$$\frac{771}{(\text{Row K00 \& column N05})} \times \frac{1,976}{(\text{Row S \& column N05})} \times 100 = 39.02. \quad (\text{Row K00 \& column DN05})$$

The number in column DN13 indicates the share (in percent) which the micro category with the code in the column DE and intensity of link, shown in the column N13, has in the sum, stated in the row S and column N13 (but in the table with the “B” label in order to take into account together existing and new links).

Let us use example of the line with code K00:

$$\frac{1,266}{(\text{Row K00 \& column N13})} \times \frac{3,804}{(\text{Row S \& column N13 in the table K00.B})} \times 100 = 33.3. \quad (\text{Row K00 \& column DN13})$$

Because of new links in 2006—2013, the sum in the row S and in the column DN13 in the table K00.C is equal to 91.2 %. If we add 8.8 % shown in the row S and in the column DN13 in the table K00.D, then we get the sum 100 %.

It is necessary to pay attention to the difference between calculation of all shares and sums with MS Excel without any rounding, as well as the presentation of the same shares and sums in the Atlas tables with two digits after the decimal point.

We use the light yellow color in order to mark values in column T in the cases when the rate of growth for the code in row X exceeds the total rate of growth for all links shown in row S in the tables with labels “A” and “B”. We use light green color when the value in the column DN13 exceeds the value in column DN05.

In the table with label “C”, micro categories in the column DE are listed in alphabetical order of JEL subject codes. For the other variant of comparison, we have placed four ranked lists for numbers in columns N05, N13, D and T in decreasing order of the numerical values for the respective indicators.

Tables “D”

Table K00.D List of New Links in 2006–2013

DE	D	DN13	Name of JEL Micro Category
A33	1	0.03	Handbooks
...
D03	13	0.34	Behavioral Microeconomics: Underlying Principles
D12	1	0.03	Consumer Economics: Empirical Analysis
...
K20	14	0.37	Regulation and Business Law: General
...
N45	7	0.18	Economic History: Government, War, Law, International Relations, and Regulation: Asia including Middle East
...
Y80	1	0.03	Related Disciplines
S	333	8.8	Sums

Tables with the label “D” contain the list of new links which the basic micro category X (in this example, K00) has established with other micro categories during 2006–2013. New codes are listed in the column DE in alphabetical order with the values of corresponding publications at the intersections in the column D. Following this table are the new link codes ranked in descending order of D.

The number in column DN13 indicates the share (in percent) that the micro category with the code in the column DE and intensity of link shown in column D, has in the sum, which allocated in the row S and the column N13 in the table with label “B”.

Validation of results for the rows D03, K20, N45 and the column D can be done by setting in the search window EconLit the expression:

subjdesc:K00 subjdesc:D03 yearmax:2013

subjdesc:K00 subjdesc:K20 yearmax:2013

subjdesc:K00 subjdesc:N45 yearmax:2013

The following three screenshots confirm the validation of the results.

The first screenshot shows a search for 'subjdesc:K00 subjdesc:D03 yearmax:2013'. The results list four items: 1. 'The Anti-foundational Dilemma: Normative Implications for the Economic Analysis of Law', 2. 'Behavioral Law and Economics. 3 vols', 3. 'Behavioral Law and Economics: Comment', and 4. 'Rationality in Law and Economics'.

The second screenshot shows a search for 'subjdesc:K00 subjdesc:K20 yearmax:2013'. The results list three items: 1. 'The End of Comparative Law', 2. 'Some Inconvenient Truths About Climate Change Policy: The Distributional Impacts of Transportation Policies', and 3. 'Legal origins: reconciling law and finance and comparative law'.

The third screenshot shows a search for 'subjdesc:K00 subjdesc:N45 yearmax:2013'. The results list three items: 1. 'The End of Comparative Law', 2. 'Some Inconvenient Truths About Climate Change Policy: The Distributional Impacts of Transportation Policies', and 3. 'Legal origins: reconciling law and finance and comparative law'.

Tables “B”

Table K00.B Links according to MesoCategories

DE	N05	N13	D	T	DN05	DN13	Names of JEL Meso- and Macro Categories
A0	0	0	0	N	0.00	0.00	General
A1	198	239	41	1.21	10.02	6.28	General Economics
A2	21	22	1	1.05	1.06	0.58	Economic Education and Teaching of Economics
A3	0	1	1	N	0.00	0.03	Collective Works
A	219	262	43	1.2	11.08	6.89	General Economics and Teaching

Table K00.C Links in 2005 according to MicroCategories

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	6	2	1.5	0.2	0.16	General Economics: General
A11	8	11	3	1.38	0.4	0.29	Role of Economics; Role of Economists
A12	148	181	33	1.22	7.49	4.76	Relation of Economics to Other Disciplines
A13	32	35	3	1.09	1.62	0.92	Relation of Economics to Social Values
A14	6	6	0	1	0.3	0.16	Sociology of Economics
A1	198						Sum

Cells from intersection of row A1 and columns NP05 and NP13 from the table K00.B contain the sums of the values of micro fields in the table K00.C included in meso field A1:

$$A1 (NP05) = A10(NP05) + A11(NP05) + A12(NP05) + A13(NP05) + A14(NP05) = 4 + 8 + 148 + 32 + 6 = 198.$$

$$A1 (NP13) = A10(NP13) + A11(NP13) + A12(NP13) + A13(NP13) + A14(NP13) = 6 + 11 + 181 + 35 + 6 = 239.$$

Indicators D, T, DN05, and DN13 in the tables “B” have the same meaning as in the tables “C” for micro categories. In the row “A” from the fragment of the table K00.B shown sum of values for meso categories A0, A1, A2, A3 and for columns NP05, NP13, and D. The value of T in all cases is derived with the formula NP13 / NP05 for the appropriate row. In cases where the value of the denominator is zero (as for the lines A0 and A3) in a cell, the letter “N” may be found.

Tables “A”

DE	N05	N13	D	T	DN05	DN13	Name of JEL Macro Category
A	219	262	43	1.2	11.08	6.89	General Economics and Teaching
B	275	357	82	1.3	13.92	9.38	History of Economic Thought, Methodology, and Heterodox Approaches
C	14	26	12	1.86	0.71	0.68	Mathematical and Quantitative Methods
D	215	443	228	2.06	10.88	11.64	Microeconomics

F	18	80	62	4.44	0.91	2.10	International Economics
G	15	69	54	4.6	0.76	1.81	Financial Economics
H	65	122	57	1.88	3.29	3.21	Public Economics
I	12	47	35	3.92	0.61	1.24	Health, Education, and Welfare
J	40	99	59	2.48	2.02	2.60	Labor and Demographic Economics
K	837	1,511	675	1.81	42.36	39.74	Law and Economics
L	51	119	68	2.33	2.58	3.13	Industrial Organization
M	7	18	11	2.57	0.35	0.47	Business Administration and Business Economics • Marketing • Accounting
N	16	93	77	5.81	0.81	2.44	Economic History
O	90	250	160	2.78	4.55	6.57	Economic Development, Technological Change, and Growth
P	64	154	90	2.41	3.24	4.05	Economic Systems
Q	5	32	27	6.4	0.25	0.84	Agricultural and Natural Resource Economics • Environmental and Ecological Economics
R	0	8	8	N	0.00	0.21	Urban, Rural, Regional, Real Estate, and Transportation Economics
Y	0	2	2	N	0.00	0.05	Miscellaneous Categories
Z	24	81	57	3.38	1.21	2.13	Other Special Topics
S	1,976	3,804	1,828	1.93	100	100	Sums and total rate of growth

Tables with the “A” label have a general purpose. From the view of 20 macro categories of JEL classification, the table shows existing connections a micro area X (in this example, K00) at the end of 2005 (NP05), and changes in these relationships due to the emergence of new links (growth D, NP13 = NP05 + D).

Tables “E”

Table K00.E Emergence and Evolution of New Links in 2006—2013.

DE	2006	2007	2008	2009	2010	2011	2012	2013	S
B50	1	0	0	0	0	0	0	0	1
F33	1	0	0	0	0	0	1	0	2
G30	1	3	0	2	1	0	0	0	7
G38	1	1	0	0	0	0	0	0	2
K20	3	1	0	7	1	2	0	0	14
N20	2	4	0	1	0	0	1	1	9
N45	2	2	1	0	0	1	1	0	7
P10	1	0	1	0	1	0	2	0	5
....			
M40	0	0	0	0	0	0	0	1	1
R10	0	0	0	0	0	0	0	1	1
NL(J)	8	25	11	23	23	27	13	12	142

Tables labeled “E” show the origin and evolution of new relationships between analyzed micro category X (in this example, K00) and other micro categories. The first crossing occurred in a year (the fragment presented it is 2006) provisionally called “seeds”, and table cells, which show the number of publications in these intersections, painted yellow. This “seed” can “sleep” until the end of the period under review (up to 2013). This is what happened with the “seed” of line B50, and other.

However, some “seeds” can provide “green shoots”. For the “seed” in the F33, there is a “shoot” in 2012. For the “seed” in the G30, we see a “shoots” in 2007, 2009, and 2010.

The row NL (J) shows the numbers of new links in the years J = 2006, ..., 2013. The sums of new intersections for every row, and for the period 2006–2013 are in the column “S”.

Tables “F”

Table K00.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		

2006	K20	Siems, Mathias M. 2006. <i>Legal origins: reconciling law and finance and comparative law</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In the last few years law and finance scholars have 'discovered' the usefulness of comparative law. Their studies look at the quantifiable effect that legal rules and their enforcement have on financial development in different countries. Moreover, they link their results with the long-standing distinction between Civil Law and Common Law countries. Whether this revival of 'legal families' is a useful way forward is, however, a matter of debate. The following article challenges these studies and looks for characteristic features which are more precise and meaningful than the use of legal families as such.
2006	K20 N45	Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers. This paper surveys China's legal system in the economic reform era. We analyze the role of law in the economy, assessing whether China's formal legal system contributed to those expectations of stable and predictable rights of property and contract that are prerequisites for growth. ..
2006	N20	Siems, Mathias, and Priya Lele. 2006. <i>Shareholder Protection: A Leximetric Approach</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In this paper we build a new and meaningful shareholder protection index for five countries and code the development of the law for over three decades. ...
2006	N45	THE SAME AS K20 Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers.

Tables labeled “F” contain information related to the first intersections (“seeds”) analyzed in basic micro field with the code X (in this example code is K00) according to the “E” type table. To design table “F” for better perception of information about publications on new crossings the following techniques have been used:

1. The data for each year is organized in such a pattern that the cell related to the year is highlighted in yellow. Then comes the white cell, and finally the blue strip across the entire width of the cell with the title and abstract.

2. Codes of new intersections are shown in the column DE in alphabetical order. If it turns out that the publication has two or more new code intersections, then all the codes are provided alphabetically in the same cell in the column DE and highlighted in yellow.

3. It may be a case that new codes of other publications are wedged in the gap between two new codes of the publication. In this case, the title and the abstract of the paper and the reverse link to the previously shown code such as THE SAME AS K20 appears, with an indication of the author, title and source of the publication with the earlier code are presented. At the same time, to save space, part of the source may be omitted.

4. Information about the publication in the column “Title and Abstract” are as following. At the beginning, we present bibliographic information, which is exported from EconLit data in the format AEA-Author-Date. This data will be copied to the clipboard and then, maintaining the original combination of standard and italic fonts, they are inserted in the appropriate cell of the “F” type table. If there is a publication of the abstract, then by using the Complete Record tool it is copied from the EconLit records field AB, and then added to the cell form “F” after the publication of bibliographic information. Summary is added only once, at the first mention of the publication for the new intersection.

5. In order to better distinguish the types of publications in “F” Tables, different types of font color, and color label have been used. As seen from the fragment of the micro field K00 in 2007 bibliographic information about preprints (Working Paper) is highlighted in a light green color. For information about articles in scientific journals, it is highlighted in turquoise:

Year	DE	Title and Abstract
2007	F15 F30	Stephan, Paul B., ed. 2007. <i>Economics of European Union Law, An Elgar Reference Collection. Economic Approaches to Law</i> , vol. 8. Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty-one previously published papers undertake an economic analysis of European Union law. Papers focus on the political economy of the European Union; the European Union as a common market; centralization and subsidiarity; the European Union and competition policy; the European Union and corporate governance; the European Monetary Union; and citizenship, voice, and loyalty.

Information about books is highlighted in yellow, and the cells with the year and the JEL code are highlighted light brown.

Year	DE	Title and Abstract
2006	B50	Mercurio, Nicholas, and Steven G. Medema. 2006. <i>Economics and the Law: From Posner to Postmodernism and Beyond</i> , Second edition. Princeton and Oxford: Princeton University Press. Revised and expanded second edition provides a concise overview of the dominant schools of thought within law and economics. Discusses the jurisprudential niche of law and economics; Chicago law and economics; public choice theory; institutional law and economics; the new institutional economics; branching out--New Haven, modern civic republican, and Austrian approaches; and social norms, law, and economics.

Yellow **CV**: marks articles in collective volumes:

Year	DE	Title and Abstract
2007	D03	CV : Engel, Christoph. 2007. "Behavioral Law and Economics: Comment." In <i>Behavioral Economics and Its Applications</i> , ed. Peter Diamond and Hannu Vartiainen, 148-55. Princeton and Oxford: Princeton University Press.

Diss: shaded yellow mark PhD dissertations. Sand color paints the cells with the year and the JEL code:

Year	DE	Title and Abstract
2013	H50	Diss : Moosapoor, Seb. 2013. Essays on Law and Economics, Economics of Education, and Public Economics. PhD diss. University of Michigan.

6. When completing the “F” type table, it has often been the case that the combination of the content and the new codes have several preprints (Working Paper) of the author(s). The titles and abstracts of all papers were the same. The only difference was the source of publication. In this case the information presented only once in the “F” table. From the set of sources, the most significant (first NBER) was chosen.

Tables “G”

The table set for the micro category K00 is completed by table K00.G, which alphabetically lists the codes for micro categories that at the end of 2013 did not have the intersection with the code K00. This is a set of potential new links with the code K00. The table “K00: Balance of Links” gives the total number of potential new links at the end of 2013.

Table K00.G Potential New Links at the End of 2013

DE	Name of JEL Micro Category
A00	General Economics and Teaching
A19	General Economics: Other
	...
C43	Index Numbers and Aggregation; Leading indicators*
	...

* Intersections with the micro categories marked in yellow appeared in 2014—2015.

K00: Balance of Links

229	Links in 2005
142	New links in 2006-2013
451	Potential links at the end of 2013
822	Total — Всего микрообластей

Notice regarding the validity and accuracy

At the end of each section, the date of the final verification is noted. There is a constant replenishment from EconLit, and there is a gap between the publication date and the download of this work in EconLit. There may be a gap of five years. Therefore, in this situation when the date of verification in EconLit, new publications will be issued in 2006–2013, or even earlier. This fact of the appearance of such a publication requires revisions to all tables of the section being analyzed, as well as the others containing the codes of new EconLit records.

The accuracy of the information provided in this volume and other volumes of the sub-series “Atlas of new research based on EconLit (2006—2013)”, will inevitably be limited by the existing restriction of the maximum size of 1000 units in terms of the cluster of records. Despite a number of techniques that are used by project participants to reduce the impact of this limitation, we are still not fully confident that all the journal articles with some micro category codes will be considered, in cases where there were more than 1,000 in particular years.

Sometimes there are cases when a work has the year of publication before 1991 and has the JEL code, which was introduced in 1991 or later. Such works are excluded from consideration and from the “seed” group. Usually, intersections that have arisen in 1991–2013 are fixed according to the year that was given in the PY field of the record, even in situations where the code shown in the field of DE had not yet been officially put into JEL releases. However, in the cases of significant discrepancies we give notes and additional information.

Mikhail V. Lychagin, Anton M. Lychagin, and Irina K. Muhina

Приложение В2. Путеводитель по таблицам Атласа¹

О предметной классификации JEL

Предметная классификация JEL (<https://www.aeaweb.org/econlit/jelCodes.php>) на конец 2013 года содержала 20 общих категорий. Каждая общая категория имела наименование и код, обозначенный одной большой латинской буквой. Категория “К” называется “Право и экономика” (Law and Economics). Этой категории посвящен настоящий том, который имеет номер “11”.

Для нас будет удобно использовать термин “макро” вместо “общий” при рассмотрении 20 указанных общих категорий классификации JEL.

Каждая научная классификация является методом для разделения (размежевания, демаркации, деления) всей предметной области определенной науки (в нашем случае экономической) на совокупность частей (регионов, полей, и т.п.). С этой точки зрения JEL-категорию “К” можно рассматривать как макрообласть экономической науки или экономических исследований.

Мы используем коды и наименования макрокатегорий JEL в таблицах с пометой («ярлыком», «этикеткой») “А”.

Классификация JEL разбивает макрокатегорию К на пять мезокатегорий с соответствующими наименованиями и с кодами (дескрипторами — DE), которые содержат букву макрокатегории и одну арабскую цифру (например, K1). На конец 2013 года насчитывалось 127 мезокатегорий.

Мы используем наименования и коды мезокатегорий JEL в таблицах с пометой “В”.

Классификация JEL делит большинство мезокатегорий на несколько (от одной до 10) микрокатегорий с соответствующими наименованиями и кодами, которые содержат код мезокатегории и одну арабскую цифру для обозначения микрокатегории. Коды и наименования 5 мезо- и 25 микрообластей для макрокатегории К выглядят следующим образом:

Код и наименование категории JEL
K0 Общее для макрокатегории К
K00 Общее
K1 Базовые области права
K10 Общее
K11 Имущественное право
K12 Контрактное право
K13 Гражданские правонарушения и ответственность производителя перед потребителем • Судебная экономика
K14 Уголовное право
K19 Прочее
K2 Законодательное регулирование деловых отношений (хозяйственное право)
K20 Общее
K21 Антимонопольное законодательство
K22 Хозяйственное право и законы о ценных бумагах
K23 Регулируемые отрасли и административное право
K29 Прочее
K3 Другие значимые области права
K30 Общее
K31 Трудовое право
K32 Законодательство по охране окружающей среды, здоровья и безопасности

¹ © М.В. Лычагин, А.М. Лычагин, И.К. Мухина, 2016.

Код и наименование категории JEL
К33 Международное право
К34 Налоговое право
К35 Законодательство по банкротству физических лиц
К36 Семейное и персональное право
К37 Иммиграционное законодательство
К39 Прочее
К4 Юридические процедуры, юридическая система и противоправное поведение
К40 Общее
К41 Процесс тяжбы
К42 Противоправное поведение и осуществление закона
К49 Прочее

Существующая предметная классификация JEL появилась в 1991 году. В начале в ней было 627 микрокатегорий. К 2005 году число микрокатегорий выросло до 757. На конец 2013 года насчитывалось 822 микрокатегории.

Каждая публикация, включенная в электронную библиографию EconLit, имеет совокупность специальных полей для описания (отражения) наиболее важных характеристик работы. Поле DE (“Description” — описание) содержит набор предметных микрокатегорий (областей), охватываемых данной публикацией.

Существует два типа наполнения поля DE:

1. Наличие единственного предметного микрокода классификации JEL.
2. Наличие кодов нескольких предметных микрокатегорий.

Проиллюстрируем записи EconLit с кодом K00.

Здесь приведен пример с единственным кодом K00:

TI: Ireland and EC Membership Evaluated: The Legal System
 AU: McCutcheon, Paul
 AF: U Limerick
 SO: Ireland and EC membership evaluated, 1991, pp. 209-29
 PB: EC Membership Evaluated Series New York: St. Martin's Press
 DT: Collective Volume Article
 PY: 1991
 ED: Keatinge, Patrick, ed.
DE: Law and Economics: General K00

В конце 1991 года в EconLit имелась 21 запись с кодом K00. Одна запись из этого множества содержала только один код K00 в поле DE. Остальные записи имели несколько кодов (см. примеры для двух, трех и четырех кодов):

TI: Economic Analysis in Civil Law Countries: Past, Present, Future
 AU: Cooter, R.; Gordley, J.
 AF: U CA, Berkeley; U CA, Berkeley
 SO: International Review of Law and Economics, 11(3), December 1991, pp. 261-63

 PB: Critical Assessments of Contemporary Economists London and New York: Routledge
 DT: Collective Volume Article
 PY: 1991[1981]

ED: Wood, John Cunningham; Woods, Ronald N., eds.

DE: History of Economic Thought: Individuals B31; Law and Economics: General K00; Equity, Justice, Inequality, and Other Normative Criteria and Measurement D63

TI: Can the "Rational Egoist" Model Be Expanded to Include Norms? Comments

AU: Mueller, Dennis C.

AF: U MD

SO: Social norms and economic institutions, 1991, pp. 103-06

PB: Ann Arbor: University of Michigan Press

DT: Collective Volume Article

PY: 1991

ED: Koford, Kenneth J.; Miller, Jeffrey B., eds.

DE: History of Economic Thought since 1925: Historical; Institutional; Evolutionary; Austrian B25; Law and Economics: General K00; Relation of Economics to Social Values A13; Equity, Justice, Inequality, and Other Normative Criteria and Measurement D63

Теоретически микрокатегория K00 могла образовать сочетания (связи) с 626 другими микрокатегориями, которые входили в классификацию JEL в 1991 году. Но фактически имелись связи со следующими 16 микрокатегориями: A12(10), D63(4), A13(3), B25(3), B41(2), B31(1), C20(1), D23(1), D60(1), D62(1), D78(1), I20(1), K40(1), L84(1), N40(1), P21(1).

Числа в круглых скобках указывают на число записей в EconLit, которые в поле DE имели код K00 и соответствующий второй код. Представляется возможным использовать эти числа в качестве **меры (оценки) интенсивности (силы) связи**. Мы видим, что наиболее сильной была связь между K00 и A12 (10 работ). На втором месте находится связь K00 с кодом D63 (четыре публикации).

Будем называть указанные 16 связей, которые были зафиксированы на конец 1991 года, *существующими связями*. К существующим связям можно отнести связь кода K00 с самим собой. Итого на конец 1991 года использовано 17 кодов. Оставшийся резерв: 609 кодов (626 – 17). Входящие в этот резерв коды могут образовать потенциально новые связи с кодом K00.

Поиск в EconLit показывает наличие 29 новых публикаций с кодом K00 в 1992 году. Первая часть этих записей имеет в поле DE только один код K00. Вторая часть работ будет иметь сочетания нескольких кодов, которые наблюдались в 1991 году. Третья часть включает 14 **новых связей** со следующими кодами, которые в 1991 году входили в список "Потенциальных новых связей": A11, D33, D61, D72, D81, D82, F02, H41, I31, L50, M21, N43, O10, O29.

Описанные процедуры мы используем для каждой микрокатегории.

Таблицы с пометой "С" отражают существующие связи и их интенсивности для периода 1991–2005 гг. и изменения этих связей в течение 2006–2013 годов.

Таблицы с пометой "D" содержат перечни новых связей, которые появились в период 2006–2013 годов. Появление и развитие этих новых связей по годам можно проследить при помощи таблиц с пометами "E". Таблицы с пометой "F" содержат примеры первых публикаций для выявленных новых связей. Таблицы с пометой "G" дают списки потенциально новых связей на конец 2013 года.

Таблицы с пометой "B" показывают агрегированную картину, которая базируется на таблицах с пометами "С" и "D" и учитывает все микрокатегории для периодов 1991–2005 и 1991–2013 годов в разрезе мезо- и макрокатегорий.

Таблицы с пометой "A" представляют связи согласно макрокатегориям.

Таблицы "С"

Таблицы с пометами "С" являются центральными (отправными) для таблиц других видов. Будем использовать для иллюстрации микрокатегорию K00.

Далее приведены фрагменты таблицы K00.C. В этой таблице и других таблицах использован англоязычный вариант представления чисел: десятичная часть числа отделяется точкой, а затем каждые три разряда в целой части разделяются запятыми.

DE — коды микрокатегорий JEL, которые имели связи с кодом K00 в течение 1991–2005 гг.

N05 — ненулевое число записей в EconLit за 1991–2005 гг. для каждого кода, приведенного в столбце DE. Если строка в колонке DE имеет тот же код X, который совпадает с кодом рассматриваемой базовой микрокатегории и который стоит в индексе таблицы (в нашем случае X = K00), тогда число в ячейке таблицы будет указывать на число записей в EconLit, которые в поле DE содержали только код X. В нашем примере это число “771” (см. принт-скрин).

Table K00.C Links in 2005 according to Micro Categories — Связи в 2005 г. согласно микрокатегориям

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	6	2	1.5	0.2	0.16	General Economics: General
	...						
J71	1	3	2	3	0.05	0.08	Labor Discrimination
K00	771	1,266	495	1.64	39.02	33.3	Law and Economics: General
K10	9	27	18	3	0.46	0.71	Basic Areas of Law: General (Constitutional Law)
	...						
Z13	20	53	33	2.65	1.01	1.39	Economic Sociology; Economic Anthropology; Social and Economic Stratification
S	1,976	3,471	1,495	1.76	100	91.2	Sums and total rate of growth

The screenshot shows the EconLit search interface. The search query is 'subjdesc:K00 yearmin:1991 yearmax:2005'. The search results are displayed in a list format, showing the top 10 results. The first three results are highlighted, and their details are shown below. The first result is 'Law's order: What economics has to do with law and why it matters' by Thomas J. Miceli, reviewed in the Journal of Economic Literature, December 2001. The second result is 'Rethinking the progressive agenda: The reform of the American regulatory state' by John M. Quigley, reviewed in the Journal of Economic Literature, December 1993. The third result is 'Law and social norms' by Michael J. Trebilcock, reviewed in the Journal of Economic Literature, June 2002.

Правильность результата для строки K00 и столбца N05 может быть проверена путем помещения в поисковое окно EconLit следующего выражения:

subjdesc:K00 yearmin:1991 yearmax:2005

N13 — число записей в EconLit для периода 1991–2013 годов.

Правильность результата для строки K00 и столбца N13 может быть проверена путем помещения в поисковое окно EconLit выражения:

subjdesc:K00 yearmin:1991 yearmax:2013

Следующий принт-скрин показывает, что искомое число именно “1,266”.
 $D = N13 - N05 = 1,266 - 771 = 495$ — прирост публикаций в 2006–2013 гг.

Число, которое стоит в последней строке таблицы K00.C в ячейке столбца N05, показывает общее число записей в EconLit для кода K00 и связей (пересечений), которые область K00 имела с остальными (их 821) кодами JEL в конце 2005 года. Число в итоговой строке столбца N13 показывает аналогичную сумму для 1991–2013 гг.

 Book Reviews

Поскольку таблица K00.C отражает только связи, которые существовали в 2005 году, то итоговая сумма для столбца N13 (3,471) не включает публикации, соответствующие новым связям, появившимся в 2006–2013 гг.

По этой причине необходимо анализировать сумму для N13 в таблице K00.C совместно с итоговой суммой публикаций в таблице K00.D (она равна 333) для того, чтобы получить результирующие суммы для N13 в таблицах K00.A и K00.B (они равны 3,804): $3,471 + 333 = 3,804$. Числа в колонке "Т" показывают темп роста по отношению к уровню 2005 года по формуле: $T = N13/N05$. Для строки с кодом K00 имеем: $T = 1,266 / 771 = 1.64$. Для итоговой строки S: $T = 3,471 / 1,976 = 1.76$.

В столбце DN05 приведены доли (в процентах), которые микрокатегории с кодом, приведенном в колонке DE и интенсивностью связей, приведенных в столбце N05, имеют в сумме, приведенной в строке S и в столбце N05 таблицы с пометой "С".

Для строки с кодом K00:

$$\frac{771}{\text{(Строка K00 \& столбец N05)}} / \frac{1,976}{\text{(Строка S \& столбец N05)}} \times 100 = \frac{39.02}{\text{(Строка K00 \& столбец DN05)}}$$

В столбце DN13 приведены доли (в процентах), которые микрокатегории с кодом, приведенном в колонке DE и интенсивностью связей, приведенных в столбце N05, имеют в сумме, приведенной в строке S (но в таблице с пометой "B" для того, чтобы учесть как существующие, так и новые связи). Рассмотрим снова строку с кодом K00:

$$\frac{1,266}{\text{(Строка K00 \& столбец N13)}} / \frac{3,804}{\text{(Строка S \& столбец N13 в таблице K00.B)}} \times 100 = \frac{33.3}{\text{(Строка K00 \& столбец DN13)}}$$

Вследствие наличия новых связей в 2006–2013 гг. сумма в строке S и столбце DN13 в таблице K00.C равна 91.2 %. Если мы добавим 8.8 %, показанные в строке S и столбце DN13 в таблице K00.D, то получим сумму 100 %.

Необходимо обратить внимание на различие, возникающее между подсчетом всех долей и сумм в пакете MS Excel, которое проводится без округления, и представление тех же долей и сумм в таблицах Атласа, когда оставлено только две цифры после десятичной точки. В строке S и столбцах DN05 и DN13 показаны точные значения, которые могут отличаться от значений, полученных при суммировании округленных значений долей в указанных столбцах.

Мы используем светло-желтый цвет для выделения значений в столбце T в случаях, когда темп роста в строке с кодом X превышает средний темп роста для всех связей, показанный в строке S в

таблицах с пометами “А” и “В”. Светло-зеленый цвет используется для выделения случаев, когда для кода X значение в столбце DN13 больше соответствующего значения, показанного в столбце DN05. В таблицах с пометой “С” микрокатегории в столбце DE перечислены в алфавитном порядке следования предметных кодов JEL. Для новых связей в таблице типа “D” дан ранжированный список для показателя D в порядке убывания числовых значений.

Таблицы “D”

Table K00.D List of New Links in 2006–2013 — Перечень новых связей в 2006–2013 гг.

DE	D	DN13	Name of JEL Micro Category
A33	1	0.03	Handbooks
...
D03	13	0.34	Behavioral Microeconomics: Underlying Principles
D12	1	0.03	Consumer Economics: Empirical Analysis
...
K20	14	0.37	Regulation and Business Law: General
...
N45	7	0.18	Economic History: Government, War, Law, International Relations, and Regulation: Asia including Middle East
...
Y80	1	0.03	Related Disciplines
S	333	8.8	Sums

Таблицы с пометой “D” содержат список новых связей, которые базовая микрокатегория X (в рассматриваемом примере это K00) образовала с другими микрообластями в 2006–2013 годах. Новые коды приведены в столбце D в алфавитном порядке со значениями интенсивности соответствующих связей в столбце D. В добавление к этому перечню после таблицы приведен список кодов микрообластей в порядке уменьшения значений интенсивности связей.

Числа в столбце DN13 — это процентные доли, которые микрообласти с кодами, приведенными в столбце DE, имеют в сумме, указанной в строке S и столбце N13 таблицы с пометой “B”. Правильность результатов для строк с кодами D03, K20, N45 и столбца D может быть проверена, если в поисковое окно EconLit подставить выражения:

subjdesc:K00 subjdesc:D03 yearmax:2013

subjdesc:K00 subjdesc:K20 yearmax:2013

subjdesc:K00 subjdesc:N45 yearmax:2013

Далее приведены три принт-скрина для подтверждения.

The screenshot shows a search results page from EconLit. The search query is "subjdesc:K00 subjdesc:D03 yearmax:2013". The results are displayed in a list format, with the first three items visible:

Таблицы “В”

Table K00.B Links according to MesoCategories — Связи согласно мезокатегориям

DE	N05	N13	D	T	DN05	DN13	Names of JEL Meso- and Macro Categories
A0	0	0	0	N	0.00	0.00	General
A1	198	239	41	1.21	10.02	6.28	General Economics
A2	21	22	1	1.05	1.06	0.58	Economic Education and Teaching of Economics
A3	0	1	1	N	0.00	0.03	Collective Works
A	219	262	43	1.2	11.08	6.89	General Economics and Teaching

Table K00.C Links in 2005 according to MicroCategories — Связи согласно микрокатегориям

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	6	2	1.5	0.2	0.16	General Economics: General
A11	8	11	3	1.38	0.4	0.29	Role of Economics; Role of Economists
A12	148	181	33	1.22	7.49	4.76	Relation of Economics to Other Disciplines
A13	32	35	3	1.09	1.62	0.92	Relation of Economics to Social Values
A14	6	6	0	1	0.3	0.16	Sociology of Economics
A1	198						Sum

Ячейки строки A1 и столбцов NP05 и NP13 таблицы K00.B содержат суммы значений микрообластей в таблице K00.C, входящих в мезообласть A1:

$$A1 (NP05) = A10(NP05) + A11(NP05) + A12(NP05) + A13(NP05) + A14(NP05) = 4 + 8 + 148 + 32 + 6 = 198.$$

$$A1 (NP13) = A10(NP13) + A11(NP13) + A12(NP13) + A13(NP13) + A14(NP13) = 6 + 11 + 181 + 35 + 6 = 239.$$

Показатели D, T, DN05 и DN13 в таблицах с пометами “B” имеют тот же смысл, что и соответствующие показатели в таблицах с пометами “C” для микрокатегорий. В строке “A” в приведенном фрагменте таблицы K00.B приведены суммы значений по мезообластям A0, A1, A2, A3 для столбцов NP05, NP13 и D. Значение T во всех случаях определяется по формуле NP13/NP05 для соответствующей строки. В тех случаях, когда значение знаменателя дроби равно нулю (как для строк A0 и A3), в ячейку ставится буква “N”.

Таблицы “A”

DE	N05	N13	D	T	DN05	DN13	Name of JEL Macro Category
A	219	262	43	1.2	11.08	6.89	General Economics and Teaching
B	275	357	82	1.3	13.92	9.38	History of Economic Thought, Methodology, and Heterodox Approaches

R10	0	0	0	0	0	0	0	1	1
NL(J)	8	25	11	23	23	27	13	12	142

Таблицы с пометой “Е” показывают возникновение и эволюцию новых связей анализируемой микрообласти X (в нашем примере это K00) с другими микрообластями. Первые возникшие пересечения в некотором году (в приведенном фрагменте представлен фрагмент для 2006 года) условно называются “семенами” и ячейки таблицы, в которых показано число публикаций на данных пересечениях, окрашены в желтый цвет. Это “семя” может “спать” до конца рассматриваемого периода (до 2013 года). Так произошло с “семенем” на строке с кодом B50. Но “семена” могут дать “зеленые ростки” или «зеленые побеги». Для “семени” в строке F33 мы видим один “побег” в 2012 году. “Семя” в строке G30 дало “побеги” в 2007, 2009 и 2010 годах.

Число новых пересечений для каждого года указано с строке NL(J), J = 2006, ..., 2013.

Таблицы “F”

Таблицы с пометой “F” содержат информацию о первых пересечениях (“семенах”) анализируемой (базовой) микрообласти с кодом X (в нашем примере это K00) согласно информации таблиц с пометами “Е”.

Table K00.F Examples of Publications according to New Links in 2006–2013

Примеры публикаций согласно новым связям в 2006–2013 гг.

Year	DE	Title and Abstract
2006		

2006	K20	Siems, Mathias M. 2006. <i>Legal origins: reconciling law and finance and comparative law</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In the last few years law and finance scholars have 'discovered' the usefulness of comparative law. Their studies look at the quantifiable effect that legal rules and their enforcement have on financial development in different countries. Moreover, they link their results with the long-standing distinction between Civil Law and Common Law countries. Whether this revival of 'legal families' is a useful way forward is, however, a matter of debate. The following article challenges these studies and looks for characteristic features which are more precise and meaningful than the use of legal families as such.
2006	K20 N45	Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers. This paper surveys China's legal system in the economic reform era. We analyze the role of law in the economy, assessing whether China's formal legal system contributed to those expectations of stable and predictable rights of property and contract that are prerequisites for growth. ..
2006	N20	Siems, Mathias, and Priya Lele. 2006. <i>Shareholder Protection: A Leximetric Approach</i> . ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. In this paper we build a new and meaningful shareholder protection index for five countries and code the development of the law for over three decades. ...
2006	N45	THE SAME AS K20 Clarke, Donald, Peter Murrell, and Susan Whiting. 2006. <i>The Role of Law in China's Economic Development</i> . University of Maryland, Department of Economics, Electronic Working Papers.

Для более удобного восприятия информации о публикациях на новых пересечениях при конструировании таблиц с пометой “F” использованы следующие приемы:

1. Данные для каждого года выделены закраской желтым цветом ячейки с номером года. Затем идет белая ячейка в графе DE, а после нее голубая полоса во всю ширину ячейки с заголовком Title and Abstract (название и реферат).

2. Коды новых пересечений приводятся в графе DE в алфавитном порядке. Если оказывается, что публикация имеет два или больше кодов новых пересечений, то все коды даются в столбце DE в одной ячейке алфавитном порядке и закрашиваются желтым.

3. Может оказаться, что в промежуток между двумя новыми кодами описываемой публикации вклиниваются новые коды других публикаций. В этом случае дается обратная ссылка на ранее приведенный код в виде THE SAME AS K20 с указанием автора, названия работы и источника публикации. Для журнальных статей приводятся все библиографические сведения, для других видов публикаций (в частности, статей в сборниках научных трудов) часть сведений об источнике может быть опущена.

Из приведенных в п. 1—3 правил могут быть исключения в двух случаях. Во-первых, работа может иметь много последовательных кодов пересечений, и, соответственно, много обратных ссылок типа THE SAME AS В этом случае для получения более подробных сведений о работе читателю придется неоднократно осуществлять обратные пролистывания. Во-вторых, между первым и последующими пересечениями кодов в таблицах типа F может оказаться более одной страницы текста, что опять потребует дополнительной работы по пролистыванию. При этом публикация может не иметь реферата (обычно это наблюдается для статей из сборников трудов). В этих случаях мы сознательно пошли на некоторое дублирование текста для того, чтобы пользователь Атласа не запутался во взаимосвязях прямых и обратных ссылок и не утомился от пролистывания страниц.

4. Сведения о публикации в столбце “Title and Abstract” приводятся следующим образом. Сначала из EconLit экспортируются данные в формате AEA-Author-Date Format. Эти данные копируются в буфер обмена и потом вставляются в нужную ячейку таблицы типа “F” с сохранением исходного сочетания прямого шрифта и курсива. Если присутствует реферат публикации, то при помощи функции экспорта данных Complete Record он копируется из области AB записи EconLit в буфер обмена и потом добавляется в ячейку формы “F” после библиографических сведений о публикации. Реферат добавляется только один раз при первом упоминании публикации.

5. Для лучшего различения типов публикаций в таблицах с пометой “F” кроме видов шрифта используются различные цвета и цветовые метки. Как видно из приведенного фрагмента для микрообласти K00 и 2006 года, библиографические сведения о препринтах (Working Papers или Discussion Papers) окрашиваются в светло-зеленый цвет.

Сведения о статьях в научных журналах закрашены бирюзовым:

Year	DE	Title and Abstract
2007	F15 F30	Stephan, Paul B., ed. 2007. <i>Economics of European Union Law, An Elgar Reference Collection. Economic Approaches to Law, vol. 8.</i> Cheltenham, U.K. and Northampton, Mass.: Elgar. Twenty-one previously published papers undertake an economic analysis of European Union law. Papers focus on the political economy of the European Union; the European Union as a common market; centralization and subsidiarity; the European Union and competition policy; the European Union and corporate governance; the European Monetary Union; and citizenship, voice, and loyalty.

Сведения о книгах закрашены желтым, а ячейки с годом и кодом JEL имеют светло-коричневый цвет.

Year	DE	Title and Abstract
2006	B50	Mercuro, Nicholas, and Steven G. Medema. 2006. <i>Economics and the Law: From Posner to Postmodernism and Beyond, Second edition.</i> Princeton and Oxford: Princeton University Press. Revised and expanded second edition provides a concise overview of the dominant schools of thought within law and economics. Discusses the jurisprudential niche of law and economics; Chicago law and economics; public choice theory; institutional law and economics; the new institutional economics; branching out--New Haven, modern civic republican, and Austrian approaches; and social norms, law, and economics.

Статьи в сборниках научных трудов имеют метку CV; закрашенную желтым:

Year	DE	Title and Abstract
2007	D03	CV; Engel, Christoph. 2007. "Behavioral Law and Economics: Comment." In <i>Behavioral Economics and Its Applications</i> , ed. Peter Diamond and Hannu Vartiainen, 148-55. Princeton and Oxford: Princeton University Press.

Диссертации имеют помету **Diss.**, закрашенную **желтым**. Ячейки с годом и кодом у данного вида работ имеют песочный цвет:

Year	DE	Title and Abstract
2013	H50	Diss. Moosapoor, Seb. 2013. Essays on Law and Economics, Economics of Education, and Public Economics. PhD diss. University of Michigan.

6. При заполнении таблиц с пометами “F” часто оказывалось, что сочетание анализируемого и нового кодов имеют несколько препринтов (Working Paper) одного авторов (авторов) с одинаковыми названиями и рефератами, но разными источниками. В этом случае в таблице типа “F” сведения о работе приводятся только один раз. Из набора источников выбирался наиболее значимый (в первую очередь NBER).

Таблицы “G”

Набор таблиц для микрообласти K00 завершает таблица типа “G”, в которой в алфавитном порядке кодов перечислены микрокатегории, которые на конец 2013 года не имели пересечений с микрообластью K00. Это набор потенциально новых связей с K00. Их число на конец указано в таблице “K00: Balance of Links” — “Баланс связей”. Желтым цветом помечены микрокатегории, с которыми возникли пересечения в 2014–2015 гг.

Table K00.G Potential New Links at the End of 2013

DE	Name of JEL Micro Category
A00	General Economics and Teaching
A19	General Economics: Other
...	...
C43	Index Numbers and Aggregation; Leading indicators*
...	...

K00: Balance of Links

229	Links in 2005 — Число связей между микрообластями на конец 2005 г.
142	New links in 2006-2013 — Новые связи, возникшие в период 2006—2013 гг.
451	Potential links at the end of 2013 — Потенциально новые связи на конец 2013 г.
822	Total — Всего микрообластей

Уведомление относительно достоверности и точности

В конце каждого раздела указана дата окончательной верификации (the date of final verification). Происходит постоянное пополнение EconLit и имеется разрыв между датой публикации и работы и отражением этой работы в EconLit (иногда этот разрыв может составить пять лет). Поэтому вполне ожидаема ситуация, когда после даты верификации в EconLit будет зафиксирована публикация, изданная в период 2006–2013 гг. (или даже ранее). И появление такой публикации потребует внесения уточнений во все таблицы как анализируемого раздела, так и других, содержащих коды вновь появившейся записи EconLit.

На точность информации неизбежно будет оказывать существующее ограничение на максимальный размер кластера извлекаемых записей в 1000 единиц. Несмотря на ряд приемов, которые использовали участники Проекта для уменьшения влияния этого ограничения, у нас все равно нет полной уверенности в том, что действительно учтены все журнальные статьи с кодами микрообластей, в которых в некоторые годы было более 1000 таких статей.

Иногда встречались случаи, когда работа, изданная до 1991 года, имела код классификации, введенной в 1991 году. Такие работы исключались из рассмотрения и не включались в группу «семян». Пересечения, возникшие в 1991–2013 гг., в большинстве случаев фиксировались по году, приведенному в поле PY записи, даже в ситуациях, когда код, указанный в поле DE, не был еще официально введен в выпусках JEL. Но в случае значимых расхождений давались пометки и дополнительная информация.

М. В. Лычагин, А. М. Лычагин, И. К. Мухина

Appendix C. JEL Classification System / EconLit Subject Descriptors
 Приложение С. Классификация JEL / Предметные дескрипторы EconLit ¹

Code and Name of JEL Subject Category	Код и наименование категории JEL
A General Economics and Teaching	А Экономическая наука в целом и обучение
A0 General for Macro Category A	А0 Общее для макрокатегории А
A00 General	A00 Общее
A1 General Economics	А1 Экономическая наука в целом
A10 General	A10 Общее
A11 Role of Economics • Role of Economists • Market for Economists	A11 Роль экономической науки • Роль экономистов • Рынок для экономистов
A12 Relation of Economics to Other Disciplines	A12 Отношение экономической науки к другим дисциплинам
A13 Relation of Economics to Social Values	A13 Отношение экономической науки к социальным ценностям
A14 Sociology of Economics	A14 Социология экономической науки

Appendix D. Dynamic Frequency Dictionary of EconLit Terms according to JEL Codes (Example)¹Приложение D. Динамический частотный словарь терминов EconLit по кодам JEL (пример)²

“Legal” in the Titles of Publications

The First Publications in EconLit with Words “Legal” in the Title:

Первая публикация в EconLit, в названии которой встретилось слово “Legal”:

Moses, B. 1892. "Legal tender notes in California." *Quarterly Journal of Economics*, 7(0): 1-25.

The label “Leg” marks the tables in usual forms of “Atlas of New Research based on EconLit” that reflect the publications in EconLit with word “Legal” in the titles within 1991—2013, and corresponding frequencies according to JEL codes. — Полега «Leg» включена в заглавия типовых таблиц издания «Атлас новых исследований на основе EconLit» для отражения частоты словоупотреблений термина «Legal» в названиях публикаций в 1991—2013 гг.

Table Leg.A Links according to Macro Categories

2006	B15	Takahashi, Shingo. 2006. "J.R. Commons's 'Transaction Economics': Institutional Economics Theory by Legal Concepts. (In Japanese. With English summary.)." <i>History of Economic Thought</i>, 48(1): 16-31. The purpose of this paper is to consider J.R. Commons's (1862-1945) institutional economics as "transaction economics." The concept of transaction is at the core of his institutional theory, and it influenced the ideas in the new-institutional economics. Even though the concept of transaction has long been recognized as crucial to Commons's institutional theory, it has not been systematically studied until recently. Here I attempt to analyze Commons's institutional theory by considering it in terms of transaction, and transaction cost. First, in Section II, I scrutinize Commons's construction of transaction and in Section III its features. Transaction does not refer to "exchange," which implies a physical transfer; rather, it implies a legal transfer of ownership. This concept is characterized by three features of Commons's institutional economics: (1) the volitional aspect based on human action, (2) three types of transactions, determined by the legal relationship, and (3) transaction comprising a minimum of five members—two buyers, two sellers, and one arbitrator. Second, in Section IV, I offer a reinterpretation of Commons's institutional economics as transaction economics. Using the theoretical construct of transaction, I analyze at micro and macro levels the legal, economic, and ethical aspects of Commons's theory. Then in Section V, I compare transaction economics with transaction cost economics as propounded by O.E. Williamson, who drew on the work of Commons. The comparison reveals the fundamental differences between the two and the uniqueness of Commons's theory. Finally, I consider in Section VI the contemporary implications of transaction economics. I conclude that transaction economics is premised upon a unique system that differentiates it from transaction cost economics, and I argue that it provides an explanation for the legal, economic, and ethical relationships between the individual and society today.
2006	C25	Constant, Amelie, and Klaus F. Zimmermann. 2006. <i>Legal Status at Entry, Economic Performance and Self-Employment Proclivity: A Bi-National Study of Immigrants</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5696. There are concerns about the attachment of immigrants to the labor force, and the potential policy responses. This paper uses a bi-national survey on immigrant performance to investigate the sorting of individuals into full-time paid-employment and entrepreneurship and their economic success. Particular attention is paid to the role of legal status at entry in the host country (worker, refugee, and family reunification), ethnic networks, enclaves and other differences among ethnicities for their integration in the labor market. Since the focus is on the understanding of the self-employment decision, a two-stage structural probit model is employed that determines the willingness to work full-time (against part-time employment and not working), and the choice between full-time paid work and self-employment. The choices are determined by the reservation wage for full-time work, and the perceived earnings from working in paid-employment and as entrepreneur, among other factors. Accounting for sample selectivity, the paper provides regressions explaining reservation wages, and actual earnings for paid-employment and self-employment, which provide the basis for such an analysis. The structural probit models suggest that the expected earnings differentials from working and reservation wages and for self-employment and paid-employment earnings matter much, although only among a number of other determinants. For Germany, legal status at entry is important; former refugees and those migrants who arrive through family reunification are less likely to work full-time; refugees are also less self-employed. Those who came through the employment channel are more likely to be in full-time paid work. In Denmark, however, the status at entry variables do not play any significant role. This suggests that the Danish immigrant selection system is ineffective.
2006	C81	Murdock, Steve H. 2006. "The Potential Effects of Legal and Unauthorized International Migration on the Census and Other Data Sources in the United States: Methodological and Policy Issues in 2010 and Beyond." <i>Journal of Economic and Social Measurement</i>, 31(3-4): 207-20. This article considers the accurate measurement of international migration to and from the United States, both legal and unauthorized, and how these measurement characteristics might affect the accuracy and utility of the 2010 census and other data sources. It provides a brief overview of the recent magnitude and impacts of US immigration. It delineates the role of immigration in determining an accurate census and discusses specific parameters that must be accurately measured in order to adequately assess immigration, both legal and unauthorized. It makes specific recommendations for addressing the effects of such factors.
2006	D10	CV: Taylor, James. 2006. "Marketing and Consumption: Legal Overview." In <i>The Sustainable Enterprise: Profiting from Best Practice</i>, ed. Jonathan Reuvid, 117-18. Second edition. London and Philadelphia: Kogan Page.
2006	D78 D86	Grout, Paul A., Ian Jewitt, and Silvia Sonderegger. 2006. <i>Governance Reform in Legal Service Markets</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5959. This paper discusses proposed governance reforms of legal services markets. The model distinguishes between a status quo position supported by a system of professionally enforced collective reputation and forms of governance based more squarely on market mechanisms. We identify a number of forces which determine the success of reform. Focussing particularly on the rent recapture and relationship substitution effects, we highlight their impact on client welfare and quality of legal services in different types of market according to whether clients are transient or repeated users of the service.
2006	D86	Evans, John H., III, Kyonghee Kim, and Nandu J. Nagarajan. 2006. "Uncertainty, Legal Liability, and Incentive Contracts." <i>Accounting Review</i>, 81(5): 1045-71. To address agents' moral hazard over effort, incentive contracts impose risk on the agents. As performance measures become noisier, the conventional agency analysis predicts that principals will reduce the incentive weights assigned to such measures. However, prior empirical results (Prendergast 2002) frequently find the opposite, i.e., incentive weights are larger (agents bear more risk) in more uncertain environments. This paper provides new evidence on the association between the extent of uncertainty and the level of risk imposed on agents. In the context of contracts between managed care organizations and physicians, we examine the effect of task characteristics and the legal liability environment on the extent of risk that physicians bear. We derive the optimal weighting of multiple performance measures in a model of a physician's choice of revenue-generating and cost-control efforts. The model predicts that physicians who face less task uncertainty bear more cost risk in their contracts, as predicted by the conventional moral hazard model. Likewise, the model predicts that as the association between task uncertainty and legal liability uncertainty becomes stronger, physicians bear less cost risk in their contracts. Our empirical results generally support these predictions. We offer an explanation for why these results tend to be consistent with the conventional moral hazard analysis, contrary to empirical results in a number of previous studies.
2006	F30 N10	Bordo, Michael D., and Peter L. Rousseau. 2006. <i>Legal-Political Factors and the Historical Evolution of the Finance-Growth Link</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12035. Recent cross-country investigations of the role of institutional fundamentals such as the protection of property rights in promoting financial development have extended a literature that has for decades maintained that financial factors can affect real outcomes. In this paper we pursue this new direction by considering relationships between finance, growth, legal origin, and political environment in a historical cross-section of 17 countries covering the period from 1880 to 1997. We find that relationships between a country's legal origin (i.e., English, French,

Year	DE	Title and Abstract
		German, or Scandinavian) and financial development are roughly consistent with earlier findings but are not persistent. At the same time, political variables such as proportional representation election systems, frequent elections, universal female suffrage, and infrequent revolutions or coups seem linked to larger financial sectors and higher conditional rates of economic growth. Despite the explanatory power of some of our measures of the deeper "fundamentals," however, a significant part of the growth-enhancing role of financial development remains unexplained by them.
2006	F30	Andreassen, Bard A., and Stephen P. Marks, eds. 2006. <i>Development as a Human Right: Legal, Political, and Economic Dimensions</i> , Foreword by Louise Arbour. Nobel Symposium Book, no. 125. Cambridge: Harvard School of Public Health; distributed by Harvard University Press. Fourteen papers explore the right to development and the related concept of human rights-based development. Papers discuss human rights and development (Amartya Sen); the human right to development (Arjun Sengupta); the implications and value added of a rights-based approach (Jakob Kirkemann Hansen and Hans-Otto Sano); obligations to implement the right to development--philosophical, political, and legal rationales (Stephen P. Marks); the right to development and its corresponding obligations (David Beetham); international human rights obligations in context--structural obstacles and the demands of global justice (Margot E. Salomon); development and the human rights responsibilities of non-state actors (Bard A. Andreassen); redesigning the state for "right development" (Yash Ghai); making a difference--human rights and development--reflecting on the South African experience (Sandra Liebenberg); the move toward implementing the right to development--a framework for indicators and monitoring methods (Rajeev Malhotra); human rights-based development in the age of economic globalization--backgrounds and prospects (Asbjorn Eide); globalization and the human rights approach to development (Siddiq Osmani); advocating the right to development through complaint procedures under human rights treaties (Martin Scheinin); and the role of the international financial institutions in a rights-based approach to the process of development (Sigrun I. Skogly).
2006	F50	Harpaz, Guy. 2006. "A Proposed Model for Enhanced European Union-Israeli Relations: Prevailing Legal Arrangements and Prospective Juridical Challenges." <i>Journal of World Trade</i> , 40(6): 1115-44.
2006	F50	Krislov, Samuel. 2006. "Can the Welfare State Survive in a Globalized Legal Order?" <i>Annals of the American Academy of Political and Social Science</i> , 603(0): 54-79. The notion that markets lead to law and freedom is said to have originated in Adam Smith's work and is rooted in history. Both the progression and roots seem highly problematic. Neo-Smithian approaches have been refurbished by general acceptance of a contingent nature of the relation. They have also been enhanced by the failures of European Marxist economics in ways predicted with uncanny accuracy. On the other hand, neoclassical claims that democratic welfare systems were only a step away from similar failures have been refuted. Hopes that an international system might impose democracy from outside the nation-state are overly optimistic. Nationalism is rife, with a continuing outburst of ethnic secessions, and little yielding of power to supranational decision makers. The greatest success of supranational authority has rather been in creating subsidiary structures, unlikely to implement fundamental transformation but with potential for supporting such a thrust. These include expert-based operations and the network of nongovernmental organizations.
2006	H75	Cornelius, Luke M., and Charlotte Bunn Robinson. 2006. "Rural School Districts and the Fight for Funding Adequacy: The Legal Challenge of CASFG v. State of Georgia." <i>Journal of Education Finance</i> , 32(1): 71-88.
2006	H75	CV: Lindseth, Alfred A. 2006. "The Legal Backdrop to Adequacy." In <i>Courting Failure: How School Finance Lawsuits Exploit Judges' Good Intentions and Harm Our Children</i> , ed. Eric A. Hanushek, 33-78. With contributions by Williamson M. Evers et al. Stanford, Calif.: Education Next Books, Hoover Institution Press.
2006	K35	Sgard, Jerome. 2006. "Do Legal Origins Matter? The Case of Bankruptcy Laws in Europe, 1808-1914." <i>European Review of Economic History</i> , 10(3): 389-419. Since the early 1997 paper by La Porta et al., a growing body of research has argued that 'legal origins' have a country-specific, time-invariant effect on property rights and economic development. Following the methodology of La Porta et al., an original database of 51 bankruptcy laws has been built: it ranges over 15 European countries and more than a hundred years (1808-1914), and summarises how the rights and incentives of the parties were defined as the procedures unfolded. The first conclusion is that, over the entire period, all legal traditions strongly protected creditors' rights; only English law comes out prima facie as less protective. Second, evidence suggests that the evolution of these laws was influenced less by their past than by continent-wide trends, arguably linked to capitalist development. An early nineteenth century model thus saw heavy repression of failed debtors and highly regulated judicial procedures. After a transition period from the late 1860s to the late 1880s, prison for debt was abandoned, rehabilitation became easier, and the parties were given much more room to recontract on property rights.
2006	K36	Festy, Patrick. 2006. "Legal Recognition of Same-Sex Couples in Europe." <i>Population</i> , 61(4): 417-53. Between 1989 and 2003, nine European countries (Denmark, Finland, Iceland, Norway and Sweden, Germany, Belgium and France) gave same-sex couples the possibility of having their union registered by a state representative and of thereby acquiring legal rights and obligations. To determine the frequency of these alternative forms of union recognition, the classic measurement tools must be adapted to a new reality that gives prominence to categories that were habitually neglected. Legal recognition of same-sex couples is considerably less frequent than that of different-sex couples, despite the shift away from the institution of marriage. The new laws are probably judged too far short of the marriage laws to be attractive, and at the same time are too similar to them to match the specific needs of the couples they target. In addition, the frequency of registration varies between the different countries, and to a much greater extent than that of marriage. However, the countries that have granted the most extensive rights to registered couples are not always those where the law is the most widely used. Finally, the laws have been adopted in a general context of declining interest in marriage and widespread questioning of traditional family forms. Hence the hypothesis that this environment influences the attitude of the affected couples towards the new legislation.
2006	K36	Colakovic, Maja. 2006. "Pravni status nasciturusa u gradanskopravnim i porodicnopravnim odnosima. (Legal Status of Nasciturus in Civil Law and Family Law Relations. With English summary.)" <i>Revija za Pravo i Ekonomiju/Review for Law and Economics</i> , 7(1): 43-72. In this paper the author analyses the issue of the legal status of human foetus. She begins with the historical background of his status and illuminates the actual problems that bring this issue in the focus of the contemporary law's interest. Then she makes a detailed analysis of the nasciturus position in the civil law and family law relations through the research of legal provisions, judiciary and doctrinal approaches. On that basis she spotlights that the protection which the legislator gives to nasciturus in order to protect his material and immaterial rights and interest de lege lata is insufficient and inappropriate. The jurisdiction contributes indirectly or directly to the realisation of that protection. The legal doctrine highlights the need for regulating completely the legal status of nasciturus, but there is no harmonized attitude as to whether the legal capacity should be recognised to nasciturus. The author draws a conclusion that the status of legal personality shouldn't be recognised to human foetus because of the collision with the rights of the already born human beings, but he deserves, however, a more efficient and more comprehensive protection of his rights and interests de lege ferenda.

Year	DE	Title and Abstract
2006	L38	CV : Brody, Evelyn. 2006. "The Legal Framework for Nonprofit Organizations." In <i>The Nonprofit Sector: A Research Handbook</i> , ed. Walter W. Powell and Richard Steinberg, 243-66. Second edition. New Haven and London: Yale University Press.
2006	L95	Doucet, Joseph, and Stephen Littlechild. 2006. <i>Negotiated Settlements: The development of economic and legal thinking</i>. Faculty of Economics (DAE), University of Cambridge. Cambridge Working Papers in Economics. The Federal Power Commission pioneered the use of negotiated settlements in the early 1960s as a means of coping with an increased workload and backlog. Legal scholars have emphasized the importance of settlements in coping with the regulatory load, and in saving time and money, albeit with some concern about transparency and the treatment of non-unanimous settlements. More recently, however, they suggest that settlements better serve the needs of the parties, allow greater flexibility and innovation, and can achieve results that lie beyond traditional regulatory authority. Recent economic research has indicated the high proportion of regulatory cases dealt with by settlements in the US and Canada and confirmed that settlements are not simply a more efficient way of doing the same thing as regulation. Rather, they involve considerable innovation, notably the introduction of price caps and other incentive mechanisms that otherwise would not have been likely or even possible.
2006	L95	Cremer, Helmuth, Jacques Cremer, and Philippe De Donder. 2006. <i>Legal vs Ownership Unbundling in Network Industries</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5767. This paper studies the impact of legal unbundling vs ownership unbundling on the incentives of a network operator to invest and maintain its assets. We consider an industry where the upstream firm first chooses the size of a network, while several downstream firms then compete in selling goods and services that use this network as a necessary input. We contrast the (socially) optimal allocation with several equilibrium situations, depending on whether the upstream firm owns zero, one or two downstream firms. The first situation corresponds to ownership unbundling between upstream and downstream parts of the market. As for the other two cases, we equate legal unbundling with the following two assumptions. First, each downstream firm maximizes its own profit, without taking into account any impact on the upstream firm's profit. Second, the upstream firm is not allowed to discriminate between downstream firms by charging different access charges for the use of its network. On the other hand, we assume that the upstream firm chooses its network size in order to maximize its total profit, including the profit of its downstream subsidiaries. Our main results are as follows. Because the investment in the network is not protected, at the time at which it is made, by a contract, the upstream firm will not take into account the interests of its clients when choosing its size. This effect can be mitigated by allowing it to own part of the downstream industry. In other words, ownership separation is more detrimental to welfare than legal unbundling. We also obtain that these results are robust to the introduction of asymmetry in network needs across downstream firms, imperfect downstream competition and downstream investments.
2006	M10	Kocbek, Alenka. 2006. "Language and Culture in International Legal Communication." <i>Managing Global Transitions</i>, 4(3): 231-47. In the contemporary business world, partners belonging to different nations, and hence different cultures, conduct business operations in either the language of one of the parties involved or in a third, neutral language, serving as lingua franca. Thus, language skills, as an essential component of the communicative competence, imply a certain extent of implicit or explicit translating and interpreting. The functionalist approaches in translation science, and most of all the Skopos theory by J. H. Vermeer, view translation as an intercultural transfer, which inevitably entails taking into account intercultural differences. As intercultural business communication is directly affected by the legal systems of the cultures involved, the communicating parties need to be acquainted with both the source and target legal systems. This is especially the case with English, as the Anglo-American legal system, based essentially on common law, differs substantially from continental law, to which most of the European countries belong. English as the world's most commonly used lingua franca will have to be adapted to its new function by adopting terms and concepts from other cultures and, within the EU, take into consideration the existing discrepancies between the continental and the Anglo-American legal systems. In this paper, cases of non-equivalence regarding legal terms are illustrated with examples from company law. In conclusion, some linguistic and cultural implications of the use of English as lingua franca, as well as their impact on teaching and learning practices are presented.
2006	M53	Eardley, Ellen, and Jessica Manvell. 2006. "Legal Remedies for Girls' Under-Representation in Nontraditional Career and Technical Education." <i>International Journal of Manpower</i>, 27(4): 396-416. The purpose of this article is to document the extent of girls' under-representation in nontraditional high school career and technical education courses, examine the role of sex discrimination in these disparities, and identify legal remedies for addressing the problem. This article uses high school CTE enrollment data from 12 states to document female students' under-representation in nontraditional courses and uses wage data to show the negative implications for girls' future earnings. Drawing on the experiences of female students, this study explains how sex discrimination contributes to their low rates of participation in nontraditional training. The study then discusses how laws and regulations at the federal and state levels may provide means to address such discrimination. Finds high levels of sex segregation in CTE course enrollment, with female students making up on average 15 percent of students in nontraditional courses and 87 percent in traditionally female fields. Substantial evidence of sex discrimination in CTE makes a strong case for its role in contributing to girls' low enrollment in nontraditional courses. Varied state laws can be utilized to address this underlying cause. While much research has looked at girls in math and science, less attention has been paid to their participation in nontraditional CTE. This paper offers quantitative evidence of girls' underrepresentation in such courses and qualitative evidence of the role sex discrimination plays. Offers a unique solution by showing how state laws can be used to address such discrimination and increase girls' participation in nontraditional training.

2006	N70	Mitchell, Andrew D. 2006. "A Legal Principle of Special and Differential Treatment for WTO Disputes." <i>World Trade Review</i>, 5(3): 445-69. Based on the notion that the needs of developing countries are substantially different from those of developed countries, the principle of special and differential treatment (S&D) in the World Trade Organization (WTO) allows a certain degree of discrimination in favour of developing countries. This article considers the potential of this principle in resolving disputes within the WTO. S&D developed in the General Agreement on Tariffs and Trade (GATT) of 1947 and is today reflected in a series of provisions in various WTO agreements. The meaning of S&D as a broader principle could assist in interpreting such provisions. In addition, the principle of S&D could conceivably be used as part of the inherent jurisdiction of Panels and the Appellate Body in connection with procedural aspects of dispute settlement. However, the article concludes that, due to the incoherence of S&D, as well as the difficulties involved in distinguishing between developing countries and in advancing their interests as an amorphous group, S&D is presently of limited value as an independent principle in WTO dispute settlement.

Fossil fuel dependence threatens environmental preservation, as well as the stability of our economic and social institutions. The time is ripe for a transition away from fossil fuel over-consumption and toward renewable energy deployment. This article is an analysis of current public efforts to advance renewable energy incentives and promote wide-scale deployment. Effective initiatives require coordination between public actors and policies, and a cohesive renewable energy policy strategy. Currently, governmental efforts are tangled in a complexity of actors, policies, and barriers. This analysis demonstrates that all levels of government must work together to shape a viable, comprehensive renewable energy legal framework.

2006	R21	Robertson, Douglas. 2006. "Cultural Expectations of Homeownership: Explaining Changing Legal Definitions of Flat 'Ownership' within Britain." <i>Housing Studies</i> , 21(1): 35-52. Following the break-up of privately rented flats in both England and Wales, and Scotland, two distinct property "ownership" systems emerged. Each sought to provide individual "ownership" of the flat and collective management of the block in which the flat was contained. Leasehold "ownership" effectively retained the previous landlord-tenant relationship because of a peculiarity in English law that only allows "positive covenants", such as maintenance obligations, to be enforced on the first purchaser of a flat, not subsequent purchasers. Although in Scotland outright individual ownership of a flat was legally possible, the management arrangements covering the common parts of the building have not proved satisfactory. Neither legal arrangement put in place an "ownership" or "governance" regime which matched popular cultural expectations of what individual homeownership should constitute. The scale of and scope of property law reform over the last 30 years illustrates how these popular cultural expectations have demanded due recognition within the British property system.

2006	R21	Mendez, Fabio. 2006. "The Value of Legal Housing Titles: An Empirical Study." <i>Journal of Housing Economics</i> , 15(2): 143-55. This paper estimates the value of legal housing titles using a Costa Rican urban housing survey conducted in 1997. The general results obtained regarding the value of legal titles to the average individual are consistent with past estimations found in the literature, but the implications for policy are new; as some groups are shown to value legal titles more than others. The criterion used to create these groups was inspired by the theoretical guidelines provided by past literature and could be easily reproduced by policy makers who may wish to target these types of individuals.
2006	R38	Cowan, Dave, Simon Halliday, and Caroline Hunter. 2006. "Adjudicating the Implementation of Homelessness Law: The Promise of Socio-legal Studies." <i>Housing Studies</i> , 21(3): 381-400. This paper offers a re-consideration of the contexts within which discretionary homelessness decision making takes place. Drawing on socio-legal studies, it is argued that one such context (which has regularly been ignored within the housing studies literature) is compliance with the law. Drawing on quantitative and qualitative data of internal reviews of homelessness decision making, the paper considers how far (and under what conditions) initial decision making might be affected by its adjudication.

2007	D83	Curley, Shawn P. 2007. "The Application of Dempster-Shafer Theory Demonstrated with Justification Provided by Legal Evidence." <i>Judgment and Decision Making</i> , 2(5): 257-76. In forecasting and decision making, people can and often do represent a degree of belief in some proposition. At least two separate constructs capture such degrees of belief: likelihoods capturing evidential balance and support capturing evidential weight. This paper explores the weight or justification that evidence affords propositions, with subjects communicating using a belief function in hypothetical legal situations, where justification is a relevant goal. Subjects evaluated the impact of sets of 1-3 pieces of evidence, varying in complexity, within a hypothetical legal situation. The study demonstrates the potential usefulness of this evidential weight measure as an alternative or complement to the more-studied probability measure. Subjects' responses indicated that weight and likelihood were distinguished; that subjects' evidential weight tended toward single elements in a targeted fashion; and, that there were identifiable individual differences in reactions to conflicting evidence. Specifically, most subjects reacted to conflicting evidence that supported disjoint sets of suspects with continued support in the implicated sets, although an identifiable minority reacted by pulling back their support, expressing indecisiveness. Such individuals would likely require a greater amount of evidence than the others to counteract this tendency in support. Thus, the study identifies the value of understanding evidential weight as distinct from likelihood, informs our understanding of the psychology of individuals' judgments of evidential weight, and furthers the application and meaningfulness of belief functions as a communication language.

"Documenting Disparity in Minority Contracting: Legal Requirements and Recommendations for Policy Makers." <i>Public Administration Review</i> , 67(3): 511-20. The challenge of advancing policy goals and public administration is compounded when legal compliance rests on data and complex analysis. This is true of disparity studies that support local government-sponsored minority contracting programs. How can local governments prepare to work with such programs in this complex environment? The authors analyze several court cases challenging minority contracting programs and illustrate the difficulty of administering public programs at the juncture of public policy goals, subtle changes in law, and demands for quality statistical analysis. Many public agencies, especially at the local level, are not prepared to address the data requirements demanded by these programs. To help with this challenge, the authors develop a set of guiding principles to help practitioners satisfy the legal requirements and meet the policy goals of minority contracting and similar programs. This includes a new emphasis on continuous gathering of valid, local-level data.
2007	H76	Goranova, Iionka. 2007. "Legal Nature of the Procedures for the Award of Public Procurement Contracts. (In Bulgarian. With English summary.)" <i>Economic Alternatives</i> , 0(78): 82-91. The article has as its subject the legal nature of the procedures for the awards of public procurement contracts from the perspective of administrative law studies. The activity related to awarding public procurement is part of state government. The awarding of public procurement is a kind of administrative legal relation between subject – contracting authority and subject – economic operator. It is included in the broad notion of state government. It arises on the basis of administrative legal norm, pointed out in Public Procurement Law. The legal fact is the administrative act which determines the subjects who manage public funds. The main task of the procedures is for the contracting authorities, who function on behalf of the state in governing the public funds, to determine the subject–economic operator as a party of a future public contract. The procedures end with an administrative act which creates the statute of subject–economic operator.

In order to address the impact of regulation on ethical concerns of consumers, we study the effect of a minimum wage. In our experimental market, consumers have monopsony power, firms engage in Bertrand competition, and workers are passive recipients of a wage payment. Two treatments are employed, one with no minimum wage in the first part but with a minimum wage in the second part, and one treatment with a minimum wage at the outset that is abolished in the second part. In both treatments, wages decrease over time in the first part even though some consumers show an interest in fair wages. If a minimum wage is in place, wages decline

Year	DE	Title and Abstract
		even faster. Introducing a minimum wage in a mature market raises average wages, while abolishing it lowers them. We discuss the implications of our results, such as the crowding out of ethical behavior through legal regulation.

The setting up of a company is firstly at the origin of obtaining the patrimonial autonomy which makes it possible on the one hand to limit the responsibility for the head of company at the moment of its contributions on the assumption of a private limited company or a public limited company and on the other hand to largely facilitate the transmission of the company in form member. The legal entity allows to separate professional inheritance and non-professional inheritance clearly. The fate of the one does not depend then any more on fate of the other. Another interest of the legal entity is to obtain a certain decisional autonomy. This autonomy remains framed all the same since the leader of company is the agent of associated or of the shareholders according to the case and it must thus always act in the social interest.

2009	C14	Barigozzi, Matteo, and Biagio Speciale. 2009. <i>Immigrant's legal status, permanence in the destination country and the distribution of consumption expenditure</i>. Universite Libre de Bruxelles, Ecares, ECARES Working Papers: 2009_019. This paper considers the distribution of consumption expenditures for a large sample of documented and undocumented immigrants in Italy. Using the one-sided and two-sided Kolmogorov-Smirnov tests, we show that the distribution of consumption of immigrants with higher permanence in the host country first-order stochastically dominates the one of immigrants with lower permanence. These

Year	DE	Title and Abstract
		distributions are first-order stochastically dominated by the ones of natives with similar characteristics. Apart from differences in the first years since migration, undocumented immigrants show similar consumption distributions to the ones of documented immigrants. All results also hold when correcting for possible immigrants' misreporting on their legal status.
2009	C93	Fellner, Gerlinde, Rupert Sausgruber, and Christian Traxler. 2009. <i>Testing Enforcement Strategies in the Field: Legal Threat, Moral Appeal and Social Information</i>. CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2787. We run a large-scale natural field experiment to evaluate alternative strategies to enforce compliance with the law. The experiment varies the text of mailings sent to potential evaders of TV license fees. We find a strong alert effect of mailings, leading to a substantial increase in compliance. Among different mailing conditions a legal threat that stresses a high detection risk has a significant and highly robust deterrent effect. Neither appealing to morals nor imparting information about others' behavior enhances compliance. However, the information condition has a positive effect in municipalities where evasion is believed to be common. Overall, the economic model of crime performs remarkably well in explaining our data.

2009	E23	Roe, Mark J., and Jordan I. Siegel. 2009. "Finance and Politics: A Review Essay Based on Kenneth Dam's Analysis of Legal Traditions in The Law-Growth Nexus." <i>Journal of Economic Literature</i>, 47(3): 781-800. Strong financial markets are widely thought to propel economic development, with many in finance seeing legal tradition as fundamental to protecting investors sufficiently for finance to flourish. Kenneth Dam finds that the legal tradition view inaccurately portrays how legal systems work, how laws developed historically, and how government power is allocated in the various legal traditions. Yet, after probing the legal origins' literature for inaccuracies, Dam does not deeply develop an alternative hypothesis to explain the world's differences in financial development. Nor does he challenge the origins core data, which could be origins' trump card. Hence, his analysis will not convince many economists, despite that his legal learning suggests conceptual and factual difficulties for the legal origins explanations. Yet, a dense political economy explanation is already out there and the origins-based data has unexplored weaknesses consistent with Dam's contentions. Knowing if the origins view is truly fundamental, flawed, or secondary is vital for financial development policy making because policymakers who believe it will pick policies that imitate what they think to be the core institutions of the preferred legal tradition. But if they have mistaken views, as Dam indicates they might, as to what the legal traditions' institutions really are and which types of laws are effective, or what is really most important to financial development, they will make policy mistakes--potentially serious ones.
2009	E23	Castro, Rui, Gian Luca Clementi, and Glenn Macdonald. 2009. "Legal Institutions, Sectoral Heterogeneity, and Economic Development." <i>Review of Economic Studies</i>, 76(2): 529-61. Poor countries have lower PPP-adjusted investment rates and face higher relative prices of investment goods. It has been suggested that this happens either because these countries have a relatively lower TFP in industries producing capital goods or because they are subject to greater investment distortions. This paper provides a micro-foundation for the cross-country dispersion in investment distortions. We first document that firms producing capital goods face a higher level of idiosyncratic risk than their counterparts producing consumption goods. In a model of capital accumulation where the protection of investors' rights is incomplete, this difference in risk induces a wedge between the returns on investment in the two sectors. The wedge is bigger, the poorer the investor protection. In turn, this implies that countries endowed with weaker institutions face higher relative prices of investment goods, invest a lower fraction of their income, and end up being poorer. We find that our mechanism may be quantitatively important.

2009	I32	Muller, Kai-Uwe, and Viktor Steiner. 2009. "Would a Legal Minimum Wage Reduce Poverty? A Micro-simulation Study for Germany." <i>Journal of Income Distribution</i>, 18(3-4): 131-51. In view of rising poverty rates, the introduction of a legal minimum wage has become an important policy issue in Germany. We analyze the distributional effects of a nationwide minimum wage of 7.50e per hour based on a micro-simulation model accounting for interactions between wages, the tax-benefit system, and net household incomes. Due to the existing system of means-tested income support, the minimum wage would be ineffective in reducing poverty in the overall population, although poverty among singles and families with children or with a female household head would be slightly reduced.
2009	J42	Kaufman, Bruce E. 2009. "Promoting Labour Market Efficiency and Fairness through a Legal Minimum Wage: The Webbs and the Social Cost of Labour." <i>British Journal of Industrial Relations</i>, 47(2): 306-26. Neoclassical economists, using a competitive demand/supply model of labour markets, typically conclude a legislated minimum wage is harmful to economic efficiency and social welfare. The major theoretical counter-attack by proponents of a minimum wage is to argue that low-wage labour markets are better modelled as monopsonistic. This article develops and formalizes a second theoretical defence for a legal minimum wage law. This defence rests on the concept of the social cost of labour, as originally popularized by Sidney and Beatrice Webb and then further developed by American institutional economists. This analysis is unique in that it continues to use the competitive

Year	DE	Title and Abstract
		demand/supply model but nonetheless demonstrates that a legislated minimum wage often simultaneously increases both economic efficiency and fairness, unlike the neoclassical prediction.

2009	L78	Gao, Anton Ming-Zhi. 2009. "The Third European Energy Liberalization Package: Does Functional and Legal Unbundling in the Gas Storage Sector Go Too Far?" <i>Competition and Regulation in Network Industries</i> , 10(1): 17-44. The third European gas liberalization package (the 3rd Package) is intended to facilitate access to gas storage through the introduction of functional and legal unbundling in the storage sector. This article will challenge this new regulatory regime from two perspectives. First, this new regime may change the originally coherent regulatory patterns and regulatory hierarchy in the 1st and 2nd Gas Directive without taking into account the economic rationales. Second, this new regime will lead to three serious concerns, i.e., the cost-effectiveness and clear implementation of the unbundling, and the doctrine of 'rigid unbundling as a last resort, when implementing. In this regard, for remedy purpose, this article provides three legislative suggestions to the 3rd Package. However, in spite of these efforts, the issue of the unclear scope of storage subject to the open access regime and to the functional and legal unbundling remains unresolved in the 2nd Gas Directive and 3rd Package. Thus, to facilitate access to storage, it is suggested that the Commission may have to clarify the scope issue first and consider adopting a more direct approach, i.e., the regulated third party access regime for the storage sector, in the 3rd Package, instead of an indirect approach of further unbundling.

2009	N53 N54 N64	Stanziani, Alessandro. 2009. "Information, Quality and Legal Rules: Wine Adulteration in Nineteenth Century France." <i>Business History</i> , 51(2): 268-91. Nowadays global concerns are tightly linked to the way wine production and labelling have been regulated in France. This paper aims to provide an historical explanation of this peculiar regulation of the wine market in France. Our argument will be that wine adulteration, as it is conceived and regulated nowadays, has to be distinguished from ancient and pre-modern forms of adulteration. From the last quarter of the nineteenth century, technical progresses (i.e. organic chemistry in food and wine making), extended commercial networks and an extending intermediation led to market failures. However, state regulation mainly aimed to ensure the circulation of information and fair trade rather than to protect public health. As a result, from the end of the nineteenth century up to the present, in France and in Europe, rules on beverages are more concerned with preserving AOC (collective trademarks) and wine producers' profits than with limiting alcohol consumption.

2010	C53	Haw, In-Mu, Simon S. M. Ho, Bingbing Hu, and Woody Wu. 2010. "Analysts' Forecast Properties, Concentrated Ownership and Legal Institutions." <i>Journal of Accounting, Auditing and Finance</i> , 25(2): 235-59. Existing research indicates that firms with concentrated ownership structures are associated with poor financial reporting quality. This study investigates whether and how the divergence between control and cash-flow rights of controlling owners affects the effectiveness of analyst forecasting activities, and whether the effect varies with country-level legal institutions. Using a broad firm-level ownership data set for twenty-two economies, we find that control-cash flow divergence, on average, has no measurable effect on analysts' forecast properties across countries with varying legal institutions. We document rather weak detrimental effect of control divergence on forecast properties only in a small set of countries with weak legal institutions. Overall, our results indicate that the agency problems embedded in concentrated ownership structures do not always impede the private information production by analysts, which complements the previous evidence of the impact of concentrated ownership structures on corporate disclosures.
2010	C90	Kube, Sebastian, and Christian Traxler. 2010. <i>The Interaction of Legal and Social Norm Enforcement</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 3091. Although legal sanctions are often non-deterrent, we frequently observe compliance with 'mild laws'. A possible explanation is that the incentives to comply are shaped not only by legal, but also by social sanctions. This paper employs a novel experimental approach to study the link between legal and social norm enforcement. We analyze whether the two institutions are complements or substitutes. Our results show that legal sanctions partially crowd out social norm enforcement. The welfare effect from mild laws is positive, however, as a higher level of compliance is achieved at lower enforcement costs.

Discusses grounds for economic man's decisions in society; reasons for domination of the activity patterns popularized by society; sources and composition of activity patterns for economic man in society; grounds for noncompliance with the activity patterns popularized by society; the conditions and mechanisms for changes in the activity patterns followed by economic man in society; preliminary empirical research methodology; legislative procedures and the political situation in Poland in the years 1990-2007; condition of the Polish economy in the years 1990-2007; and manifestations of the resonance effect of the operations of normative sets on the example of Poland in the years 1990-2007.
2010	E21	Bangake, Chrysost, and Jude Eggoh. 2010. "International Capital Mobility in African Countries: Do the Legal Origins Matter?" <i>Economics Bulletin</i> , 30(1): 73-83. This paper investigates the Feldstein-Horioka coefficients and legal origins for 37 African countries using the recently developed panel cointegration techniques. The empirical findings reported in the paper reveal that savings and investment are nonstationary and cointegrated series. The estimated coefficients using DOLS is 0.58 for the sample as a whole for the period 1970-2006. However, there are marked differences in retentions ratios in each country group with ratio lowest in common law countries (0.34) compared to French civil law countries (0.85). These results imply that in the countries with strong legal protections of investors, capital tends to be mobile internationally than in countries with worse protection.

Legal Restrictions and the Asset Composition of International Financial Flows." <i>Journal of International Money and Finance</i> , 29(4): 666-84. How effective are capital account restrictions? We provide new answers based on a novel panel data set of capital controls, disaggregated by asset class and by inflows/outflows, covering 74 countries during 1995-2005. We find the estimated effects of capital controls to vary markedly across the types of capital controls, both by asset categories, by the direction of flows, and across countries' income levels. In particular, both debt and equity controls can substantially reduce outflows, with little effect on capital inflows, but only high-income countries appear able to effectively impose debt (outflow) controls. The results imply that capital controls can affect both the volume and the composition of capital flows.

2010	I14 I24	Andreassen, Bard A. 2010. "The Right to Development and Legal Empowerment of the Poor." <i>Bangladesh Development Studies</i> , 33(1-2): 311-25. Legal empowerment of the poor--especially through legal protection of their property rights--has recently been advocated as an essential ingredient of a comprehensive package to combat poverty. The formation of a High Level Commission for Legal Empowerment of the Poor by the United Nations in 2005 has given a strong impetus to this new movement. Many in the human rights community are suspicious, however, of the focus on property right because of the fear that the pursuit of this right might be inherently biased in favour of the rich and that it might even entail a sacrifice of other socio-economic and cultural rights. This paper attempts to provide a balanced view on this debate by arguing for two inter-related propositions. First, it shows that the call for the protection of property rights is entirely consistent with the human rights laws and principles as enshrined in the various covenants and treaties on human rights. Second, it makes the case that for the protection of property rights to actually lead to the legal empowerment of the poor rather than to strengthening the hands of the rich, the programme of legal empowerment must be embedded in an explicitly human rights approach to development such as the one embodied in the concept of the right to development.

2011	C73	Deakin, S. 2011. <i>Legal Evolution: Integrating Economic and Systemic Approaches.</i> ESRC Centre for Business Research, ESRC Centre for Business Research - Working Papers. This paper explores the scope for synthesis between economic and systemic approaches to the understanding of legal evolution. The evolutionary and epistemic branches of game theory predict that stable norms will emerge when agents share common beliefs concerning future states of the world. Systems theory see the legal order as a social system which reproduces itself by recursive acts of legal communication, thereby giving rise to self-reference and operational closure. At the same time, the legal system is cognitively open, that is to say, indirectly influenced by other social systems in its environment. This gives rise to the possibility of coevolution of law and the economy. It will be argued that systems theory, by developing the idea of law as an adaptive system with cognitive properties, provides a missing link in the evolutionary theory of norms. Recent game theoretical models imply that common knowledge is not entirely endogenous to agents' interactions, but depends to a certain extent on emergent normative structures. These include the public representations of common knowledge which are provided by the legal system. The paper will explore the implications of this idea, argue for an integrated economic and systemic analysis of legal evolution, and consider some of the theoretical and methodological implications of such a step.

(A Comparative Study of Microfinance Institutions Performance in Sub-Saharan Africa According to Their Legal Status. With English summary)." <i>Annals of Public and Cooperative Economics</i> , 82(1): 63-76. This paper investigates the existence of a difference in performance amongst microfinance institutions in Sub-Saharan Africa according to their legal status. A multivariate analysis of variance allows the study of a sample of 94 MFIs between 2001 and 2005. Results suggest that cooperatives show better organizational and financial efficiency than private companies and non governmental organizations (NGOs). No significant difference in portfolio quality by the legal status of MFIs is found. Furthermore, no significant difference in profitability and viability is found between private companies and NGOs. However, while transactions are more intense in cooperatives, outreach (number of active borrowers) seems more important in private.

2011	E61	Anderlini, Luca, Leonardo Felli, Giovanni Immordino, and Alessandro Riboni. 2011. <i>Legal Institutions, Innovation and Growth</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 8433 We analyze the relationship between legal institutions, innovation and growth. We compare a rigid (law set ex-ante) legal system and a flexible one (law set after observing current technology). The flexible system dominates in terms of welfare, amount of innovation and output growth at intermediate stages of technological development--periods when legal change is needed. The rigid system is preferable at early stages of technological development, when (lack of) commitment problems are severe. For mature technologies the two legal systems are equivalent. We find that rigid legal systems may induce excessive (greater than first-best) R&D investment and output growth.
2011	F44	Funta, Rastislav. 2011. "Economic Law and Economic Crisis: Where Do We Go from Here? Economic, Legal and Political Dimension." <i>Danube: Law and Economics Review</i>, 0(1): 65-71. The impact of the economic crisis, which has rapidly developed and spread into a global economic shock, has become increasingly severe. The period immediately before the crisis was characterized by a combination of the following factors (hereinafter "origins of the crisis"): Blind belief in the strength of large financial institutions; incapacity of management to assess real risk; accumulation of public and private debt; low interests rates and high world growth; failure of a Shadow banking system and its risks; rating agencies practices, etc. Developing a system that comes closer to the ideal combination of economic freedom and open competition seems to be necessary. This is of paramount importance, because a healthy financial system is crucial to any working market economy.
2011	F60	Landauer, Carl. 2011. "Regionalism, Geography, and the International Legal Imagination." <i>Chicago Journal of International Law</i>, 11(2): 557-95. Despite international law's identity as focused on spatial relations, it has long been dominated by a temporal, narrative imagination. This article argues for an increased spatial conception of international law, but one that is also culturally and temporally enriched. It begins with a section called "Regionalism without the Region," which describes how efforts at emphasizing the region in international law are often empty of regional content--that is, of true locality. Then, in a section on "Globalisation without the Globe," the article describes how globalisation studies have focused on globalisation as a process--that is, on the "isation" rather than the "globe" and, consequently, the real geographical impact. Finally, in a section entitled, "Westphalia without the West," the article takes on the Westphalian myth and suggests that the Westphalian state system was never fully in place and if so only for the briefest of moments--even in its supposed epicenter. In sum, international law has adopted so strong a narrative mode that it is ultimately more interested in mapping than maps, losing sight of geographical specificity.
2011	G19 G29	Kinsella, Stephen, Thomas O'Connor, and Vincent O'Sullivan. 2011. <i>Legal protection of investors, corporate governance, and investable premia in emerging markets</i>. Geary Institute, University College Dublin, Working Papers: 201117. We examine the interaction between the legal protection of investors, corporate governance within firms, institutional development between countries, and investable premia in emerging markets. In a multi country setting and using a novel dataset we find that better-governed firms experience significantly greater stock price increases upon equity market liberalization. We look to see whether well-governed firms in poorly governed countries enjoy an investability premium as measured by Tobin's q. We find they do. Investors look beyond the seemingly weak country-level governance structures, and focus on corporate governance.
2011	L20	Daughety, Andrew, and Jennifer Reinganum. 2011. <i>Search, Bargaining, And Agency in the Market for Legal Services</i>. Department of Economics, Vanderbilt University, Working Papers: 1106 We show that, in the context of the market for a professional service, adverse selection problems can sufficiently exacerbate moral hazard considerations so that even though all agents are risk neutral, welfare can be reduced by allowing the agent to 'buy the firm' from the principal. In particular, we model the game between an informed seller of a service (a lawyer) and an uninformed buyer of that service (a potential client) over the choice of compensation for the lawyer to take a case to trial, when there is post-contracting investment by the lawyer (effort at trial) that involves moral hazard. Clients incur a one-time search cost to contact a lawyer, which parametrically influences the market power of the lawyer when he makes a demand of the client for compensation for his service. The client uses the demand to decide whether to contract with the lawyer or to visit a second lawyer so as to seek a second option, which incurs a second search cost. Seeking a second option shifts the bargaining power to the client because she can induce the lawyers to bid for the right to represent her. We allow for endogenously-determined contingent fees alone (that is, the lawyer covers all costs and obtains a percentage of any amount won at trial) or endogenously-determined contingent fees and transfers; in this latter analysis, lawyers could buy the client's case. Under asymmetric information with only a contingent fee (the 'no-transfer' case), in equilibrium the first lawyer visited demands a higher contingent fee for lower-valued cases, signaling the case's value to the client. If a transfer is also allowed, then in equilibrium the higher contingent fee (and transfer from the lawyer to the client) is obtained by the more valuable case, with only the highest-value case resulting in the lawyer buying the entire case (100% contingent fee with a transfer); again, in equilibrium, the value of the case is signaled. In both settings the client uses an equilibrium strategy that involves seeking a second option a fraction of the time, which induces separation. In equilibrium the presence of asymmetric information does not affect the client's expected payoff, but it does reduce the lawyer's expected payoff and it does increase moral-hazard-induced inefficiency on the part of the lawyer in the post-contracting investment. We also show that welfare under the no-transfer compensation scheme may increase with an increase in search costs, and shifting from a no-transfer to an unrestricted-transfer scheme can result in a reduction in expected social efficiency, as the adverse selection effect exacerbates, rather than ameliorates, the moral hazard problem.
2011	L20	Strasser, Kurt A., and Phillip Blumberg. 2011. "Legal Form and Economic Substance of Enterprise Groups: Implications for Legal Policy." <i>Accounting, Economics, and Law: A Convivium</i>, 1(1): 1-28. Although conducted world-wide through hundreds of subsidiaries and affiliates, modern large business is, in economic reality, typically a single economically integrated enterprise functioning with a common objective under the control of its parent company. Yet the prevailing legal models are, for the most part, oblivious to this. Mistakenly adopting outmoded concepts inherited from the misty past, these models focus on many separate subsidiary corporations that make up the business and necessarily overlook the larger whole. The result of this outdated view is a mismatch between business reality and legal form which has led so frequently to poor legal and regulatory decision-making and ineffectual public control. While there is change stirring today, overall the law's response to this mismatch has been piecemeal and unsystematic. After reviewing how we got to this unhappy point, this paper will sketch out a new legal theory of enterprise analysis as the basis of modern corporation law to serve the needs of the Twenty-First Century. In some areas it will replace and in other areas it will supplement existing legal models. Enterprise analysis focuses on the implementation of the underlying policies and rules of the specific body of law at issue, such as securities, tax, or bankruptcy, to determine whether the objectives of that

Year	DE	Title and Abstract
		body of law are better served in the specific matter by looking to the whole enterprise or, alternatively, to the particular corporate subsidiary entities involved. While overt recognition of this enterprise analysis has been limited, the American legal system today is in fact applying it in numerous areas.

"The Legal Barriers to International Movement of Goods and Their Impact on the Administration of Small Scale Organisations in the United Kingdom." <i>African Journal of Social Sciences</i> , 1(1): 75-82. The carriage of goods across international boundaries involves bulk and sometimes complex transportation and therefore requires planning and the deployment of resources and logistics. In most cases, the use of sea transportation is commonly preferred. The legal issues surrounding the carriage of goods have informed the development of trade laws and international commercial law including the law of contract. Carriage of goods by sea, land, and air have been comprehensive yet dynamic body of law which continues to develop through statute and case laws, both domestic and foreign. The objective of the paper is to discuss some of the fundamental legal hurdles which confront small scale firms engaging in export and import businesses in the United Kingdom; to discuss some of the problems of the current international trade laws; and, to address the possible implications of failing to comply with the legal requirements of international trade.
2011	N00	Ma, Debin. 2011. <i>Law and Economy in Traditional China: A "Legal Origin" Perspective on the Great Divergence</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 8385. This article offers a critical review of recent literature on Chinese legal tradition and argues that some subtle but fundamental differences between the Western and Chinese legal traditions are highly relevant to our explanation of the economic divergence in the modern era. This paper seeks to elucidate the fundamental feature of traditional Chinese legal system and the mechanism of dispute resolution within the framework of a disciplinary mode of administrative law within a bureaucratic hierarchy and intermediation within social-networks. By comparing the contrasting development of the legal professions in China and Western Europe, it reveals the importance of political institution, legal regime and the growth of jurisprudence that would ultimately affect property rights, contract enforcement and ultimately long-term growth trajectories.

"Establishing SPV for Power Projects in Asia: An Analysis of Critical Financial and Legal Factors." <i>Journal of Business Economics and Management</i> , 13(3): 546-66. One of the main reasons for the success of Public Private Partnership (PPP) projects is the creation of separate commercial venture named 'Special Purpose Vehicle' (SPV). SPV provides a good framework for raising funds, linking participants legally and assuring supply, production and marketing of products. SPV brings together various parties like lenders, financial institutions, public sector and export credit agencies, guarantors, suppliers and off-takers. There is often a lack of precedents to identify factors of SPV and the process is further hampered by undeveloped financial and legal structures of a country. A number of factors need to be considered before setting up of SPV for PPP projects. A questionnaire survey was thus conducted to explore the most important factors in setting up SPV for PPP power projects from a wide range of personnel involved in the PPP processes in Asia. The objective of this paper is to investigate the current practice of setting up SPV and associated legal and financial impacts onto it. Analysis of the response data reflects experts' opinion in identifying the influential factors and the choices in setting up SPV for PPP power projects in Asia. The findings of the paper would help the public sector in implementing PPP power policy development and private sector sponsors in managing the projects.

2012	I25	Cantoni, Davide, and Noam Yuchtman. 2012. <i>Medieval Universities, Legal Institutions, and the Commercial Revolution</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 17979. We present new data documenting medieval Europe's "Commercial Revolution" using information on the establishment of markets in Germany. We use these data to test whether medieval universities played a causal role in expanding economic activity, examining the foundation of Germany's first universities after 1386 following the Papal Schism. We find that the trend rate of market establishment breaks upward in 1386 and that this break is greatest where the distance to a university shrank most. There is no differential pre-1386 trend associated with the reduction in distance to a university, and there is no break in trend in 1386 where university proximity did not change. These results are not affected by excluding cities close to universities or cities belonging to territories that included universities. Universities provided training in newly-rediscovered Roman and Canon law; students with legal training served in positions that reduced the uncertainty of trade in medieval Europe. We argue that training in the law, and the consequent development of legal and administrative institutions, was an important channel linking universities and greater economic activity.

2012	O12	Martyniszyn, Marek. 2012. "Export Cartels: Is It Legal to Target Your Neighbour? Analysis in Light of Recent Case Law." <i>Journal of International Economic Law</i> , 15(1): 181-222. Despite the growing sophistication of antitrust regimes around the world, export cartels benefit from special treatment: they are almost universally tolerated, if not encouraged in the countries of origin. Economists do not offer an unambiguous policy recommendation on how to deal with them in part due to the lack of empirical data. This article discusses arguments for and against export cartels and it identifies the existing gaps in the present regulatory framework. The theoretical part is followed by an analysis of the recent case law: a US cartel challenged with different outcomes in India and South Africa, as well as Chinese export cartels pursued in the USA. The Chinese cases are particularly topical as the conduct at stake, apart from being subject to private antitrust actions before US courts, was also challenged within the WTO dispute settlement framework, pointing out to the existing interface between trade and competition. While the recent developments prove that unaddressed issues tend not to vanish, the new South-North dimension has the potential of placing export cartels again on the international agenda. Pragmatic thinking suggests looking for the solution within the WTO framework.
2012	P40	Malik, Adeel. 2012. <i>Was the Middle East's economic descent a legal or political failure? Debating the Islamic Law Matters Thesis.</i> University of Oxford, Department of Economics, Economics Series Working Papers: WPS/2012-08. An influential thesis [Kuran, 2011, The Long Divergence] locates the economic failure of the Middle East in Islamic legal arrangements that laid the basis for organizational deficiencies. This article critically scrutinizes this thesis using the lens of political economy and argues that tracing the impact of Islamic law without a discussion of the enforcement environment is unconvincing. Specifically, as a legal explanation for development, it is important to probe the extent to which Islamic law was embedded in the material domain and influenced by preferences of political incumbents. A key contention of the article is that Islamic law can be described, at best, as a proximate rather than a deep determinant of development, and that there is limited evidence to establish it as a causal claim. Finally, I propose that, rather than exclusively concentrating on legal impediments to development, a more promising avenue for research is to focus on the co-evolution of economic and political exchange, and to probe why the relationship between rulers and merchants differed so markedly between the Ottoman Empire and Europe.
2012	Q11	CV: Mueller, Charles C. 2012. "Regional Development and Agricultural Expansion in Brazil's Legal Amazon: The Case of the Mato Grosso Frontier." In <i>The Regional Impact of National Policies: The Case of Brazil</i> , ed. Werner Baer, 184-203. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2012	Q55	Ma, Zhong Fa. 2012. "The Effectiveness of Kyoto Protocol and the Legal Institution for International Technology Transfer." <i>Journal of Technology Transfer</i> , 37(1): 75-97. Kyoto Protocol has certain provisions concerning environmentally sound technologies (ESTs) transfer, primarily including the direct provisions, the clean development mechanism, and the fund mechanism, which are supposed to favor technology transfer for reducing the emission of greenhouse gases (GHG) in the world. However, mainly due to the flaws of these provisions, ESTs have not been transferred as smoothly as possible to realize the Kyoto Protocol's objectives. Therefore, the international community shall take the effectiveness of Kyoto Protocol as a fresh impetus to consummate the legal system of international technology transfer, that is, to develop a uniform technology transfer agreement under the WTO with a focus on promoting ESTs transfer, which may make the developing countries to acquire the technologies they need under the fair terms and help them build their capacities for sustainable development. China does not need to perform the obligation of reducing GHG emissions until 2013 according to Kyoto Protocol, but precautions shall be taken to improve its legal systems on technology transfer to make preparations for implementing the policy of scientific development and playing significant roles in related international legislation.

2013	B12	CV: Schofield, Philip. 2013. "The Legal and Political Legacy of Jeremy Bentham." In <i>Annual Review of Law and Social Science. Volume 9</i> , ed. John Hagan, 51-70. Associate Editors: Kim Lane Scheppele and Tom R. Tyler. Palo Alto, Calif.: Annual Reviews.
2013	B21	Signorino, Rodolfo. 2013. "Price Theory and U.S. Antitrust: A Note on an Enduring Legal Doctrine." <i>History of Economic Ideas</i> , 21(3): 113-23. Since the mid-1980s, the post-Chicago approach to antitrust economics has produced a few game-theoretic models which have challenged many typical Chicago antitrust propositions. Yet, Chicago style antitrust has not yet lost its hold on U.S. antitrust. The paper suggests that the Chicago persistence within U.S. antitrust and, by the same token, the inhospitality of U.S. antitrust towards game-theoretical industrial organization theory owe much to the vitality of the legal doctrine according to which antitrust analysis should be consistent with traditional price theory. In particular, the paper analyzes two issues: i. the adoption of the equilibrium end-state notion of competition which is still dominant within mainstream economics and ii. the unshaken faith in the resilience of competition vis-a-vis Type II errors committed by antitrust agencies, provided that government-induced barriers to entry be absent or negligible.
2013	C01	Deakin, Simon. 2013. "The Legal Theory of Finance: Implications for Methodology and Empirical Research." <i>Journal of Comparative Economics</i> , 41(2): 338-42. This commentary on the LTF project highlights the importance of the idea that law 'constructs' finance and considers some of its methodological implications. The idea that law shapes finance implies that the legal system can be clearly differentiated in theoretical terms from the economy, and that the independent causal influence of the law on financial outcomes can be measured empirically. It will be argued that this can best be achieved by placing empirical research on law and finance in an evolutionary-theoretical perspective, which draws on related developments in game theory and systems theory, in the statistical study of law ('leximetrics'), and in time-series econometrics.
2013	C58	Alda, Mercedes, and Luis Ferruz. 2013. "Management Fees: Determinants and Influence of Legal Limits: Evidence from Spanish Pension Funds." <i>Estudios de Economía</i> , 40(2): 157-77. Pension funds in Spain have become of considerable importance in recent years. In fact, many studies have focused on fund performance and the adverse impact of fees, although little work has been done on analysis of the determinants of fees. Even though fees are restricted by legal limits in many countries, traditional models do not take these limits into account, and results could be biased; therefore, censored models (such as Tobit or CLAD) may provide a better fit. In this work, we study the determinants of management fees in Spanish equity pension funds. We find a better fit in the CLAD model, which provides unbiased and consistent estimators. Additionally, older and larger pension funds charge greater management fees and these fees increase with low volatility. However, fund returns and market returns barely affect such fees.

2013	D30 E30 E60 N90 O53	Cosgel, Metin M., and Bogac A. Ergene. 2013. "Law and Economics" Literature and Ottoman Legal Studies. University of Connecticut, Department of Economics, Working papers: 2013-02. This article considers the relevance of hypotheses developed in the "law and economics" literature regarding settlement/trial decisions in the Ottoman Empire. In particular, it explores the applicability of the "selection principle" and "50 percent plaintiff win-rate" formulated by George Priest and Benjamin Klein. The article also demonstrates how existing research based on Ottoman court records can contribute to the "law and economics" scholarship, which is dominated by research based on modern, Western contexts. The article utilizes the court records from eighteenth-century Kastamonu to make observations about settlement/litigation decisions in an Ottoman context.
2013	D85	Cremer, Helmuth, and Philippe De Donder. 2013. "Network Investment under Legal and Ownership Unbundling." <i>Review of Network Economics</i> , 12(1): 27-59. We consider an industry where an upstream firm determines the size of a network used by two downstream firms. We contrast ownership unbundling and legal unbundling, where the upstream firm maximizes its total profit, including the profit of its downstream subsidiary(ies), but does not discriminate between them. Furthermore, each downstream subsidiary maximizes its own profit. We show that ownership separation is more detrimental to welfare than legal unbundling, whether the downstream market is perfectly competitive or not, and whether there are asymmetries in network needs across downstream firms, and downstream investments, or not.

2013	H19 H29	Hartwick, John. 2013. <i>Benefit Charges for Firms and Households for Maintenance of The Legal System</i> . Queen's University, Department of Economics, Working Papers: 1305. We present an aggregate four good model (consumption, investment and two government goods) in which the current flows of one government good are in part pure public intermediate goods. The other public goods has "final" services for households. We are interested in a benefit approach to charging for government services that includes government services flowing directly to firms. The legal system is our representative intermediate public good and benefit charges to firms should include part of the maintenance of the legal system.

2013	L64	Erickson, Jennifer L. 2013. "Stopping the Legal Flow of Weapons: Compliance with Arms Embargoes, 1981-2004." <i>Journal of Peace Research</i> , 50(2): 159-74. This article examines sending state compliance with arms embargoes. Arms embargoes are one of the most frequently used types of economic sanctions but they are perceived as one of the least effective. One major problem with arms embargoes, many argue, is sending states' failure to implement them. Yet studies tend to focus on cases of arms embargo violations, not compliance in the context of arms export practice more broadly. Using a series of new arms embargo variables, I conduct a statistical analysis of the relationship between arms embargoes and small and major conventional arms transfers from 1981 to 2004. Contrary to popular expectations, I find that arms embargoes on average restrain sending states' arms exports. If arms embargoes do indeed have difficulty changing targets' behavior, or achieving other measures of 'success,' additional explanations must also be considered. I suggest that arms embargo target selection and the intractable challenge of cutting off illicit arms flows are two important plausible alternatives. This finding also provides optimism for compliance with international commitments in the absence of institutionalized enforcement mechanisms. Major exporters overall appear to implement sanctions, despite strong economic incentives to ignore them and a lack of formal accountability mechanisms to punish violators.
2013	L68	Blandin, Annie. 2013. "La television sans frontieres avec Internet: Interactions et ordres juridiques. (Connected TV: Interactions and Legal Orders. With English summary.)." <i>La Revue des Sciences de Gestion</i> , 48(263-264): 117-23. TV connected to the internet brings both new opportunities and mess. The announced converging world is first a collision between two sectors that are regulated differently. Indeed, regulations are stricter for audiovisual media and looser for the Internet. This has a considerable impact upon the new competitive deal, especially since the connected TV lets new players into the audiovisual landscape, which come for the most part from non-EU countries. It raises a question about how to regulate these new services to bring order. In this situation of reform, our contribution focuses on the frame of legal analysis of innovations rather than on positive law.
2013	L70	Elvan, Osman Devrim. 2013. "The Legal Environmental Risk Analysis (LERA) Sample of Mining and the Environment in Turkish Legislation." <i>Resources Policy</i> , 38(3): 252-57. As advancing technology and increasing demands for natural resources continue to mount pressure on the environment, environmental conservation and sustainable management have become ever more important. Individual countries have been increasingly taking action to reduce environmental destruction caused by human activities in an attempt to find a balance in between the necessary exploitation of resources and environmental conservation. In Turkey, the struggle between environmental conservation and mining activities is set within the legal context, with the requisite legal regulations (which describe various procedures) in the midst of being updated or renewed. The legal environmental risk analysis (LERA), beginning by discussing the main legal regulations of environmental conservation in relation to mining activities, defines basic environmental components which form the basis of environmental conservation in relation to mining, and analyzes the impact of mining on each component. The analysis (LERA) finishes with an evaluation of the components as they currently stand and makes some suggestions for the improvement of insufficient regulations.

2013	Q35	Maican, Ovidiu-Horia. 2013. "Legal Regime of Shale Gas Extraction." <i>Journal of Knowledge Management, Economics and Information Technology</i> , 3(6): 1-19. Some countries with large reserves intend to promote shale gas production, in order to reduce their dependency on imported gas. Shale gas will be an important new aspect in the world energy scene, with many effects. European Union wants secure and affordable sources of energy. Natural gas is the cleanest fossil fuel and a vital component of European Union's energy strategy. One of the most important aspects is that gas produces significantly cleaner energy than other fossil fuels. From a legal point of view, extraction of oil and natural gas is one of the most highly-regulated activities. In European Union, the regulation of shale gas activities is different if we compare with United States. United States has a complete framework of federal and state regulation of shale gas extraction. More than that, these regulations have evolved in order to respond to the United States shale gas boom. Legal regime of shale gas extraction in every member state of European Union must put together national and European Union regulations in this field of activity. Methodology: The analysis is based on a survey of relevant national legal frameworks. The purpose of the article is not to provide an assessment of the applicable legal framework but to analyse how the current legal framework is applied in practice and to point to possible areas for further review.

The total volume of derivative works for appendix D is equal to 4.67 AS.
 Общий объем приложения D — 4,67 авторских (уч.-изд.) л.

³ AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40,000 characters (including the spaces between words), or 3,000 sq cm of illustrations (maps) like the table Leg.E.

Appendix E1. Series Editorial Board

This appendix contains brief information about members of the series editorial board. We used the following abbreviations:

RAS — Russian Academy of Sciences (SB — Siberian Branch, UB — Ural Branch),
MRI — Main Research Interests according to macro categories of JEL subject classification.

Victor I. Suslov (Суслов, Виктор Иванович) — *Chairman of the Editorial Board*, D. Sc. (Economics), Professor, Corresponding Member of the RAS, Deputy Director of the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University, Deputy Editor-in-Chief of the scientific journal “Region: Economics and Sociology”. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. G Financial Economics. O Economic Development, Technological Change, and Growth. R Urban, Rural, Regional, Real Estate, and Transportation Economics.

Gagik M. Mkrtchyan (Мкртчян, Гагик Мкртчичевич) — *Deputy Chairman of the Editorial Board*, D. Sc. (Economics), Professor, Honored Professor of the Russian Federation, President of the Faculty of Economics and Head of the Chair of Mathematical Methods for Economics and Planning at the Novosibirsk State University, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Editor-in-Chief of the scientific journal “World of Economics and Management” (previous title – Vestnik NSU. Series: Social and Economics Sciences) published by the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. C Mathematical and Quantitative Methods. I Health, Education, and Welfare. M Business Administration and Business Economics • Marketing • Accounting. P Economic Systems. Q Agricultural and Natural Resource Economics • Environmental and Ecological Economics.

Mikhail V. Lychagin (Лычагин, Михаил Васильевич) — *Editor-in-Chief*, D. Sc. (Economics), Professor, Honored Professor of the Russian Federation, Head of the Chair of Finance and Credit in the Faculty of Economics at the Novosibirsk State University, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. F International Economic. G Financial Economics. I Health, Education, and Welfare. J Labor and Demographic Economics. L Industrial Organization. M Business Administration and Business Economics • Marketing • Accounting. O Economic Development, Technological Change, and Growth. Z Other Special Topics.

Alexander O. Baranov (Баранов, Александр Олегович) — D. Sc. (Economics), Professor, Head of the Chair of Economic Theory in the Faculty of Economics at the Novosibirsk State University, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Deputy Editor-in-Chief of the scientific journal “World of Economics and Management”. (Novosibirsk, Russian Federation).

MRI: E Macroeconomics and Monetary Economics. O Economic Development, Technological Change, and Growth. P Economic Systems.

Lidiya P. Bufetova (Буфетова, Лидия Павловна) — D. Sc. (Economics), Professor, Professor in the Faculty of Economics at the Novosibirsk State University, Editor-in-Chief of the journal “Economy. Issues of School Economic Education”. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. D Microeconomics. J Labor and Demographic Economics. N Economic History. P Economic Systems.

Igor N. Dubina (Дубина, Игорь Николаевич) — D. Sc. (Economics), Professor in the Faculty of Economics at the Novosibirsk State University and Professor in the Institute of Economics, Management and Information Systems at Altai State University, Associate Editor of the “Journal of the Knowledge Economy” and the “Journal of Innovation and Entrepreneurship” (Springer). (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **O** Economic Development, Innovation, Technological Change, and Growth.

Konstantin P. Gluschenko (Глущенко, Константин Павлович) — D. Sc. (Economics), Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **D** Microeconomics. **E** Macroeconomics and Monetary Economics. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Alexandr B. Khutoretskii (Хуторецкий, Александр Борисович) — D. Sc. (Economics), Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **H** Public Economics.

Vladimir I. Klistorin (Клисторин, Владимир Ильич) — D. Sc. (Economics), Professor, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: B History of Economic Thought, Methodology, and Heterodox Approaches. **H** Public Economics. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Igor V. Kudin (Кудин, Игорь Валерьевич) — PhD (Can.Sc., Economics), Chairman of the Board in the Novosibirsk City Public Organization “Our Health” (Novosibirsk, Russian Federation).

MRI: I Health, Education, and Welfare. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Valerii N. Lisitsa (Лисица, Валерий Николаевич) — D. Sc. (Law), Docent, Head of the Chair of Law in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: K Law and Economics.

Anton M. Lychagin (Лычагин, Антон Михайлович) — PhD (Can.Sc., Economics), Docent, Director of the Autonomous Nonprofit Organization “The Institute of Applied Projects”, Chairman of the General Meeting in the Fund “TIME” (the Fund for Implementation of the community initiatives) (Moscow, Russian Federation).

MRI: G Financial Economics. **K** Law and Economics. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting. **O** Economic Development, Technological Change, and Growth.

Irina K. Muhina (Мухина, Ирина Константиновна) — Data Strategist, Analytical Consultant & Knowledge Architect with 25 years of practical and leadership experience in investment, banking, consulting, insurance, research Corporations of North American, Founder of Innovative Educational Center of Art and Science iECARUS.com, President of ERUDITE school Erudite.com (Russian Federation and Canada).

MRI: A General Economics and Teaching. **C** Mathematical and Quantitative Methods. **F** International Economics. **G** Financial Economics.

Alexander V. Novikov (Новиков, Александр Владимирович) — D. Sc. (Economics), Professor, Rector of the Novosibirsk State University of Economics and Management. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **G** Financial Economics.

Eugene V. Popov (Попов, Евгений Васильевич) — D. Sc. (Economics; Physics & Mathematics), Professor, Corresponding Member of the RAS, Honored scientist of the Russian Federation, Chief Scientific Secretary, Ural Branch of the Russian Academy of Sciences (UB RAS), Head of the Economical Theory Department at the Institute of Economics UB RAS, Deputy Editor-in-Chief of the “Russian Journal of Economic Theory”, Member of the Editorial Board of the “Advances in Economics and Business” (USA). (Yekaterinburg, Russian Federation).

MRI: A General Economics and Teaching. **B** History of Economic Thought, Methodology, and Heterodox Approaches. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Nikita I. Suslov (Суслов, Никита Иванович) — D. Sc. (Economics), Professor, Head of Department of Analysis and Forecasting the Development of Industrial Systems at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: E Macroeconomics and Monetary Economics. **L** Industrial Organization.

Sergey A. Suspitsyn (Суспицын, Сергей Алексеевич) — D. Sc. (Economics), Professor, Honored scientist of the Russian Federation, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Tatiana O. Tagaeva (Тагаева, Татьяна Олеговна) — D. Sc. (Economics), Docent, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: E Macroeconomics and Monetary Economics. **Q** Agricultural and Natural Resource Economics • Environmental and Ecological Economics.

Valentin P. Taratuta (Таратута, Валентин Петрович) — PhD (Can.Sc., Philosophy), Docent, Associate Professor in the Institute for the Philosophy and Law at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **B** History of Economic Thought, Methodology, and Heterodox Approaches.

Vladislav V. Titov (Титов, Владислав Владимирович) — D. Sc. (Economics), Professor, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Head of the Chair of Modelling and Management of Industrial Production in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Miron A. Yagolnitsner (Ягольницер, Мирон Аркадьевич) — PhD (Can.S., Economics), Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **L** Industrial Organization.

Приложение E2. Редакционный совет серии

В приложении приводится краткая информация о членах редакционного совета серии книг «Инновационный библиометрический анализ в экономических исследованиях» с указанием основных исследовательских интересов (**ОИИ**) согласно предметной классификации JEL.

Суслов, Виктор Иванович (Victor I. Suslov) — *председатель редакционного совета*, доктор экономических наук, профессор, член-корреспондент РАН, заместитель директора по науке Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета, зам. главного редактора Всероссийского научного журнала «Регион: экономика и социология». (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. **Г** Финансовая экономика. **О** Экономическое развитие, технологические изменения и рост. **Р** Экономика города, села, регионов, недвижимости и транспорта.

Мкртчян, Гагик Мкртчичевич (Gagik M. Mkrtychyan) — *заместитель председателя редакционного совета*, доктор экономических наук, профессор, заслуженный работник высшей школы Российской Федерации, президент экономического факультета и заведующий кафедрой применения математических методов в экономике и планировании Новосибирского национального исследовательского государственного университета, главный научный сотрудник Института экономики и организации производства СО РАН, главный редактор журнала «Мир экономики и управления» (ранее — «Вестник Новосибирского государственного университета. Серия: Социально-экономические науки»). (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. С Математические и количественные методы. I Здоровье, образование и благосостояние. М Деловое администрирование и экономика бизнеса, маркетинг, учет. Р Экономические системы. Q Экономика сельского хозяйства и природных ресурсов, экологическая экономика и экономика окружающей среды.

Лычагин, Михаил Васильевич (Mikhail V. Lychagin) — *главный редактор*, доктор экономических наук, профессор, заслуженный работник высшей школы Российской Федерации, заведующий кафедрой «Финансы и кредит» экономического факультета Новосибирского национального исследовательского государственного университета, ведущий научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. F Международная экономика. G Финансовая экономика. I Здоровье, образование и благосостояние. J Экономика труда и демография. L Отраслевая организация производства. M Деловое администрирование и экономика бизнеса, маркетинг, учет. O Экономическое развитие, технологические изменения и рост. Z Другие специальные темы (экономика культуры, экономическая социология, экономическая антропология, религия).

Баранов, Александр Олегович (Alexander O. Baranov) — доктор экономических наук, профессор, заведующий кафедрой экономической теории экономического факультета Новосибирского национального исследовательского государственного университета, ведущий научный сотрудник Института экономики и организации производства СО РАН, зам. главного редактора журнала «Мир экономики и управления» (ранее — «Вестник Новосибирского государственного университета. Серия: Социально-экономические науки»). (РФ, Новосибирск).

ОИИ: E Макроэкономика и монетарная экономика. O Экономическое развитие, технологические изменения и рост. P Экономические системы.

Буфетова, Лидия Павловна (Lidiya P. Bufetova) — доктор экономических наук, профессор, профессор экономического факультета Новосибирского национального исследовательского государственного университета, главный редактор журнала «Экономика. Вопросы школьного экономического образования». (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. D Микроэкономика. J Экономика труда и демография. N Экономическая история. P Экономические системы.

Дубина, Игорь Николаевич (Igor N. Dubina) — доктор экономических наук, профессор экономического факультета Новосибирского национального исследовательского государственного университета и Международного института экономики, менеджмента и информационных систем Алтайского государственного университета, зам. главного редактора международных научных журналов «Экономика знаний» и «Инновации и предпринимательство» (Издательство Springer). (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. О Экономическое развитие, инновации, технологические изменения и рост.

Глущенко, Константин Павлович (Konstantin P. Gluschenko) — доктор экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. D Микроэкономика. E Макроэкономика и монетарная экономика. R Экономика города, села, регионов, недвижимости и транспорта.

Клисторин, Владимир Ильич (Vladimir I. Klistorin) — доктор экономических наук, профессор, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: B История экономической мысли, методология и неортодоксальные подходы. H Экономика общественного сектора. R Экономика города, села, регионов, недвижимости и транспорта.

Кудин, Игорь Валерьевич (Igor V. Kudin) — кандидат экономических наук, председатель правления Новосибирской городской общественной организации «Наше здоровье». (РФ, Новосибирск).

ОИИ: I Здоровье, образование и благосостояние. L Отраслевая организация производства. M Деловое администрирование и экономика бизнеса, маркетинг, учет.

Лисица, Валерий Николаевич (Valerii N. Lisitsa) — доктор юридических наук, доцент, заведующий кафедрой правового обеспечения рыночной экономики экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: K Право и экономика.

Лычагин, Антон Михайлович (Anton M. Lychagin) — кандидат экономических наук, доцент, директор АНО «Институт прикладных проектов», председатель общего собрания Фонда реализации общественных инициатив «ВРЕМЯ». (РФ, Москва).

ОИИ: G Финансовая экономика. K Право и экономика. L Отраслевая организация производства. M Деловое администрирование и экономика бизнеса, маркетинг, учет. O Экономическое развитие, технологические изменения и рост.

Мухина, Ирина Константиновна (Irina K. Muhina) — международный эксперт по проектированию и архитектуре информационно-аналитических потоков с области инвестиций, банков, страхования, консалтинга и исследований корпораций Северной Америки (более 25 практической работы), основатель образовательного инновационного центра iECARUS.com, президент ERUDITE school Egudite.com. (РФ и Канада).

ОИИ: A Экономикс в целом и обучение. C Математические и количественные методы. F Международная экономика. G Финансовая экономика.

Новиков, Александр Владимирович (Alexander V. Novikov) — доктор экономических наук, профессор, ректор Новосибирского государственного университета экономики и управления. (РФ, Новосибирск).

ОИИ: A Экономикс в целом и обучение. G Финансовая экономика.

Попов, Евгений Васильевич (Eugene V. Popov) — доктор экономических наук, доктор физико-математических наук, профессор, член-корреспондент РАН, заслуженный деятель науки РФ, главный ученый секретарь Уральского отделения РАН, руководитель Центра экономической теории Института экономики Уральского отделения РАН (Екатеринбург), заместитель главного редактора “Журнала экономической теории”, член редакционного совета журнала “Advances in Economics and Business” (USA). (РФ, Екатеринбург).

ОИИ: А Экономика в целом и обучение. В История экономической мысли, методология и неортодоксальные подходы. Д Микроэкономика. Л Отраслевая организация производства. М Деловое администрирование и экономика бизнеса, маркетинг, учет.

Суслов, Никита Иванович (Nikita I. Suslov) — доктор экономических наук, профессор, заведующий отделом анализа и прогнозирования развития отраслевых систем Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: Е Макроэкономика и монетарная экономика. Л Отраслевая организация производства.

Суспицын, Сергей Алексеевич (Sergey A. Suspitsyn) — доктор экономических наук, профессор, заслуженный деятель науки РФ, главный научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. R Экономика города, села, регионов, недвижимости и транспорта.

Тагаева, Татьяна Олеговна (Tatiana O. Tagaeva) — доктор экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: Е Макроэкономика и монетарная экономика. Q Экономика сельского хозяйства и природных ресурсов, экологическая экономика и экономика окружающей среды.

Таратута, Валентин Петрович (Valentin P. Taratuta) — кандидат философских наук, доцент, доцент Института философии и права Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

А Экономика в целом и обучение. **В** История экономической мысли, методология и неортодоксальные подходы. (РФ, Новосибирск).

Титов, Владислав Владимирович (Vladislav V. Titov) — доктор экономических наук, профессор, главный научный сотрудник Института экономики и организации производства СО РАН, заведующий кафедрой моделирования и управления промышленным производством экономического факультета Новосибирского национального исследовательского государственного университета.

ОИИ: С Математические и количественные методы. Л Отраслевая организация производства. М Деловое администрирование и экономика бизнеса, маркетинг, учет.

Хуторецкий, Александр Борисович (Alexandr B. Khutoretskii) — доктор экономических наук, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

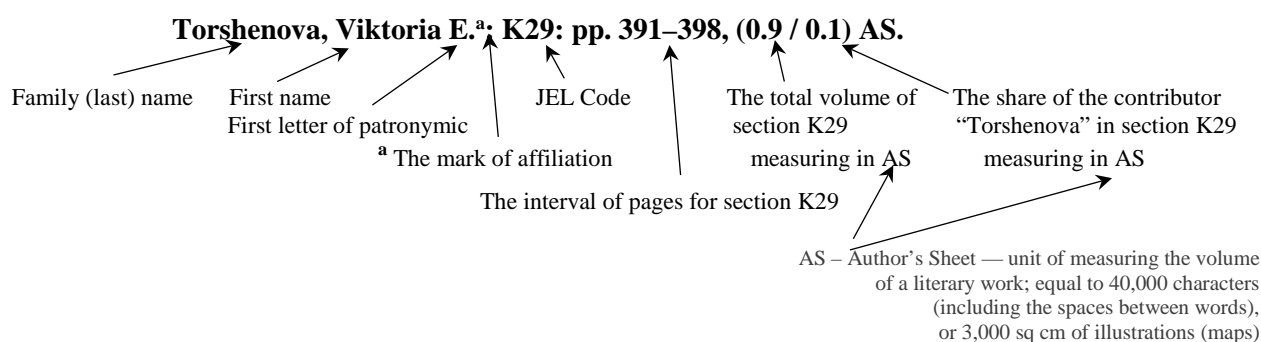

ОИИ: С Математические и количественные методы. H Экономика общественного сектора.

Ягольницер, Мирон Аркадьевич (Miron A. Yagolnitser) — кандидат экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. Л Отраслевая организация производства.

General Observations — Общие замечания

We use the following form of presentation:

На русском языке используется следующая форма представления:

Согласно сложившейся практике объем литературной и издательской работы измеряется в *авторских листах* (AS — Author's Sheet). Один такой лист принимается равным 40 000 типографских знаков (включая пробелы между словами), или 3000 кв. см иллюстративного материала (карты, фотографии и т.п.). Ранее в тексте книги в конце каждого раздела с кодом предметной классификации JEL шли сведения об авторском вкладе на английском и русском языках и для обозначения таких авторских листов использовалась аббревиатура AS. Это сокращение будет использоваться и в данном приложении.

If the author participated in the preparation of several sections, then at the end after the word "total" the total amount of AS sections with the author's participation is indicated first, and then after the slash the sum of AS, which in each section accounted for his share. In cases where sections are listed separately in English and Russian, page intervals and volumes are specified for both types of text. For convenience of perception, we transfer the information to the next line according to the boundaries of sections.

Если автор принял участие в подготовке нескольких разделов, то в конце после слова "итога" указывается сначала общая сумма AS разделов с участием данного автора, а затем после косой черты сумма AS, которые в каждом разделе приходились на его долю. В тех случаях, когда разделы приведены отдельно на английском и русском языках, интервалы страниц и объемы указаны для обоих видов текста. Для удобства восприятия перенос сведений на следующую строку производится не автоматически, а по границам разделов.

Affiliation List — Перечень аффилиаций

- ^a Faculty of Economics, Novosibirsk State University, 1 Pirogova Str., Novosibirsk, 630090, Russian Federation. — Экономический факультет, ФГАОУ ВО "Новосибирский национальный исследовательский государственный университет" (Новосибирский государственный университет, НГУ), ул. Пирогова, 1, г. Новосибирск, 630090, Российская Федерация.
